In the searchlight process, care must be taken to avoid reading hidden meaning into simple facts—to avoid looking for the "gimmick" or the "catch"—just as much as care should be taken to avoid slanting the news. On the point of avoiding slanting the news, I must salute one of our northern Maine newspapers for one of its editing jobs in eliminating a slanting of the news. In one of his mid-February columns, a national columnist referred to me as the "gracious Mrs. MARGARET CHASE SMITH of Maine." The northern Maine paper apparently felt that the word "gracious" was slanting the news, so it deleted the word "gracious" that was carried by all of the other papers. That I call admirable, conscientious editing of slanting news. It was objective, regardless of one's views.

As I am sure that many people dislike my little column and disapprove of my views, so I have pet peeves in columnists and commentators. But I read and listen to those with whom I differ because I want to know the other side of the argument. There are times when they have changed my mind. And even though this is not often, it is often enough to pay me to read and hear the other side.

It is unfortunate that some papers have brought upon themselves the charge of iron curtain because they have failed to report both sides of the news, because they have withheld the news which they did not like.

We need news reported, interpreted, and edited in earthy, simple, and commonplace terms. Many papers are doing a good job in reporting, interpreting, and editing the news on the level of the average American instead of down to him. That is the kind of journalism I admire—the kind I think the people want.

It is true that the radio and television have entered the field of news and share the power of shaping public opinion with the press. But in so many instances do the American publishers own and control the local radio and television stations along with the newspapers, that these new media of expression have served to increase, rather than dilute, the power of the American publishers.

Whether you like it or not, you publishers have in the palm of your hand the most powerful force in the world's most powerful Nation—the public opinion of America.

A Great Opportunity for American Cities

EXTENSION OF REMARKS

OF

HON. EDWARD A. GARMATZ

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1949

Mr. GARMATZ. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a speech made by the Honorable Thomas D'Alesandro, Jr., mayor of Baltimore, chairman of the standing committee on legislation of the United States conference of mayors, on the housing bill of 1949, at the National Public Housing Conference held in Washington yesterday.

The speech follows:

Most of the talk about the housing bill of 1949 has been concentrated on its benefits to those who are forced to live in slum homes and blighted areas. These benefits are considerable. However, this bill has wider implications—implications which could easily affect the entire physical structure of our cities.

The American cities of today are sick at their core. The great scientific and industrial advances that have enabled them to grow to impressive proportions have failed to protect them from the blight that is spreading with epidemic speed. For years we have all been battling with the problems caused by haphazard development, streets not designed for the varied purposes that they serve, confused zoning laws which offer little protection to either neighborhood or property, congestion that is forcing too-rapid decentralization, and residential developments which offer shelter only, and little opportunity for neighborhood living. We have known for years that people are leaving the central parts of the city as though they were plague spots to make their homes in outlying communities, and that these new developments have been filling our valued green spaces without any planned relationship to the needs of the city as a whole. The end result has been a drain on city finances that has been growing to alarming proportions. Not only do we sink millions each year into the slums and blighted areas, but property values are showing a consistent and sharp decline. National estimates show that the greatest part of all city revenues is derived from taxes on real estate, yet we have failed to protect from the depreciating effects of blight this important source of city income. In Baltimore we know the score all too plainly. During the 15 years between 1930 and 1945, $55,000,000, or about 32 percent in assessed valuation, was lost to Baltimore's downtown business area alone. Although there has been a slight rise since, there was again a decline in 1948.

Maybe some of you think that I am speaking very bluntly for a city executive and that I should speak more gently and protectively about my own city. I have two answers for any who subscribe to this view. The first is that Baltimore's problems are not unique, and I am not therefore exposing difficulties that had best be kept within the municipal family circle. Our problems are the problems of all of you who live in urban centers, and enlightenment on them comes through open and frank discussion. My second answer is that to ignore a bad situation is to perpetuate it and fail to recognize the means for help when it is at hand.

There are no insurmountable technical difficulties involved in preparing plans for modernizing a city to meet present problems and present standards. For years city planners have been ready with their maps and blueprints showing just what could be done to revamp obsolete patterns. But for the most part, these plans have been gathering dust in musty file cabinets, because there was no way of putting them into effect. Every change that was in any way significant or comprehensive collided head on with the problems of the blighted areas and the people who live in them. So rather than attempt impractical compromises, we attempted nothing—and waited.

It looks as though our waiting has about come to an end. The Housing Act of 1949 is a tool which, if properly used, can be of great help in overcoming the obstacles to comprehensive planning. It provides the

means, long sought, of getting rid of the old to make way for the new. We have never had an opportunity of this kind before. The old United States Housing Act of 1937 was a good bill, and we owe a lot to the pioneer principles it embodies and the experience it gave us. But, it provided for a very limited amount of slum clearance. The number of housing units it made possible was comparatively small, and the only slum clearance it provided for was the razing of slum sites on which the projects were to be built. There were no provisions whatsoever for redevelopment with private funds. As you know, the present bill not only provides for at least four times as many public-housing units as did its predecessor; it also offers aid to private developers by making it possible for them to buy or lease land at discount prices. The extensive amount of slum clearance which can be accomplished under either the redevelopment or public-housing provision will make it possible not only to substitute decent new housing for dilapidated old structures but also to reclaim whole areas.

The way is now open for city budget makers to start thinking in terms of far-reaching changes. Street systems can be redesigned to speed up traffic and facilitate the transportation of goods. (Business has been badly handicapped by the amount of time it has taken goods and merchandise to travel from one place to another.) Neighborhoods can be planned so that major thoroughfares bypass rather than intersect them, thus minimizing the dangers that threaten every child who plays on a city street. All new development can be so planned that open spaces are available for parks and playgrounds, and new zoning laws can be passed to protect residential areas from the smoke, noise, and dirt that have had such depreciating effects in the past.

I think it's important, at this point, to emphasize the fact that it's not enough to erase the blight and start afresh. It is equally important to profit by the expensive lessons of the past and plan for the prevention of future blight. To this end land should not be abused but used to its best advantage. Population density should be controlled, building coverage should be limited, new construction should allow for plenty of light and air, and there should be provision for permanent green spaces. Burdening the land with too many people or too many buildings will lead us right back to the conditions we are now trying so hard to remedy.

I'd like to hope that as we replan our cities, we will give a little thought to the need of people for the companionship of other people. I don't have to tell you of the loneliness that overtakes individuals, or even families, in the midst of densely populated cities. This condition has been intensified in recent years by the fact that many people have broken their old neighborhood ties and moved to outlying or suburban communities. At the same time, transportation problems have become much more complex, and people are reluctant to make the effort of traveling from one end of the city to the other. I believe that the new developments should include opportunities for neighborly contact such as now exist in the public-housing projects. Housing authorities have found that people respond eagerly to the chance to work together on common problems and to plan for social and recreational events that take in the entire community. Furthermore, the full recreational programs that have been developed for children of all ages have had a stabilizing effect that has attracted public comment.

I think it is important for all of us to remember that while the Housing Act of 1949 offers great opportunities to our cities, it does not provide for any automatic process. It is up to the cities, themselves, to know how to use these opportunities. We can and must plan on a broad scale and not limit our accomplishments to spotty developments which are really no more than islands of order and good living surrounded by chaos and blight.

Actually spot progress in a city is insignificant, because each city is a unit, with the well-being of one group bound up with the well-being of all other groups. The time is past—if it ever existed—when we can consider our cities in terms of different sections or different interests. If progress is to be real and enduring, we could favor one group at the expense of another. Our interests are interrelated and we might just as well recognize this fact now—as we approach a new era in the city's life. This concept would be self-evident if we consider the fact that it has received world recognition. If the well-being of this country is so bound up with the well-being of other countries that we share our resources with them, how much more evident the relationship becomes in the comparatively small area of a single city.

I believe that I can say, with pardonable pride, that my city is ready to participate in the benefits of legislation of the extent and significance of the Housing Act of 1949. The Baltimore City Planning Commission, the Baltimore Redevelopment Commission, the Housing Authority of Baltimore City, and the Baltimore City Health Department realize the importance of coordinated operations, and between these four agencies, united by a common objective, there is continuing contact and consultation.

The cities of this country are chafing at the bit. They are eager to have this opportunity, which promises them so much, securely within their grasp. Let us hope that Congress recognizes their impatience by passing without further delay the Housing Act of 1949.

Marshall Plan Aid and Socialization

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "ERP Hasn't Financed Socialization" which appeared in the Washington Post of May 1, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ERP HASN'T FINANCED SOCIALIZATION

(By Frank Gervasi)

LONDON, April 30.—There may be good reasons for reducing Marshall aid to Europe for the next 15 months, but one often advanced in Congress, that nations like Britain are using European recovery program dollars to spur socialism, does not appear to be among them.

Had it not been for Marshall aid, of which Britain received $1,316,000,000 last year and is asking $940,000,000 for the next, the Labor government might not have been able to boast a phenomenal recovery record. It probably would have had to delay its biggest Socialist venture, the national health service.

But the notion that capitalist dollars are being used to finance British socialism is one of several misconceptions of what ERP is. Another is that the program is some sort of relief activity, to feed the hungry and succor the sick.

Such Socialist enterprises as nationalization of the Bank of England, of transportation, of electric light and power, and of the coal industry were purely internal transactions involving sterling, not dollars. Nationalization of the bank, which was little more than the creation of a British version of our own Federal Reserve System, was accomplished by issuance of $232,000,000 in Government bonds to the former stockholders.

So it was with the other enterprises which were transferred by the Government from private to public ownership. The shareholders received stocks and bonds paying from 2½- to 3-percent interest. No dollars changed hands.

The evidence is that Marshall aid has slowed up rather than accelerated British socialization. Without it the resultant chaotic conditions would have encouraged far more Marxist experimentation with the nation's economy than is now the case.

UNRRA A LIFESAVER

But to understand what might have happened in Britain—and the rest of Europe—had it not been for Marshall aid, we must go back and examine the situation as it existed at the end of World War II. Then it looked as though Hitler's prophecy that when he fell he would take Europe with him to a hell of communism might be realized.

Thanks to the 20,000,000 tons of food, fuel, medicine, machinery, and raw materials poured into Europe by the United Nations Relief and Rehabilitation Administration immediately after the war, Europe began to revive. European eyes began to turn westward toward America, whose taxpayers pay for two-thirds of the UNRRA help, and away from Moscow.

Smoke poured from factory chimneys again. Wheels turned. The throngs of unemployed grew smaller. A semblance of economic vitality and stability was restored. But hunger, disease, joblessness still prevailed. Europe needed more food and fuel, more steel and more machinery, railway cars and tractors, fertilizers, and a thousand other things.

Europeans needed more of those goods than they were able to produce or to obtain in trade for their own products. The war had destroyed or damaged normal sources. The only possible supplier was America, and to a smaller degree, Canada.

But to buy from America dollars were needed. Together America and Canada poured more than $8,000,000,000 in cash and credit into the tills of Britain, France, and others to keep them buying. Still it wasn't enough. The buyers used up the loans and drained their own reserves of dollars and gold. By August 1947 Britain, richest of all the war victims, was near the bottom of the barrel.

A BREAK IN RHYTHM

In Lancashire, the rhythm of the spindles and looms of the cotton mills slowed. Cotton stocks were down, and cotton could only come from the United States. Britain's big electrical supply industry was crying out for copper, another dollar material. The tire industry, so dependent on lamp black as a rubber catalyst, was about to close up, and with it factories, which needed rubberized belting to keep them operative or tires to put on cars, tractors, and trucks.

Coal production dipped for lack of timber props for new tunnels. The vital housing program, which produced some 200,000 units a year, was to be reduced to 50,000 for want of lumber, and the railways desperately needed ties for repairs.

Worst of all, the British faced new reductions in an already reduced diet. Britain must import half of all the food it consumes even in the best of times. Deprived of the rice of Malaya and the sugar of the East

Indies, unable to import meat from any of the usual European sources, hunger stared at Britons from every cupboard.

The basic conditions for political unrest were the same in Britain as in France, Italy, and elsewhere. They differed only in degree. Britons would not have turned to communism only because they are too fond of freedom. But who can say how much freedom they might have relinquished in exchange for promises of full stomachs?

Out of the chaos which would have been generated by a continuance of the conditions prevalent only some 20 months ago, a far more Socialist Britain than is now the case would, in the opinion of competent observers, have most certainly emerged. Marshall aid prevented that, as it avoided for Frenchmen and Italians the necessity of choosing communism as a way to economic well-being.

MILLS ARE SHORT-HANDED

Specifically, this is what Marshall aid has meant to Britain:

Where unemployment and all that it means threatened Lancashire in the winter of 1947, today the mills are begging workers to come in. Some 278,000 are working, 50,000 more are needed. The spindles and looms consumed, in 1948, 300,000 bales of cotton from our Southern States and converted it into goods which earned dollars and sterling.

Shipments of copper from the Western Hemisphere enabled the manufacturers of generators, cable, motors and electrical equipment of all kinds to achieve the dual goal of stepping up production of goods for export and of expanding the country's industrial plant. Marshall aid financed the purchase of 300 tons of copper a day, a total of $49,000,000 worth in 1948.

A mere 5,000 tons of lamp black, ordinary soot of a kind produced only by the United States, saved the tire industry in the first weeks of 1949. Eight hundred firms faced disaster until the stuff arrived.

About 2,000 miles of railway were laid or relaid with ties bought with ERP dollars in 1948. But nearly half of the imported lumber, most of it American, went into construction of factories, power plants, and housing, and for urgent repairs to schools and hospitals. A fraction went into packing cases for the goods which Britain delivers overseas to earn the dollars of economic independence. The rest went into pit props in the mines.

A GENERATION RESCUED

But, perhaps, in the long run, the most important contribution to British recovery made by ERP was that to British stomachs. In the first year of ERP, nearly half of the British allotment was spent for food. Eighty-five percent of it came from Canada, the rest from the United States. Without the food which Britain was able to buy with ERP money, its people today would have not merely a monotonous diet but one approaching near-starvation level.

Marshall aid has helped to provide the milk, sugar, glucose, and orange juice which have given Britain a lowered infant mortality rate and the healthiest children in all Europe. If it had done nothing else, the Marshall plan would still have been a success, for upon the healthy youngsters of today the nation's and the continent's destiny depends.

Not all ERP aid is a free gift. As far as Britain is concerned, only 75 percent of the total represents a grant. The rest is in the form of a loan, to be repaid starting in 1952 at 2½ percent interest, with repayment on principal to begin in 1956.

If a cut is made in the over-all figure for Europe, as is envisioned as a result of price drops in the United States, Britain may be confronted with serious problems. Its estimated needs for 1949-50 already took into account lower American prices.

Some further cuts in food imports may have to be made. A bit may be shaved off here and there on raw materials. But those who decide such things in Washington will need to consider (1) whether we can afford to allow the British to reduce their already skimpy rations, and (2) whether we can afford to allow British production to go down and so risk all of the gains already made.

Moderation for Republicans

EXTENSION OF REMARKS

OF

HON. MARGARET CHASE SMITH

OF MAINE

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mrs. SMITH of Maine. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address which I delivered at the Lincoln Day dinner of the Republican committee in Washington on Tuesday, February 8, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Toastmaster, Governor Dewey, Speaker Martin, Miss Hunter, distinguished guests and fellow mourners, I feel rather special tonight. It is quite an honor to speak on the same program with the two Republicans who have come the nearest since 1933 to being the President of the United States—one missing that honor by only 4 percent and the other by only a life—less than 100,000 votes difference could have made one President and a death could have made the other.

But it seems that the Democrats got in both of their ways.

I feel privileged to be coupled, or tripled, with them tonight for other reasons. I once said that I thought that one of them would be the 1948 Republican Presidential nominee. But I was wrong. This time they got in the way of each other and one had to give way. The other I proposed for the post of Secretary of State. This time a prominent Democrat didn't agree with me—so that didn't jell either.

But like most Republicans at some time or other, Governor Dewey and Speaker MARTIN, Republican Speaker that is, and I have had our set-backs and disappointments. Even that greatest of all Republicans, Abraham Lincoln, had his set-backs and disappointments. There are those who say that the Civil War he had to contend with was somewhat mild in verbal comparison with the recent Republican uncivil war in Omaha. The unity which we praised and paid homage to so much last summer and fall seemed to be without representation at Omaha.

Today we meet in observance of the memory of the greatest of all Republicans—Abraham Lincoln. A man who not only held his party together but also held his country together. In Lincoln's days the Republican Party did stand for unity—it was a Republican President that kept the country unified.

But today we don't have that unity in the Republican Party or in the Democratic Party—or in the Nation. I am afraid that it would take a national emergency to bring unity overnight.

These are strong words. But let's face and examine the facts. We do not have a majority President—he is a minority President. The winning Democratic Party is split up with its reluctant Trumanites, Dixiecrats, and Wallaceites. What is left of the Republican Party is split up among at least three leaders—all of whom have tasted defeat. That was altogether evident at Omaha.

Wheels within wheels—division within divisions. And why?

It is not only a result of personal ambition; it is a direct result of pressure-group ambition. All of the division within divisions stems from the fact that ours has become a pressure-group government—a government that yields special privileges to the demands of those minorities which can bring the greatest pressure on it.

And we Republicans are not invulnerable on this point. After all, we did control the legislative branch of our Government for 2 years.

What both parties have lost sight of is that they were given the power by the people and they took the power because the people did not like the catering that the particular party at the particular time was doing to particular minority groups.

In 1946 the people took the control of Congress from the Democrats and gave it to the Republicans because they didn't like the strikes that kept food and heat from their homes and they didn't like rationing and price control.

But their dislikes were not hatreds that demanded punitive measures for some and the return to "the good old days" for others. That's where the Republicans missed the boat from 1946 to 1949.

In 1948 the people took away that which they had given to the Republicans, and the Democrats were back in the saddle, because they didn't like what they interpreted to be punitive measures and "do nothingism" on the very things that affected their daily living.

And now there is strong indication that the Democrats are going to use their regained power in an extreme manner to the special privilege of the articulate groups that felt the Republican Eightieth Congress did them an injustice—for which they kicked them out.

In short, the Democrats went to extremes for special minorities until 1946 when the majority of the voters became fed up and elected a Republican Congress. Then the Republicans went to the opposite extremes for opposing special minorities and attempted a backward return to the "good old days"—they clung steadfastly to the long-outmoded notion that it is not the business of the Federal Government to intervene in the economic affairs of people. Like the Democrats, they had ears only for those vocal minorities which they felt had elected them. Like the Democrats, they forgot the majority—they failed to see that they had won on a protest vote of the majority rather than a positive vote of pressure minorities.

The answer to what has brought these 2-year shifts of power is simple and basic—extremes and articulate pressure minorities. This has given rise to a growing fiction that the Democratic Party is the party of labor and that the Republican Party is the party of big business. The real fact is that both parties are essentially the parties of the people—and when they cease to be the parties of the people, the people throw them out. That's what happened to the Democrats in 1946 and the Republicans in 1948.

The Republicans have steadily been making a comeback in the off-Presidential elections for the last three times in 1938, 1942, and 1946. We have just been unfortunate enough to have the 2-year swinging pendulum of the extremes swing on the Democratic side in the Presidential election years.

But we can win not only 2 years from now in the past normal Republican swing of the pendulum, but also 4 years from now in the normally Democratic swing of the pendulum. We can do it by convincing the electorate that the Republican Party is the party of all the people at the very time that the Demo-

cratic Party is swinging to the extreme of pressure government for the favored few.

We can do it by living daily the creed of Abraham Lincoln—of the people, by the people, and for the people. We must recognize that the American electorate has matured; that it has developed an intelligence—an ability to discriminate in the selection of its representatives on the basis of their records rather than their promises. If anyone ever had any doubt of this, all they need to do is to look at the record number of split ballots in the 1948 Presidential election. Before we use easy hindsight to conclude that anyone did not wage as vigorous a campaign as he should have, let's remember the burden of a lot of dead weight on some of the State and Federal tickets.

And where can we convince the people that the Republican Party is the party of the people? The first and foremost place is in Congress. Congress can be supplemented by the Republican governors.

And how can we convince the people? By a record; a record of moderation; a record that refuses the extreme right and the extreme left—a blend of true liberalism and intelligent conservatism; a record that is not a monotonous shout of defiance just because we are in the minority party; a record that is not "me tooistic" just because the Democrats defeated us; a record that accepts the good of legislation bearing Democatic names, but a record that offers a positive substitute for that which we oppose in legislation bearing the names of the Democrats.

I propose that the only way we go back is to Lincoln's moderation.

And you can rightly say this is all beautiful theory, but how can you put it into practice?

And I'm just naive enough to try to give you the answer to that. I propose the creation of a Republican Party policy committee with representation from the major segments of the party—three representatives from the United States Senate, three representatives from the United States House of Representatives, three representatives from Republican governors, and two representatives from the Republican National Committee—and of those representatives from the Senate and the House there definitely should be included someone from that block of Republicans identified with the 13 "Young Turk" rebels or liberals.

I propose the majority of the places for Republicans in Congress because, after all, in the next 2 and 4 years, the Republican Party will have to stand principally on its record in Congress. Responsibility must be accompanied by authority. Republicans in Congress have the major responsibility; they must have the major authority. Too much policy authority in the past has been vested in the Republican National Committee. That is not realistic. The Republican National Committee is basically an administrative agency to carry out, not formulate, the policy of the party. The Republican National Committee should do what Republican leaders tell it to do—instead of Republicans doing what the national committee tells them to do.

In short, if we are ever to approach Lincolnism in our party again, we must make a fresh start. We must organize the party so that it will be responsive to the people. We must organize the policy makers so that they will represent the major segments of the Republican Party as identified in the minds of the electorate—and all of the major factions of the party, the liberals, the conservatives—and the growing ranks of moderates. They must meet in an atmosphere of friendly compromise. They must resolve their differences in a spirit of give and take—with an emphasis on party objectives instead of party personalities.

They must make both the proposed policy committee and the Republican Party a Lincoln party—"of the people, by the people, and for the people"—not just favored minorities, but all—and, I repeat, all—the people. To achieve victory in 1950 and 1952 we must first gain victory within our own ranks—a victory of the muchly maligned unity rather than of personalities.

Tiny Pitcher Molded by Texas Potter

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Tiny Pitcher Molded by Texas Potter," published in the Marshall, Tex., News of May 10, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MATCH-SIZED TINY PITCHER MOLDED BY TEXAS POTTER

MARSHALL, TEX., May 10.—What is believed to be the world's smallest ceramic pitcher ever shaped and fired by the usual methods left Marshall Tuesday for the collection of Mrs. Edward Martin, wife of the United States Senator from Pennsylvania.

The pitcher, a tiny piece of work smaller than the head of a match, was executed by John H. McKinnon, owner of the McKinnon pottery in Marshall, from clay mined within the city limits.

It was mounted on a small ceramic table, also designed and executed by the local potter, for mailing.

Address by Ralph E. Becker Before the New England Council of Young Republicans at Portsmouth, N. H.

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address by Ralph E. Becker, chairman of Young Republican National Federation, before the New England Council of Young Republicans at Portsmouth, N. H., on May 14, 1949. This is a very analytical and sound appraisal of our basic problems and solutions.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE REPUBLICAN RESPONSIBILITY

It is indeed a pleasure to be here in Portsmouth today and participate in this meeting of the New England Council of Young Republicans. You, young Republicans here in the American cradle of free enterprise, are asking yourselves the same questions that are being asked by young Republicans all over the country. But there is one thing of which everybody is profoundly aware in these troublesome and disturbing times, and that is that the people in the middle and lower income brackets are demanding a better share of the material things of life. This is a problem which everybody and every political party must squarely face. It involves the desire and determination of such vast numbers of people that the true solution will necessarily be recognized by increasing numbers of people as time goes on.

What is the true solution? Well, there are only two basic solutions which are advocated at all. One is the solution of the welfare state, that is, the welfare state of Communist Russia; the welfare state of Socialist England; and the welfare state advocated by the Truman administration in Washington. The other solution is our Republican system of free enterprise based upon individual opportunity, individual responsibility, individual development, and hard work.

Now, let us examine these two systems and see which provides more material things of life for the people in the middle and low income brackets. First, let us examine the welfare state and its basic theory. The welfare state theory is this, that through central planning by a "great brain" in the Nation's Capital, effectuated by a rigid system of legal controls, the Government will give more and more material things, free, to people in the middle and low income brackets, and that somebody else will have to pay for them.

This welfare-state central-planning theory, in its essence then, is that the people will be getting something for nothing. And as such, it certainly is attractive to most of us. Something for nothing always sounds good.

And there is something else which sounds good about the welfare state and central planning, and that is the illusion that there is something scientific and efficient about it—about a great brain in the Nation's Capital and running everybody's affairs for them. But when we analyze central planning and the welfare state, not as a vague theory, but in the light of the experience of the people who have had to live under it, we find something entirely different. First, we find that nobody gets something for nothing under the welfare state, and second, we find that it is crude and unscientific, and hopelessly inefficient.

So, let us see how it works. In Russia, we see the welfare state based on central planning in a true state of perfection, developed to its utmost, with no hampering restrictions of any kind on the practical application of the theory. But what are the results in Russia? There, strangely enough, we see a tremendous gap between the rich people on the one hand, and the people in the middle- and low-income brackets, on the other. In Russia, the rich people are the politicians, and the hard and disturbing fact is that practically everybody else is poor. The people in the so-called middle- and low-income brackets in Russia, that is the white-collar worker, the skilled worker, the school teacher, the technicians, and the so-called masses, live in circumstances of utter horror and misery. The middle- and lower-income brackets, the staple of society, everywhere, are the downtrodden and crushed, the people without material things. The welfare-state central-planning concept in Russia has given the people a raw deal, and we cannot expect the welfare state to do any better anywhere else. We can, however, definitely expect the welfare state to be overthrown eventually, in Russia, as it always has everywhere else.

Now let us turn to England. The Labor Party in England has had a free hand for almost 4 years with socialism, which is only another name for the welfare state and central planning. There we see the nationalization of enterprise after enterprise, the

banks, the transportation system, the public utilities, and now the steel industry. The Labor Party in England has been advocating the same welfare state propaganda, namely, that government officials will give the material things of life out free to the people in the middle- and lower-income brackets, and that somebody else will pay for it.

There is no question but that the socialist government there has been giving free handouts. There are various types of subsidies to keep prices down, and they have a system of socialized medicine there in which everything of a medical nature is given out absolutely free.

But the difficulty with all this is that we live in a practical world and somebody has to pay for the production of things which are useful. Somebody has to produce them and the people who produce them have to be paid, one way or another. The rich don't have anything like the vast sums necessary to finance the free hand-outs of the welfare state. From that standpoint, their wealth is only a drop in the bucket.

Today, in England, 40 percent of the national income goes for taxes. That means that, one way or another, the middle- and lower-income brackets are paying 40 percent of their income in taxes, or very close to it, for these groups earn the great bulk of the national income.

Now, let us turn to our country. We do not have a welfare state here in a substantial sense. We still have a free-enterprise economy based on individual responsibility, opportunity, and development. But we do have, in Washington, a definite movement of the New Deal, Fair Deal theorists who, for the last 17 years, have been advocating, one way or another, the failure of capitalism and the need for conversion to the socialism of the welfare state. We can look back to the NRA, a comprehensive plan for the control of all business. Today, the administration is still advocating a peacetime OPA, with even further regulation of business. The administration-sponsored Spence bill, now pending in Washington, provides for rigid controls of the economic system of our country in a manner and to a degree that we scarcely dare comprehend unless we actually read the bill itself.

Yet, so far, the people have resisted most of the advances of the welfare-state theorists in Washington. But we have not completely resisted them. The New Deal-Fair Dealers have spent vast sums of money on welfare-state and boondoggling projects, all without tangible results except to increase the national debt and the burden of taxation on people in the middle- and lower-income brackets as well as those in the upper brackets. When the present administration started in Washington in 1933, the national debt was some $23,000,000,000. It is now $252,000,000,000, over 10 times as much. The interest on the national debt alone amounts to $5,400,000,000 per year. The wealth of the rich is not even worthy of discussion as a source of paying such astronomical indebtedness. The only people who can pay are those in the middle- and low-income brackets, for theirs is the great bulk of the national income.

So when the welfare-state people in the administration in Washington tell you that they will provide all sorts of things for the middle- and low-income brackets, free, and that someone else will pay it, don't you believe it. The administration is making false promises—promises so false that they constitute a gigantic fraud on the American people. The truth is that everything has to be paid for, and that it is the people in the middle- and low-income brackets who earn the great bulk of our national income and who have to pay for the great bulk of the expenditures of any Government.

Now, that is the first fraudulent representation of the welfare-state administration—that there will be all these free handouts which somebody else will mysteriously pay for. But the administration is responsible for a second gigantic fraud. The New Deal-Fair Dealers actually tell people that we can maintain our individual liberties as they advance with the legal controls of the welfare state. The hard fact is that the welfare state can only exist on a rigid system of legal controls which regulate the everyday affairs of the people and subordinate the individual to the state. Look at Russia. There the system of legal controls and the constriction of the activities of the people is complete. Look at England. There we have a system of rationing and controls over the lives of the average individuals which is increasing daily as the welfare state proceeds. Look at the things the administration has tried to do in the United States—the NRA, the OPA, the Spence bill, and all the other things to bring the individual under control and to subordinate the individual to the state.

And also let us not forget what some of these people have said. We may, indeed, go back as far as 1931, when Rexford Guy Tugwell, later Under Secretary of the Interior of the administration, wrote that our system was "not so satisfactory to the rational faculty as revolution and rebeginning on the Russian model." Think of it. Mr. Tugwell thinks we should have a revolution and a rebeginning on the Russian model. Henry Wallace, former Vice President of the United States in the administration, stated frankly that "Capitalism must collapse unless something is done to bring the individual under control." And when running as the Democrat candidate for Governor of California, Upton Sinclair actually went so far as to say that, "Capitalism has served its time and is passing from the earth. A new system must be found to take its place. Our opponents have told you that all this is socialism and communism. We are not the least worried."

Now, it is perhaps fortunate that there is a great wave of unrest going through the peoples of the world in the middle- and low-income brackets, for we do not have to speculate as to some new solution for giving them more material things. We have, right here in our own country, under our Republican system of free-enterprise individualism based upon individual opportunity, individual responsibility, and the possibilities of individual development, a system which has already produced more of the material things of life for people in the middle- and low-income brackets than has ever been produced by any system anywhere in the world. I repeat, our principle of free-enterprise individualism, which has made our country great and lavishly productive, is essentially a Republican principle.

Moreover, under our Republican free-enterprise system based on individual responsibility, we have the very system which is best calculated to produce genuine social reform. We have produced more genuine social reform in the country, and we are better off as a people than any other country in the world.

Also, let us not forget that the theory of the welfare state, with its lack of faith in the individual, is the theory of cynicism and disillusionment, while our free-enterprise-individualism philosophy is the philosophy of eternal youth. Youth is not afraid of responsibility and hard work. All we young people ask is an opportunity to develop ourselves and to be productive. And through our Republican free-enterprise system we have that opportunity.

Now, what is the real responsibility of the Republican Party with respect to all this? In my opinion, it is something which we must face squarely and not delude ourselves about through fear or cowardice. The responsibility of our party, as I see it, is this: We must make the people in the middle- and lower-income brackets of this country, which constitutes the vast bulk of our population, realize that the welfare-state propaganda of the administration is only a gigantic fraud and delusion, and that the welfare state has only produced poverty and misery where it has been experienced. We must make them realize, through the experience of Russia and England, what will happen if the administration proceeds here with its welfare-state plans. We must help them to see the pitfalls of the welfare-state theory, through the experiences of others, rather than to insist upon a disastrous experience for the United States.

We must also make them realize that there is only one real solution which experience has ever provided for giving more of the material things of life to people in the middle- and low-income brackets, and that that solution is our Republican system of free-enterprise individualism. This is not something on which we have to speculate: Our Republican system of free-enterprise individualism has already produced results for the people of this country which exceed those of any other country anywhere.

To repeat, our real Republican responsibility is to face the facts, and to make the people of our country realize that their true salvation rests not in wild and theoretical speculation about the welfare state which has already been tried out in Russia and England with disastrous results; but in the hard facts of the lavish production of our Republican free-enterprise system.

Moreover, our Republican responsibility is not something negative in character. Ours is an affirmative responsibility to make the people of our country realize that their own real future lies, not with the crude welfare state and its attitude of disillusionment and cynicism, but with our Republican philosophy of free-enterprise individualism and its faith in the individual. It is up to our Republican Party to sell the lavish experience of free enterprise as against the poverty and misery of the welfare state.

Finally, this affirmative program is essentially a program for young people, for our futures depend the most on it. Hence, it is primarily up to us young Republicans to go out and sell it. Go out and do it. For the future of our country is in your hands.

Conflicting Jurisdiction in Federal, State, and Local Governments

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the editorial which appeared in the Journal-Every Evening, Wilmington, Del., for Tuesday, May 10, 1949, on the conflict of jurisdiction in Federal, State, and local governments.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BACKING FOR BOGGS BILL

Powerful and distinguished support is rallying behind the proposal of Representative J. CALEB BOGGS, of Delaware, for a commission to study the problems of conflicting jurisdiction in Federal, State, and local gov

ernments. At the first session of a joint House-Senate hearing on the Boggs bill, held yesterday, five governors endorsed the measure. Governor Knous, of Colorado, came all the way from Denver to give his testimony; Governors Lane, of Maryland, and Driscoll, of New Jersey, also appeared in person, and Governors Lausche, of Ohio, and Stevenson, of Illinois, sent their hearty endorsement.

The legislation introduced by Delaware's Congressman has attracted this immediate backing because it meets a real and crying need. The sprawling, Topsylike growth of the Federal Government during the past decade and a half and the accompanying rise in Federal taxation have created urgent problems for all the States. Overlapping of functions and activities and duplication of taxes have created hardship and confusion for States, cities, counties, and—last, but not least—the citizens themselves. It is time to straighten out the tangle, and adoption of Representative Boggs' bill would be a good way to begin.

The North Atlantic Pact

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "The Loaded Automatic," published in the Wall Street Journal of May 17, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE LOADED AUTOMATIC

The Atlantic Pact is advertised as a means of preserving peace.

It will be a strange peace, achieved by turning the western world into an armed camp face to face with an armed camp in the east.

The administration proposes to send more than a billion dollars worth of guns to western Europe—the first year. How many billions there will be in all has not been revealed, but unofficial estimates range as high as 20. This is not likely to discourage the Russians from the increased manufacture of arms.

If the administration's military-aid program successfully wages peace, it will be the first such peace.

Guns have an odd habit of getting used. Perhaps there is an innate fascination about them. Rare is the child or man who can resist the temptation to play with them. The more guns there are the more likely they will find employment.

The history of Europe is the history of armaments races. Peace was never the victor.

British policy for generations sought the balance of power in Europe. The theory was that strong military nations would not attack other nations which were equally or nearly equally strong. This was extended to blocs of nations, and there were ententes of various sorts.

But the power often got out of balance, the ententes collapsed, and the almost invariable result was war. Power built on guns invites the extension of power by means of guns.

World War I was not the first explosion of the balance of power in Europe, but it was the biggest till then. After it, the nations, realizing where the trouble lay, decided to throw their loaded automatics out the window. The idea was sound, but the nations retrieved or replaced their guns.

By 1939, they had enough to start shooting again. Hitler broke Germany's balance of power with the nations to the west. On the other side, the Nazi-Soviet pact epitomized the balance of power principle: two powerful opposing forces agreeing to mutual nonaggression because it did not seem realistic for one to attack the other. But one did.

To suppose that billions of dollars worth of guns, matched as nearly gun for gun as the Russians can, will remain idle in Europe is to misread history. There is no special magic attaching to a balance of power armaments race just because it is now an Atlantic Pact bloc on one side and a Soviet bloc on the other. War remains a more tempting way of settling differences than the conference table, when the means are at hand.

The Atlantic Pact started out as a simple declaration that Soviet aggression in western Europe would not be tolerated by the United States. That would have been a clear warning, which the Soviets could be expected to heed. The administration has turned that into a dangerous policy based on an exploded principle.

If the nations of Europe wish to challenge the Soviet Union to an armaments race, that is their unfortunate business. But it is not the business of the United States to provide them or anyone else in time of peace with the means of war. And it is confounding confusion to do so in the name of peace.

Near East Survey Commission

REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. MULTER. Mr. Speaker, this morning we are introducing under the joint sponsorship of approximately 50 Members of the Congress a joint resolution to establish a Near East Survey Commission.

The establishment of a Near East Survey Commission is a necessary preliminary to a Near East economic development program. This resolution provides for a comprehensive inquiry with respect to the action which it may be necessary or desirable for the United States, in cooperation with the United Nations or otherwise, to take with regard to the economic development of the states and countries in the Near East and neighboring states and countries economically interrelated to them.

Its purpose is to stimulate industrial and agricultural production and trade among the Near East countries, the improvement of standards of living and of conditions of health and education. It points the way in which point IV of the President's inaugural address seeking to make available our technological skills to underdeveloped countries may be implemented in the Near East.

The bill emphasizes particularly public works developments creating power and water for irrigation. Vast potentialities for this purpose exist in the valleys of the Jordan, the Tigris, and Euphrates, and in the area of the White Nile—including parts of Uganda and Belgian Congo—in Syria, in Lebanon and in Jordan—these areas which at one time supported great civilizations and population centers with large cities of a million and more people now lie neglected yielding but a small fraction of their potential. It is estimated that 10,000,000 to 15,000,000 cultivatable acres could be created by projects costing about $500,000,000. A great deal of preliminary work has been done in surveying these projects by the British High Commission, by Lowdermilk and Hays and by other authorities, but these proposals have not been coordinated in terms of the whole region nor have questions of financing and resettlement been dealt with. It is important to recall that the various plans for Palestine partition, the Grady-Morrison plan and the plan adopted by the United Nations General Assembly on November 29, 1947, all called for this kind of economic development for the region as a whole. It is also emphasized that such projects could enormously facilitate the resettlement of the 750,000 Arab refugees from Palestine.

The Commission to be formed under the bill is to be composed of 15 members, 5 to be appointed by the President of the Senate, 5 by the Speaker of the House of Representatives, and 5 by the President. The Commission is temporary in character and is to cease to exist 90 days after submission of its final report, although it is instructed to make interim reports.

The Commission is authorized to draw on executive departments and agencies of the Government both for personnel and for information.

The Near East is defined as including the following countries: Egypt, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Palestine, Saudi Arabia, Syria, Turkey, and Yemen. Kuwait is an independent sheikdom at the head of the Persian Gulf. The Commission will not visit any such countries except on the invitation of the government or the administration thereof. The resolution also warns that "it is not intended or to be construed as an express or implied commitment to provide any assistance, whether in funds, commodities, or services, to any state or states, country or countries."

It also encourages the maintenance of international peace and security by eliminating the potential of the Near East as one of the world's foremost tinderboxes for war and revolution due to chronically low standards of living, bad conditions of health and education, and feudal traditions of government. The presence of Israel in the Near East as a bridgehead of democracy and as an industrial workshop built on democratic foundations can furnish the nucleus for technical and skilled manpower, making an ambitious program for the development of the whole region practicable. The fate of Israel is now unalterably linked with the fate of the whole region and this bill is one way to bring permanent peace and neighborly relations between Israel and the other Near East countries. The program is a Near East development program rather than a Near

East recovery program. It is not intended to initiate an international PWA, but to instigate efforts to improve the economy of that region by self-liquidating, wealth-creating projects.

The following Members of the Congress sponsor the resolution:

California: CHET HOLIFIELD, NORRIS POULSON.

Connecticut: RAYMOND E. BALDWIN, JOHN DAVIS LODGE.

Illinois: PAUL H. DOUGLAS, BARRATT O'HARA, ADOLPH J. SABATH.

Massachusetts: CHRISTIAN A. HERTER, THOMAS J. LANE.

Michigan: JOHN D. DINGELL, GEORGE D. O'BRIEN, GEORGE G. SADOWSKI.

Minnesota: JOHN A. BLATNIK.

New Jersey: HUGH J. ADDONIZIO, EDWARD J. HART, PETER W. RODINO, JR.

New York: WILLIAM T. BYRNE, EMANUEL CELLER, JOHN C. DAVIES, ISIDORE DOLLINGER, LOUIS B. HELLER, JACOB K. JAVITS, KENNETH B. KEATING, EUGENE J. KEOGH, ARTHUR G. KLEIN, ABRAHAM J. MULTER, JAMES J. MURPHY, ADAM C. POWELL, JR., ANTHONY F. TAURIELLO.

North Carolina: CHARLES B. DEANE.

Ohio: FRANCES P. BOLTON, MICHAEL J. KIRWAN.

Pennsylvania: FRANK BUCHANAN, ANTHONY CAVALCANTE, EARL CHUDOFF, HARRY J. DAVENPORT, HERMAN P. EBERHARTER, DANIEL J. FLOOD, JAMES G. FULTON, WILLIAM T. GRANAHAN, WILLIAM J. GREEN, JR.

Texas: CLARK W. THOMPSON.

Virginia: TOM B. FUGATE.

Washington: HUGH B. MITCHELL.

West Virginia: E. H. HEDRICK.

Wisconsin: ANDREW J. BIEMILLER.

Mr. Speaker, I ask unanimous consent at this time that the revision of my remarks, being beyond the usual limit, may be extended and appear in the Appendix of the RECORD, and that I may include therein a copy of this joint resolution.

The SPEAKER. Is there objection to the request of the gentleman from New York?

There was no objection.

The resolution is as follows:

Joint resolution to establish the Near East Survey Commission

Resolved, etc., That the purpose of this joint resolution is to provide for a comprehensive inquiry with respect to the action which it may be necessary or desirable for the United States in cooperation with the United Nations, or otherwise, to take with regard to the economic development of the States and countries in the Near East and neighboring states and countries economically interrelated therewith.

SEC. 2. (a) There is hereby established the Near East Survey Commission (in this joint resolution referred to as the "Commission").

(b) The Commission shall be composed of 15 members, as follows: Five Members of the Senate to be appointed by the President pro tempore of the Senate; five Members of the House of Representatives to be appointed by the Speaker of the House of Representatives; and five members to be appointed by the President. Any vacancy on the Commission shall not affect its powers, but shall be filled in the same manner in which the original appointment was made.

(c) The Commission shall elect a chairman from among its members. Eight members of the Commission shall constitute a quorum.

SEC. 3. Members of the Commission who are Members of Congress or officers or employees of the United States shall serve without compensation but shall be reimbursed for travel, subsistence, and other necessary expenses incurred by them in the performance of the duties vested in the Commission. Members of the Commission who are not Members of the Congress or officers or employees of the United States shall receive per diem compensation so long as they are engaged in the work of the Commission at the rate of $50 per day.

SEC. 4. The Commission shall have the power to appoint and fix the compensation of such technical, professional, and clerical personnel as it deems advisable in accordance with the civil-service laws and the Classification Act of 1923, as amended: *Provided,* That to enable the Commission to make the investigations herein provided for it is hereby authorized to employ engineers and to fix the compensation of any and all such engineers without regard to the civil-service laws or the Classification Act of 1923, as amended. The Commission shall have the same privilege of free transportation of official mail matter as granted by law to officers of the United States Government.

SEC. 5. Ninety days after the submission to the Congress of the final report provided for in section 6 (b), the Commission shall cease to exist.

SEC. 6. (a) It shall be the duty of the Commission to carry out the purposes declared in the first section of this joint resolution and to that end the Commission shall conduct full and comprehensive investigations and studies, and shall make studies, reports, and plans relating to (1) the immigration and resettlement of displaced persons and refugees, (2) the improvement of standards of living, social services, and educational opportunities, (3) the establishment and development of agricultural and industrial projects which are capable of increasing productivity and improving health and living standards, (4) the improvement of opportunities for primary and secondary education and for technical and university education, (5) the integration of all such projects with similar projects initiated or sponsored by the United Nations.

(b) The Commission shall make interim reports to the Congress from time to time, and shall make a final report which shall include recommendations for such legislation as it shall conclude to be necessary or desirable.

(c) In the performance of its duties the Commission shall cooperate with the governments or administration of the states and countries of the Near East and with the governments or administrations of such other states and countries whose economic development is interrelated with that of the countries of the Near East. The term "Near East" as used herein is defined to include, but without limitation, Egypt, Iran, Iraq, Israel, Jordan, Kuwait, Lebanon, Palestine, Saudi Arabia, Syria, Trans-jordan, Turkey, and Yemen: *Provided,* That the governments or administrations of the states and countries of the Near East shall be responsible for all authority necessary to carry out the Commission's duties in their respective states and countries and that the Commission shall visit any such states and countries only upon the invitation of the government or administration thereof: *and provided further,* That nothing contained herein is intended or shall it be construed as an express or implied commitment to provide any assistance whether in funds, commodities, or services to any state or states, country or countries.

SEC. 7. There is hereby authorized to be appropriated such sums as are necessary for the purposes of this joint resolution.

SEC. 8. (a) The principal office of the Commission shall be in the District of Columbia, but it may sit and act at such other places, whether within or without the United States, as it deems advisable. The Commission may conduct such hearings as it deems advisable, and any member of the Commission may administer oaths or affirmations to witnesses appearing before the Commission or before such member.

(b) The Commission is authorized to secure directly from any executive department, independent establishment, or instrumentality of the United States information, suggestions, estimates, and statistics for the purposes of this joint resolution; the Commission is authorized to arrange with any such executive department, independent establishment, or instrumentality of the United States for the temporary assignment to it of personnel and for the payment of the compensation and reimbursement of travel, subsistence, and other necessary expenses incurred by such personnel; and each such department, independent establishment, or instrumentality is authorized and directed to furnish such information, suggestions, estimates, and statistics directly to the Commission, upon request made by the chairman if possession of such information, suggestions, estimates, and statistics by the Commission will not endanger the common defense and security.

Mr. JAVITS. Mr. Speaker, will the gentleman yield?

Mr. MULTER. I yield.

Mr. JAVITS. I would like to state to the House that this resolution which is being introduced is bipartisan and is being introduced in the other body under bipartisan sponsorship. It is the first effort that has been made to treat the whole Middle East as a region and to deal with the conditions of suppression of disease and illiteracy there.

Socialized Medicine

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Socialized Medicine," published in the Price (Utah) Sun-Advocate of May 12, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SOCIALIZED MEDICINE

Men who like to call themselves liberals have one outstanding trait. They are always kicking and anyone who opposes their wild-eyed schemes is classed as an obstructionist or a conservative. Right now the target of this particular brand of so-called liberalism is the medical profession, and a drive is under way to make the people believe they're being denied medical attention which only the Government can provide.

Doctors have struggled for centuries to learn the secrets of keeping the human body alive and healthy. Many dread diseases have been eliminated and the span of life has been doubled in a few decades. Not so long ago appendicitis was treated with opium pills, poultices, and castor oil. The treatment was cheap but most of the patients died. Diabetics were given codeine and put on a diet, but as the obituaries read, the patient soon departed this world. Ever-growing complexity of treatment has added to the cost—as does everything which contributes to modern living.

Some liberals, whose blood pressure would have killed them long ago if a few competent physicians had not been at hand, are telling the people that the medical profession has got to do better or Uncle Sam will have to step in and take care of all their needs from the cradle to the grave at a cost of six to eight billion dollars a year to be taken out of pay checks.

Of course, private medical costs are high. So are services of skilled lawyers, architects, or engineers. But few patients ever get sued for doctor's bills. Right here in Price we know of physicians who have done thousands of dollars worth of service without ever expecting to be paid.

Socialized medicine would do no more than make the Government a bill collector for the doctors, payable in advance, with part of the money retained for bureaucratic services. Uncle Sam has no degree in medicine and medical advancement will be achieved in the future by the doctors, as it has been since the days of Hippocrates, in spite of the self-styled liberals who are trying to woo votes by making the health of the Nation a political issue.

Home Ownership Under the American Incentive System

EXTENSION OF REMARKS
OF
HON. EDITH NOURSE ROGERS
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mrs. ROGERS of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include essays written by boys and girls in the high schools in my district on the importance of private enterprise in business.

HOME OWNERSHIP UNDER THE AMERICAN INCENTIVE SYSTEM

(By Joanne Spurk, senior class, Academy of Notre Dame, Tyngsboro, Mass.)

Home ownership is a matter of predominant concern to all people in all the countries of the world. However, here in the United States of America more than anywhere else has the thrill of realizing this innate and noble dream of home ownership seen its most complete fulfillment.

To a young American like myself, the subject of home ownership is most fascinating because the choice of a home is one of the real adventures of a lifetime. That home, selected after careful consideration, will be the permanent shelter of a growing family who will share its friendly warmth and love its enduring beauty for many years.

Due to the sound economic system of free enterprise that is an integral part of our way of life, that home can be comfortable and it can be beautiful. This is because the citizens of this country have been given, to a marked degree, a greater distribution of the material wealth that gives concrete form to the spiritual urge which motivates the building of a true home.

And it is not only material wealth but also a wealth of material that has prompted the creation of more and better homes for Americans. This happy fact is primarily due to the vast natural resources with which our Nation is enriched coupled with the technical know-how of the lumber industry which is constantly striving to better the thousand and one essentials necessary to a finished home. The prospective owner, upon a visit to the warehouse of his local lumber dealer, finds his incentive to build greatly strengthened. There, displayed before his interested eye, are the components of a home. He marvels at the genius of an industry capable of producing such fine materials at such reasonable cost. His fingers thrill at the touch of the smooth flooring as he traces its delicate grain. He looks appreciatively at the exquisite workmanship of doors that would befit a castle but which serve equally as well on Main Street, U. S. A. Also there to arrest his gaze are windows, sturdily constructed and beautifully designed which will allow him to view the beauties of nature from the security of his abode. Nor can he overlook those sturdy beams, heavy studs, and colorful shingles that will all be needed. After having viewed this amazing wealth of available materials, he is ready to take advantage of the friendly service offered by his lumber dealer whose broad experience in the field of housing enables him to assist the prospective buyer in planning for the specific needs of his future home. The advice of a man, so experienced, is invaluable to the home investor. These advantages of reasonably priced, high-grade materials and consultation with men of housing background immeasurably increase the incentive to home ownership. The work of the retail lumber dealer is most indispensable to the progress of his community.

Home ownership bears many fruits. Among these is the comforting sense of security which envelops the man and his family as they place their possessions in what is indisputably their own domain. There is the opportunity of expressing his creative instincts in lending an added personal charm to his shelter that could not otherwise be achieved. Home ownership automatically places the individual in high standing for when one has such a substantial stake in the community, credit is readily available to him. This is because he is converting his money into a sound investment, of which there is no better.

The home owner, and rightly so, sees himself as a contributor to the establishment of fine communities for it is a known fact that neighborhoods which have the highest percentage of home owners are invariably ideal sections in which true Americans desire to live. It is the character of these proud and industrious citizens to promote high living standards and this is reflected in well-kept homes, fine schools, good roads, sufficient lighting and efficient water systems. Home owners bring to government a keen awareness to civic needs and in this way bring about more conscientious management of public affairs. Thus home owners and civic leaders work in unison so that better communities shall flourish wherever these groups meet on the common ground of making America great.

Yet, this very day, there are those who would destroy this splendid spirit of initiative that has prevailed since America was founded. These are the proponents of mass Government housing who would, if they could, crush the incentive for the building of individual homes. The projects which they sponsor would remove all the individuality and privacy that make a house a home. Still these ideas do have a certain appeal to that irresponsible segment of the population which regrettably can be found in any society. Federal housing caters to the weaknesses in men by asking the doers of the Nation to contribute to the support of institution-like living quarters for the shiftless element which does not have the necessary gumption to acquire, through its own efforts, the comforts of modern living. These propositions are harmful to the American ideal of independence which has predominated the thinking of our citizens since the birth of this glorious Nation and which now must not be tampered with if we are to continue as a powerful people.

As one young American, looking into the future in which all the young Americans of today will soon take their places, it is my fervent wish that we, just as our parents, will be able to share in and enjoy the benefits that swell from an economic system which stimulates incentive, recognizes ability, and rewards hard work with every material and spiritual blessing attainable to mankind.

HOME OWNERSHIP UNDER THE AMERICAN INCENTIVE SYSTEM

(By Jerome Wetmore, Westford Academy Westford, Mass.)

In the United States of America we believe that anyone who wants to get ahead may do so if he has the ambition and incentive needed. America has always given its citizens the incentive to better themselves. These ideas form what is known as the American incentive system, in which no man is barred from the top.

Now what about home ownership under this idea of the American incentive system. Figures show that 51.4 percent of the American people own their homes. This is by far the greatest record for home ownership in the world. Yet in the United States should not more people own homes? Yes, they should if they want to and have the ambition to work for home ownership. But do the people who do not own homes want to own them? Yes, basically they do. Great pride has always been taken by Americans in home ownership. Our colonial ancestors found that owning a home meant security for all the members of the family, and we have inherited their idea. Then, as this seems to lead to the fact that the American people do want to own their homes, why don't they under the American incentive system.

There are many obstacles in the path of home ownership. The main obstacle is the housing shortage and from this stems many of the other difficulties, such as high prices, and so forth. These obstacles discourage many people from working toward the goal of home ownership, especially those in the lower income brackets. They find it easier and seemingly cheaper to rent. It is claimed that this group of people lack the necessary ambition to forge ahead in this field.

There is also a second group of people in the United States that doesn't own homes but wish to. They have ambition and want to get ahead, and to them ownership is a step on the way to the top. They have the money necessary for home ownership but find none for sale.

What is to be done about the shortage of housing? The housing shortage is not new in the United States. Never has there been enough housing for the increase in population. During the depression years of the thirties, little or no housing was done simply because few families had incomes to warrant their buying homes. At that time they were content to live in unsuitable rented buildings. In the war years of 1941–45 few houses were built for the general public. In 1942 the coordinated Government housing program came into being. This was to oversee war housing which was for the Army and Navy. This shows that for a period of time, approximately 20 years, no housing to speak of was done. Not even enough to supply the old demand let alone the new.

Figures show that 47.8 percent of the American people in 1890 owned their own homes. Then interest in home ownership slowly slackened until 1940 when only 43.6 percent of the people owned their home. From 1940 to 1947 this rate increased to 51 percent. What do these figures mean? During the thirties there was very little interest in home ownership and no housing was done; then, suddenly in the forties the interest became very great, greater in fact than ever before, but still no houses were built.

What caused this great increase in the interest of home ownership? During the war for the first time, those people who had been contented under bad living conditions in the thirties found home ownership within their reach for the first time in their life.

Also the marriage rate increased and strengthened the demand for more housing. This means that we are faced with a great shortage of housing far greater than ever before. Besides the new demand created by the war there is also the demand created by those people who should and would have had houses a few years back if conditions allowed.

What are Americans doing to supply the need for housing? Many magazines and speakers have advocated public housing. What is public housing? It is subsidized housing which in turn means Government in business. In England and Russia where government has control of housing there is a far less number of houses built than in the United States. In England where the people have more rights than those in Russia there is a far greater number of homes completed than there is in Russia. If in the United States we have Government in such a great business as housing which is our second largest industry there is no doubt that it would lead to Government in other business. But even if we did have Government in the housing business would it aid the people? Public housing would mean giving homes to the needy at a far lower price than cost. Therefore it is up to the American public to pay for these homes out of their own pockets. Not only would they be paying for their own homes but for thousands of others as well. That does not seem fair to the American who has the ambition to own his home and find because of that he has to pay for other people's homes.

The Public Housing Act of 1937 states that those in the lowest income group would be the ones entitled to new homes. This has been interpreted as meaning the group that has a maximum income of $1,200 to $3,000. Not only do these people have admittance to these homes but may continue to live there with incomes up to $13,000.

The families in the United States who have received public housing have incomes averaging $2,200. Therefore, under the Housing Act of 1937 there are 20,000,000 families in the United States who are entitled to new homes. At today's cost that would be $150,000,000,000 to $200,000,000,000. A great part of that sum would have to come from the taxpayers' pocket. Even without money problems it would take a century or more to build houses for all in this group. When these houses had been produced there would be a clamoring for more subsidized housing for other income groups and in the end Government would own more than half the homes in America. This is defeating the ideas presented under the American incentive system. There will be families that have an income above the maximum set for public housing and they will try rather than raise their income to lower it so they will qualify for housing. This results in negative incentive. These families would increase the number dependent on the Government whereas before they were independent. The plan of public housing will not solve the housing situation without ill effects that would be disastrous to the American incentive system.

There is nothing to show that Government in housing can build houses faster and cheaper. In fact it is private industry that builds houses faster and cheaper. In 1946 Government controls and regulations reduced home construction to a rate of 218 per hour, whereas in the last half of 1947, when the industry was free, it produced homes at the rate of 457 per hour. For 4 months the industry broke all records for housing. This trend is continuing. In the first 4 months of 1948, 51,800 more homes were built than in the first 4 months of 1947. This proves that it is individual incentive that brings results.

We are now building houses at the rate of a million a year and it is said that if we keep up with this record for the next 10 years that we will be able to supply all demands for housing.

It would seem to me that it is necessary to supply those people that have money enough to buy their homes without aid from the Government before we supply those who need help from the Government. Why should we meet the demands for these people if they are sitting back and expecting the Government to do everything for them.

Under the American incentive system it is the people who do things themselves who get ahead, so why should we change things around and give those who lack ambition to get ahead, housing before we give it to those who are ready for housing? If we built a million a year we will be able to supply houses to those who want them enough to work for home ownership and then will be the time to think of those who do not care about bettering themselves.

If we do not do this there will not be any more American incentive system. The United States of America will become as many countries of Europe where all the common people have to live under the same conditions regardless of which has the most ambition. No American citizen should want that.

HOME OWNERSHIP UNDER THE AMERICAN INCENTIVE SYSTEM

(By Katherine Graham, Acton High School, Acton, Mass.)

One of the largest problems facing the American people today is housing. We all know this statement to be true, but exactly what is everyone doing about the housing situation? Let me tell you what they are doing.

People are reading their newspapers and talking to their neighbors about it, and the main plan of thinking seems to be "Let the Government do it." Why do people think that Government control and action is the only way out? Here is something that they all have apparently forgotten—and unless they begin remembering it, it will mean the loss of personal liberty and individual freedom—the power of Government is always a dangerous weapon in any hand.

Before there were 48 stars on our flag, thousands were arriving here from Europe. They did not come because of any high hopes they had entertained concerning "government-guaranteed securities. To them that was no panacea—they had had enough of that sort of thing. No, they came because they wanted their personal freedom. Today, we still say that we want our freedom, but along with it, we want the Government to do everything for us. Because people do not want or like individual responsibility, they are going back to the old idea of government for security. This is where Government housing versus personal home ownership enters the picture. Do the American people want to have their Government build their houses for them? Do they lack the incentive to build houses for themselves? It is easy to own your home today.

Everything is in favor of private building. Home ownership has long been held up as an ideal that everyone should aspire to. It is the mark of a stable and respected citizen to own his own home. People have more pride in homes they own than in rented houses, and the difference is apparent in the care they give their homes. Home ownership makes for settled residences, so that the owners become a part of the neighborhood and community in a sense that is not usual with temporary residents.

If a person decides to buy his own home, there are several factors to be considered. The house should be selected in a location that will improve with the years rather than deteriorate. Other factors to be considered are the proximity to employment, churches, schools, and transportation. The right time to buy should not be overlooked. Some who bought during the last inflation saw their property slowly diminishing in value before their eyes.

There are new and better products on the market every day. For example, the insulating, electrical, plumbing, heating, and ventilation systems are far better than ever before.

It has been proved that the rate of home construction is doubled by free industry. Government-operated housing projects do not work. No system has ever excelled private enterprise.

It is very apparent that our largest needs are:

1. We need better quality materials.
2. The taxes on privately owned homes should be reduced.
3. We must regulate the production per man-hour of labor.
4. We must provide loans for those who wish to build, but cannot without financial aid.
5. We need to establish a sounder and more stable economic government.

Wholesale prices of building materials in December 1948 showed the first decline in prices in 8 months. Lumber and softwood prices weakened by 8 percent. The only increases were cement, brick, and tile by 3 percent; and paint materials, plumbing, and heating by 2 percent. Totally this gives the prospective builder a saving of 3 percent.

Here are the ideas that the Department of Commerce has for shaving building costs:

First. Use lumber precut to sizes specified in the plans so that a lot of hand work will be eliminated.

Second. Put walls together on the floor, and then tip them up into position.

Third. Erect the outer walls and roof first, before beginning the inside work.

These suggestions, they claim, would save home builders up to 20 percent.

Compared with other countries, in 1946–47, the United States built 1,288,900 houses. Russia only built 564,506 houses for their homeless millions; this is 29 percent of our number; and England built 164,878 houses, 38 percent of ours. These percentages are, of course, in proportion to their size and population.

Although we should be proud of our record that we own the biggest building industry in the world; annually the American public spends $12,600,000,000 for housing. However, the same people spend $12,700,000,000 for personal care, recreation, and travel. That amounts to $100,000,000 more than is spent on any housing unit or plan. And $12,100,000 is spent each year for liquor and smoking. Still there are people wondering why they do not have sufficient money to build their homes.

Here in America, we are guaranteed nothing except life, liberty, and the right to own whatever you have honestly acquired. You can do what you please as long as you do not violate the right of others to do as they please. As it stands today, the choice rests with us as individuals. No one can tell us what to do or how to think. It is only right that we do our own thinking and acting. Others have done it before us, and America stands as a symbol of their thinking and foresight. By doing likewise, we shall set an example for those who will follow in our footsteps.

Now, with ample supplies, costs are sure to fall, and if we have enough efficient home-building financing, I think that 1949–50 will be boom years. Truly, all that the American people need now is the ambition to work and plan and save.

We should be eternally grateful that all this is made possible by the American incentive system, and that as long as Old Glory is flying in the breeze, this system will remain in power.

My sources for all statistics were as follows: Bureau of Labor Statistics, Weekly Builders Bulletin, National Retail Lumber Dealers Association, and Bill of Rights by Russell.

Multiple Sclerosis

REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. FULTON. Mr. Speaker, I would like to say to the House two alarming words—two of the most alarming words that have come up since this war has ended.

Those are the words that are used to describe the new progressive paralysis which is now hitting 300,000 in this country and particularly the veterans of the last war. That is the disease called multiple sclerosis. These two words are causing untold misery, as it is a disease with no known cure.

The most famous case of this disease, of course, was the tragic case of Lou Gehrig, of baseball fame. Another case very close to us is that of the daughter of the Senator from New Hampshire, Senator TOBEY. I have a young veteran working in my congressional district who has been stricken recently by this terrible plague, and another Senator has an office employee similarly afflicted. This disease is now attacking more young servicemen than infantile paralysis.

This disease often hits people who have been subjected to great strain, so it might happen to anyone here. It is a progressive paralysis which often results in death in from 2 to 8 years, and at best is completely crippling. Doctors have no cure for it. There has been no real research done on it. In the last year 17 separate bills have been introduced by Congressmen with reference to it. Senator TOBEY has introduced a bill this year to investigate this disease, and I am glad to have followed his leadership, among other Congressmen, in introducing in this House, a bill to combat this menace.

Changing Relations of Business to Government

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. DAVIS of Georgia. Mr. Speaker, the March 1949 issue of the magazine The Controller carried an article written by Prof. Ernst W. Swanson, a member of the faculty of the school of business administration of Emory University, Georgia.

The subject of Professor Swanson's article was "Changing Relations of Business to Government," a subject which year by year becomes more important, not only to those who are engaged in business, but also to the average citizen.

I have been impressed by the clarity with which Professor Swanson has presented some great truths in this article. One of the paragraphs of the article reads:

We are surely all agreed on the generalization that the true private-enterprise system demands that we take risks, that we act as enterprisers, not as mice. It demands that we abolish group practices of running to governments for sanctions. It demands above all that we do not abuse the privilege of acting as individuals.

Another paragraph deserving special emphasis is:

Fortunately for us, there are still many in America who want to work hard and who want to take risks of enterprise. Therefore we have not traveled the whole road to collectivistic oblivion, and we still can reverse our engines. Let those of us who see things in this fashion hang on with the grimmest of determination, and it may come that we shall again have our day.

In this day of running to the Government for everything "from the cradle to the grave" it is refreshing to read a sound, common-sense presentation of facts such as are set forth in Professor Swanson's article. I believe it is worth while for the Members of Congress and the readers of the CONGRESSIONAL RECORD to have this article in its entirety, and under leave previously granted, I insert the article herewith.

Professor Swanson received his doctor of philosophy degree from the University of Chicago. He has served on several university faculties, has been research fellow at Brookings Institution, Washington; Research Economist and Assistant Director of Economic Research, United States Chamber of Commerce, Principal Fiscal Analyst of the Bureau of the Budget, Washington. He is a prominent lecturer on public and private finance, as well as the author of numerous economic publications.

CHANGING RELATIONS OF BUSINESS TO GOVERNMENT

(By Ernst W. Swanson)

I suppose that every town has its "character." In my home town it was Ol' Man Mose. He lived long before Al Capp's creation of a character of the same name, and gained repute for one other capacity than that for consuming corn likker. In one of his more sober moments, when politics were being cussed and discussed on the court house square, Mose in a fit of exasperation spot out a stream of tobacco juice and muttered a phrase that became a local byword: "The Guvment is a dam' fool."

From that day on cussing the Government always took on the flavor of: "The Guvment is a dam' fool."

But Ol' Man Mose and others of us who so regard our Government overlook a cardinal point. In these United States we are collectively the Government. By taking Ol' Man Mose's view, whether we are businessmen, farmers, or staunch members of the CIO, we set aside our responsibility—the greatest of them all—to be and to act as members of a government which is of the people, for the people, and by the people.

Today, more than ever, we are losing sight of this fundamental principle of democratic society. We are letting ourselves believe that our world is becoming so complex that we must leave government to the expert.

But in a democracy we dare not let this become our way. Indeed, that view is sheer folly, for by adopting it we deny the possibility of democratic society. What is even more pertinent for our purpose, we thus foster developments which are destined to make society complex.

Our Government cannot be made to rest on the view that there are people who know the right answers to our social and economic problems. In democracy no one knows the right answer. Solutions to such problems can come only from discussion of them by all. The experts, the right answer boys, may submit their conclusions but in the end their views can only be compounded with the others to derive the solution. No one group, no one individual provides the solution.

It is, moreover, essential to understand that the truly free enterprise system cannot survive under conditions other than those of free discussion of issues.

But then how did we come to turn to Government, to the "right answer" boys? That is a long story. I shall try to outline it as briefly as possible.

The American Revolution was in a large sense the fruition of the awakening and the rise of the western world. The eighteenth century brought into bloom the age of enlightenment and liberalism. The seeds were transplanted with the colonists into American soil and there the flower grew as it had not grown nor would grow in England, France, and Scotland, where the species originated. America provided the ideal soil. It was the soil of the truly democratic view, of a fertility that came from the general exchange of views and ideas and not from dependence upon authority.

A new social order flourished and that social order created the competitive private enterprise economy for the organization of production and the economic well-being of the individual, who then truly became an individual, not a yeoman, a villein, or a townsman, but a member of a democratic society.

True, the man who gave us the philosophy was a European, Adam Smith, a Scottish professor of moral philosophy who had studied in France. Yet his thinking was far more attuned to the New World than to the Old, and in the New World its tap roots grew deep.

Adam Smith stated a fundamental relation of business to government. It would be wrong to contend, as some did, that he sought complete freedom of business from government or that he would put government into the hands of business or any other producer group. Rather government and business should stand in such relation to each other that government insures the nearest thing possible to competition among producers and sellers of goods for the money of the consumer and for labor and capital.

Government's role was to be not that of Santa Clause, but the policeman who saw to it that the rules of competition were followed by all. No one would be permitted such powers as would significantly affect the prices of goods and services. No one was to be permitted to abuse the sanctions given him, when sanctions were necessary. There would be freedom of investment, of job, and of choice among the many goods produced by competing firms and industries. But that freedom could not be anarchistic, nor could it be a freedom to take from others by preventing the operation of the market-price structure.

To be sure, England looked quite early to the new philosophy. There, in the search for wider and wider markets, the factory owners were bursting at the seams to get away from the heavy hand of government. They wanted laissez faire—to be let alone. The new philosophy appeared to them most apropos.

But they never really did adopt the philosophy as Adam Smith had stated it. They took such portions of it as were convenient for their purpose. It was this defection which helps explain what is happening in England today. Let us therefore fasten our attention upon the English experiment. It may teach us much.

The factory owners and financiers sought rights which would permit them to act on

their own account. Government interference was reduced to a minimum so that factory owners and others could pursue their own interests. It was wrongly presumed that these interests, while selfish, would carry with them sufficient reason to prevent the abuse of the rights granted.

Nothing was really said about the obverse to such rights, the responsibility that was coequal with the rights. It was ignored that no society can grant rights to anyone without exacting from him responsibilities which prevent his abuse of the rights and remain an organized society. Instead the English people granted individuals powers such as no government ever before had done. The abuse of the powers, moreover, was most unconscionable.

The factories, the mines, and much of industry in general shortly made virtual serfs of the working men, women, and children. They were worked long hours. They were fed barely enough to keep body and soul together. The conditions under which they lived were described as "animal-like."

Worse, children 8, 9, and 10 years of age were chained together to drag coal trucks out of mine shafts so narrow that few adults could squeeze through them. Many died before they reached adolescence, and not many of the survivors reached maturity with a body fit to cope with the rigors of the new industrial world.

Such were the beginnings of enterprise economy and industrialism in England. And to what purpose? To provide "cheap labor."

The concept of competition taken over by the English factory owners was not the competition of finding the best process of manufacture but the cheapest possible labor. Mind you, laws were enacted to insure continuing sources of cheap labor supply. There was absolutely no understanding that cheap labor would eventually become truly cheap by its bespoiling.

After a time England sadly learned the folly of its ways. Working conditions were improved and wages were raised, but only after a severe toll upon manpower.

But England never did awaken to the truth that competition is not a struggle to see who could gain the greatest advantage through the abuse of the free enterprise privilege. After closing the chapter on the abuse of labor, English factory owners sought to prevent the operation of the price-market structure through trade agreements, price control, and cartelistic practices. Had it not been for her necessity to practice free trade so that there might be adequate imports of raw materials, England would long ago have passed into the limbo of the highly collectivistic economy. Free trade forced a measure of competition upon its industries.

The First World War broke the industrial back of England. Rigged prices and cartel-controlled markets and sales had become fairly general. Prices had gone up during the war and because of the monopolistic controls did not decline much after the war. By that time, too, the trade-unions had become quite powerful and they added to the price floors by putting in wage floors and raising the ceilings on wages.

England's chickens had come home to roost. Had there not been the early abuse of labor, it is doubtful that there would have been nation-wide trade-unions. Had it not been for the misbegotten philosophy of looking for advantages rather than for low-cost production, there would never have been reason for unions to seek wage control. Prices and wages would have been set in the competitive market. But it was inevitable, under the practices pursued, that both wages and prices of goods should be put on a political basis. And England priced itself out of the world markets.

Norman Douglas, in his then contemporary novel, South Wind, described the British as a people who were largely concerned with the preservation of a measly 2 percent on their investments, rather than with things that really mattered. They were blind to the folly of their ways; on nearly all sides they sought security for security's sake alone.

By the middle of the 1920's England was coping with extensive permanent underemployment. Hers had become a very sick economy. In spite of our efforts to aid, it remained sick until the Second World War began to make itself heard in No. 10 Downing Street.

What has happened since then I need not review. I do want to observe that—as Jacob Viner, one of America's great economists, not long ago remarked—England today is a case of a country which has pursued security to to the point where it is paradoxically an overpopulated country, suffering from a scarcity of labor.

In seeking to preserve their 2 percent, the English came to expand less and less their capital and they failed to adopt new ways of production. They preferred to sit on what they had but, in sitting, they began to consume what they did have.

It is, then, unavoidable that labor is scarce, because more and more men had to be moved into the government to find the answers to the many problems which arose simply and solely from the fact that security was preferred—and because there are too many doing the work that one should be doing. Capitalism of its own accord turned into socialism. (I have been told by an English economist of orthodox private enterprise faith that there were businessmen in England who actually welcomed the socialist government. They were then able to get out from under the mess which they had helped create, but which they were unable to recognize as their own creation until after the event.)

We thus find a moral in England's case: Let anyone seek security against the change which the private enterprise system must bring if it is to remain highly productive, and we soon shall all be seeking to escape from security itself.

To seek security is to turn to the government for right answers—but to turn to others than ourselves for the solutions to problems means the substitution of authority for democratic discussion.

England permitted industrialism to become a social evil. Today the ghost of Karl Marx hovers above, happily and ghastly content.

Certainly, you will remark, we here have not carried the abuse of the competitive principle to the point that the English did. We never treated labor in the same fashion. Nor is big business necessarily an indicator of monopoly, price-rigging, or other follies against private enterprise.

For the sake of argument let us concede the point. Nevertheless I am worried that we have taken steps in the same direction. Consider, for example, the passage of so-called fair-competition laws; they are actually designed to preserve the status quo rather than to spur business on to a bigger and better future. Is not that the first step?

As an adjunct, we seek protection of our industries against foreign trade and foreign cheap labor through increased agitation, by business and labor both, of tariffs that are far removed from the purpose of merely raising revenues. We really want to take fewer and fewer risks. Consider how we clamor for the blue-chip stocks and yell for the control of security issues and the stock exchanges—still another step away from the risk-taking of private enterprise.

Do we not also advocate and provide price supports of a number of agricultural commodities? It does seem reasonable to suggest that supports are a long step in the direction of turning to the "right-answer" boys. Do we not, moreover, seek guaranties of employment and wages—without the responsibility on the part of labor for maintaining an increasing production and productivity? For those purposes we advocate and enact laws to give us bigger and better unions and full employment and social security. The late Henry Simons termed this purpose the drift toward labor syndicalism.

I honestly believe that these are the facts of life, that our drift toward the collectivism of the English is upon us. The joker of it all is that we are being forced to do so because we took the very first steps. Never once should we have gotten on the road; it then became inevitable that others should become advocates of security.

What is really puzzling about these developments is: Why did it happen in America? Why has the competitive spirit been laid low in some segments of our great economy? We were going along beautifully until the close of the 1920's and then we did a reverse.

Some blame it on the First World War. We had to drop competition because after the war no other countries of any size remained truly competitive. Yet why should such circumstance affect us at home?

Others blame it upon economic stagnation. But we can argue with equal validity that it was the reversal of our competitive spirit which brought stagnation—certainly, the great depression.

My position is that for the most part we have become careless, just as did the English, in the assumption of risks of enterprise but in a different way and at a later date. We thought that the transfer of some risks to government would actually mean their elimination. Thus the suddenness of many of our technological developments and the search for expanding markets brought us increasing uncertainty. We hoped that the government could reduce the impact of these changes, and soon we were trying to transfer other risks. It was only natural that government turned to the "right answer" boys in its effort to meet this new demand upon it.

I'll let you take the argument from there.

Understand that what I offer is a proposition, not a conclusion, for I have not provided full supporting evidence. At least we may agree that by turning to government and the "right answer" boys we depart from the competitive spirit. But if we admit that much do we not concede the remainder of the argument?

We are surely all agreed on the generalization that the true private enterprise system demands that we take risks, that we act as enterprisers, not as mice. It demands that we abolish group practices of running to governments for sanctions. It demands above all that we do not abuse the privilege of acting as individuals.

If we can relearn those simple but most essential principles, we can save our industrial economy from going completely into collectivism. Going to government for handouts is the essence of collectivism, whatever name it goes by.

The one thing which we learn through the study of economics is: No economy can lift itself by its bootstraps. Laws to bring security against change, whosoever makes them, will not in themselves prove fruitful, for they in themselves cannot increase production and productivity. That is a most essential fact of life.

Fortunately for us, there are still many in America who want to work hard and who want to take risks of enterprise. Therefore we have not traveled the whole road to collectivistic oblivion, and we still can reverse our engines. Let those of us who see things in this fashion hang on with the grimmest of determination, and it may come that we shall again have our day.

I'll admit that there are times when I get pessimistic, but I go on placing my faith in Americans, that they will again see the issues in their proper light and go back to the solutions gained from joint discussion of issues and not from the right-answer boys.

Today we may not know what we want but we're willing to go to hell to get it; but tomorrow we may find out what we were looking for all along—that we are again willing to assume our responsibilities as individuals, whether we be consumers, investors, workers, or enterprise.

How About an Arizona-California Compact?

EXTENSION OF REMARKS
OF
HON. JOHN R. MURDOCK
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. MURDOCK. Mr. Speaker, in their dispute over sharing Colorado River water why do not Arizona and California work out a compact which would effect a settlement of the claims of each? It is my contention that the two States have already made such a compact. My contention is based, as will be explained presently, on certain legislative agreements which constitute this compact, and which are binding upon all parties.

There are two kinds of interstate compacts known to our American practice, one being a negotiated compact to which Congress gives its approval and the other being a legislative compact which, under certain conditions, is equally effective. The existing, binding compact between Arizona and California is of the latter class, it being a legislative compact. It is nonetheless binding, because the essential elements of the agreements were adopted by the acts of both State legislatures of these two sovereign States. While our Public Lands Committee has recently approved several interstate compacts during the present session of Congress, indicating that our committee certainly thinks well of such negotiated compact settlements, yet me must not deceive ourselves that such is the only kind of compact.

Binding Arizona and California is a legislative compact which is just as binding as the other kind. This divides the water apportioned to the lower basin by article III, subsection (a), of the Santa Fe compact. Now article III (a) apportions 7,500,000 acre-feet of water to the three States of the lower basin—namely, Arizona, California, and Nevada. What does this binding law contemplate?

There is no question but that the basic compact provided that 7,500,000 acre-feet of water shall be delivered annually to the lower basin at Lee Ferry for use in those three States. Undoubtedly Congress intended that Arizona, California, and Nevada should get together immediately after 1922—the year the compact was drawn—and agree upon a proper division of that water thus apportioned to them in perpetuity by the Santa Fe compact. Saying nothing about who is to blame for their not getting together in agreement during the following 6 years, I will state the fact that they did not work out a negotiated compact, although many conferences were held. The opening question in this statement, then, applies to a negotiated compact which has never been worked out and implies a lack of knowledge of the existence of one of another kind. One answer to that question is that since 1944 such a negotiated compact is unnecessary, for we have an equally binding legislative compact which I will now explain.

Six years passed after the basic compact was unanimously signed, and seeing that the three States of the lower basin were probably not going to arrive at a negotiated compact, the Congress took a hand in the matter in the passage of the Boulder Canyon Project Act of 1928. Since this act of Congress was intended largely for the benefit of California, Congress in its wisdom saw the need not only of legislating for California but also in protecting the future of the other basin States. Therefore, this great act conferring tremendous benefits upon California also imposed conditions upon California for the protection of her neighboring States in the basin.

The two parts of the act which imposed those conditions are: First, that California must, as a condition precedent, limit her maximum use of water from the 7,500,000 acre-feet of the III (a) main stream apportioned water to 4,400,000 acre-feet; and second, that California should recognize that Arizona was to receive 2,800,000 acre-feet of apportioned water out of the water to be delivered at Lee Ferry; and that Nevada was to receive 300,000 acre-feet of the same. Thus, the Boulder Canyon Project Act, which is the first great act of Congress making a legislative beginning on the Colorado River development, aimed to help California and at the same time to protect the future of the younger States whose utilization of the water might be years in the future.

This was an exceedingly wise provision so that the fast-growing and powerful State of California could not get all, or too much above a rightful share, of the river in her rapid development. The Legislature of California accepted the terms of the congressional act by the act of her legislature on March 4, 1929, known as the California Self-Limitation Act. This was declared to be an irrevocable covenant between the State of California and the United States Government for the protection of Arizona and the other six basin States named in alphabetical order. The California act, in accepting the conditions imposed in the congressional Boulder Canyon Project Act, used the very language of the congressional enactment, thus showing plainly that it was the intention of the sovereign State of California to enter into this irrevocable covenant for the protection of the other basin States on the terms laid down by Congress.

Arizona brought along her end of the bargain toward agreement by two acts of her legislature. It was in 1944 when Arizona ratified the Santa Fe Compact and at the same time entered into a contract with the Secretary of the Interior for Arizona's share, namely, 2,800,000 acre-feet of water out of Lake Mead on the main stream of the Colorado River. Nevada likewise entered into contract with the Secretary of the Interior for 300,000 acre-feet of water, which everybody understood to be her quota of water apportioned to her in perpetuity. These various statutes and contracts by California, Arizona, and Nevada are acts of sovereign States and are binding in the same way as if all were imbedded in a compact signed by all three. Arizona has accepted the congressional terms of settlement and California has also accepted the terms of congressional settlement.

Rural Electrification Administration

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. BRYSON. Mr. Speaker, the Rural Electrification Administration has just celebrated its fourteenth birthday. It is astounding to know of the progress that has been made toward lighting up the rural sections of our country during this comparative short time. I was amazed to learn that certain other countries, including Japan, had made electricity available to more of their people before the recent war than we have even to this day.

We congratulate the Rural Electrification Administration on its outstanding accomplishments but must resolve to accelerate this vital service needed to lift the burdens from both man and beast.

The Honorable Harry Slattery, former Administrator of REA and former Under Secretary of the Interior, a native of my district, spoke at the recent annual dinner meeting of the REA. I include his address together with a copy of a letter dated April 16, 1949, which the President addressed to the Honorable Claude R. Wickard, the present Administrator.

ADDRESS BY HON. HARRY SLATTERY, FORMER REA ADMINISTRATOR AND FORMER UNDER SECRETARY OF THE INTERIOR

The initials REA have now become known Nation-wide. It means much to many people throughout this Nation, especially in rural America. I know a story about the initials REA that I think has some significance. When I was with the REA 1 year I made a trip to my native State of South Carolina. We were looking at the new rural REA lines around Walterboro in the coastal country, not far from the country known amusingly as Hell Hole swamp. One Saturday afternoon we stopped at a cross-road store to get some gas and a coke. The superintendent of the REA cooperative who was along in the car said, "Mr. Slattery these boys here at the store want to ask you a question to settle an argument." Up stepped an enormous fellow, a spokesman for the group that had assembled, and he said, "Captain, we wants you to settle this question. Some says one thing and I say another. I says these little silver markers on the REA poles—R-E-A—stands for 'Roosevelt Electric Association' and others."

The REA co-ops in Topeka, Kans., once held a meeting at the Jay Hawker Hotel. The principal guest was Sir Ronald and Lady Lindsey, the British Ambassador and his wife. They were making an auto trip in the Midwest, coming out from Washington through Ohio, Indiana, Missouri, and Kansas. He made a talk and said this: "When

I came through this country I observed the signs reading 'Watch the Fords Go By,' but after traveling these many miles I think the slogan should read 'Watch the REA Poles Go By.' "

REA symbols on these poles have in every State meant a lot to the rural people. They have meant a new farm life through the blessings of electricity.

When the war came after Pearl Harbor we had to curtail much of REA, including the markers on the poles, because everything was aimed at the reduction of strategic materials down to even the aluminum markers for war purposes, so we then ceased marking REA poles with the little symbols. Many of you here tonight may recall the fake alarm from Texas—that we were hoarding copper wire in the cotton fields—and I have always believed that this was the fine Italian hands of the Texas Power & Light publicity boys. Of course, as you say in Texas, it was a copper-riveted damn lie.

Now, I am coming to my point. I want to ask the Administrator, Mr. Wickard, to resume the wide marking of the REA poles with the symbols REA—either aluminum, copper, ceramics, or what have you. It has a mighty good pulling publicity point and an appealing power, and much good in it. I noticed in South Carolina in my native heath, around Greenville, Pickens, and Spartanburg Counties, last year that while before the fine Blue Ridge Cooperative organization had markers with the recent new plans, they are not marked. Mighty good can come from these markers. I can recall once when in Texas for the dedication of the Buchanan Dam—traveling from Fort Worth to the dam by auto, in Senator LYNDON JOHNSON'S district, we lost our way at night, but finally the REA signs showed up, and we knew we were near our dam. REA symbols often point the way that I know.

This might be called conservation week in Washington. This REA birthday meeting tonight—and now the 3 days' conference of the National Emergency Conference on Resources, May 12, 13, and 14. It is significant for the great White House Conference of Governors under Theodore Roosevelt to launch the conservation was begun on that day, May 6, 1908. It may interest you to know that the word "conservation" was coined by my old chief and friend, Gifford Pinchot, who was a prime leader in the resource movement. He had been horseback riding with Overton W. Price, associate forester in the nearby Virginia hills. They were working on the coming conference, tieing in the various plans for forestry, irrigation, waterways, and mineral resources. The name came to Pinchot, "conservation" as the significant one—and he carried it to Theodore Roosevelt—and T. R. with his quick mind for names, said "conservation it will be"—and it was—so that is how the name "conservation" was born.

Many of you will recall Gifford Pinchot spoke at our REA sixth annual birthday dinner, April 18, 1941—and other speakers were Speaker Sam Rayburn, Mrs. Franklin D. Roosevelt, Senator George Norris, Congressmen John Rankin and Clarence Cannon, and Secretary Wickard. Pinchot then said:

"You members of the REA are bound together not only by a great common purpose of vast importance to the Nation—you are bound together also by a common enemy—an enemy whose effort to break down your great work is a most dangerous part of the efforts of monopolies to control this country. You are organizing against power, the power of the people against the power of electricity.

"You are doing it in the cooperative way. And cooperation in my opinion has a future in this country which it would be almost foolish now to attempt to describe."

The National Emergency Conference on Resources which begins at 9:30 tomorrow morning in the Interior Department auditorium will be headed by the first Administrator of REA, the highly respected and regarded Morris L. Cooke. And Mr. Administrator, to show him respect, why not ask the members of the REA to attend this meeting? And they will get much from the meeting.

The rural electrification movement and the conservation movement have both gone far under the leadership of men like Franklin D. Roosevelt, George Norris, Gifford Pinchot, Sam Rayburn, and Harry Truman. All you faithful and loyal men and women here tonight under the leadership of Secretary Brannan and Administrator Claude Wickard, together with his aides have made a notable contribution—and his aides are these: Deputy Administrator, William J. Neal; Assistant Administrator, George W. Haggard; Arthur W. Gerthm, Chief, Application and Loans; Frank A. Dawes, Chief, Management Division; James B. McCurley, Chief, Power Division; Joseph F. Marion, Chief, Finance Division; Joseph Edward O'Brien, Chief, Technical Division; Kermit O. Overby, Chief, Information Division; John W. Asher, Personnel Division; John W. Scott, Chief, Administrative Division; K. Wilde Blackburn, Associate Solicitor—and many others, like Dr. Harlow S. Persons, Bob Beale, Alayn Walters, and Franklin K. Wood.

And there should be added all the hosts of co-op workers, in every section of the Union—plus the earnest group under the generalship of Clyde Ellis and his national organization who have become valiant workers for REA.

The friends of REA everywhere wish you many happy returns!

THE WHITE HOUSE,
Washington, April 16, 1949.

Hon. CLAUDE R. WICKARD,
Administrator, Rural Electrification Administration, Department of Agriculture, Washington, D. C.

DEAR MR. WICKARD: Please convey my greetings to the REA staff on the occasion of the agency's fourteenth anniversary. All are to be congratulated on the splendid progress that has been made in bringing electricity to rural people on an area-wide basis.

In developing and extending your program during the past year, you frequently have been faced with the difficulty of obtaining adequate sources of electric power at rates the people can afford. Your problem in that regard is, of course, part of the Nation's problem. We can leave no stone unturned in our efforts to develop to the utmost all existing facilities for producing electric energy and making it readily available not only to those served by the rural electric cooperatives but to all of our people.

Perhaps one of the most striking things about the REA program is the pattern which it has set for extending to our countryside the facilities for better living so common to most urban dwellers. The program has resulted in a new and most effective pattern showing how Government can help the people to help themselves.

Very sincerely yours,

HARRY S. TRUMAN.

Governor Lee, of Utah

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mr. WATKINS. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Answer to Taxpayer's Prayer?" published in the Omaha Daily Journal Stockman of April 25, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ANSWER TO TAXPAYER'S PRAYER?

From this distance Governor Lee, of Utah, appears to be the answer to the taxpayer's prayer. He was elected on economy pledges, and much to the surprise of everybody is setting out to make good on them, slashing spending wherever he can, and in opposition to the legislature with which he has to work. So, according to report, he is in wrong with the job holders, with the farmers, with labor, and with suppliers of materials on State contracts, sundry of whom declare that they will get him come another election. He just goes on his serene economy path, and gives his detractors the "hoss laff," declaring that he is not even interested in a second term. What the country needs is more administrators not interested in a second term. But it will be interesting, and most disconcerting to the spenders, if it turns out that the road to political preferment is paved with economy, and it just might.

Unity for Atlantic Pact Shown by Votes in Two European Nations

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following editorial which appeared in the Brooklyn Eagle of May 16, 1949:

UNITY FOR ATLANTIC PACT SHOWN BY VOTES IN TWO EUROPEAN NATIONS

The vote in the House of Commons for ratification of the North Atlantic Treaty and the result in the Belgian Senate are impressive as evidences of the unity of the people of these two nations in support of this alliance as a means of preserving the integrity and the freedom of their respective nations.

Votes in the two governing bodies were significant, too, as reflecting the character and the source of the opposition to the treaty. In the House of Commons the vote was 333 to 6, the negative votes having been cast by 2 Communists, 2 Laborites, and 2 left-wing Laborites who have been expelled by the Labor Party. In the Belgian Senate 127 votes were cast for ratification and 13 in opposition.

Abroad, as well as in the United States, the opponents of the North Atlantic Treaty are recruited in the main from those who are quite unashamed in their loyalty to Russia. This circumstance should have the effect of intensifiying sentiment in its support and hastening affirmative action by the United States Senate, where the question of ratification is pending.

Surely, the testimony of Mr. Dennis, the acknowledged leader of the Communist Party in this country, and of Mr. Wallace, who finds so much in the policies of his own Government to condemn and so much in those of Russia to defend, strengthens the case for speedy ratification.

Moscow's hostility was explained in indisputable terms by Foreign Secretary Bevin, speaking for approval. Those nations adhering to the pact can no longer be considered as weak, divided nations, dependent upon their own limited resources. They cannot be singled out for destruction one at a time,

depriving a potential aggressor of an advantage the Nazis enjoyed when they set forth to conquer Europe.

This alliance has enabled like-minded neighborly people, whose institutions have been marked down for destruction, as Mr. Bevin has described them, to get together. Their union is disheartening to the forces whose designs call for conquest.

Businessmen Take Rosy Peek at Future

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. SABATH. Mr. Speaker, under leave to extend my remarks, I insert an article in the RECORD which was published in the Chicago Daily News on May 3, 1949. This article resubstantiates my statements in yesterday's RECORD to the effect that businessmen are taking a rosy peek at the future.

BUSINESSMEN TAKE ROSY PEEK AT FUTURE
(By Paul R. Leach)

WASHINGTON.—Sure, they have troubles. Businessmen always have 'em. But delegates to the thirty-seventh annual meeting of the United States Chamber of Commerce say on the whole business is good, and looking up.

Among their principal worries are what Congress might do to them. New taxes, they say, will set them back. So the "regimentation" legislation President Truman wants. Cotton and wool textiles are the main industrial worry.

The farm States are not enthusiastic about Agriculture Secretary Brannan's plan to subsidize prices and make 'em lower for consumers at the same time, the businessmen say.

Several delegates declare "we've had our recession, it seems. It is leveling off well."

Here is a hop, skip, and jump across the country on interviews with regional chamber of commerce officials, men whose business it is to keep a finger on the pulse of business:

James H. Lucas, Pittsfield, Mass.: "On the whole business in New England is good. Retail slowed down for awhile but is picking up. The textile industry is having trouble but it is not serious yet. The General Electric Co. in my city has gone on a 4-day week but is not laying off anybody. It is spreading the work. New England is holding its own."

Donald Marcellus, New York City: "The northeastern region, for the long pull, is definitely sound. Textile employment is a problem at the moment; it remains to be seen how that works out. The Northeastern States are well mobilized to maintain a competitive standing."

Walter T. Brown, Empire State Association: "New York City and State are picking up in retail sales and employment. Business complains it is overtaxed. We are making a survey this summer to see if we can't recommend to Governor Dewey a different or reduced tax base."

Spencer Shaw, Chicago: "The north central area has had a little recession but is on the way up now. I think it is quite a stable picture. People don't have as much money as they did a couple of years ago, there's not as much buying, people are more conservative. It's a buyer's market now, and business is adjusting to it."

L. P. Dickie, Atlanta: "Business is fine in the southeastern section. Businessmen are adjusting themselves to a buyer's market."

H. Hodson Lewis, Dallas: "We're pretty happy generally. Merchants have found that the free spending days are over. We're going to have a buster of a wheat crop. Pay-roll income is increasing with new branch plants."

J. B. Pratt, Minneapolis: "Farm prices are off in the Northwest and there is some worry. Crop prospects are fine, but we need more rain. Employment is holding up well and retail business is good."

William E. Hammond, San Francisco: "The Western States are in pretty fair condition. There has been some falling off in business and employment but nothing serious as yet. All business indications, while under the immediate postwar period, are well above those of 1939."

Address Before Pilgrims Society of Hon. Frederic R. Coudert, Jr., of New York

EXTENSION OF REMARKS
OF
HON. FREDERIC R. COUDERT, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks, I include a speech delivered by me at the annual meeting of the Pilgrims Society in New York on January 26, 1949:

Mr. President, Bishop Manning, distinguished guests who represent Great Britain, and our great neighbor to the north, Canada, and fellow Pilgrims, it is a great privilege, gentlemen, rather a frightening privilege, to stand on this platform in the place of the great Pilgrims that have stood here before. I think of one in particular who, on innumerable occasions, has graced these meetings, one who was a friend of my grandfather, who was a trustee of Columbia, a friend of my father who is still an active trustee, and I am proud to say in later days a friend of mine. I refer to our great friend whose voice was so long the leading beacon in this community, Nicholas Murray Butler.

The fact that I am here, however, my friends, gives me no delusions of grandeur. I strongly suspect that I stand in loco parentis of a parental vice president who was probably scheduled for this job. As a matter of fact, I would only be too glad to stand in his shoes, or perhaps I should say bathing trunks, at this very moment because he is happily gamboling on the sands of Florida and I should like very much to be with him. But if I can't be with him and if I have to be in New York on this unpleasant, rainy day, I can think of no better company than the company of my fellow Pilgrims.

The Pilgrim Society was founded to promote friendly relations between the English-speaking peoples. These relations have been unique in history. Since the Treaty of Ghent, Anglo-American peace has been maintained despite important and difficult problems which have arisen to plague our friendly relations—the Alabama, the Bering Sea and the Fisheries' Arbitrations, the Venezuela and Canadian boundaries controversies. It so happens that my grandfather was a representative of the United States on the Bering Sea Commission and on the Venezuelan Commission. I happened to serve in an American Division in 1917 and 1918 that was under British command, and, furthermore, I happened to vote for the Marshall plan last year. Therefore, so far as the Coudert tribe is concerned, we have a long record of Anglo-American cooperation. We are really Pilgrims.

Since 1917 the English-speaking peoples have stood shoulder to shoulder in active cooperation, in peace and in war, for the common purpose of resistance to aggression and the settlement of international controversies through diplomacy and law.

Today we stand united in defense of western civilization against an onrushing communism that knows no law but that of force and international class struggle. If that form of aggression, internal and external, should be successful, it would rob mankind of the efforts made through so many generations to achieve the reign of liberty and law.

Doubtless a long, rough road lies ahead, but we have faith in our cause and in our combined strength.

Our capacity for cooperation has been the result of a common background of ideas, largely born in Britain, transplanted and fostered on the virgin soil of America—liberty under law, the freedoms of worship, speech and assembly, security of person and property, trial by jury, representative government, and all those great guarantees embedded in our own Bill or Rights.

It is impossible to speak of anything before the Pilgrims that will be more than a postscript to earlier observations of Pilgrims' sages. In three of Dr. Butler's last addresses his theme was the industrial civil war menacing free institutions in the United States. He referred, of course, to the ever-swelling power of labor unions as a threat to the equilibrium under law so vital to survival of democracy. After his last speech in 1946, there was a fitting postscript in the form of the Taft-Hartley law, passed by an unjustly maligned Congress, of which I happened to be a Member. Now a brief 2 years later a post-postscript appears in the offing—repeal or emasculation of that law. Such action would put the country back where it was in 1946, wholly at the mercy of such labor leaders as might choose to exercise their great power without regard to the public welfare. Surely we cannot have forgotten certain of the strikes which threatened the very life of the people of the country as in coal, railroads, and shipping. A sure way to destroy free government is to permit the existence of groups within the community strong enough to successfully defy government itself and to hold the community to ransom. The Taft-Hartley law was an honest attempt to bring organized labor fairly within the law, as are other citizens. If these organizations are again freed from all orderly restraints, it will be a sad day indeed for America.

Maintenance of orderly labor relations within the framework of fair and equitable laws is essential to the survival of a free democracy. No person or group must be allowed to rise above the law.

For my own part, humble as is that of a minority Member of this Congress, I shall resist all efforts to weaken the Taft-Hartley law.

Failure successfully to integrate organized labor within the American democratic system of law is not the only way for Americans to lose their precious liberties—liberties are so easily taken for granted. The radical changes which have taken place in the past 3 years in Britain should warn us against taking too much for granted.

Superficially, at least, nationalization of major activities from steel making to the practice of medicine does not seem like free economy. And dressing bartenders in taverns in the livery of civil servants does not look like an extension of the liberties of the subject. Nor, I imagine, will it improve the taste of the beer. While, of course, that nationalization is Britain's own problem, I certainly hope that example is not going to

be contagious and I agree with former Ambassador Gerard, speaking before the Pilgrims in 1948, when he stated that "Nationalization can have no place in our economic vocabulary." Nationalization, of course, means the end of economic freedom and the substitution of a totalitarian economy. I have always supposed that economic freedom was the very foundation of individual liberties which could not live without it. Paper guaranties of liberties cannot be very convincing in the face of complete government control of the necessities of daily life. The power to deny a ration card is more persuasive than any constitutional guaranty of free speech. I hope indeed that our own United States is not going to embark upon the primrose path leads to statism. But we have in recent years moved far in that direction.

The American people, I am confident, would not knowingly surrender their liberties for the deceptively seductive mess of false security offered by totalitarianism. If the issue were squarely posed, there would be no doubt of the outcome. There would be instant and resounding repudiation.

There is, however, a very effective, though indirect, road to the same end. A people can unwittingly or recklessly spend themselves into bankruptcy and totalitarianism. There lies the danger to America.

No matter how worthy or appealing objectives may be, they cannot be attained by driving to the breaking point the dynamic free economy which has built this great country. No Government economy can match in production a free economy like our own, but it can and it invariably does suppress all personal liberty.

The United States is attempting to rebuild a shattered world and at the same time to rebuild a home establishment that has suffered from the neglect and postponements of war. Either assignment alone would be a large order. To attempt both at the same time without great restraint or too rapidly would be to court disaster. The survival of our essential liberties is dependent upon maintenance of a healthy, free economy. That demands restraint in public spending with its attendant inflation and taxation.

Americans are in substantial agreement upon ultimate objectives. We all want peace in the world. We all want to see a progressively higher standard of life for all Americans at home. But to wreck the free, productive economy by imposing unbearable burdens upon it will accomplish neither.

Aid to the world—yes, but within the limits of our means. Federal spending for various programs of domestic reconstruction—yes, but again only so far as the economy can stand it. Americans would like to see better and more housing, better and more schools, better and more hospitals, but let us not forget that the only sure source of these good things is the freely, productive economy that has made the United States what it is; that production alone can provide the goods and services necessary.

No one can surely say how much spending and taxation the Nation can safely endure over a long period. My own guess is that we cannot now stand any increase in taxation and that the Government should be forced to live within its present income [applause] and very soon, indeed, plan to reduce all along the line. The Franklin D. Roosevelt of 1933 understood these things very clearly and did not hesitate to say so. Listen to him for a moment. Many of you will remember it, but I am frank to say I had forgotten it until I looked over some of the old speeches:

"Too often in recent history liberal governments have been wrecked on the rocks of loose, fiscal policy. We must avoid this danger.

"All the costs of local, State, and National Governments must be reduced without fear and without favor. Unless the people through unified action arise and take charge of their Government, they will find that their Government has taken charge of them. Independence and liberty will be gone and the general public will find itself in a condition of servitude to aggressive, organized, and selfish minorities.

"For upon the financial stability of the United States Government depends the stability of trade and employment and of the entire banking, saving, and insurance system of the country."

Gentlemen, that is not a humble minority member of the Eighty-first Congress speaking. That is the President of the United States, elected in November 1932, Franklin D. Roosevelt. What he said then was true then, and it was never as true as it is today.

Just think for a moment, in 1933, when those words were uttered, the Federal budget was in the neighborhood of $5,000,000,000, representing an insignificant proportion of the total national income. And yet today the total Federal budget plus local budgets are in excess of one-third of the total income of the people of the United States. If President Roosevelt's view was right in 1932, good heavens, how right it must be now. We have gone a long way since 1933.

The budget message of January 10, which is only the first installment of the 1950 demands, makes it abundantly clear that we now stand at the crossroads. If we cannot soon reduce national spending, it may be too late to avert disaster. We can expect very little help from the new Congress, certainly not from the House. Rank and file Members of Congress are largely spenders. That is not surprising. Some 104 Members of the present House were elected by very narrow margins. They are naturally sensitive to the demands of pressure groups.

Heretofore the Appropriations Committee of the House has been relied upon to act as a wholesome and necessary brake upon these spending proclivities. In earlier Congresses the committee acted with surprisingly little regard for party politics. The members of the committee stood largely shoulder to shoulder whether Democratic or Republican. In a great many cases the appropriation bills came out of a unanimous committee. As a result, this committee has in the past saved untold billions of taxpayers' money and exposed enormous losses resulting from bureaucratic incompetence, such as the $8,000,000,000 for which the Maritime Commission is still unable to account.

I happen to have been a member of that committee, and I am still a member of that committee, and if I am proud of anything in my life it is the part I was able to play in a small way in the work of the Appropriations Committee of the ill-fated Eightieth Congress.

Last week the Democratic majority undertook ruthlessly to wreck that committee, to render it quite incapable of fulfilling its traditional and highly necessary role. This operation undoubtedly was performed for the purpose of assuring passage of administration spending bills without interference or independent scrutiny. Unfortunately, it will also clear the way for spending bills that even the administration may not want.

Consider for a moment the Veterans' Committee of the House, of which Representative JOHN RANKIN now becomes the chairman. The Appropriations Committee will be in no position in this Congress to exercise any influence on the bills that come out of that committee, among others. The subcommittee set-up that had functioned well for years has been completely scrapped and replaced by an utterly unworkable system. For example, two of the new subcommittees of that committee, consisting of five members each, three majority, two minority, will be loaded with 60 percent of that total Federal budget of $43,000,000,000. In the past 4 subcommittees of 7 members each, 28 in all, carried that stupendous load. Obviously, there can be no serious examination of appropriation requests under those circumstances, nor, in my humble opinion, is there intended to be. The reorganization of the committee, furthermore, will remove minority members in large measure from the fields of Government with which they have become familiar by their service on the committee in past years. But the Democratic majority is taking no chances. They are not running the risk that overly energetic members may overcome those handicaps. They have discharged highly competent investigators and accountants who have acted as the eyes and ears of the committee in their investigations of the operations of the departments and the agencies. Without them, the committee will be quite helpless. But they are going to be replaced by others, gentlemen, and such others. The committee is going to borrow employees from one department of the Government to investigate the operations of other departments of the Government in order to find bureaucratic waste—a perfect subject for a musical comedy.

Mr. Chairman, I don't know how much longer the United States can stand the pace of public spending without collapse. That is anybody's guess. I should guess that we have very definitely reached the breaking point. If citizens do not now rise against increased taxation, if they do not now effectively demand that their Government live within its present enormous income, then those same citizens will have only themselves to blame if their cherished personal liberties are swept into oblivion with the economic freedom that alone makes them possible.

Poison of Prejudice

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article entitled "Poison of Prejudice" by Henry Seidel Canby:

POISON OF PREJUDICE

It is curious that most worthy people who have been attacking racial prejudice in this country have not used one argument which history has proved again and again to be true. They think only of the victim of racial prejudice, his suffering, his wrongs, and the damage done to his dignity as a man. They forget what happens psychologically to the prejudiced man or woman.

The abolitionists before the Civil War were equally narrow-sighted. They talked only of the harm done to the Negro by slavery. They said little or nothing of the normal damage to the white man who owned him. It was the subtle corruption of the owners of the slaves by irresponsible hands over human beings. For there is no snake in the breast more dangerous than unreasoning hate and nursed contempt. It is the most poisonous kind of compensation for failure or for lack of self-confidence. Despise a race, hate a race, or dislike a race, and the poison will come out like invisible boils. Whatever goes wrong irritates the haters first. The hated get the blame for everything. And a really prejudiced man becomes a center of infection. But he infects first himself.

Racial prejudice has killed the bodies of millions in the last few years. We cannot forget that. But it is still warping the spirits and cramping the minds of tens of millions of the prejudiced.

HENRY SEIDEL CANBY.

The SEC, the American Bar Association, and the Tucker Fiasco

EXTENSION OF REMARKS
OF

HON. WALTER A. LYNCH
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1949

Mr. LYNCH. Mr. Speaker, I was so impressed by an article that appeared on April 30 last in the weekly magazine America that under the unanimous consent granted me, I am including it in these remarks. The article, entitled "The Tucker Fiasco," was written by David C. Bayne, S. J. It pays a well-deserved tribute to the Securities and Exchange Commission which is so ably headed by Chairman Edmond M. Hanrahan and takes to task the American Bar Association for its opposition to the extension of SEC activity. However, even more important are the sound recommendations that are made for the further implementation of the powers of the SEC. Chairman Hanrahan and his colleagues on the Commission are doing a splendid administrative task. They could do a better one for the protection of the American investing public and to the great advantage of the securities business if the recommendations in Mr. Bayne's article were put into law.

The article follows:

THE TUCKER FIASCO AND THE SEC

Causes for depressions—and market slumps—are sought vainly under every rock and behind every hedge: Economic causes, sociopolitical causes, international finance, and so on ad infinitum. Yet 4 years ago, and every year before and since, the Securities and Exchange Commission has been asking us to look just a little in the direction of decay at the base of our national corporate structure. Can our American system take another $25,000,000,000 loss in this decade? The SEC would prefer that it didn't. But the American bar, through the American Bar Association, would prefer—well, at least not to discuss it. These cries for reform from the SEC and the countercries for the good old way from the American bar set the tone—when into the cacophony screeches Tucker, the car of the future, and $20,000,000 in public-investor losses. The Tucker affair answers some questions and poses some problems. It high lights the SEC and suggests some questions for the American Bar Association. (Where not otherwise identified, quotations in this article are from SEC Release No. 3236 under the Securities Act of 1933.)

TUCKER

Less than 2 years ago the American public was treated to full-page ads of the "car of tomorrow." The public read about the spectacular new rear engine, the cockpit protection, the revolving safety lights, the top-flight executives recruited from every major automotive firm. The result? Twenty million dollars in American investment.

Today the $20,000,000 is gone. The Tucker Corp. is in bankruptcy. Tucker and friends are faced with the Department of Justice, a Federal grand jury, a Federal bankruptcy court. And the American investor is faced with no return whatsoever on his $20,000,000.

The tale of Tucker is lurid enough in summary, but the step-by-step procedure from beginning to bankruptcy is fantastic. The whole story covered a little over 2 years, and first came into the full light in June of 1947 when Tucker and company decided to share their fortune with the American investor. The plan was—besides revolutionizing the car industry—to offer the public investor 4,000,000 shares of Tucker class A common stock at $5 a share, for a good beginning of $20,000,000. There was to be no other foreseeable financing. The American public was to have all of a good thing.

Since the Securities Act of 1933 requires every large corporation to file full information on any such sale of stock in an amount exceeding $300,000, Tucker reluctantly complied by filing his registration statement. "Reluctantly" seems to be the word, since Tucker was very hesitant about actually revealing anything concerning this car of tomorrow or the corporation behind it. In fact, so hesitant was he that he simply failed to inform. The result of this bashful approach was an SEC investigation. And the results of the investigation were some rather startling revelations. Remember that all these revelations came long before the American investor laid a dollar on the line for stock, long before any of the $20,000,000 left the hands of the American public. These revelations came because Federal statutes force disclosure of information on securities before a large sale. But the Federal statutes do not empower the SEC to require anything beyond mere disclosure. The SEC does not pass on the merits of any security, does not recommend or dissuade; it simply pries out the truth, lays it bare and then departs, leaving the public investor to whatever may befall him through his eternal desire to be duped. Thus it was with Tucker: revelation, but no recommendation, no warning beyond the facts.

SEC INVESTIGATES

And the facts? The SEC investigation disclosed some interesting facts to the public investor—facts, incidentally, of which the full-page ads in the New York Times gave not an inkling. Facts, too, which Tucker had nowise indicated in his first filing with the SEC. Not everything was new, but just about everything.

The first stage of the active plan had begun with the advertising. There was a regular rash of full-page ads, sales brochures, company advertisements. It was clear that these cost a goodly sum, and that they were designed not to sell the car but to sell the stock. As Floyd O. Cerf, president of the firm that was to float the issue of stock, said, there was "no doubt the present issue could be sold merely on the basis of the widespread public interest that had already been created." And he was right. That this was the purpose of the ad campaign, the public could have known and should have known, but probably did not fully realize. So it was with many of the other facts that the SEC forced Tucker to disclose.

1. It did not seem to dampen investor ardor that even before the Tucker Corp. was to touch its $20,000,000, a good slice in the amount of $2,800,000 was to be lopped off and handed over to Mr. Cerf for his efforts in offering an avid public its chance to join the Tucker venture. This left Tucker and the investor-owned company with $17,000,000 ere a beginning had begun.

2. Since Preston Tucker personally had complete control of the company from its inception, he had made arrangements most congenial to Preston Tucker. There were 333 days on the expense account, at $40 per diem "exclusive of hotel bills and transportation charges, to cover taxis, tickets, limousines, racing tickets, etc." There was the matter of the $15,000 of corporate funds that appeared suddenly in Tucker's personal checking account, the personal loans of corporate cash to Tucker, the rubber check for $150,000. And, finally, as the SEC forced Tucker to sum it up in the prospectus issued before the sale: "Mr. Tucker has made no net cash contributions to the company," and, in fact, "Mr. Tucker has received directly or indirectly * * * payments from the company aggregating $217,669.60."

3. Woven in and around the misty background of the Tucker deal is the shadowy figure of Harold A. Karsten, alias A. H. Karatz, possessor of a much discussed record, and a prominent though clandestine figure in the Tucker promotion. Karsten alias Karatz had been in and out of the affair during the whole period, but mostly in. His was the negotiation towards rental of the huge War Assets plant in Chicago. His was much of the brain work and master-minding of the promotional scheme. When the odor of his presence in the foreground became too stifling, he was moved to the background. Ostensibly he was completely out of the corporate picture, and henceforward, as a blind, received his $2,000 a month through the firm of Russell, Tripp and Neuwerth, Inc., who were being paid the while $1,500 a month to handle the public-relations services. As Mr. Karsten alias Karatz blithely puts it, he feels "all of his services to the registrant corporation for the entire period were worth approximately $1,000,000." Such a bill indeed would ill serve the incipient corporation. The corporation, however, would make this a bill personal to Mr. Tucker. At present who is to say?

4. Then there is the sprawling government-built war plant, so big and so costly in upkeep that the rental and maintenance alone drained the corporation of thousands of dollars. Never was it used, never equipped. Yet under the first contract with the War Assets Administration a total of $1,000,000 was to be paid during the first part of 1946. All this was preparatory to a definitive lease for a 10-year period.

5. At this stage the public investor might sigh a bit, and console himself, perhaps, with the promise of the car of the future. But no. The next step finds Tucker admitting, under SEC prompting, that the original ads, the original stock prospectus, the original registration, had all failed to disclose the true status of development of the car. Actually there had been no substantial testing of the automobile. None of the new and radical features which screamed across the Times had been tried at all. There really was no knowledge of just what experimentation yet remained to be done. Even the pilot model faced extensive testing. There might, it appeared, be material changes in engineering design. And as a climax came the admission that the very features which were untested were the ones which represented such startling departures from the conventional automobile, the very features headlined in the ads, the brochures, the company booklets.

6. As somewhat of a final fillip to the whole, Tucker and company confessed that even had the testing been done on these radical features, there still was the matter of patents, and Tucker had no patents on the various features of its product representing radical departures from conventional automobiles. And to get them would cost money, both in initial investment and in royalties.

7. Side by side with the patent difficulties appeared threatened litigation. Mr. Tucker had made many arrangements. He had promised just about everyone concerned just about everything. He had issued promissory notes, promised options on stock at half the market, distributorships, stock participations. In short, lawsuits in the neighborhood of $2,000,000 were threatened by a varied list of claimants with assorted claims.

So went much of the $20,000,000. The rest went in a multitude of ways—Italian jet experts, plant open houses, salaries to friends, triumphant Tucker tours with handmade models—but never a car came off the line, and nary a dollar remains.

THE SEC

That the story of Tucker. Yet, as the SEC puts it, these are only the major items of information which were either misstated or completely omitted in the registration statement and prospectus originally filed. Yet what is startling and alarming about this whole story of the Tucker affair is not the facts alone. There are much deeper questions, much deeper conclusions to be drawn from the Tucker case. The facts might astound, but thought on the facts leads much further.

The Tucker fiasco has a two-pronged implication. The first prong has a sharp jab, is readily felt. The SEC has done a good job. The full machinery was used—a special investigation, a special release to the public available to all, an amended prospectus issued by Tucker as demanded by the SEC, with the major revelations in black and white. These revelations did accomplish much, no doubt saved many, no doubt reduced the gullible to a minimum. What a chaos without any SEC at all, without any investigation, any release, any amended prospectus. And yet, with the SEC in full operation, Tucker was still able to happen. The American investor insisted on investing $20,000,000. Hence the second prong, Why could not the SEC have gone the whole way and averted the Tucker losses even for the most innocent, the most gullible?

To note the first implication of the Tucker story is not difficult. It is readily admitted that the disclosure work of the SEC has been a godsend. It is the second implication that gives us pause and is the nub of this discussion. The real question does not concern the clear merit of the present procedure. The question is, Why did the SEC not avert the Tucker disaster under its present procedure?

There are two reasons. The first reason, or cause, is perhaps justified. The SEC is limited to enforcing mere disclosure. Under the two main acts relative to investor protection, the Securities Act of 1933 and the Securities Exchange Act of 1934, it cannot pass on the merits of a stock, can set up no standards of stock excellence. Under its disclosure power the Commission has done a tremendous work. During its first 10 years, information was supplied on over 200,000 security reports. But beyond disclosure it cannot go. No matter what the state of corporate affairs, what the state of corporate risk, of accounting chaos, of disorganization, of fantastic schemes—short of actual fraud—so long as the material facts are disclosed, the SEC is helpless. Beyond this the SEC's hands are tied.

No doubt this limit of control is healthy. Some might say that delay-periods could be imposed by SEC, pending adjustment of irregularities. By and large, however, and certainly for the present, the SEC is well restricted to enforcing disclosure and disclosure alone. But, none the less, this is the first cause for the SEC's failure to avert the Tucker disaster.

The second cause of SEC failure, however, is remediable. The American investor bought Tucker. But it cannot be said that he bought Tucker with a full knowledge of all the information, of all the facts disclosed by the SEC. And why? Because the SEC disclosure is a formal disclosure only. It is almost passive. There is no attempt at broadcast, no attempt to effect publicity in contradistinction to mere publication. What it comes down to is this: the American public must be forced to be informed. Its tremendous facility for being duped must be counteracted by positive steps. The form this broadcast may take is not important—perhaps a public service of the American press in the form of specially boxed announcements of every SEC release pertinent to informed investment; perhaps donated ads in regular spots in the financial sections; perhaps prospectuses that really inform. The point is that investor inertia and indolence must be overcome by vigorous measures. The investor must be informed in spite of himself.

WHAT THE FACTS MEAN

There is a second problem—the inherent complexity of the disclosed information. The investor simply cannot understand what has been disclosed. To overcome this obstacle will require great finesse and a delicate hand. But it can be done, and without going beyond the mere statement of the facts. There must be some correlation of the information disclosed with the value of the stock, the state of the corporate business, the prospects for future business, the effect on dividends. In short, there must be a factual interpretation that will render the information, once disclosed, intelligible. Had there been an intelligible analysis and interpretation of the facts disclosed in Tucker, and this understandable factual presentation been effectively broadcast, how many American investors would today be watching the bankruptcy of their company, the last dribbling away of their $20,000,000? Such an extension of SEC practice would have eliminated the second reason, the second cause, of SEC failure and would have appreciably lessened the jolt Tucker gave to the American economy. Nor are these extensions a new grant of power. This is merely the logical use of a power of disclosure already granted. Certainly Tucker suggests at least these extensions.

In fact, to an interested observer there are many other logical extensions of SEC activity that Tucker suggests—extensions that may not be so immediately apparent, but extensions long desired and long advocated. Extensions, indeed, that are as inevitable as tomorrow and clearly within the intent of Congress in initiating SEC disclosure regulation. There is, above all, the anomalous double standard of SEC regulation under the Securities Exchange Act of 1934. The Commission can force disclosure of corporate activity by periodic reports only in the case of those companies which have seen fit to use the national securities exchanges for trading their stock. If there is no use of an exchange, there is no embarrassing SEC disclosure of corporate affairs. Thus there are two great classes of American corporations: those desiring exchange facilities, and hence subject to the SEC disclosure; and those preferring the shadows, which hence forego the use of the exchange. In the Securities Act of 1933, disclosure of initial stock issues is restricted to larger issues of stock only. If a promoter wishes to escape Federal disclosure of his activity, he limits his issue to less than $300,000. These have been the major subjects of proposed extension of SEC power.

THE AMERICAN BAR ASSOCIATION

But the minute there is mention of extension of SEC activity, brows are knitted and raised, fingers are wagged. And if this for the expected, inevitable extensions—extensions not in a new field, but merely for uniform coverage of an old one—what is there for such proposals as broadcast publicity and intelligible interpretation?

It was just a bit over 2 years ago that the SEC last came forward with thoughts of an extension of its activity. (There had been an attempt before World War II.) And this proposal contemplated only the filling out of the field already covered in part. It was just a bit thereafter that the American Bar Association replied to this proposal. In full plenary session the American bar went on record: *"Resolved,* That the American Bar Association is opposed to the amendment to the Securities Exchange Act recommended to Congress by the Securities and Exchange Commission."

More important, however, than the bald statement of the resolution is the supporting reason and the expressed attitude of the American Bar Association to SEC activity. It indicates the regard the bar has for the type of prevention the SEC supplies. The report accompanying the resolution had this to say:

"As far as concerns sharp practices by officers of unregistered corporations, your committee would prefer not to increase regulation but to permit the courts, as they have in the past, to provide the remedy."

It should be rather evident just how much of a remedy the courts can now give to the investor in Tucker. The horse has long since gone out of the barn. It is a bit late for the courts to try to close the door. The courts are of necessity after the fact. The stitch in time must come from the SEC. It is prevention by disclosure that will: first, warn the investor against bad risks and apprise him of just what he is buying and, second, act as a healthy incentive to corporate promoters and managers alike to see that what does reach the light of day is conducive to further public investment. But the American Bar Association does not feel that promoters and managers are dissuaded from indiscretions by enforced light on their operations:

"Abuses of confidence by corporate officers are as likely or unlikely to occur in the cases of registered companies as of unregistered companies. Registration cannot change the officers' proclivities in this regard."

Perhaps the American Bar Association is overlooking the fact that with every registration there is full disclosure of corporate activity. In any event, it might be added with Brandeis that "Publicity is justly commended as a remedy for social and industrial diseases. Sunlight is said to be the best of disinfectants; electric light the most effective policeman."

But the point is not to quibble with the American Bar Association. The point is their opposition to the extension of SEC regulation even toward uniformity. The point is their desire and preference to leave such matters to the courts, as they have in the past, to provide the remedy.

The Tucker fiasco helps much in explaining the public investor's hesitancy to invest. The Tucker fiasco points up the good work of the SEC in calling to light the Tucker facts. The Tucker fiasco cries for more of the same from the SEC—in broadcast publicity, intelligible interpretation. The Tucker fiasco begs the American investor, as well as the American Bar, to cock a more ready ear to the SEC and its recommendations, and to give some serious thought to the extension of its powers.

Doctors and Dentists Educated at Government Expense Are Not Fulfilling Their Obligation to the Armed Services

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1949

Mr. VAN ZANDT. Mr. Speaker, on July 1, 1949, the Armed Services will be short 1,600 physicians and 1,160 dentists. By December, 1949, they will be short 2,200 physicians and 1,400 dentists.

This acute situation affecting medical and dental care for 1,700,000 men and women in our armed services, is brought about by the fact that by July 1, 1949, almost one-third of the physicians and

dentists in the Armed Forces will have been separated and returned to civilian life.

Last February, then Secretary of National Defense, James Forrestal called this situation to the attention of the American Medical Association, pointing out the Armed Forces were faced with a shortage of physicians and dentists and that the situation was critical and would be more so by July 1, 1949.

Mr. Speaker, let us look at some basic facts that are responsible for this situation.

In the United States today, there are thousands of young physicians and dentists who were deferred from the draft and excused from combat in order for them to complete their professional education. Of this group, many received all or part of their training at Government expense—the others paid for their own education but were excused from the draft and combat service.

Under the Army specialized training program: (a) Eleven thousand, eight hundred and ninety-eight medical students were enrolled. Of this number 10,098 graduated. These medical students spent on an average of 1.7 years in training. The cost per year for one student was $2,131. (b) There were 7,774 dental students of whom 2,435 graduated. These students spent on the average of seven-tenths year in training at an annual cost per student of approximately $1,758.

Under the Navy V–12 program (a) about 10,000 medical students were trained, spending on an average of 2½ years at an annual cost per man of $2,500; (b) about 3,500 dental students were trained, their length of training being about 2½ years at an annual cost per man of $2,500.

During the spring of 1948 when the House Committee on the Armed Services was considering the selective service bill, provisions were contained in the bill providing for the drafting of doctors and dentists into the Armed Services. This provision was written in the bill because of the necessity of providing adequate medical and dental care for our armed forces.

Testifying before the committee and against the provision to draft doctors and dentists, Dr. James C. Sargent in behalf of the American Medical Association said:

> Special provision in the law is both unnecessary and unwise.
>
> And in the end, if neither of those means are to be employed and experience proves that soldiers and sailors are in need of medical care, the profession of America will see they get it, draft or no draft. They did it handsomely in the last war, as indeed they always had before. And the would do it again.
>
> The special provisions for the drafting of older doctors in H. R. 6274 not only are completely unnecessary but they are palpably unwise.

After receiving the assurance from Dr. Sargent that it would be unnecessary to draft doctors and dentists the committee struck from the bill the provision for drafting members of the medical and dental profession.

Mr. Speaker, Dr. Sargent was wrong because of the fact that regardless of the effort of the armed forces they were unable to obtain doctors and dentists.

Let us at this point recall the following statement of Mr. W. Stuart Symington, Secretary of the Air Force, when he said: "The situation in the medical services of the Air Force has been rapidly deteriorating due to the shortage of doctors. There has been a decrease of 27 percent in Medical Corps officers and the outlook for the months ahead on this score is dark. The Air Force is in a critically serious situation with respect to its medical component. We are in grave trouble and it is getting worse."

Faced with this acute situation, Secretary of Defense Forrestal in February 1949 named a committee consisting of the Surgeon General of the Army, Navy, and Air Surgeon together with 11 distinguished civilian physicians. This committee launched a joint undertaking of the armed forces, American Medical Association, American Dental Association, and other allied professional groups. This committee was furnished the names of all doctors and dentists who received their professional training at the expense of the Government either as an Army or Navy student.

The purpose of furnishing these names was to contact these doctors and dentists at a local level and urge them to return to military service. The key-note of the program was "moral suasion."

While this committee was functioning, the then Secretary of Defense, James Forrestal, wrote a personal letter on March 1, 1949, to approximately 10,820 men who had been trained by the armed forces at the expense of the Government and had given little or no military service in return. Using moral suasion as the theme, he invited them to accept commissions in the Medical and Dental Corps of the armed services.

As of March 31, 1949, the response to Secretary Forrestal's invitation was as follows:

Letters sent	10,820
Replies received (May 5, 1949)	8,165

Of the total number of replies received, 1,011 were favorable and 7,154 were in the negative with the following reasons cited:

	Medical Corps	Dental Corps	Total
(a) Not interested	3,707	1,877	5,584
(b) On duty with the United States Public Health Service	122	83	205
(c) On duty with the Veterans' Administration	15	2	17
(d) Did not complete medical or dental school	415	----	415
(e) Deceased	23	----	23
(f) Students	278	----	278
(g) Applied for participation in the Army resident training program	33	----	33
(h) Applied for participation in the Navy resident training program	3	----	3
(i) Completed obligatory service with the Navy:			
Medical Corps	12	----	----
Dental Corps	----	445	457
(j) Completed obligatory service with the Army:			
Medical Corps	18	----	----
Dental Corps	----	143	161
Total	4,567	2,550	7,154

Of the 1,011 favorable replies, 662 were already in service, as outlined in the following table:

	Medical Corps	Dental Corps	Total
(a) Already on active duty with the Army	240	39	288
(b) Already on active duty with the Navy	62	32	94
(c) Already committed for service with the Army	107	11	118
(d) Already committed for service with the Navy	140	22	162
Total	558	104	662

Out of the 10,820 letters sent and the 8,165 replies received, a total of 349 doctors and dentists requested active duty, in addition to the 662 already on active duty:

The following table provides a breakdown of the 349 doctors and dentists requesting active duty:

	Army		Air Force		Navy		Total
	Medical Corps	Dental Corps	Medical Corps	Dental Corps	Medical Corps	Dental Corps	
(a) Number requesting active duty, 1949	100	27	34	18	88	39	306
(b) Number requesting active duty, 1950	16	----	3	----	22	2	43
Total	116	27	37	18	110	41	349

Mr. Speaker, as I said in the beginning of my remarks, the situation is acute, and unless these thousands of doctors and dentists who received their education at the expense of the American taxpayers, decide to accept a commission in the armed forces, there is nothing left for Congress to do but to draft them. I feel I speak for every Member of Congress when I express the hope that it will not be necessary to draft doctors and dentists.

Before concluding my remarks, I feel it is only fair to point out that at the moment, there are 4,000 doctors and dentists educated by the Government who have finished their 2-year tour of duty in the armed forces. They were promised to be returned to civilian life at the expiration of 2 years of military service. The young doctors and dentists in civilian life today who owe their education to the Government of the United States, should respond to the needs of our armed forces and replace those 4,000 young men who have discharged their obligation to their Government.

Commodity Credit Corporation

EXTENSION OF REMARKS

OF

HON. WALTER E. BREHM

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1949

Mr. BREHM. Mr. Speaker, I was not privileged to be a Member of Congress when the original Commodity Credit Corporation was set up in 1933 in an effort

to combat the depression in commodity prices. However, I recognized the importance of this agency to the farm population of America and, because of that fact, I have periodically voted to support the Commodity Credit Corporation on each and every occasion that it has come before Congress during my term of service.

I was particularly pleased during the last, or Eightieth, Congress to support legislation which gave official recognition to the CCC as a permanent Government agency. The service which it has rendered in the support of farm prices has in my opinion justified its existence as a permanent agency of our Government.

A few days ago I was pleased to support legislation which extended the service of the CCC to the grain farmers of America and particularly to my farm constituents in the Eleventh Congressional District. I refer to the loans of 17½ cents per bushel which the farmers may borrow from the CCC in order to build storage bins on their own property.

Money advanced to build these bins is about equal to the cost of storing their grain in one of the terminals of this country for a 12-month period. However, under this farmer-loan provision grain growers will own the bins they construct with Government loans. It should also be pointed out that within 2 years the Government will get back every penny of the loan, whereas under existing terminal storage arrangements the Government gets back nothing. Any money which is paid the farmer from subsequent farm-support subsidies will be used to liquidate these loans.

In my opinion the extending of this authority to the CCC to grant loans for bin construction should help materially in preventing an overloading of grain terminals at harvest time and alleviate the acute transportation problem which we have experienced in the past due to freight-car shortage.

I was therefore pleased, Mr. Speaker, to support this legislation which grants loans to farmers for bin construction as I am convinced that storage on the farm, or as nearby to the farm as possible, will solve several major problems which have confronted the grain producers in the past.

The Truth Is Always Important

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. BEALL. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I wish to place on record the facts about my friend and constituent, Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs. The people of the Free State of Maryland admire Dr. Thorning not only as a sincere apostle of the good-neighbor policy in South America, but also as an honorable, upright gentleman, who is on friendly terms with many Members of the Congress of the United States. His reputation is one of the glories of our State and of my district. Consequently, whenever his name is mentioned, whether in the newspapers or over the radio, I wish to have the facts related accurately. "The truth, the whole truth, and nothing but the truth" is a good principle, as the following facts reveal.

THE FACTS ABOUT AN INCIDENT OF THURSDAY, MAY 12

First. Contrary to the United Press and Daily Worker story, the Reverend Dr. Joseph F. Thorning, associate editor of the Americas and World Affairs, did not accost Representative WRIGHT PATMAN, Democrat, of Texas, either to talk about Spain or about any other topic;

Second. Mr. PATMAN, who passed Dr. Thorning in front of the Parliamentarian's office, made a remark, not a formal complaint, to Mr. William M. Miller, Doorkeeper of the House. When the latter approached Majority Leader JOHN W. MCCORMACK on the subject, he was told not to bother Dr. Thorning, who had come to the House door, where he had a perfect right to be, in response to Congressman MCCORMACK's invitation. Consequently, Mr. Miller, although mentioning to Dr. Thorning the fact that a remark had been passed by "a Member," did not order Dr. Thorning from the place where he was waiting; nor would he have had any reason or authority to do so. When Mr. Miller saw the United Press story in the Washington Times-Herald, he assured Dr. Thorning that "there was not a word of truth in it." In other words, there had been no order issued; and there was no ouster of a priest from the Speaker's lobby. Majority Leader MCCORMACK described the story as "low, cheap, and contemptible."

As further evidence that there had been neither an "order" nor an "ouster," it is certain that Dr. Thorning waited in the lobby in front of the Parliamentarian's office until Mr. MCCORMACK came out to talk with his friend. Both Majority Leader MCCORMACK and Dr. Thorning, subsequent to the alleged "order" and "ouster," or the "ejection," as the Daily Worker put it, conversed for about half an hour in the aforesaid Parliamentarian's office. All this was completely in accord with the rules of the House, and no one would have any right to object on this score.

After Dr. Thorning had finished the conference with Majority Leader MCCORMACK, the former was approached by Mr. Bill Arbogast, head of the Associated Press Bureau on Capitol Hill. As soon as the Associated Press correspondent heard the facts he declared that " the Associated Press would not touch such a story," even though a writer for some Texas newspapers had tried to "peddle" the so-called report to the House Press Gallery.

It was Representative THOMAS J. LANE, of Massachusetts, who advised Dr. Thorning, as he was standing in front of the Parliamentarian's office, that several Members of the House were giving speeches on the floor in favor of the restoration of full diplomatic relations with Spain. Dr. Thorning, who was there to confer with Mr. MCCORMACK, not to lobby, expressed satisfaction with regard to these speeches. He did not even touch the doors that lead onto the House floor, much less enter the House Chamber.

In summary, therefore, it may be emphasized that the United Press and Daily Worker stories were essentially untrue. Dr. Thorning did not address himself to Mr. PATMAN; he was not ordered from the House floor or from the Speaker's lobby; he was neither "removed" nor "ousted," nor "ejected"; he was present, in the proper place, at the invitation of a personal friend, who wished to consult him; he was not lobbying, as the several Members of the House who were in conversation with him are ready to testify. It was a final indication of the slovenly manner in which this story was handled that the priest's residence was given as Washington. The fact is, as most Washingtonians know, that Dr. Thorning resides at Carrollton Manor, Md. Truth is better than fiction.

Brannan Farm Price Plan

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. WOODRUFF. Mr. Speaker, Mr. Clark L. Brody, executive secretary of the Michigan Farm Bureau, is among the soundest, wisest, and most patriotic gentlemen in our great State of Michigan. For many years he has been an outstanding leader in agriculture. He knows the problems of the farmer and he knows the solution of those problems.

I have received a statement entitled "A Summary of the Brannan Farm Price Plan," and under unanimous consent to extend my remarks in the RECORD, I include this statement.

If they will read this splendid summary, it will be helpful to those who are interested in preserving the freedom of the farmers of this country.

The statement follows:

A SUMMARY OF THE BRANNAN FARM PRICE PLAN

(By Clark L. Brody, executive secretary of the Michigan Farm Bureau, from a television discussion of the Brannan farm price plan with Mr. Maurice Doan, Michigan director for the Production Marketing Administration, WWJ, Detroit, May 11, 1949)

I regard the Brannan plan as a dangerous step toward further socialization of our Government and regimentation of the American farmer. It is a political-economic philosophy of government that would destroy the farmer's initiative and incentive to solve his own problems and meet the ever-changing demands of the consumer as registered in the market place.

The Brannan plan places a ceiling on opportunity for the American farmer. The Government support price should not be the price we expect to live on. It is valuable insurance. It is not and should not be the farmer's chief incentive.

It would tend to regiment the consumer as well, for the President's advisers—I hope we shall never be compelled to refer to them as the "elite" of Government or the "palace guard"—could to a considerable degree really determine the kinds and amounts of food that would be available to the urban purchaser. They could tell the consumer what was good for him.

The cost to the taxpayer would be exorbitant. This is estimated by competent authorities to be from $5,000,000,000 to $10,000,000,000 annually. This staggering amount would have to come from the pockets of both consumers and farmers through higher taxes. Neither do the consumers want the Government to determine what they shall buy.

Our farm people do not want to become wards of the Government supported by subsidies from the Federal Treasury as contemplated in the Brannan plan. Under a free, competitive economy our farmers have developed an agriculture that is feeding much of the world's population. The initiative and incentive of the American farmer is the best insurance that the consumer will have an adequate food supply of the kind he wishes to buy and at prices he can afford to pay.

Why a Depression?

EXTENSION OF REMARKS
OF
HON. CLINTON D. McKINNON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. McKINNON. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the RECORD, I include an article by Oscar Cox entitled "Why a Depression?" This article was published as a public service by the International Latex Corp. of Dover, Del., in the New York Times of Sunday, May 8, 1949.

WHY A DEPRESSION?

(By Oscar Cox)

There are many who still think that economists, Government officials, and business executives can tell definitely in advance whether or not we shall have a depression in the United States. This is far from the truth, although some of the prophets themselves labor under this false belief.

Forecasting of our economic trends is useful. Forecasting can indicate some of the straws in the wind, and there are many such straws available today. But forecasting is not yet advanced enough to predict with accuracy exactly what is going to happen to employment, production, prices, and the other important aspects of our economy.

The fact that we do not know with certainty whether or not a depression is coming does not mean that effective action cannot and should not be taken now. If a depression comes, we should have in readiness those measures which can minimize such a depression.

There can be reasonable differences about what measures can counteract or forestall a depression, but basically there are fewer differences on this score than in forecasting with certainty whether there will be a depression.

The better part of practical wisdom is to have ready as soon as possible those measures which can be used to counter a depression if it does result. If it does not come, we simply do not have to use the measures, and we shall have lost little by having them ready. If a depression does result and we do not have adequate measures ready, the toll in unemployment and human suffering, the threat to our security position, and the weakening of our political structure may be devastating. If a depression is coming, the longer we wait before making ready intelligent measures to combat it the greater will be the costs to us in human and money values.

Instead of waiting to see if a real depression sets in, when the tendency will be to act in hysteria and panic, we should begin to plan and act now. To think out, to debate, and to put into effect the necessary measures will take plenty of time, anyway. It is not too soon to begin now. The strong indications are that production is falling off and unemployment is increasing. These may snowball rapidly. In preparing and acting now to fend off a possible depression there is no need to develop the type of psychological jitters which will make matters much worse. It is far better to face the situation ahead of us with knowledge and without fear than to do nothing effective and be blindly afraid.

In principle the area and time of action to try to forestall a possible depression are clear: Instead of make-work or leaf-raking projects, the central focus should be on working out as promptly as possible those measures which increase the real wealth and productivity of our country and its people and at the same time generate the creative employment that assures the purchasing power upon which all business and agriculture depend.

Instead of relying too much on imperfect forecasting—and then sitting—we should concentrate now on those purposeful measures which not only can forestall a depression, but can expand our useful production and employment.

Those purposeful measures can be positive and effective. They include further relaxation of export and credit controls; Nationwide building of soil-conservation dams that can also expand our supply of much-needed hydroelectric power; the rebuilding of our schools and hospitals which, during the last 20 years, have become shamefully obsolete; meeting our housing needs with the mass-production techniques for which we are famous; speeding up capital investment in our industrial plant by tax incentives or other means. American ingenuity can provide socially and economically valuable projects. It is merely a matter of intelligent thinking, discussion, action, and legislation. The important thing is that the thinking, discussion, action, and legislation should be begun right now and with all the vigor at our command.

If our Government, our businessmen, our labor and farm leaders join together now to meet those problems head on with the same spirit in which we prepared for and waged the war, we can be sure that we can defeat any coming depression. Depressions do not have to be. Depressions result from the individual or combined actions of great numbers of human beings. Human beings with intelligent foresight and effort can prevent any depression.

National Temperance Day

EXTENSION OF REMARKS
OF
HON. JOSEPH R. BRYSON
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. BRYSON. Mr. Speaker, I am introducing a joint resolution calling for the establishment of a National Temperance Day by proclamation of the President.

This project is the outgrowth of a resolution adopted last June at the convention of the National Grand Lodge of the International Order of Good Templars, of which Dr. J. Raymond Schmidt, of Washington, is national superintendent of legislative work. Fred Eklund, of Chicago, is national chief templar and Alfred Abrahamson, of West Hartford, Conn., is national secretary-treasurer.

The order is the second oldest temperance society in America and the centenary of this widely flung organization, operating in many nations throughout the world, is to be celebrated at Chicago on June 18, 19, and 20, 1951. This international convention, composed of eminent delegates from many lands, will be presided over by Senator Ruben Wagnsson, of Sweden, international chief templar of IOGT and governor of the royal province of Kalmar.

The designation of a National Temperance Day for the United States of America would therefore be a timely and gracious act greatly appreciated by the temperance forces of all classes throughout America and the world.

Boys' Clubs of America

EXTENSION OF REMARKS
OF
HON. ADOLPH J. SABATH
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. SABATH. Mr. Speaker, under unanimous consent, I insert in the RECORD an address by Hon. James A. Farley, delivered at the dinner meeting of the annual convention of the Boys' Clubs of America, at the Drake Hotel, Chicago, Ill., on May 5, 1949. It was a most inspiring address on the work of Boys' Clubs in the interest of the youth of our Nation and I commend its reading by the membership.

It is indeed a source of refreshment and encouragement to enjoy the opportunity to meet with people whose program of activity and interest is so far removed from the area of controversy. In the entire field of man's relation to man, it has become axiomatic that in the interest of things to come, worldly and spiritual, youth must be served, for youth will be of service.

Those of us who have been privileged to share the burden have been faced constantly with the challenge of a wide range of earthly maladies, from insidious conspiracy in governments to mass deprivation and degradation, from stark madness to misguided genius, from arms to armistice, and back to arms again. While we have enjoyed some degree of success, I am often fearful that in the process of solving our immediate pressing problems, we have lost sight, from time to time, of that sphere of life and living toward which all of our energies are directed. In effect, in dealing with the complex affairs of men, we have tended to overlook the intricate affairs of youth. That is precisely what I meant when, in expressing my opinion on the outlook for the world a short time ago, I said, "When I look on the older generation, now so largely in power,

the generation to which I belong, and reflect on the problems which have been ours, and the crises we have met successfully, the present uncertain future of all peoples, all things, my heart is heavy. But when I fix my attention on a group of boys, the new generation, my heart leaps with faith and hope."

I should like to say here and now—thank God for the thousands upon thousands of self-sacrificing loyal Americans who have all these years devoted a good portion of their lives to the mental, moral, and physical welfare of the youth of our country. But for the untiring efforts of our schools, our churches, and our youth-serving organizations, this democracy of ours might indeed have been threatened by a bankruptcy in sound citizenship with its rightful place of influence in things to come. In particular, I should like here to pay tribute to the men and women who devote their lives to the training and guidance of boys. I wish to express my appreciation to the more than 30,000 of them who give their time and thought to the management of boys' clubs and to promote their interest in boards of directors, women's auxiliaries, alumni associations, and other organizations pertaining thereto.

In singling out the Boys' Clubs of America, I should like to be sure that you understand I am not merely adjusting my personal opinion to the exigencies of the occasion. As a matter of fact, I have more than a passing fancy to substantiate my opinion. I, as a member of the national board of Boys' Clubs of America, am proud to be among this army of laymen who believe in the soundness of boys' clubs.

As you are probably aware, it has been my good fortune to travel into every State in the Union and to have met thousands of men and women in every walk of life—a true cross section of the population of this country. I have enjoyed the opportunity to observe at first hand the fruitful effects of the untiring efforts of our schools, our churches, and our social agencies and institutions. Furthermore, I have come to learn from personal experience that if there is one thing upon which we can base our confidence and hopes of a better day to come, it is the youth of our Nation.

I ask you to bear with me while I read a poem that I have carried in my pocket for years. It is The Boy, by Edgar A. Guest:

"A possible man of affairs,
A possible leader of men,
Back of the grin that he wears
There may be the courage of ten;
Lawyer or merchant or priest,
Artist or singer of joy,
This, when his strength is increased,
Is what may become of the boy.

"Heedless and mischievous now,
Spending his boyhood in play,
Yet glory may rest on his brow,
And fame may exalt him some day;
A skill that the world shall admire,
Strength that the world shall employ,
And faith that shall burn as a fire
Are what may be found in the boy.

"He with the freckles and tan,
He with that fun-loving grin,
May rise to great heights as a man
And many a battle may win;
Back of the slang of the streets
And back of the love of a toy,
It may be a Great Spirit beats—
Lincoln once played as a boy.

"Trace them all back to their youth,
All the great heroes we sing,
Seeking and serving the Truth,
President, poet, and king,
Washington, Caesar, and Paul,
Homer, who sang about Troy,
Jesus the greatest of all,
Each in his time was a boy."

Think of the unexhausted energy of youth. What boundless vitality, enthusiasm, devotion, and greatness are wrapped up in youth. Consider the average American boy—think of his unspoiled powers, the agility of his muscles, the quickness of his eye, his ear undulled, his curiosity keen, his memory sharp, his unspoiled emotions ready to admire, and his will power to be directed.

But think, too, how easily he is affected by the influences that we offer him. Bad influences all too often. Statistics tell us that the average age of men who are inmates in prisons and reformatories is 26, or even younger, and even more serious is the fact that five-sixths of these young men had had the seeds of weakness, that later caused their downfall, cast across their character in the period of their boyhood or early youth. This has tremendous significance to you and to me, and to all who are interested in the future welfare of our country.

But thank God boys are even more easily affected by good influences than bad. The result of my many conversations with young people in the course of my lifetime and experience justifies me in going on record to say that boys are far more responsive to high and noble ideals than to those forces which are demoralizing, provided, of course, that those ideals are presented in a way that the boys can understand and that appeals to them as worth while.

Should you have any doubt of the fact that the chief asset of this Nation is its youngsters, reflect for a moment on the things that you feel makes a nation great. Mere extent of territory does not constitute greatness. Russia has more square miles of territory than any other nation on earth. Nor does the volume of population indicate greatness. China has the numbers—some 400,000,000—but that is not what constitutes the greatness of the Chinese people. Nor does the volume of public or private wealth or of natural resources constitute true greatness. Am I not right when I say that neither education nor technical training by themselves made a nation great? Germany was one of the best trained nations of modern times, but the experience of Germany is illustrative only of the fact that education and training can teach to build armaments and be skillful in their use, but that is not greatness.

No; the real greatness of a nation is in its people. It is their ideals, their character, their spirit, that makes it great. And these are determined largely by the influence that we bring to bear on the boys and girls, the youth of our country. What America, this land we so much love, will be 30, 40, or 100 years from now depends implicitly upon what is happening to those boys who are shooting marbles in the streets and lanes of our cities and villages right now. Consequently, if we are to prepare this country adequately to meet the tests of the trying years ahead, we must strive toward the adequate preparation of our citizens who will be at the helm.

The responsibility for this great task cannot be placed entirely within the walls of our schoolrooms. The field of education has made tremendous strides in behalf of our children. I believe their efforts and accomplishments have earned our fullest admiration and respect. But, actually, mere schooling is not education. Whereas a boy is influenced by his school for a few hours daily, during a few years of his life, every other experience that he encounters is also educational in nature. Often the most vital part of his education, for better or for worse, is received outside of the school.

And the value of a good home is impossible to estimate. A boy's greatest educational experiences, affecting his entire life, are found within the home. Is it not a fact that most young men who get into trouble with the authorities are products of an inadequate home environment?

And is it not true that the church is a major factor in a boy's education? Too often, unfortunately, this factor is minimized or not brought into play at all. They tell me that an alarming number of boys of America do not have any church affiliation. To any serious-thinking person, that is a frightful indictment of the parents of those boys. Every youngster needs to be taught that if he is to be rewarded in the world to come, he must do two things in his life; first, he must honor the divine command to "love the Lord, thy God, with thy whole heart, thy whole soul, and thy whole mind." And then, he must do something else; he must "love thy neighbor as thy self."

This thought brings me to a specific reason for my belief in the work of the Boys' Clubs of America. Somewhere, outside of the home, the school and the church, there must exist a proving ground, a workshop, as it were, where a boy may exercise and develop the ideals which have been expounded to him. I can think of no better way for the boys of our Nation to occupy their free-time hours than participation in the safe and constructive program of a boys' club.

Here he is given full opportunity under the guidance and protection of competent, qualified leadership to learn self-reliance, to aim for leadership in competition in the spirit of fair play, and to develop bodies, hand and brain skills in preparation for the future. Here he finds an opportunity to prove his skill, to satisfy his hunger for adventure, to give and take in full consideration of others, and to stand on his own feet. And, what's more—he likes it.

I am convinced that if we are to interest boys in worth-while activities we must offer something that they will enjoy doing, and, further, something they think is worth doing. To my way of thinking, boys' clubs are satisfying this prerequisite.

Multiply these invaluable influences by 322 clubs and a total boy membership in excess of 300,000, and you have an infiltration each year into the citizenry of the Nation, of thousands of graduates of boys' clubs, who will not only have a direct effect for good in their community, but will work like a leaven in influencing thousands of others the world over, with whom these boys' club alumni come into contact. This admirable picture is in itself a monument to you who are giving years of devotion to the management and promotion of boys' clubs.

I wish to compliment all the men and women in America who voluntarily contribute toward the benefit of the people. This concern of the individuals for the welfare of their neighbors has been traditional in America. It is just as much a part of the American way of life as our desire to improve our own conditions. It would be a tragic day for America if all responsibility for the welfare of the people were to be thrown on the Government. It would be equally tragic for us as individuals if we could discharge our responsibility to our neighbors by filling out an income-tax blank.

I know full well that in our struggle upward as individuals and as a Nation, there have been those who needed the helping hand of their neighbors. We have made a great advance in our concern and efforts for the unemployed, the aged, the sick, and the disabled veterans, and all who, because of misfortune or for any reason, cannot make the grade in the upward struggle.

These people are the great concern of all of us and the most of us will approve sound measures for meeting their needs. I believe, however, that we should and can best meet their needs without destroying the initiative and self-reliance of the individual. In a state where there is complete so-called se-

curity, it is security on a very low level and the opportunity of the individual to rise and create for the benefit of all the people is not only limited, but the lack of incentives is deadening to individual initiative and enterprise.

One of the principal reasons for the prosperity and standard of living in America is this—that from the time of our Pilgrim Fathers, it has been a land of opportunity. Every parent, as he looks at his child in the cradle, has at least the hope that the child will be better off than he has been and may have the American dream that their sons will become important figures in the business, professional, and political world.

With this thought in mind we must never permit our outlook on life, our American skyline, if you please, ever to become obscured by the cloud of social and economic problems. We must never allow the fabulous wealth of this Nation to deprive us of the simple virtues that have made this Nation the hope of all mankind. We must never permit the ideals of this Republic to sink to a point where every American father and mother, regardless of race, color, or creed, cannot look proudly into the cradle of their new-born babe and see a future President of the United States.

I am speaking now of human realities—human realities that we can hand down to our children, if we will but keep the faith of our fathers and cherish the bonds of unity that are so necessary, so essential for our continued progress. Give America a united front, and there is no power on earth, within or without, that can weaken or destroy our democracy.

This hope and dream is firmly based on the life stories of thousands of men and women who from limited beginnings rose to important places in our economic, professional, and political life. Because men in America had the incentives to work and strive, they have brought about the highest standard of living in the entire world.

America is still a land of opportunity, and I believe that the opportunities for our youth are greater now than ever before in our history, but it is my contention that with every opportunity a responsibility emerges. It is squarely up to us to do the most important thing we can for our youth and for our country, and that is to teach boys and girls that they can have more than mere security if they will learn and strive. On large scale, the Boys' Clubs of America are meeting that responsibility.

Herein lies another reason why I am so anxious to support the work of boys' clubs. While they serve boys of all classes where there is need, they have always been especially concerned with boys whose family and neighborhood resources are limited. Many boys whose formal education, too, must be limited find their opportunity for advancement in the boys' club.

Boys' clubs are geared to meet needs unmet by other organizations. While they are completely nonsectarian, they are not godless. As a matter of fact, they are fountain springs of tolerance—enemies of bigotry. They are possessed of no magic formula, but, on the contrary, are simple and direct in pattern. They are the best means I know for a sound investment of our interest, efforts, and money toward insurance of the future well-being of our country.

The only fault that I can find with boys' clubs is the fact that there are not yet enough of them. We can and must make the fruits of this tried and true movement available to every boy in every sizable community. I know of no other way in which, as individuals, we can proffer our boys and girls the incentives to work upward in the American tradition and the opportunities for their self-development.

The Hoover Commission

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following letter that I have received from Mr. Henry P. Kendall, president and treasurer of the Kendall Co., Boston 10, Mass., bringing to my attention an article regarding the Hoover Commission:

THE KENDALL CO.,
Boston, Mass., May 16, 1949.

Hon. THOMAS J. LANE,
House Office Building,
Washington, D. C.

DEAR MR. LANE: You, I am sure, must have given some thought and study to the recommendation for a reorganization of the executive branch of the Government on the basis of the Hoover Report. I have tried to familiarize myself with the principles involved, and with many others, I share a deep concern that this masterly, objective study has not been implemented. The enclosed clipping expresses better than I can the importance of action.

It would seem to me that a bill instructing the President to carry out the Hoover report completely, and as expeditiously as possible, should be drawn. If the report is torn to pieces by bureaucrats without having been given a trial, it is likely to be emasculated. No superficial reading of this exhaustive report without the background of time put into it by the various task groups is likely to be anything but harmful.

If the report is passed as a whole, any weaknesses will show up, and improvements or beneficial modifications growing out of the experience of operation can be undertaken, which will be a far wiser and safer course to follow.

New England, as well as the rest of the country, has much to gain from the adoption of this report. I am therefore sending this letter and clipping to all New England Congressmen and Senators and also to such other Congressmen and Senators with whom I am personally acquainted.

Men like myself, I can assure you, who have developed sound and efficient organizations and comprehensive budgetary controls, feel deeply concerned by the lack of progress toward implementing this report.

Cordially and sincerely yours,

HENRY P. KENDALL.

THE GREAT GAME OF POLITICS

(By Frank R. Kent)

DANGEROUS INERTIA

WASHINGTON.—The sluggish indifference in Congress to the Hoover Commission's recommendation for reorganization of the Federal Government, grotesquely swollen and incredibly bungling, wasteful, and inefficient, is a direct reflection of the inertia and unintelligence of the American people. There is no other way to explain it. The present situation is as complete an indictment of our unfitness to govern ourselves as has been made.

These may seem harsh words but they are justified by the facts. If this Nation were free of debt; if its citizens were lightly taxed; if there were a dependable surplus in the Treasury; if there were no war clouds in the foreign sky; if peace were assured, our defense armament reduced to the minimum and the rest of the world on its economic feet (an ideal condition which, of course, will never occur but may be assumed for the sake of argument), even then it would be inexcusably stupid not to enact the Hoover recommendation, which not only would save $3,000,000,000 a year but, through the elimination of duplication, waste, and absurdities, restore reason and efficiency to a machine close to bogging down of its own weight.

Even under the ideal conditions above described there could be no defense for inaction, no argument against adoption, no sense in refusal. But, under conditions as they really are, not to act swiftly and favorably is more than stupid—it is wicked. It comes close to national insanity. It would be the most shocking demonstration of popular incapacity in all history. It would exhibit this Nation as having, first, gone on record as realizing the necessity of regaining control of its governmental machinery; second, as having its request to be shown the way fully complied with; third, with full knowledge of the danger, as having turned its back, shut its eyes and done nothing.

These statements are by no means too strong. The truth is they cannot be made too strong. For here are the facts—far, indeed, from those ideal conditions, financially, the Nation is in an appalling state. Instead of being free of debt, the debt—now more than two hundred and sixty billions—is far greater than anyone dreamed could be sustained. The annual interest alone is twice as much as the total cost of government 20 years ago. Instead of being lightly taxed, the tax burden is unprecedently heavy. It bears grieviously upon rich and poor alike. It has reached the point where to gain acutely needed revenue, economists generally fear the result of adding to it. Instead of a dependable surplus for nearly 18 years, we have consistently run increasingly large deficits. Under such conditions any business, big or little, would be marked "insolvent," branded as bankrupt. In other words, our Federal fiscal structure is strained to the limit.

Instead of permanent peace, for 2 years we have been engaged in a frightening cold war with Russia and no man can be sure it will not become a shooting war. Instead of reduced armaments at vast cost, we are forced to build up a gigantic defense machine. And billions are being poured into the friendly countries of western Europe to promote their economic stability and strengthen our position. Finally, we have just concluded the North Atlantic Pact, under which in the next 12 months we will furnish to the other signers $1,500,000,000 worth of military supplies. This one and one-half billion is not provided for in the President's budget and must be added to the five and one-half billions necessary for the Marshall plan in the coming year. On top of all this, before the session has ended Congress will have appropriated several other nonbudgeted billions for a variety of purposes. The drain upon the Treasury will be terrific. We have got to get more revenue or go under. Where is the money coming from? Even if more taxes are levied, we will still be far short of our needs. In face of these facts, which no one disputes, one would think the Hoover proposal to eliminate waste, increase efficiency, and save three billions annually would seem heaven-sent.

Literally, there is everything to commend it. It is not as if the Hoover Commission were trying to sell it. The idea was not originated by Mr. Hoover but by Congress itself. It was Congress which unanimously passed a resolution creating the commission and asking it to do the job. The commission has done the job. Neither the accu-

racy of the report's figure nor the soundness of its recommendations are questioned by anyone. Practically every newspaper in the United States has approved. There isn't so much as a trace of politics anywhere. No one connected with the commission has anything even remotely to gain. No one in any party disputes the vital necessity of the proposed reorganization, which every President since Theodore Roosevelt has urged. Informed men know that if it fails this time it will never be done. This is the last chance.

Opposition comes from the entrenched Federal bureaucracy and the labor lobby. Powerful as these are, they should be easy to override on so tremendously essential a matter as this. Yet, incredibly, it lags. Already it is being said that Congress will evade responsibility itself and merely authorize Mr. Truman to reorganize to the extent he desires. That, of course, means nothing at all. Most Congressmen shrink from doing anything to disturb the constituents whom they have on the pay roll. Their disposition is to run away from the drastic steps they are now asked to take in the national interests. If some way is not found to save this report from the lingering death which its opponents predict, this country's future is not pleasant to contemplate. Easily, it is the most important matter before Congress. Its fate will affect every project upon which we are engaged, abroad as well as at home. It is a dreadful thought that the people are incapable of being aroused on so vital and simple an issue.

Northwest Support of CVA

EXTENSION OF REMARKS
OF
HON. HUGH B. MITCHELL
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. MITCHELL. Mr. Speaker, some die-hard opponents of CVA and their editorial spokesmen are attempting to depict President Truman in the role of foisting CVA on the Pacific Northwest against the wishes of our people. Outstanding citizens of my State have answered these unfounded attacks and misrepresentations. I include with these remarks a statement made jointly by E. M. Weston, president of the Washington State Federation of Labor; Henry P. Carstansen, master of the Washington State Grange; Roy W. Atkinson, regional director of the Congress of Industrial Organizations; and Harold J. Gibson, president of Aero Mechanics Lodge, No. 751, and president of the Washington Council of Machinists, International Association of Machinists.

I also include a letter to the Tacoma News-Tribune, written by State Senator John T. McCutcheon, which effectively sets forth the benefits that will accrue to the Pacific Northwest by establishment of a CVA.

The statement and letter follow:

Recent newspaper reports quoting anti-CVA spokesmen as saying that there is no support in the Pacific Northwest for the Columbia Valley Administration bill is an insult to the many Northwest organizations which have actively favored this legislation for years.

The organizations we represent have a combined membership of a half million persons plus their families. We have consistently backed CVA and have helped organize the League for CVA to bring forth the facts to the general public. We challenge the CVA opponents to name the people they represent when they claim to speak as the voice of the Pacific Northwest.

We believe that the misguided opponents of CVA are fighting against the greatest opportunity ever presented to the people of the Pacific Northwest. We remember that these same groups were among those opposing construction of Bonneville and Grand Coulee Dams, which have proved to be of great benefit to this region.

CVA will bring greater benefits to the Pacific Northwest by hastening the development of the Columbia, America's greatest source of power. It will be done in a completely democratic manner, and the people of the Pacific Northwest will have more to say in their future destiny than they have ever had before. By democratically working together with the CVA, we will be able to work out the particular details of Northwest development to the satisfaction of all concerned.

The enthusiasm of our members convinces us that were the CVA issue put to the test of a vote, the people of the Pacific Northwest would be overwhelmingly in favor of this legislation. The manner in which the people of our region are rallying to the support of CVA further convinces us that the Pacific Northwest wants a CVA and will have a CVA.

E. M. "ED" WESTON,
President, Washington State Federation of Labor.
HENRY P. CARSTANSEN,
Master, the Washington State Grange.
ROY W. ATKINSON,
Regional Director, Congress of Industrial Organizations.
HAROLD J. GIBSON,
President, Aero Mechanics Lodge, No. 751, and President, Washington Council of Machinists, International Association of Machinists.

MAY 5, 1949.

To the EDITOR,
Tacoma News-Tribune,
Tacoma, Wash.

The opposition to the CVA bill is totally illogical. It seems to be based on an imaginary surrender of some vague power or freedom to the Federal Government which we are now supposed to possess over the navigable streams of the State. Even in politics, logic and common sense have some place. What power do we now or did we ever possess over Coulee, Bonneville, McNary, and the other great dams to be built on the Columbia River, or over the great reclamation project in the Columbia Basin? None whatever. Their future progress and development are completely at the whim of the Federal Government as it is. The only difference is that under the present system the policy of the Federal Government may change overnight if the private power interests get control of a new Congress and inspire it with their peculiar ideology. We have everything to win and nothing to lose by the establishment of a permanent regional authority that will fix the policy as one of development and not of stagnation. It will unify the conflicting claims of the Reclamation Service, Bonneville, and the Army engineers, and coordinate the protection of fish and wildlife.

The CVA bill now before Congress does not take away any of the power or authority of any city, town, or public utility district, or arrest their expansion in any way. Anyone who says otherwise is not telling you the truth. These local agencies, which are the backbone of local control in the distribution of power, will be tremendously aided by a CVA, not hindered. They will be enabled to buy more cheap power and distribute it. Industry will thrive and floods be brought under control.

The city of Tacoma cannot help but benefit, the mutuals cannot help but benefit, and the districts cannot help but benefit. Their present powers to expand are in no way limited. A CVA means unity of Federal effort; it means greater appropriations; it means continuity of policy and more rapid development of power, which will pay off the costs of the investment.

No one who believes in the development of the Northwest can logically oppose a CVA. No one who has fought the battle for public power over the years will.

Very truly yours,
JOHN T. MCCUTCHEON,
State Senator.

Trade and Cold War

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans Times Picayune of May 16, 1949:

TRADE AND COLD WAR

Three men well qualified to speak on world economics had their say this past week. Will Clayton warned that on balance the Russians are still winning the cold war and will continue to win so long as western Europe clings to self-containment trade and economic policies. Paul G. Hoffman, director of the ECA, told an Italian audience that although the Marshall plan had halted the Communist offensive for the moment, the job will not be done until 1952, and then only if European recovery is accomplished. W. Averell Harriman, special ECA representative in Europe, tied up these two statements by strongly reaffirming American support for world-wide reduction of trade barriers and establishment of a sound multilateral trading system. He insisted that the time has come for Europeans and the Western world generally to do something more than talk about economic integration.

All of this suggests that after 1 year of Marshall plan operation, which has been mainly concerned with priming the pump of European production, the time has come to proceed toward the real goal of the program: The economic reintegration of opposed nationalistic economies of even the Atlantic pact countries.

The reciprocal trade agreements act, which Congress is once more to consider soon and free, we hope, from the crippling amendments imposed last year by the Republican majority in the Senate, is one step in freeing world trade. United States foreign economic policy is firmly behind the Havana charter of the international trade organization which would help to remove barriers and establish unrestricted facilities for monetary exchange.

Mr. Harriman correctly warned Europe that it is far better for nations to take the risk now in giving up restrictive devices than to wait until American aid no longer is available. Although it is true that steps should be taken slowly and carefully it nevertheless is also true, as Mr. Harriman said, "that if a man too long postpones moving from his chair, his legs may atrophy to the point where he cannot even walk."

Reserve Officers and the National Security

EXTENSION OF REMARKS
OF

HON. W. STERLING COLE
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1949

Mr. COLE of New York. Mr. Speaker, one of the outstanding younger officers of the United States Air Force, Maj. Gen. Thomas D. White, recently addressed the State convention of the Reserve Officers' Association of New York State, held at Elmira, N. Y., and it is my pleasure to offer his remarks made at that time:

It is a great pleasure for me to be here tonight. Believe it or not, I owe the privilege to General Baron von Hammerstein. I haven't been able to get any historical data on him but the amiable baron evidently was an astute observer of human nature. Hanging on my office wall in the Pentagon is a quotation from the baron. It seemed so apt that, in the course of my business of keeping Air Force contact with Members of Congress, I had some photostats made. I gave one of them to Representative STERLING COLE, distinguished Congressman from this district. I thought Congressman COLE would particularly appreciate it. He did.

General Baron von Hammerstein said, "I divide my officers into four classes: The clever, the stupid, the industrious, and the lazy. Most officers possess at least two of these qualities. Those who are clever and industrious are fitted for high staff appointments. Use can be made of those who are stupid and lazy. The man who is clever and lazy, however, is destined for high command for he has the temperament and nerve to deal with all situations. But, whoever is stupid and industrious is a danger and must be removed immediately."

Congressman COLE alleged that "use could be made" of me and suggested to your committee that I appear here tonight.

It was a pleasure to accept your kind invitation, because I was anxious to have the opportunity to be present at this gathering and meet the members of your group. My interest was aroused immediately when I learned that this association included Reserve officers of all three services. Unification is one of the most important issues that the Military Establishment must resolve, and your association is a healthy sign of spontaneous unification that is highly encouraging. In addition, I have always been interested in the vital role of Reserve officers in the national defense. This organization, then, composed of Reserve officers of all our armed forces and dedicated to the support of a suitable military policy for the Nation, is to me a tremendously important group. Its potentialities for constructive effort in the national defense program are practically without limit.

I often wonder if enough Reserve officers are aware of their vital function in our national life. It sometimes seems to me that many of these men are not fully aware of their own importance and strength, but regard themselves, certainly in peacetime, as filling an essentially static role. It is, of course, perfectly clear that that could not be true of you gentlemen gathered here. Your actions prove otherwise. You have formed this organization. You have given freely of your time and effort. You are here now, in fact, sitting out there listening to me talk while both trout and golf are newly in season. Now I find that highly flattering, but I also regard it as ample evidence of a serious understanding of your importance, as Reserve officers, in our national life.

This importance can hardly be exaggerated. It is far from true, as some believe, that the reserves are active only in wartime, and even then do no more than those other citizens who join the armed forces. Our reserve forces are a vital element of our military structure, in peace as in war. Our military policy, and indeed our national economy as well, are predicated on the repudiation of the totalitarian doctrine of the constant maintenance of armed forces at full wartime strength. Our prosperity and many of our liberties would vanish if we attempted such a thing. Instead, the traditional American doctrine has long been to maintain standing forces adequate to provide a training corps and to meet the initial impact of hostilities with the capability of immediate expansions to wartime strength. This matter of expansion to full strength is the key to the success or failure of the entire policy. It could never be done without the existence of a trained and organized body of reserves ready at all times to assume the full duties and responsibilities of professional military men. I have used the expressions "at all times" and "full duties and responsibilities" deliberately and with a purpose. Modern war strikes swiftly. Our ranks must be filled at once with trained men. Other millions of men must be adequately and promptly brought to a high state of training. In both cases the professional competence of our Reserve officers is a vital and decisive factor. We cannot tolerate a "guns or butter" economy. We certainly must never suffer military conquest. Our ability simultaneously to avoid both these contingencies depends primarily upon you men here today, and upon your counterparts throughout the country. That is a great responsibility. To meet it would seem to be enough to ask of any man. There are, however, many other important functions that a reserve officer can and does perform in his dual role as soldier and civilian. His understanding of matters of defense significance is that of a military man but his daily life is that of a civilian. In this he enjoys a unique advantage. In this position he can be of the greatest service to his fellow citizens, his service, and his country.

The American citizen today is vitally interested in defense matters. He is naturally and properly concerned about the security of his country. He is concerned about taxes. He certainly wants the maximum for his defense dollar. He wants unification of the armed forces. Above all, he seeks information about and understanding of all these things. Neither are always easy to obtain.

Now, of course, there are no clear-cut answers to many such questions. However, a man with the background of military training and experience necessary to be a Reserve officer, is at least in a position to weigh these matters intelligently. He can usually tell fact from rumor. He knows his own service intimately and is doubtless familiar with the needs and purposes of the others. He is respected by his friends and neighbors for his military knowledge, and if he keeps himself well-informed professionally he can be of immeasurable assistance to his civilian associates. This is more important than it might appear. Military matters do not lie outside the province of the private citizen. He exerts a very real if indirect influence on all matters of national policy. It is proper and essential that he should. It's his safety and his money that are involved. His free speech, his vote, and his influence upon his elected representatives are the means by which he exercises the prerogatives of a free citizen. Experience has shown that when he does not exercise those prerogatives vigorously and wisely they are lost.

Many Americans are apathetic toward the powers and responsibilities of citizenship and in defense matters often find it difficult to know what to believe or do. The Reserve officer, a private citizen himself, can be a very powerful influence in his community; an influence working toward the active, enlightened, and vocal concern of every citizen with defense measures. Such concern is important to our very survival. Foster it upon every possible occasion.

Probably the most important issue involving the armed forces today is that of unification. Certainly this is what the public currently hears the most about. It is the score upon which they are most confused and most alarmed. Everyone knows that effective working unity between the Army, Navy, and Air Force is essential to both military effectiveness and economy. Yet people hear that the military establishment is rent by conflicting doctrines and ambitions, that vast waste and petty quarrels hopelessly impair efficiency and economy. Because of its importance and because of the confusion and misrepresentation that are so common, I want to talk a little about this matter of unification.

In the first place, we do have our differences in the National Military Establishment. It would be silly to deny it. I think it's a good sign. What people don't think about, however, is that these very differences are evidence of the degree of unification that has been attained. If the Army, Navy, and Air Force each went its own separate way their doctrines and principles could be wildly divergent. That was largely true for many years. It was not until we faced up to the problem of establishing uniform and realistic concepts of strategy and tactics that the differences that do exist become apparent. These differences are inevitable, but they are being resolved. They are being resolved by discussion in the Joint Chiefs of Staff. They are being resolved by experience, by the experience of the recent war supplemented by joint exercises and maneuvers. Out of all this discussion, out of joint experience, and out of an ever-growing familiarity with each others' weapons, methods, and capabilities, there is growing at all levels in all services, a new, integrated, and realistic understanding of the very art of war itself. This understanding, and the new and vital concepts that are taking shape in the light of it, will form the basis for the future strategic and tactical doctrine of the unified United States forces.

This new doctrine and the resulting new methods in warfare may well be our salvation in any future war. At present, however, their birth pangs are being felt in consternation and worry over the alleged interservice feuding. Feuds, of course, make good copy, just as one airline crash is news but several million passenger-miles flown in safety are not. One of the biggest feuds we read about is that over the primary function of the services. Principally, we hear of the Air Force's right to strategic bombardment.

The Air Force, of course, is concerned with its strategic bombing role. We feel it's important, and we feel that we have a grave responsibility to do it as effectively as modern weapons and methods permit. We realize, however, that when the Air Force drops a bomb, atomic or otherwise, the performance is far from being wholly an Air Force show. It is a joint operation, as is any other military activity. On a strategic bombing mission the Air Force is carrying the ball. In a carrier strike the Navy carries the ball. In a land campaign the Army has taken the pass from center. But in every one of those activities every member of the team has a vital function to perform. To bring any type of force to bear on the enemy in modern war requires the coordinated effort of all land, air, and sea forces and is a highly intricate team function. It will no longer suffice to think in terms of Army, Navy, and Air Force roles. It is no longer sufficient to think in terms of cooperation. Modern war planning must include all the involved

relationships and intricate functions of every weapon and arm of service from the very beginning. This integrated planning must be done on one level—at the top. This is the new concept of war that I mentioned a moment ago. Simple as it sounds, its effect on our future military operations will be revolutionary.

Let me illustrate what I mean by every military activity being a joint operation. The Air Force, when carrying the ball in strategic bombing, is dependent upon the Army for ground defense, airdrome construction and maintenance, and common supply. It is dependent upon both the Army and Navy for the all important transportation of bombs, fuel, and personnel. The attack starts here at home. By the time the bombs are delivered all units of our Defense Establishment have become involved. The Air Force is aware of this, and is equally aware of its responsibilities in an operation where the Army or Navy performs the ultimate application of force.

The Air Force is responsible for air support of the Army. Our fighter groups devote at least half their training time to activities designed to perfect their ability in the tactical support of ground troops. Dive bombing, ground gunnery, and tactical reconnaissance are vital and major parts of our fighter-training program.

The delivery of parachute and airborne troops is, of course, one of our primary responsibilities. We have developed the aircraft and tactics to perform this function. We train constantly with the Army to perfect our techniques. This is a joint operation in every sense of the word, and the Army and Air Force have developed common doctrines and tactical procedures that represent the very essence of unification. We have developed the means to supply by airlift any Army operation that requires it.

Another quite important aspect of the definite progress that is being made is the joint Navy-Air Force planning of mining operations. It was found in the war with Japan that the Air Force could make a valuable contribution to the Navy's minelaying campaign. As a result, this activity is now being planned on a joint basis.

I mentioned a moment ago the value of joint maneuvers. These are currently possible and are being held on a scale that was never before dreamed of in the United States. Before the recent war it was the custom of any service holding a maneuver to invite participation by the others. This participation could consist, however, of little more than observation. Money was the principal obstacle. If the Army held a field exercise, for example, the Navy could not take an active part because their budget wouldn't permit it. The budget had been prepared a year or more before, and the funds for such a maneuver had not been included. As a result, in any maneuver simulating a situation where more than one service would be involved in actual warfare, a vital ingredient of the situation had to be simulated. Naturally, such simulation was on an unrealistic basis. The maneuvers themselves were highly unrealistic and of doubtful training value.

In the recent war, therefore, when joint operations became necessary, it was largely a matter of cut and try. Tactics were evolved on the spot. The services were unfamiliar with each other's terminology, weapons, and capabilities. We ad libbed, in short. It was a difficult and often costly process.

As a result, the Unification Act of 1947 gave the Joint Chiefs of Staff the responsibility for formulating all plans for joint field exercises. Maneuvers arranged by this body are not only devised to give the maximum benefit to all participating services, but they are considered in the budgets of these organizations so that full-scale participation of all is possible for the first time. It is the policy of the Joint Chiefs to hold these exercises at least once yearly and more often when possible. The result on American strategic and tactical thinking is enormous. Just as great will be the growth in each service of an appreciation of the abilities and problems of the others. A valuable consequence will be the elimination of duplicate functions.

Naturally, it will take time for the full benefits of the very real progress made and to be made to become fully apparent. Already, however, we have numerous encouraging examples of what can be expected in the future. The Berlin airlift is such an example. The airlift, like a bombing raid or charity, starts at home. There can be no airlift without gasoline, and Navy tankers have transported approximately 100,000,000 gallons of it from the United States since the airlift began. When the Navy delivers the gasoline in European ports, the Army Transportation Corps carries it, along with other airlift supplies, to the airdromes in Germany—airdromes, incidentally, which are maintained by Army engineers. The supplies are then flown into Berlin by Air Force and Navy aircraft and crews. The two Navy squadrons on the operation have delivered, by the way, an average of over 750 tons of these supplies daily. In Berlin, the supplies are once more in the hands of the Army, this time for distribution. The picture is not complete without mention of the fact that the Army Quartermaster provides logistic support for all Vittles personnel. The personnel of all three services on Vittles have functioned for nearly a year as a close-knit unit to bring to success the most momentous and intricate air transport operation in history. It would have been incredible a mere decade ago. I have every confidence that such confusion and conflict as we still have will seem equally incredible in less than another decade.

Those of us who are in the service today, Regular or Reserve, are privileged to service in a critical and interesting era. Like all periods of change, it is challenging and filled with interest. It makes many great demands upon us all. You Reserve officers, as both civilians and officers, face double responsibility. As we all meet the challenges and soberly fulfill our responsibilities, we are hastening the day when our unified forces will be prepared to deal with any contingency as they have the Berlin blockade. When they can do that, the Nation will be secure.

I thank you all for permitting me to be here. In closing I cannot refrain from quoting once again from Baron von Hammerstein and in so doing to hope that I have not entirely accomplished his definition of training (which can well include a talk before a Reserve officers association).

Said the baron: "The art of military training lies in so exasperating the soldier in times of peace, that when confronted with war conditions he is inclined to regard the whole thing in the light of a holiday."

The UN and Spain

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of May 18, 1949:

THE UN AND SPAIN

The long debate over Spain in the General Assembly of the United Nations has ended in a somewhat inconclusive result. A majority of the States voting on the question approved a resolution that would have sanctioned the return of Ambassadors and Ministers to Madrid while the Franco regime is still in power. But on this question most of the democratic nations of the West—Britain, France, the United States, Canada, Sweden, Denmark and Belgium—abstained; and the favorable vote itself fell short by four of the two-thirds majority necessary to its acceptance. Meantime, while the result of the vote is to leave in effect an earlier UN resolution of 1946, calling for the withdrawal of Ambassadors and Ministers, eleven member States of the UN have already sent chiefs of mission to Madrid or have announced plans to do so. All this leads to anything but a sharply defined conclusion.

In fact, it might be said that the one thing that did emerge from the whole affair is the demonstration—again—of how valuable an asset Franco is, as a debating point, for the Communist bloc in the UN. He is a perfect foil for their purposes. They denounce his government as antidemocratic and as a creature of fascism—both of which things undoubtedly it is; and in so doing they blur the record of the thousands of tons of petroleum and manganese and grain that Communist Russia delivered to Hitler Germany, under the Ribbentrop-Molotov pact, when Hitler made war on democracy and Britain stood alone. They run the gamut of criticism of Franco's suppression of civil liberties, his press censorship and his concentration camps; and they manage thereby to convey, at least to some innocents, the impression that they, who outmatch him in all these things, are in fact the defenders of a democratic tradition. They dwell upon the congratulations which they accuse Franco of sending to Japan, at the time of its attack upon Pearl Harbor; and they thereby thrust further into the background of popular memory "the warmest congratulations of the Soviet Government on the splendid success of the German armed forces" which Molotov sent to the German Ambassador in Moscow when the German armies entered Paris.

To the Soviet-Communist bloc Franco is worth his weight in at least a semiprecious metal. They would have a hard time getting along without him.

Opposition of William M. Chadbourne, of New York, to Statehood for Hawaii and Alaska Based on Misapprehension of Facts and Unsound Conclusions, Edward R. Burke, Counsel of Hawaii Statehood Commission, Says

EXTENSION OF REMARKS
OF
HON. JOSEPH R. FARRINGTON
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to extend the text of a letter addressed to myself and to all Members of Congress by former Senator Edward R. Burke, who is at present counsel for the Hawaii Statehood Commission.

The latter is an agency created by act of the Legislature of the Territory of Hawaii and supported in its entirety by public funds.

The text of Senator Burke's letter constitutes a complete and final answer to arguments against statehood advanced by William M. Chadbourne, of New York, in a memorandum circulated to Members of Congress.

The letter follows:

TERRITORY OF HAWAII,
HAWAII STATEHOOD COMMISSION,
Washington, D. C., May 16, 1949.

Hon. JOSEPH R. FARRINGTON,
Delegate to Congress from Hawaii,
House Office Building,
Washington, D. C.

DEAR MR. FARRINGTON: Mr. William M. Chadbourne, of New York, recently submitted to the Eighty-first Congress a memorandum in opposition to the admission of Hawaii and Alaska as States. This statement is limited to the case for Hawaii, although in considerable part the arguments apply with equal force to Alaska.

Mr. Chadbourne is a distinguished citizen of recognized probity and ability. It may be accepted that his desire is to do, as he says, "what is best for the United States as a whole and thus for the world." We submit, nevertheless, that he is laboring under a misapprehension of the facts, and that his conclusions are not well-founded. There is abundant evidence to support the claim that Hawaii now meets every legitimate qualification for statehood. The broader view will disclose that in Hawaii, to use the words of an eminent American, there is "the finest example under the flag of the welding of alien peoples of diverse racial strain into Americans."

It is important to remember that 50 years ago Hawaii voluntarily surrendered its independence at the urgent invitation of this country in order that it might be, as officially stated, "incorporated into the United States as an integral part thereof." It was understood that the language used and the action taken was an assurance that when Hawaii became able to meet the requirements it would be welcomed as a State.

Numerous congressional committees after personal investigation certify that Hawaii has fulfilled its part of the bargain. It has a substantial population and a sound economy. Its civic ideals and institutions are in every respect in accord with the best American tradition. Examine its schools and colleges and you will find a system of education that compares favorably with the best in any State on the mainland. Illiteracy is so slight as to be practically nonexistent. The newspapers of Hawaii are free, alert, and forceful. There is complete religious freedom. Courts of justice function exactly as they do in New York State or Washington. The elective franchise is dearly treasured even though its citizens are denied the right to participate in the choice of their president, governor, or Federal lawmakers. Regularly a larger percentage of voters go to the polls in Hawaii than in any State in the Union. It is not too much to say that its people have displayed a marked genius in self-government, and have set a splendid example of how men and women of divergent races may live and work in harmony and good will.

The Chadbourne memorandum asserts that to grant statehood to Hawaii and Alaska would set a precedent that would require that Puerto Rico also become a State, and, presumably, other outlying possessions. There is no substance to that allegation. Hawaii and Alaska are organized territories, the only ones in that class. Congress need not, and probably will not, ever establish another organized territory, in legal view the first step toward statehood. Puerto Rico and all of the unorganized territory over which the United States exercises some measure of control, in their present status, lie entirely outside the realm of statehood possibility.

The precedent which Mr. Chadbourne fears is rightly not the final act of granting statehood. In the case of Hawaii, the precedent was established 50 years ago when it was made an organized Territory and thereby authorized to qualify itself for statehood. If the request should ever come from Puerto Rico that it be organized as a Territory as the first step toward statehood, Congress would again have to decide whether it were willing to follow the precedent, established 50 years ago in Hawaii's case, of organizing a noncontiguous territory in preparation for its admission as a State.

However, this is really beside the point. In no respect is there any resemblance between the position of Puerto Rico, on the one hand, and of Hawaii and Alaska, on the other.

The memorandum of opposition stresses what the author seems to feel as to the "remoteness" of Hawaii. That argument has been completely demolished by modern methods of transportation and communication. Today Hawaii is in actuality closer to the National Capital, more intimately in daily—even hourly—contact with Washington, than were New York or Boston—or even Philadelphia—when the seat of government was located there. Distance in miles has ceased to be a barrier.

The memorandum states that many Americans travel from State to State and thus come to know their fellow citizens. Hawaiians know their fellow citizens, too. They are probably more widely traveled than even a New Yorker. Think of the amount of contact the people of Hawaii must have had last year, for example: More than 93,000 passengers flew across the Pacific to or from Hawaii and the west coast; passenger ships from Hawaii to the coast accommodate more than 3,700 passengers; Hawaii is a regular port of call for some 70 ships. Hawaiians not only rub elbows with their fellow citizens on the mainland, but, like New Yorkers, with many races from all parts of the world.

Finally, the argument against statehood for Hawaii rests upon the alleged unfairness of adding two United States Senators who will represent a State with less than 600,000 population, whereas New York, with its nearly 15,000,000 people, is likewise restricted to two Senators. This is the crux of the opposition. It is an attempt to arouse the hostility of the more populous States against those of small population. In reality, this is a challenge to the wisdom of the framers of the Constitution. With infinite care they worked out the compromise of equal representation of all States in the Senate, whereas population should determine the number of Representatives.

Hawaii will have two Senators just as New York. But it will also elect two Representatives to sit with the 45 chosen in New York. The combined voting strength of 18 States in the House does not equal that of New York. All this is as it should be. It is all a part of the great compromise without which there would have been no United States.

We submit that it is improper for States with large representation in the popular branch of the National Legislature to oppose the grant of statehood to an otherwise qualified organized Territory solely because the new State would have equal representation in the Upper House. It was anticipated that new States with small population would be admitted. Hawaii will be the fourteenth State with not more than two Representatives, yet now, for the first time, serious objection is urged to compliance with the Constitutional requirement of equal representation in the Senate. There is no evidence that the less populous States combine to defeat the will of the large States.

In conclusion, Hawaii has become a strategic outpost of immeasurable importance to the United States. In the recent World War, its citizens displayed an heroic devotion to the American ideal. To accept Hawaii into the Union now would be not only heartening to its loyal citizens, but it would add greatly to the prestige of the United States among the millions of inhabitants of the Pacific and around the world.

Sincerely yours,
HAWAII STATEHOOD COMMISSION,
EDWARD R. BURKE, *Counsel.*

The North Atlantic Pact

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES

Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mr. JOHNSON of Colorado. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD the statement made today in the hearings before the Senate Foreign Relations Committee by Rev. Edgar M. Wahlberg. For many years Mr. Wahlberg was pastor of a large community church in Denver, where he made a great record as a humanitarian and spiritual leader.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

Honorable members of the Foreign Relations Committee, first of all, I wish to congratulate the members of this committee and the Senators from my own State, namely, Senators ARTHUR H. VANDENBERG and HOMER E. FERGUSON, who in conformity with our democratic tradition have provided for an extensive hearing on this most important issue of the North Atlantic Defense Pact.

I have the privilege of representing the social action commission of my own church, a group of ministers and Christian laymen of the Detroit area whose names are attached, and the Detroit Peace Council, and the Michigan Council Opposing Peacetime Conscription.

The following statement is my own. The motivation for it is in my Christian faith and basic desire to serve the Prince of Peace. It is my contention that Christianity and its teaching of love for all mankind is the third alternative to the alternatives of appeasement and war.

We believe that no one sincerely desires war. We should do everything to prevent a third world war and the destruction of our way of life. The deepest desire of mankind is peace. The American people desire to maintain a democratic way of life and to lead the way to world security.

Peace depends upon an understanding between the United States of America and the U. S. S. R. and a satisfactory working relationship in a pattern of world responsibility and concern for the people of the world.

Fear and unfriendly acts by both Nations have deepened the division between them and have generated hostility. Both Nations are burdened with expenditures of a military nature that have endless and exhaustive proportions.

If the present pattern persists there is danger of a violent war at any time. It is only logical to assume that the present cold war can lead to an outbreak of actual war.

Yet a further step is now being prepared in the form of a North Atlantic Defense Pact to be followed by a huge and costly program of arming western Europe.

We contend that in practice, if past experience is a guide, the very nature of this alliance and the process of rearmament will generate fears which still further rearmament will be needed to allay, creating a mounting spiral of expenditures in which military estimates will prevail over considerations of economic and social recovery. In this way we will be perpetuating the very conditions of misery, want, and dissatisfaction, at home and abroad, which according to the State Department analysis itself, foster communism and thus play into the hands of the U. S. S. R.

We contend that we must put a general settlement with the U. S. S. R. ahead of the North Atlantic Defense Pact. We feel that the State Department and the administration should provide an answer to this question. We believe that it is preferable to set up standards of conduct rather than standards of geography in which we militaristically divide the world into two warring camps.

We are of the opinion that the Atlantic Pact is a second-best attempt to provide for world security. It is not unlikely that a series of regional pacts and agreements will take precedence over the facilities of the United Nations and will in time overshadow the United Nations' universal character and aims. It would seem that such arrangements will hamper and further weaken the United Nations. In actuality the pact is a substitution for the first best alternative, the United Nations, and will lead to the "bankruptcy of the political and legal system for which the United Nations was created."

We believe "that it will prove impossible to restore a sense of security regarded by the United States as essential to western European recovery, no matter how much we arm the nations along the Atlantic seaboard, until Russian troops are withdrawn from Germany and Austria."

Our problem is to relax the tensions which make it essential for us and others to keep troops in Europe. Let us rather demonstrate our good faith in the possibility of the ultimate adjudication of the real difficulties dividing East and West by making a thoroughgoing overture through the United Nations of universal disarmament with the obviously necessary sanctions.

We are deeply convinced that capitalism and communism not only can, but must, live together in the same peaceful world. No dispute between the United States and Russia need be resolved by force, and there are nc differences between them which in time cannot be settled by peaceful negotiations. We are of the opinion that all of the possibilities for such negotiations have never been fully explored.

We petition for the discharge of our responsibililties as a peaceful nation to the end that all mankind may be freed from the threat of total war. Confidence in an enduring peace will be created in a series of friendly acts so directed as to bring understanding between the United States of America and the U. S. S. R.

We, therefore, urge you to oppose the Atlantic Pact and the rearmament of western Europe by the United States; and we urge you to give consideration to every genuine opportunity in which it is possible for the United States and the Soviet Union to enter into relationships of understanding and agreement, as regards the settlement of international disputes, and to a speedy end of hostilities as related to World War II and also to the so-called cold war. We urge the strongest support of the United Nations and the use of its facilities for world understanding and social and economic recovery and disarmament.

As I have said, Christianity is the third alternative to the tragic pathways of appeasement and war. The sheer hypocrisy of security by preparing for an atomic war faster than any other nation .s seen in the desperate way that atomic scientists are trying to get the American people to do some clear, honest thinking about human relationships. This kind of thinking does not call for atomic armaments and the militarization of the West. If we wish to save the world it calls for God's plan for our lives.

The early Christians went into the world with a plan. It was God's plan. Because it was better than the Roman plan and other plans, the people turned to the Christians and laid the foundations for the humanitarian efforts of mankind which led to the expansion of democracy and man's dream to save the world. Man found the stuff for a new world in His divine nature. The power came from God.

We see this in the establishment of our own nation, the first best democracy on earth. When things were confused in the Constitutional Convention, our forebears recessed to pray. They reconvened and found the way to agreement.

God gave us the world with all its abundance. God gave us life and a nature that can be good and helpful. God gave us Jesus Christ, who more than any other has shown us the way to live. In Christ, we have the teaching of faith and love. We have the power of God and the grace and discipline of prayer. God's plan is adequate. Here we have that added greatness of soul which drives out fear and in which we can work together for the common good.

This is the glory of God's plan for our lives. God made us in His image and through Christ has lifted us to the greatest knowledge known to man. We belong to God in the fact of our birth. Let us belong to God twice in our response to His love and our unhurried love for all the children of men. We pray that our Representatives in Washington may implement this universal faith in the support of these universal institutions and values which alone will direct us to world peace, understanding, and security.

Brotherhood of Man

EXTENSION OF REMARKS
OF

HON. FRANCIS J. MYERS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mr. MYERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by me at the Brotherhood Day dinner of the Philadelphia chapter, National Conference of Christians and Jews, at the Bellevue-Stratford Hotel, Philadelphia, on Tuesday night, May 10, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Perhaps never before in man's whole history has the concept of brotherhood been more necessary to the existence of man's freedom. We are our brother's keeper—not just in our family—not just in our community—not just in our Nation—but we are our brother's keeper in a world-wide sense. Brotherhood embraces all the 2,000,000,000 people with whom we share the planet.

Today, the act of any man in the world may touch off a chain reaction of tragedy which will ultimately affect great segments of the world. All of us here tonight are keenly aware that Hitler's persecution of Germany's Jews was not an event isolated in time—and unrelated in space—with respect to happenings elsewhere in the world. We remember the swastikas scribbled on American synagogues. We remember the legacy of hatred Hitler left behind in Europe—how that poison swept east into Poland, and resulted in the unbelievable and terrible pogroms that decimated the ghettoes into which Jews had been herded for slaughter.

Beneath this thin veneer we call civilized decency lies a latent and explosive reservoir of misunderstanding and hatred, of bigotry, and unreasoning self-pity. This reservoir is everinflammable, ready for a spark which might be struck, perhaps, in a distant part of the world. And the only way this reservoir may be drained off is through the spread of understanding, and through the eradication of those things which give rise to blind fear and self-pity.

This reservoir cannot disappear entirely until all men understand that their freedom depends upon the freedom of every other man in the world. A race riot in South Africa, a fiery cross on a southern hillside, star-chamber trials of Catholic churchmen and prelates—any one of these—is as grave a threat to man's freedom as a standing army of 10,000,000 men.

Many, many things must be done to achieve true brotherhood among men. The success of the National Conference of Christians and Jews affords gratifying evidence of what can be done—and is being done—among religious and lay institutions to promote understanding through education, and cooperation among men.

Even if we were to attempt to limit brotherhood to its establishment here in America alone—and, as I have said, we realize that brotherhood cannot be limited just to America—there is, nonetheless, a great deal which remains to be done right here at home.

I don't believe there would be any real disagreement among us here tonight as to the imperative need of basic civil-rights legislation.

But civil-rights legislation isn't going to abolish discrimination or establish the brotherhood of man overnight—and all by itself. There are, I am convinced, some basic weaknesses in these laws when they are left standing by themselves. For one thing, such laws seek primarily to punish a result, and not to remove the factors which caused the trouble in the first place. For another, they seek to legislate in the field of beliefs and misunderstanding. Now we can make misunderstanding a crime, perhaps, but the real answer to misunderstanding is understanding, and to a large extent, that is a matter of education, and ending the causes of misunderstanding.

But the best organized society from the standpoint of guaranteeing civil liberties and civil rights remains a shaky society unless each member of the society can feel freedom from the gnawing fear of economic disaster. Much of our racial and religious tension has its origin in, and derives its sustenance from, economic tension, fear of the loss of one's job. We've been relatively free of this for some years, because of the shortages of skilled labor beginning 9 years ago.

If we were to have a sharp downturn in our economic levels, however, I fear for what might happen. When men compete for a square meal for their families, or for a decent home—when there aren't enough jobs to provide adequate living standards for large groups of our citizens—the soil is fertile once again for the spread of racial and religious hatreds. Hitler used the technique with devastating effectiveness, but he didn't invent it. It was used in this country many times against each new wave of immigrants. It was the technique of the Black Legion, and of similar terroristic organizations. The technique is ineffective, however, when men feel secure in their ability to maintain their families on a decent American standard of living.

That poses many problems, and reasonable men and women, willing to practice reason in working out these problems, can certainly find solutions. There is no objective more in keeping with the spirit of brotherhood than in the establishment of decent social and economic conditions here at home.

The better we succeed here in that effort, the better are our chances for encouraging the spread of decency throughout the world.

Progress toward international brotherhood is slow, it's true. But there are many hopeful signs. America turned its back on the League of Nations—but we haven't turned our back on the UN. There are a lot of doubting Thomases where the UN is concerned, but I am certainly not one of them. I never have believed, though, that you could take the sovereign nations of the world—with their conflicting interests, beliefs, and misunderstandings—and put those nations into a single organization with the expectation that all our troubles would be over. But the UN is forging ahead. The UN is bringing problems out into the open. It is breaking down misunderstandings. Its achievements in helping Israel and the other governments of the Middle East to work out their misunderstandings represent a tremendous boost in its prestige—and it is a heartwarming demonstration of what the UN can do, and of what it will be able to accomplish on a much larger scale in the future. To increase the effectiveness of the UN will take a lot of patience, a lot of understanding, a lot of time—and an awful lot of work. But the will to make the UN effective is there, and I have great hope for its success.

In addition to the UN there are for the present many other ways that we can foster brotherhood in the world. The bold, imaginative point-4 program, suggested by President Truman in his inaugural address last January, is a fine example of what I mean. The very spirit behind it is that of lending an understanding hand to all the peoples in the world—to help them work out the most effective utilization of the world's resources for the benefit of mankind. Here again is a measure directed toward a relief of tension, toward an increase in understanding.

It is in this same spirit that we have undertaken the European recovery program—not in a spirit of promoting an American imperialism, but rather to help the people of Europe work out the vexing problems of postwar reconstruction and revival of trade, to help them create an atmosphere of mutual trust and understanding, to help them achieve security, and to put at an end the economic and spiritual chaos left in the wake of war.

In the present anxious tension which pervades the minds of people everywhere, in this uneasy state of half-peace, the brotherhood of man is indeed still but a dream. But we are making progress. We can turn this dream into substance.

Just as latent bigotry and discrimination lie beneath the veneer of civilization, so, too, is there a latent spirit of decency in all men. We all have our little prejudices, but many of us are honest enough with ourselves to be ashamed of those prejudices. We have found ways of communicating with each other, and gradually overcoming our own prejudices by coming to know each other. We are trying now to communicate with other peoples, to talk their languages, and to have them talk ours. As compared to the world of 10 years ago, we have made tremendous strides in human understanding. It took a war to achieve much of this progress—a horrible price to pay for such little achievement.

We have given ourselves a new chance, a new opportunity to provide a world which conforms to the goals which mankind, through its greatest spokesmen, have sought over thousands of years. If each of us wants that kind of a world sincerely enough, and is willing to work for it hard enough—at home in our own communities through efforts like those sponsored by this organization, on a State-wide basis and nationally, through a constant interest in, and influence on the day-by-day activities of our Government, and internationally through the many channels now available to us individually, and collectively as a nation, perhaps we yet will see the day when the brotherhood of man takes on the stature of real meaning. Then we will have found true brotherhood of man under the fatherhood of God.

General Pulaski's Memorial Day

EXTENSION OF REMARKS

OF

HON. J. CALEB BOGGS

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1949

Mr. BOGGS of Delaware. Mr. Speaker, in 15 of the last 20 years the Congress has adopted joint resolutions calling upon the President to proclaim October 11 of those respective years as General Pulaski's Memorial Day. These proclamations have properly caused the people of this Nation to remember and revere, on the anniversary of his death, the valor and bravery of Casimir Pulaski, who gave his life in our fight for freedom.

In view of the respect and high regard the people of this country have for General Pulaski, certainly it should not be necessary, Mr. Speaker, for the Congress to act each year on the matter of a Pulaski memorial day. Consequently, I have introduced into this House a joint resolution authorizing and directing the President of the United States to issue a proclamation calling upon officials of this Government to display our flag on all Government buildings on October 11 of each year, and inviting the people of the United States to observe October 11 of each year in schools and churches and other suitable places with appropriate ceremonies commemorating Gen. Casimir Pulaski.

Born in Poland on March 4, 1746, Pulaski grew to manhood during one of the darkest periods of Poland's tragic history. When Pulaski and his freedom-loving compatriots were crushed by a cruel conspiracy against the fundamental rights of man, he managed to escape from his subjugated homeland and made his way to France. It was there that he met Benjamin Franklin, who, impressed by this young count and his deep love of freedom, enabled him in 1777 to come to the United States of America, which was then a Nation only 1 year old and struggling for survival.

General George Washington recommended to the Congress that Pulaski be commissioned in the American Army. Impatient, however, and without waiting for confirmation of his commission, Pulaski served in the American Army as an ordinary volunteer. A few months later he was commissioned a Brigadier General and placed in command of our cavalry forces. Later, however, with the permission of General Washington he formed and commanded the renowned Polish Legion.

After more than 2 years of inspiring leadership and fearless fighting for American freedom, General Pulaski was mortally wounded at Savannah and died on October 11, 1779.

No words of mine, Mr. Speaker, could state the deep purpose which General Pulaski had in his heart as his own words in his last letter to Congress only 2 months before his tragic death. General Pulaski wrote at that time:

> I could not submit to stoop before the sovereigns of Europe, so I came here to hazard all for the freedom of America.

And since that day in October 1779 there has continued to be a very close bond between the people of the United States and the freedom-loving people of Poland. During the 170 years which have intervened, thousands of Americans of Polish extraction have shown that they, too, were willing "to hazard all for the freedom of America."

Mr. Speaker, we find a sorrowful comparison between the Poland from which Pulaski escaped to fight for America and the Poland of today. History has recorded that in the eighteenth century under the guise of a friend, Russia imposed kings upon Poland, maintained them there and spread intrigue throughout the country. And now we find, almost two centuries later, that Russia

again has spread intrigue through Poland, and by infiltration has subjugated the Polish people.

But all of us know, Mr. Speaker, that no nation can subjugate the spirit of the freedom-loving people of Poland. I feel confident that out of Poland's present suffering there will arise another Casimir Pulaski, and that by reason of his dauntless and fearless leadership there will come forth again another Polish legion, to gain the renown and the respect of the world. I believe that Americans of Polish extraction have faith that these things will come about.

And so, Mr. Speaker, I urge the Members of this Congress to follow the example of the Congress in the United States in 1777, by conferring honor upon Casimir Pulaski and his love of freedom, for which he was willing to die. This Congress can do so by passage of this joint resolution, providing that one day, October 11, shall be set aside in each year by the United States of America to do honor to General Pulaski and to pay homage to a man who gave so much for human rights and for the preservation of our Nation.

House Joint Resolution 241 is as follows:

House Joint Resolution 241

Joint resolution authorizing the President of the United States of America to proclaim October 11 of each year General Pulaski's Memorial Day for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski

Resolved, etc., That the President of the United States is authorized and directed to issue a proclamation calling upon officials of the Government to display the flag of the United States on all governmental buildings on October 11 of each year, and inviting the people of the United States to observe the day in schools and churches, or other suitable places, with appropriate ceremonies in commemoration of the death of Gen. Casimir Pulaski.

Land Reform in Italy

EXTENSION OF REMARKS
OF
HON. JOHN DAVIS LODGE
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I am including an editorial from the Washington Star of May 17 with regard to the program of land reform drafted by the De Gasperi government in Italy.

This is another welcome indication of the determination of that government to combat poverty and to eliminate social injustices. This is one more excellent result flowing from the Italian elections of April 18, 1948, in which the godless forces of communism went down to defeat.

LAND REFORM IN ITALY

The program of land reform drafted by the De Gasperi government is a development whose implications are important politically and socially as well as in the strictly economic field. The project envisages the transfer of some 3,000,000 acres of agricultural land from large estates to peasants now either wholly landless or working on especially onerous share-cropper tenancies.

Such a reform has long been overdue. Italy is an overpopulated country with insufficient fertile land to nourish its people. Even under ideal conditions there would not be enough farming acreage to satisfy the needs of its rural population, which numbers approximately 20,000,000—about one-half of Italy's total inhabitants. But the situation has been made worse by the existence of vast estates in several sections, especially in the south, where birth rates are highest and population pressures are therefore most intense. The result is a class of landless agricultural laborers who live in chronic poverty. Their plight has been exploited politically by Communist agitators, who have built up an agrarian radicalism strongly revolutionary in character. Indeed, those rural Communists are as much of a threat to Italy's democratic evolution as are the urban workers of the industrial north. Even an amelioration of the hard lot suffered by these landless proletarians would do much to undermine communism's hold on the Italian masses. It is a notable proof of the wisdom, foresight and political courage of the De Gasperi government that it undertakes this agricultural reform, since the Christian Democratic Party which is the mainstay of the Cabinet includes most of the big landowners whose class interest will suffer from the projected land distribution. Premier de Gasperi has told them, however, that they must make the required sacrifices for the good of the nation as a whole. He has also pointed out to them the danger of a social revolution from which they would be among the worst sufferers, since they would then lose everything.

The reform program appears to be soundly conceived. The land earmarked for distribution will be carefully studied and brought under control of a special organization which will make sure that the new owners are capable of operating their allotments efficiently. It will not be a hit-or-miss process. The peasant proprietors will be enabled to obtain on suitable credits the tools, fertilizer, water and other services which were formerly supplied by the big landowners. Furthermore, the large proprietors will not be expropriated. They will receive compensation, mostly in the form of special government bonds. Thus their losses will be minimized. Furthermore, the reform program will take effect gradually.

This is not the first time such a program has been undertaken. Right after World War I, when Italy was going through a similar period of revolutionary unrest, about 2,500,000 acres were turned over to small landholders. The growth of population during the ensuing three decades, however, has rendered a fresh land distribution imperative. And the present program appears to be better conceived than its predecessor. The success of the venture will promote the stability of Italy perhaps more than any other measure that could be inaugurated.

Come in, Alaska

EXTENSION OF REMARKS
OF
HON. HOMER D. ANGELL
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1949

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Times-Herald of May 17, 1949:

COME IN, ALASKA

Separated from the 48 States of this Union by a strip of Canadian territory is a huge chunk of land bought by this country 82 years ago. It covers 585,000 square miles which is about one-fifth the size of the United States.

It was purchased from Russia in 1857 for $7,200,000 or for less than 2 cents on acre. The purchase treaty was signed at 4 a. m., March 30, 1867, in Washington by Secretary of State William Henry Seward and Baron Edward de Stoeki, ambassador from Russia.

For years thereafter this territory was known as Seward's folly. Its population and natural resources were sneered at or forgotten.

Seventeen years later in 1884, Alaska was given a civil government. And then in 1897 and 1898 during the Yukon gold rush, civil and criminal codes were established. A Homestead Act was passed for the Territory in 1903. In 1906 Alaska residents were permitted to elect a Delegate to Congress and in 1921 the present territorial form of government was set up.

And now, 28 years later, the Public Lands Committee of the House has approved a bill to make this territory the forty-ninth State in the Union. This bill, introduced by Alaskan Delegate Bartlett, is the result of a referendum held in 1946 when the residents voted, 3 to 2, in favor of full Statehood.

The people of Alaska want their full rights as citizens of this Nation and we can't for the life of us think of any reason why they shouldn't get them. On the other hand, however, from a purely selfish standpoint we want Alaska in because this country needs the undivided loyalty of every one of the 94,000 inhabitants of this big, rich territory and needs it bad.

WE NEED ALASKA

The reason this need is so great now is because Alaska is separated from Siberia by only the 56 miles of water in the Bering Strait. And we cannot allow our last frontier to be left dangling in a halfway atmosphere. It should be bound to the rest of this country by the strongest ties.

The military chiefs became only too aware of this during the last World War when the Aleutian Islands were invaded by the Japanese and defense construction was rushed by the Army and Navy.

Since then the importance of building up this part of our country with increased population and the exploitation of its natural resources into industrial expansion has been a paramount object of the Interior Department.

In the past 2 years the foundation for this advancement has been laid. At Fairbanks and Anchorage two international airports have been started. They have runways 7,000 feet long and strong enough to hold the largest planes. Approximately $13,500,000 is being spent to construct these fields. At the same time the Air Force has built one of the largest airfields in the world at Fairbanks. Others are located at Anchorage and Nome.

The Alaska Railroad is being modernized. Twenty-one million dollars was spent on this job last year. Forty million dollars have been set aside in appropriations and contract authorizations to build up the highways.

President Truman and the branches of the Government under his control are going all out to develop this land as a bulwark against any fancy ideas our disgruntled neighbors across the Bering Strait might have about reannexing that Territory.

RUSSIAN MENACE

And Russia does have such ideas. Russian planes now fly over our Territory at will.

And many Russians who have come in contact with the natives and our Government officials have grumbled aplenty about the Seward deal and are still claiming the land as Russian soil.

We have too much at stake in Alaska to leave any uncertainty in anyone's mind as to whether we consider Alaska a full-fledged part of these United States. We need to build up Alaska to protect the rest of the Nation. And in the words of Interior Secretary Krug:

"Alaska has formed a part of this Nation for over 75 years. It is time that the period of apprenticeship served by the people of Alaska be brought to a close.

"My own firm conviction is that statehood for Alaska would link it more closely in every respect to the continental United States."

The Part the Pulp and Paper Industry Has Played in Southern Forest Development

EXTENSION OF REMARKS
OF
HON ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. SIKES. Mr. Speaker, I take particular pleasure in calling to the attention of the House an important address by James H. Allen of my State. Mr. Allen, one of the foremost industrialists of the South, has, in showing the courage and the foresight to build on the natural products of the South, pointed the way to the future security of a great part of our land:

THE PART THE PULP AND PAPER INDUSTRY HAS PLAYED IN SOUTHERN FOREST DEVELOPMENT

(An address delivered by James H. Allen, vice chairman, St. Regis Paper Co., before the Southern Forestry Conference of the Forest Farmers Association, Montgomery, Ala., February 18, 1949)

It has been asked: "What part has the pulp and paper industry played in southern forest development?"

My answer is: A major part. For it has provided the market for pulpwood, which is the foundation upon which the economic structure of the pulp and paper industry rests.

In supporting this statement, I will refer to October 1933, when a group of interested persons met in Fernandina, Fla., and organized the National Wood Fiber Growers' Association. I was elected president, and recall the ambitious eight-point program adopted for the organization.

These eight purposes were:

1. To capture your own forest products market.

2. To coordinate the efforts in forestry of the National and State forest services, of the private forest owner and of the United States Forest Products Laboratory.

3. To combine the wood-fiber processing plant and the forest farm, just as the cotton gin and the cotton farm are combined.

4. To operate on the sustained-yield basis.

5. To create public wood markets for the farmers.

6. To extend quickly semicommercial experiments for the processing of wood fiber into commercial runs.

7. To create sound forestry products at economic locations, and to seek financial aid for the protection and development of the forests.

8. To endeavor to capture for the woodsmen of the United States the 70,000 jobs now held by foreign employees working in foreign nations.

For the first issue of our organization magazine, I wrote an article entitled "An Imaginary Fact-Finding Conference on Forest Conservation." It portrays vividly today the situation that existed 15 years ago; and against this background of accomplishment, demonstrates clearly what a group of thoughtful men working together can do in writing a prescription for an ailing economy.

The cast of characters in this imaginary conference included: The American consumer of wood products, the banker, Canada, the chemical industry, the coal operator, the coordinator, the farmer, the State, the lumberman, NRA code provisions, the newspaper owner, the pulp and paper engineer, the private forest owner, the pulp and paper industry, the railroad, the Secretary of the Interior, unemployment, and United States Forest Products Laboratory, and United States Service.

The lumberman of the South from 1893 to 1933 had performed a constructive task of industrial development. They had converted virgin timber into lumber, supplying material for homes at an economic level. After most of the virgin timber had been cut, the second-growth stand did not take its place in the market, because it was lacking permanent qualities unless given preservative treatment.

The lumber industry in 4 years has sustained a shrinkage in sales volume from $1,500,000,000 gross in 1928 to $155,000,000 in 1932. This was nearly a clean wipe-out. A certain amount of this was caused by the depression, but a large part was due to lumber users turning to other materials. Certainly the market for immature timber was distinctly curtailed in the lumber field.

I could dwell at some length on the situation of the lumber industry, but have purposely directed my remarks to the point that some other outlet for young trees was vitally needed.

In the magazine account of our "fact finding" conference, I quoted Carlisle P. Winslow, director of the United States Forest Products Laboratory, Madison, Wis., as making the following statement:

"As pointed out under Timber Requirements, the quantity of foreign wood used in producing the paper consumed in the United States has increased steadily until in 1930 the proportion in the United States was equivalent to approximately 13,000,000 cords of wood. Of this quantity, the equivalent of nearly 7,300,000 cords was imported. In terms of land use, this means that perhaps 12,000,000 acres of forest lands in the United States were deprived of not less than $50,000,000 contribution to the national market. In terms of labor employed, our 1930 imports of pulp and paper could be considered as equivalent to the exportation of full-time jobs for 70,000 American citizens."

This quotation of Mr. Winslow can be found in the Copeland Report, page 1380, volume 2.

The fact that 56 percent of all of the wood used in making paper that was consumed in the United States was grown in foreign countries struck men interested in the development of the forests of the South very forcibly.

Many of us resolved to change this percentage to a much lower figure, and to change it perceptibly. Of the success that followed, I will refer later. At this point I would like to emphasize that the Copeland Reports spread forest seed thoughts that lodged in the minds of the characters represented in our conference, all of whom have given a good performance. For this, the United States Forest Service should be lauded for its best work.

The private owner, in 1933, was quoted as saying: "We private owners are forest farmers. We raise wood-fiber and naval-stores products. We produce five times as much wood fiber as the Nation consumes. We are practically without a market, while 56 percent of our national needs are supplied from wood-fiber farms of foreign nations. We desire to compete for this business but have no processing plant. What would the cotton farmer do without his processing plant—the cotton gin?"

The conference's pulp and paper engineer summarized potential advantages that might be found in reclaiming that part of the domestic market for wood and pulp products held by foreign sources by pointing to the volume of imports, the three and half million tons of paper or the equivalent fiber weight of 13,000,000 bales of cotton. The import value was placed at $237,000,000.

Translated into raw material, this import quantity could create an annual demand for 6,840,000 cords of wood if produced within the United States. This production could absorb the perpetual yield of a timber farm equivalent to 13,680,000 acres, or equivalent to 36 pulp and paper mills producing 400 tons daily 320 days per year.

New mills required to convert this pulpwood to pulp and paper would provide employment for 44,000 men; their construction cost (1933 basis) would be between one hundred and seventy-five and two hundred million dollars.

The combined projects would create new freight revenue amounting to $37,500,000 annually. They would provide a market for 855,000 tons of chemicals. The additional steam demand would have an equivalent B. t. u. value of 5,000,000 tons of coal. Based on $8 per ton, annual labor pay rolls of $27,000,000 would be established.

The construction program itself would exercise far-reaching beneficial influences.

The Railroad's conference representative was quoted: "Mr. President, you understand our problem; you know where most of our securities are placed; you understand how badly we need business. So we can be brief. Many of our systems traverse woodland States where wood fiber has an annual growth alongside our rails."

There is more detail, but it all sums up to the statement of the United States Forest Service "that a market is an essential part of forestry."

For my part, I said then and repeat now: "Without income forestry stands at a dead issue. If through our own forestry we fill consumers' orders for forest products, the Nation will have a lively forest plan through the centuries."

What I have said up to this time goes to show that in 1933 we men who were undertaking to develop southern forestry realized that a prescription had been written. It was up to us to interest wholeheartedly the leaders of the pulp and paper industry and their bankers to come into our midst for the purpose of making a market for the trees we were raising or proposed to raise.

Now, the two questions for consideration are: (1) How successful were we promoters of forest development in attracting the attention of the pulp and paper industry, with its trade and capital; and, (2) How successful has the pulp and paper industry been in the development of our southern forests?

That the pulp and paper industry responded to our invitation to come South is well borne out by the figures. We have had two rounds of mill construction and expansion.

LET'S LOOK AT THE RECORD

In 1933, I estimated southern mill capacity at 3,000 tons per day, with a capital investment of $105,000,000.

At the close of 1948, productive capacity had attained 19,500 tons per day, with capital asset value of $624,000,000.

In 1933, over-all sales of paper out of southern mills would not have exceeded $85,000,000, whereas in 1948, the production volume may be placed at $822,000,000. Even

after making allowance for a higher market price, the increase has been tremendous.

During the same span of years, the 18,000 men employed in mills and woods in 1933 expanded to a combined employment of 128,000 men.

The pay roll is about $190,000,000 compared with not over a mere $10,000,000 when our 1933 expansion campaign was launched.

What is more, we now in the South export some pulp, paper, and board.

This brings us to the direct return enjoyed by southern forest farmers as a result of pulp and paper mill expansion since 1933.

Well, here it is. In 1933, wood consumption amounted to 1,800,000 cords, which, at a valuation of $5 per cord, brought a return of $9,000,000. In 1948, pulpwood consumption in the South approximated a valuation of better than $170,000,000.

There actually is more to this picture than just a few figures. In 1933 in the Southern States, millions of acres of cut-over and second-growth pine had lapsed into tax delinquency; owners felt the properties were not worth paying taxes on. Today, these acres have been converted into one of the most salable assets possessed by the South.

How many folks in the South realize that the annual crop of wood fibers used by the pulp and paper mills is actually equivalent to a 24,000,000-bale cotton crop? Or, that the mills, with all the properties set aside for their use, far exceed $1,000,000,000.

The figures which follow have been adjusted to a 100-percent basis. The totals are not absolute, as in some cases estimates have been used.

Upon being invited to make this talk, I sent a questionnaire to owners of 19,500 tons daily capacity of pulp and paper production in the South, asking for supporting data for the information I have laid before you. It gives me pleasure now to give you a summary of details furnished by two-thirds of the productive capacity from which information was requested.

1. Number of employees in plant, 62,250.
2. Number of employees in office, 3,787.
3. Number of wood dealers, 1,327.
4. Estimated independent wood producers, 61,500.
5. Hourly average rate of employees, $1.31½.
6. Over-all gross annual pay roll, $190,000,000.
7. Gross annual cost of wood, $173,000,000.
8. Capacity of mill—paper, 19,500 tons daily.
9. Gross annual sales, $822,000,000.
10. Cords (128 cu. ft.) used annually, 9,000,000.
11. Estimate freight in-bound annually, $59,188,000.
12. Estimated freight out-bound annually, $66,642,000.
13. Annual chemical cost, $43,210,000.
14. Electric power required, 500,000 kilowatts.
15. Steam required to operate, 20,000,000 pounds per hour.
16. Fuel, equivalent to 5,000,000 tons of coal.
17. Gross taxes 1948, $84,000,000.
18. Estimate time plant will operate in present location, perpetual.
19. Gross investment in south, $624,000,000.
20. Asset value of timber and land owned and controlled, $112,000,000.
21. Asset value of timber and land by timberland owners who sell stumpage to mill contractors, $200,000,000 (estimated).
22. Working capital, estimated to equal 4 months' sales, $274,000,000.
23. Total—estimate value, $1,210,000,000.

It is common practice now for the pulp and paper industry not only to protect natural land reseeding of forest, but also supplement nature's work by planting seedlings, from its own nurseries. We in St. Regis, for example, are planting two and one-half million seedlings on our own lands around Pensacola, besides giving or selling an equal number of seedlings to our neighbors. In 1948, we consumed two and one-half million trees in pulpwood, but planted back twice that number. We also are spending more than 50 cents per acre protecting and managing our timber farms. We have permanence of operation, and we intend to keep this permanence.

We might also say that 90 percent of trees we used last year came from timber farms not company owned.

Now, what we are doing, many other pulp and paper companies in the South are doing, some of them possibly a little better, and some not so well. But the average of forest management, as far as the pulp and paper mills are concerned, is A-grade.

The paper industry has been conscious of the need for sound forestry practices, including such developments as tree farms, that will lead to the goal of sustained yield. St. Regis, through its president, Roy Ferguson, last year took steps to acquaint the public with its forestry program, by means of institutional advertising, spending several hundred thousand dollars in 1948 to tell its story.

I believe no one in the South can claim that the pulp and paper industry has ever paid too little for labor, in any department of its operations. There has been some complaint that the wages we pay are too high. I don't agree with this latter philosophy, but I do know, and I wish to emphasize this statement, that there has never been a time in the wood market of the South when, if the pulp and paper companies had chosen to do so, they could not have bought the wood at a price below that which was paid for it. What has been true in the past is true now. Every mill in the South is well supplied with wood, but so far prices have been stable. As it should, wood is selling at a reasonably profitable price. As long as that continues, we will have a lot of folks in the South accepting as their responsibility the raising of timber as a crop.

The question arises as to whether or not we shall have too much timber in the South at the end of another 15-year cycle. I say most emphatically, "No." The market for wood fiber from the South is still in its infancy. Its potential markets, for example, can be found in supplementing supplies in textiles with rayon, aluminum and steel with plastics, and in containers made of other materials with paper.

The adaptability of pulp and paper mill products for extended uses not considered in the past was most dramatically demonstrated during World War II. And here, let me ask: If it had not been for the South's added production of pulp and paper how much longer would the war have lasted?

How many more of our young men would have been killed, because we would not get pulp for powder; pulp, paper, and board for packaging; pulp and paper for printing maps, and pulp and paper for all the necessities in life? This additional 5,000,000 tons of pulp, paper, and board, I know, is largely responsible for the shortening of the war. This we owe to the pulp and paper industry, and we should be grateful for it.

Recently the Marathon Corp., of Rothschild, Wis., published valuable information about the pulp and paper industry. To illustrate, in 1933 the population of the United States was 126,000,000; the consumption of paper per capita 174 pounds; the national income $45,000,000,000. The production of paper throughout the United States and the consumption of paper and paperboard was 11,000,000 tons.

In 1948 all of these figures had materially changed. The population changed to 145,000,000, an increase of 19,000,000. The per capita consumption of paper had increased to 357 pounds, or nearly double. Paper consumed had increased to 26,000,000 tons. The national income had increased to $221,000,000,000. The national income, you will note, increased 5 to 1. The production of paper had increased 2½ to 1.

The population had increased approximately 15 percent. This increase in 16 years, amounting to 19,000,000, and with the per capita consumption over 350 pounds, causes a new demand for paper, in fiber weight, of 3,325,000 tons which would require new plants and new wood supply to take care of 10,000 tons of pulp and paper daily. In the past 16 years the South's increased paper and board production equals 5,000,000 tons; the rest of the Nation's increase was 11,000,000 tons.

It is well to remember at this point, too, that other nations are learning to use paper economically. This demand will require new production and this presents a problem.

New mill locations in Canada are very limited, and as the Scandinavian countries have cut timber well ahead of their growth program, no great new production can be looked for there. The future timber supply must come from the South and Northwest. In the South, with intensified forestry programs and on selected lands, we can produce large acreages of timber farms that will raise 15 cords per acre in 15 years. We have learned a lot about intensified forest management during the past 15 years; this, every tree owner in the South realizes.

It is axiomatic in life that where there exists a great need, the manpower to meet the necessity is forthcoming. In this tremendous expansion in the South's great forest-product industry—in both forest and mill—we were blessed with outstanding men of action, creative genius, and courage. Men who were willing to strive vigorously against great odds. Men whose whole thought was the job at hand, with no time for public acclaim.

The most representative of this type of men included Dick Cullen, Ed Mayo, George Hardy; also Charlie Luke, of West Virginia; Charlie Smith, of Champion; Ed Gates, of Crossett; Charles Herty, H. E. Westervelt, of Gulf States; J. G. McGowan and others. These men have left the scene of battle.

Within this group, the late Richard J. Cullen will in time be chronicled as the South's greatest business executive to this date. Possessed of a dynamic mind and personality, he had the ability to build efficient mills; to inspire men in his organization; to find markets; to pay debts; and to create capital surpluses.

I estimate that the market Dick Cullen built in board and paper and boxes and bags in the South requires the production of better than 3,000,000 cords of wood per year to fill.

He gathered wood fiber for his processing plants, that I estimate had a fiber weight equivalent to 5,000,000 bales of cotton. I consider him one of the outstanding executives of our time; not only in the South but in the Nation. We folks of the South should sponsor a monument to Dick Cullen and his late associates named above.

The present management of our great southern pulp and paper industry now includes such far-seeing leaders as Roy K. Ferguson, John Hinman, Alexander Calder, Jim Camp, Ernest Kurth, Lou Calder, Robert Fitts, R. E. Hartman, Ruben Robertson, and Generals Goodyear and Gaylord, and many others representing a mighty general staff of planners, that make their plans come true.

It is up to the younger men in our industry to continue the growing of timber and the operation of the mills, to maintain the present high level of wages, improve the technical staffs, and to improve research. This group must understand that our Nation, State, county and city governments are operated by the men who give their lives to politics. Similarly, our woods and mill labor

must understand that management of business is the task of those trained for that purpose.

It is up to management to search the field of labor for those who can later become management. We must recognize, too, that while labor and management are on the same team, the consumer must be considered. Not one of these can be exploited without friction, loss, and general disappointment. The consumer, however, for his own good, must realize that he must pay a reasonable price for that which he buys, or he may bargain-buy himself out of a job. Each of us must learn to attend to his own stewardship.

President Truman has planned a budget of $40,000,000,000 a year, for 2 years. In 1933, the total national income was only $45,000,000,000. We must realize that commodity and farm prices, and the labor wage scale should be maintained, if the Government is to get anything like the $40,000,000,000 it requires to operate.

I believe that the present price structure is not impairing the living standards of any single group and, unless we become frightened, no one can be seriously injured if values remain at present relative levels. It would be well for us to remember that the price of the dollar that put us where we are today should be the same as the price of the dollar that gets us out of debt. You cannot deflate too much and pay the national debt or continue to pay the present wages.

I could heartily support a Government-imposed stabilization, for, say, the next 2 years, until a formula could be worked out by which the right-sized dollar is found, and the proper division of that dollar determined as between labor, cost of materials, taxes, interest, dividends.

I believe that in the pulp and paper industry, which now plays an important part in the management of the forestry program for the South, we have men capable of keeping the forest industry on an even keel. In our industry, all shores of commerce are touched. The economists of Washington, taking note of the management we have in the southern pulp and paper mills and the forest farms today, might well find the solution for stabilization in our midst.

The forest farmer must keep the trees growing, must enlarge the crop, and must have adequate fire protection. The pulp and paper companies must enlarge their markets for trees. In the pulp and paper industry, labor must see that their jobs depend upon the forest farmer.

It it well to note that the basic factors in our social and commercial success are: (1) Good pay and permanent jobs for labor (the forests can supply this); and (2) a profitable price to the farmer for his crop.

The farmer who raises the trees, labor that produces, and management that creates the project, finds the capital, and the trade, and does the managing, all have a common purpose. Unity between the three is a prime requirement.

Does it not appear that the pulp and paper industry has played a major part in southern forest development?

Unemployment

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1949

Mr. PATTERSON. Mr. Speaker, we are facing a period of serious unemployment in this Nation. This is not scare talk, but a realistic appraisal of economic conditions.

United States News and World Report states that official estimates of unemployed are 3,100,000 now as compared with 1,730,000 6 months ago. The forecast is that the number seeking work in 1950 will reach well over 6,000,000 or one in every 10 of those who are employable. The number of unemployed in Connecticut is approaching the 100,000 mark with no relief in sight.

We have already reached a position where our national income has decreased $9,000,000,000 in the first quarter of 1949. This is a serious deflection, and means that we may expect a corresponding decrease in Federal revenue. To offset this decrease there must be a curtailment of Government spending and a realization of the great problem facing our citizens in maintaining a decent living standard. Our people are not half so concerned with programs to combat a nonexistent inflation as they are to obtain work at fair wages.

Let us face the problem squarely and plan to care for those who are in need of work.

I have requested of the Secretary of Commerce, the Federal Works Administrator, and the House and Senate chairmen of the Small Business Committees suggested action to forestall any greater decline in our economic position and should have this information available sometime this week.

The Airlift Victory

EXTENSION OF REMARKS

OF

HON. CHESTER E. MERROW

OF NEW HAMPSHIRE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an editorial from the Portsmouth Herald, published in Portsmouth, N. H., entitled "The Airlift Victory." This appeared in the issue of May 17, 1949:

THE AIRLIFT VICTORY

The men who flew the airlift rate a cheer, and a big one, from the whole country as well as from Defense Secretary Johnson, who sent them a commendation through General Clay.

"Undaunted by time and weather, working hour after hour, day and night, you have demonstrated to the world unified American national defense in action," Mr. Johnson said. "Your achievement takes its place beside the great American victories of all time."

The Secretary was not exaggerating. It was indeed a great victory. And more than that, it was typical of the process leading up to other great American victories, especially those in World War II.

The United States did not expect this major battle of the cold war, which is what the Berlin blockade was. It was not prepared for it. It did not want it. But when the job clearly had to be done, the armed forces did it—and, we might add, how!

The beginning was tentative, uncertain, maybe a little hopeless. First one C–47, then another, and then a few more. Ten months later, when agreement was finally reached to end the blockade, "flying boxcars" were in service on a round-the-clock schedule.

The airlift crews had flown more than 50,000,000 miles. At great expense to their country, at great danger to themselves at times, they had done the unprecedented and the seemingly impossible. They had sustained a divided city of more than 2,000,000 people. They had not only brought in the bare necessities of food, clothing, and fuel, but also enough more to keep up what passes for normal life in the battered German metropolis.

It was a feat as impressive as it was unprecedented. It could scarcely fail to increase American prestige among the Germans. And, like them or not it is better to have the Germans for us than against us. It must have given a comforting assurance of latent American power to the friendly governments of Europe. Most of all, it must have provided a lesson which the Soviet Government will ponder and remember.

The Russians started out with the heartless, cruel purpose of starving the population of Berlin, if necessary, in order to force the western powers out of Berlin. Well, the Berliners did not starve and the western powers did not leave. With a determination that never flagged, they not only thwarted the cynical Soviet plot but also turned it against the Russians with a counter-blockage of their own.

Here, in miniature, was World War II all over again. America started slowly and reluctantly. It started with two strikes against it. But once under way, the potential might of the Nation and the resoluteness of its citizens were not to be matched.

If Russia ever undertakes armed aggression, it may expect early success, as it did in the blockage. But it may also expect to be overtaken. And in the Marshall plan and the North Atlantic Treaty, Russia has been given notice that this country will not again take the costly and precarious chance of total good faith and almost total unpreparedness.

America can do it the hard way, as the war and the Berlin blockage showed. But the hard way is not the best way. Today this country is more alert and prepared than ever before in time of peace. It is determined to achieve the best by being ready for the worst.

The Problems of National Housing

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, May 19 (legislative day of Monday, April 11), 1949

Mr. SPARKMAN. Mr. President, last night it was my privilege to attend a dinner which marked the closing of the eighteenth annual convention of the National Housing Conference. The conference was made up of hundreds of persons from all over the United States who are vitally interested in an adequate housing program. There were two able addresses delivered at the dinner meeting last night, one of which was by our esteemed colleague, the Senator from New Hampshire [Mr. TOBEY]. I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the Senator from New Hampshire at the meeting to which I have referred.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Two years ago, I had the great pleasure of meeting with you in Chicago to discuss the acute problems of national housing and the chances of passage of the Taft-Ellender-Wagner Act.

So I was pleased to be invited to speak to you again tonight.

I shall not review the trying hours of the past several years, when our labors and our Senate triumphs in the housing field were set at naught by a handful of willful men who prevented the House of Representatives from exercising its constitutional and democratic privilege of voting on the Senate measure. I am convinced that the efforts of that little oligarchy of men had considerable to do with the defeat at the polls last November of a party whose views they did not truly represent.

What is most important, the powerful Rules Committee in the House now finds itself with its wings clipped, so it is hoped the Members of the House may finally be able to assert their democratic prerogatives and pass the bill into law.

But enough said of the past.

Tonight is a night of near victory. We are on the threshold of winning a great battle. We are near victory because the great majority of the American people are decent and humane. We are near victory because you people have fought such a valiant fight, because you have helped the decent people of this country, and those of us who represent them, to understand that there can be no decency in the kind of ramshackle, vermin-ridden, dim-lighted and evil-smelling tenements and shacks in which several million Americans are committed to live. I pay tribute to the selfless devotion which you have given to this great cause. I pay this tribute on behalf of the millions of mothers and fathers and children throughout this country who can now begin to have hope of liberation from the slums.

I cannot let this occasion pass without paying tribute to some of the leaders in the Senate in this fight on housing who have demonstrated a high degree of public interest and parliamentary skill in successfully bringing this legislation through the Senate. First, to a great Christian gentleman and a great Senator, whom I delight to call friend, JOHN SPARKMAN, of Alabama; then to a new Senator from Illinois who has already made a place for himself, a keen student of government and economics, PAUL DOUGLAS; then to my friend and colleague from a neighboring State, an economist, successful businessman, and devoted public servant, RALPH FLANDERS, of Vermont; to the senior Senator from Louisiana, whose name has been on this housing bill, with others, since its inception, and who fought valiantly down through the years, ALLEN ELLENDER; to BURNET MAYBANK, chairman of the Banking and Currency Committee, whose vote was the deciding vote in reporting the housing bill out of committee to the floor last year; to BOB WAGNER, of New York, who, while not present, deserves our acclaim for his continued and loyal interest in the matter of public housing; and, last and far from least, to my friend and colleague from Ohio, the man who perhaps has done more than any other man to fight this bill through, a man of extraordinary ability, Senator BOB TAFT. Each of these men has been outstanding in his efforts in behalf of public housing and deserve your appreciation.

I wish I could say tonight that we have actually achieved a great victory, that this could be a real celebration dinner. But, as a Republican and having in mind November 1948, I think I have full justification in warning you that we cannot safely acclaim victory, until all the votes are counted. We can be sure that the campaign of misrepresentation and obstructionism will not stop. It will continue right through the debate in the House of Representatives, through conference, and through the final consideration of the conference report by both Houses of Congress. We have seen how the opposition has endeavored to inject into this housing fight another great, but separate issue, that of civil rights; an issue on which many of us have deep and strong convictions; not because the opposition had any sudden pangs of conscience, but because they saw an opportunity to defeat this legislation or, at the least, to make it inoperative in a large section of this country. We can be certain that if the opposition sees no hope of winning the major battle, it will continue its efforts to dope up this legislation with a liberal dose of sleeping tablets, liberally coated with sugar, in the form of amendments to make it ineffective.

When I speak of the opposition, I am talking about those who make their living out of trumping up false issues, so that they can build up memberships and create a steady flow of campaign funds. I am not talking about the great body of businessmen back in our home towns, who make their living in the conduct of a legitimate real estate and building business. Those of us who have seen the kind of propaganda put out by professional lobbyists to the businessmen back home, who pay the costs of maintaining their office suites, know that the campaign of misrepresentation works both ways. How many of you realize that when one of the great veterans' organizations recently testified before a congressional committee, that the only part of the testimony which the most powerful of the lobbies distributed to its members, through its trade journal, consisted of two paragraphs, pointing out the disagreement of this veterans' group on the details as to how the slum clearance program authorized in this legislation was to be carried out. There was not one word as to the general endorsement of the American Legion, of the legislation as a whole, including the major objectives of slum clearance and low-rent housing.

I am informed that this real-estate organization has never mentioned in its membership publication the resolutions which the Legion presented in support of this bill. Half-truths, omissions, and distortions. It is small wonder that the members of the organization cannot form independent judgments on issues of this kind, when its own people in Washington fail to give them the most elementary information.

I do not say that private builders are to blame for the present housing situation. I am a great believer in the system of free enterprise, but this happens to be a field where it has failed to find a solution. And this is very understandable. Private builders are not interested in building low-cost houses, because there is not enough profit in this field. Profits are not obtainable in low-cost, low-income housing. There is more money in building houses in the higher-price range.

After you leave this dinner tonight, you must continue the fight that has been carried thus far so successfully. You must make sure that we not only get this housing legislation, but that the victory will be one of substance, and not merely of form. We must have a good bill that will really clear slums and provide good housing for the people.

I am certain that my friend, Congressman MCCORMACK, will echo my sentiments, that there is much to be done before we can really celebrate a great victory. But with your continuing help, we hope to shortly write on the legislative books of this Nation the principle that every American has a right to a decent home, in a good environment, and we shall have the weapons to bring about that great objective, through the joint efforts of the Federal Government, the local community, and of private industry.

One of the charges most frequently leveled at the whole housing program, since its inception, has been that it is socialistic.

On the floor last year, a Senator from the Middle West was speaking, and he charged that the housing bill was a piece of socialistic legislation. I asked him to yield, which he did, and I queried:

"Did you vote for flood control down in your district?"

"Yes," he answered.

"Did you vote for soil conservation and for free lime for farmers?"

"Yes."

"Did you vote for irrigation and drainage for farmers?"

"I did," he answered.

"Then," I said, "will the Senator kindly point out to me wherein those votes were not as socialistic, according to his understanding, as this legislation on housing, wherein the Government advances money for public housing and slum clearance which, God knows, is sorely needed in municipalities throughout the country?"

Of course, he could not. His charge was inconsistent with his own recorded votes.

A common criticism lies in that we are taking Federal funds from all the people to spend for certain parts of the country. One must consider that criticism with the understanding that while we are a Union of 48 States, yet, the weak points in any State, whether in education or flood control or irrigation or drainage or the basic problems of agriculture, if not taken care of, are a liability on all the country.

What I want to talk to you about principally, tonight, is the bigger and more difficult job ahead of you after this legislation is enacted. We must not confuse our approaching victory, with total triumph, in the war on bad housing. This is only the beginning of our long march out of the realm of housing bondage, into the promised land we seek which still lies far ahead.

Those who fought so bitterly against this program to free the people, will continue to obstruct, misrepresent, and condemn the efforts that you here, and those charged with the responsibility throughout the country, make to bring its benefits to those who so sorely need them. But these will not be your only enemies. Your other enemies will be indecision, bad planning, the snarls of red tape, personal aggrandizement within your own ranks, and petty bickering. The Congress is entrusting you with a great responsibility that will require real statesmanship, in Washington and in your local communities. It is to you who will be charged with carrying out this mandate in the local communities, that I address these remarks, in particular. You have stated, and we have stated, that this is a local job that must be undertaken locally. If you falter, if you in any way fail to fulfill the solemn obligations that are written or implied in this legislation, no administration in Washington, no matter how effective, can make amends. It is up to you not only to do your own part, but also to see that the administrative agencies fulfill their obligations in this great undertaking. It is up to you to work unceasingly, not only to assure the accomplishment of the particular responsibilities assigned to you, but also the total objectives of the legislation. Remember that this legislation contains not only slum clearance, low-rent public housing, and farm housing, but also research, designed particularly to reduce costs, and that one of the ways in which costs may be reduced, is through the modernization of building codes, and other regulations, and intelligent enforcement.

I say these things first, because your efforts will be under constant scrutiny. They will be scrutinized not only by those whose primary purpose is to find fault, but also by the great body of the people for whom the

effectiveness of such a great cooperative enterprise is yet to be demonstrated. There are many doubting Thomases. You can be sure that we in Congress will hear about any mistakes, real or fictitious. We who have supported this legislation through the long fight, will have to answer for your efforts, and you will have to supply the answer in positive accomplishments, that will fulfill the purposes of the bill, and reflect good planning, good management and integrity.

I say these things primarily, because of the hopes of the people who live in the slums, and under bad housing, in our cities and towns and on the farms. Their present deplorable conditions are the things which have inspired us in carrying on this great fight. Their urgent needs must continue to furnish the inspiration that will assure the accomplishment of the needs.

We must continue to have a sense of alarm about the fact that a great many people, regular wage earners of modest income, have been pushed out of the housing market and into the slums. We must continue to be alarmed, when an increasing segment of our population is losing ground in housing, when we urgently need to gain it. We must continually be alarmed with the voice of bitterness, and desperation, speaking from overcrowded rooms and dismal, inadequate flats, in nearly every large city in the country; with the fact that children are growing up in them now, and that 5, 10, or 15 years from now, if we do not do this job, the damage to that part of our future generation will have been done.

These are the voices that you have heard, that I have heard, that all who have not stopped up their ears nor drowned out their pleas, with the clamor of their own selfish protests, have heard. They are the voices of the people who must endure this situation, of plain Americans in cities and towns throughout the country, who frantically and desperately write their mayors, their Government, their Senators and Congressmen, or anyone they can think of to pour out their plight and plead for relief.

These are the voices of workers and veterans, many with the Purple Heart, who leave their jobs at the end of the day to come home to a state of family chaos, because they cannot afford a decent place to live. They are the voices of mothers, at their wits' end, to bring up their children with a decent chance of development. They are the voices of families long separated for lack of a place to live together, and other young families who have tried to stick it out, but whose hopes of a happy family life are cracking up under the strain. They are the voices of doctors, of teachers, or welfare workers, and many others who attend these families, and are dismayed at the human waste and corrosion that comes from bad housing.

Hear then the voice of a young wife in Atlanta who writes: "Ours is a lost generation, 4 or 5 years behind on living, on furthering careers, establishing homes, and beginning families, with no one to help us. This generation does not want charity; all we want is a chance to lead normal lives, and who can live normally when he has no home?"

Hear also the voice of a mother in California who says: "We love our children, and are very proud of them, and want to provide a decent home for them. We are living, eating, and sleeping, four of us, in a hotel room."

Hear the voice of a 15-year-old girl who says, "My mother and daddy are so worried because they are going to put us out of our home. I don't like to see my mother and daddy so worried. They just don't know what to do."

Hear the voice of a husband in New York who says, "My married life has been threatened to its taxing point due to the lack of a home of our own."

Hear the voice of a returned GI who writes: "Our son is 4 years old and has never lived in a decent home. We realize that communism means the end of our traditional American freedoms, but what good are freedoms if one is too weak from starvation to exercise them?"

It is these voices that we are at last about to heed, at least for a start, in the enactment of this housing bill. These are the voices that at last have shouted down the loud cries of a few, who have, and who still will, seek to preserve the homes of America as their private hunting ground, for personal profit.

This Nation of ours is a growing thing. It is not static. We now have 140,000,000 population, and it will increase materially in the next decade. The Nation is long since out of swaddling clothes, and it is now mature.

In every proposed matter on a national scale, we must give consideration to this increased growth.

For many years, I have been repeating, in public addresses, the famous words of Lincoln to Congress which will bear repetition many times:

"The dogmas of the quiet past are inadequate to the stormy present; as our case is new, we must think anew, and act anew."

Certainly our case is new today; therefore, we must think anew and act anew.

Since this bill has been under study and discussion, going back 4 years ago, I have heard a lot about costs. We have been told that this bill may cost from $13,000,000,000 to $16,000,000,000 over a period of 40 years. That is nearly as much in 40 years as we are contemplating spending on military needs in 1 year today. The latter we must spend to protect our freedom to have homes and to enjoy them. The former is designed to provide homes that we can enjoy and that are worth such a defense.

As you move ahead with this program, you must think about these costs, but you must think also about your mission of eliminating the slums that drain off the revenues of the citizens and that create untold losses in human resources. I have heard of the high costs and rates of crime and disease that mark the slum areas of our cities from coast to coast.

I have heard that the slums are costing the city of Newark $14,000,000 annually. I have heard that in Atlanta, Ga., slum areas contributed 5½ percent of that city's property but cost 53 percent of its police, fire, health, and other service costs. I have heard that in Cleveland the per capita deficit of a slum area was $51.10—at prewar prices. I have heard that in St. Louis tax delinquence ranged from 25 to 40 percent in slum areas, compared to 2 to 5 percent in newer districts.

I have heard that in Chicago a slum area of less than 3 square miles, chiefly because of bad housing, accounted for 21 percent of Chicago's murders, 12.3 percent of its robberies, 24.9 percent of its rape offenses in the years 1943, 1944, and 1945.

There is no lack of such statistics that multiply where the evils of slums propagate, and these, too, are a part of our national balance sheet.

But though figures and statistics, in their cold sort of way, can give us some idea of the extent of the deficit we have to meet, they do not reflect an even more important aspect of the housing problem—one that is not so easy to tabulate or add up. That is the housing problem in terms of human beings, in terms of its threat to our way of life and our aspirations as a people and a democracy, and in terms of the next generation—the children of today—whose lives and attitudes and minds are being formed for the future in today's homes.

During the housing debate last month, I had the occasion to visit our local slums with some of my colleagues in the Senate, just a few blocks down toward the river from the Capitol. I was shocked that such conditions could exist in this country. I cannot convey to you the absolute squalor of life for many thousands right here in our midst. High disease rates combine with high crime rates to create a threatening and dangerous condition. Public health and police officials feel they can do little to fight the filth and crime of this section. There are too many people living in too small an area—in houses too old and neglected for salvation. These people have no place to go. They cannot within any stretch of the imagination afford new housing built by private enterprise. The rents they must pay now consume 30 or 40 percent of their incomes. Many of them are prevented from moving to other sections by restrictive covenants.

I immediately had some inquiry made into the ownership of slum properties in southwest Washington, an area where the so-called alley dwellings are the epitome of squalor and human misery. I have found that a prominent local bank holds mortgages on a substantial portion of one slum area. I have found that it is extremely difficult to track down some owners who rent, for example, one room, minus any toilet or cooking conveniences at all, for some $20 and permit as many as 11 human beings to exist in that room in the midst of lice and disease. I have found out enough to tentatively decide that some persons listed as owners are in reality "fronts" for other bigger persons and investment houses who would rather not be known. The same charge has been made in the past about certain areas in New York City.

Fortunately, there is a more cheerful side to this story. At one end of this area, there is a public housing project. The buildings in the project are low-cost brick structures of simplified design. They are spaced apart to allow plenty of light and air. Lawns give ample areas for play. Although the units house families from some of the worst slum sections, they are immaculate.

A District health officer reported that the transfer of these people into clean quarters brought an almost incredible drop in the crime and disease rates. What was of equal importance, it brought a new-found pride in being a human and an American citizen. Many of these people who had previously been shiftless and unsettled when living in the sordid atmosphere of the slums gained a new sense of responsibility and ambition.

So I implore you that in the performance of the job ahead of you, you keep before you the millions of families who are pleading to be lifted out of the misery of the slums, that in using the dollars that are being made available, you remember that you are wiping out the great toll that is being exacted every day by slums and bad housing.

If you continue to have the inspiration of the great humanitarian purposes you are serving, I have no doubt that we shall have, indeed, accomplished a great victory. I am confident that 4 or 5 years hence, when Congress reviews the accomplishments under the mandate we have given you, a great swell of approval will rise from the American people, to drown out the small voices of those who continue to think of the home merely as a source of profit and exploitation. With that kind of approval, we shall be able to set out for higher goals, and to move ahead toward their accomplishment.

So, men and women of the National Housing Conference, you and I are participants in this great crusade for better living conditions, and higher living standards for all our people, through the initiation of this great program. It will make a beginning, at least, toward the elimination of slums, and thereby combat crime, juvenile delinquency, and other evils that thrive in unhealthy, unhappy surroundings.

But, I must point out that the building of houses for people of low incomes is not all there is to do. Those houses must become homes.

It was Calvin Coolidge who well said: "Look well to the hearthstones of America; there lies the safety of the Nation."

As one observes life today, it is clearly manifest that the masses of our people are imbued with a widespread passion "to get rich quick," and to get something for nothing, to find the golden mean.

As we contemplate this, we are reminded of the line of the popular song, "I'm Always Chasing Rainbows."

When will the people realize that money, mere wealth, does not in itself bring happiness or contentment, and that oftentimes it is not even a blessing, but a curse. The fallacy and transient values in mere wealth are dramatically and tragically illustrated in an article I read recently in the CONGRESSIONAL RECORD.

"In 1923 a very important meeting was held at the Edgewater Beach Hotel in Chicago.

"Here were gathered a group of the world's most successful men. At least men who had found the secret of making money. Twenty-five years later, let's see where those men are.

"The president of the largest independent steel company—Charles Schwab, died a bankrupt and lived on borrowed money for 5 years before his death.

"The president of the greatest utility company—Samuel Insull, died a fugitive from justice and penniless in a foreign land.

"The president of the largest gas company—Howard Hopson, is now insane.

"The greatest wheat speculator—Arthur Cutton, died abroad insolvent.

"The member of the President's Cabinet—Albert Fall, was pardoned from prison so he could die at home.

"The greatest 'bear' in Wall Street—Jesse Livermore, died a suicide.

"The head of the greatest monopoly—Ivor Krueger, died a suicide.

"The president of the Bank of International Settlements—Leon Fraser, died a suicide.

"All of these men learned well the art of making money, but not one of them learned how to live."

How temporary was the great fortune and the power that these men amassed. And what did it avail them?

Remember the words of the Master of Men: "For a man's life consisteth not in the abundance of the things which he possesseth."

Men and women, hear again the words of the man of God, who thundered: "Beware of what you make of life, America."

When we see the record of crimes of violence which appear daily in the press, when we find such a woeful lack of common honesty and integrity, when we contemplate the tragic increase in juvenile delinquency throughout our land, and when we see the mounting divorce rate, it must be apparent to thoughtful men and women that something is wrong in this country. Perhaps it is because, as I see it, the American home and the Christian church have lost a large degree of their influence. Can such be recaptured? It can and must if America is to go on to a great destiny under God.

In that powerful sermon on the mount, Jesus gave a great admonition to the people of all ages: "Seek ye first the kingdom of God and His righteousness." There is the formula for success and progress, and salvation for man.

And you who are engaged in this great work of practical Christianity, of providing adequate homes for people, as you effectively carry on, will be making your contribution, in harmony with this word of God.

I join with you in yearning that wrong and evil may be overthrown, and that this Nation may become a Nation wherein dwelleth righteousness, the righteousness that exalteth a nation. May that be the prayer of every heart.

To make this effective, the only real remedy is the application of the teachings of Jesus to the sickness of our human society, so beautifully expressed in the words of the hymn:

"Where cross the crowded ways of life,
Where sound the cries of race and clan,
Above the noise of selfish strife,
We hear Thy voice, O Son of Man.

"In haunts of wretchedness and need,
By shadowed thresholds, dark with fears,
In paths where hide the lures of greed,
We catch the meaning of Thy tears.

"From tender childhood's helplessness,
From women's grief, man's burdened toil,
From famished souls, from sorrow's stress,
Thy heart hath never known recoil.

"The cup of water given for Thee
Still holds the freshness of Thy grace,
Yet long the multitudes to see
The sweet compassion of Thy face.

"O Master, from the mountain side,
Make haste to heal these hearts of pain,
Among our cities' throngs abide,
Oh, tread our cities' streets again.

"Till sons of men shall know Thy love
And follow where Thy feet have trod
Till glorious from Thy heaven above
Shall rise the city of our God."

God speed the day.

Subversive Activities

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1949

Mr. O'SULLIVAN. Mr. Speaker, at this time there is nothing which I know of that is more important to the loyal citizenry of the United States of America, and their most wonderful country, than to do something to stamp out or to stem the tide of communism and kindred "isms", at the earliest possible date, by enacting laws which will effectively take out of circulation, permanently if I had my way about it, every subversive group and individual owing any allegiance, fealty, or service whatsoever to Marxism or any of its equally debasing and slave-making offshoots, one of which is spreading now, like a diseased, foul ulcer, over parts of the world where chaos has reigned supreme, and is also endeavoring to bring about every type of chaos in our own country today.

Much hue and cry has been raised in certain quarters that to pass drastic legislation would be to deny to this new though old-time slavery group, firstly, certain rights inuring to them under the Constitution of the United States, and secondly that to enact prohibiting legislation would have the ultimate effect of driving these groups underground, where their activities could not be observed and easily thwarted. Many patriotic, distinguished and able Americans have written and spoken much about these two matters, but in spite of all they have said and written I am of the sincere opinion that they have been in error grossly in their various contentions and conclusions.

During my campaign for Congress I told the people in my congressional district that I would, if elected by them to Congress, not only talk against communism but would deliver to it every body blow I could, and make every effort to destroy it wherever and whenever found. I still adhere to this policy and am for the necessary legislation which would accomplish the afore-mentioned objectives.

Communism like alcoholic liquors is not a "builder-upper," but it is a leveler. Everyone who has partaken of alcoholic liquors to excess, or indulges in serious communistic thought, becomes as low-down as the lowest in his immediate group. The clean aristocrat puts his arm around the dirty bum, and they are equal until the intoxication wears off. In the alcoholic, Mr. Aristocrat most generally sobers up the next day, but the aristocratic Communist steps up and becomes an overlord for sure only when the revolution is a reality.

As has been very ably stated by Attorney H. J. Pinkett, of Omaha, Nebr., to a meeting of people of his color some time ago, "Every lowly American is and should be fired by his ambition to rise above the particular status of society in which he was born, and not seek to drag down everyone he chances to meet, to his own lowly level, as is the case in a land which becomes a communistic country."

In America progress is the order of the day. Treadmill antics and the march of retrogression are not in keeping with American ideas and ideals. As a forward-looking Nation we should move upward and onward along the lines contemplated by the founders and preservers of our great Republic.

We should also remove the causes in our country which foster and bring about the desires to espouse communism. Employers and those in higher places and religion could lend a very helping hand in this field.

If communism is in truth and in fact a political ideology then it has a right to exist and carry on without let or hindrance the same as any other political party in the United States.

If communism is a religion with Nikolay Lenin as the savior, and Josef Stalin as its titular head, then ridiculous and unthinkable as it may seem, it has a right to exist and carry on also without let or hindrance the same as any other religion in the United States.

If, however, it is what I think it is, a criminal conspiracy to commit treason—the highest crime known to the law of the land—then each and all of us must bend every effort to crush it out wherever we find it, be it in the sky, on the water, on the earth, or underground, and never relax our efforts until it is put underground in an unnamed and unmarked grave for keeps.

We should all remember that nothing good or wholesome could ever come out of the dwarfed, twisted, debased, and criminal minds of the old robber and mass-murdered minds of Nick Lenin, Joe Stalin, and others. These men are not instrumentalities from Heaven, but blood brothers from an opposite place in shadowland.

I now place in the RECORD one of the best contributions which I have been privileged to read in many days on the subject of communism and pending legislation dealing with same:

STATEMENT OF JAMES F. GREEN, CHAIRMAN, NATIONAL AMERICANISM COMMISSION, THE AMERICAN LEGION, BEFORE SENATE JUDICIARY COMMITTEE ON S. 1194, S. 1196, EIGHTY-FIRST CONGRESS, MAY 18, 1949

I am James F. Green, Omaha, Nebr., chairman of the National Americanism Commission of the American Legion, appearing here today in behalf of the American Legion to support S. 1194 and S. 1196.

It is not necessary for me to consume time in a recitation of the many resolutions adopted by national and department conventions of the American Legion in support of legislation to expose and control Communist activities and legislation of the type being considered in particular. Nor would it serve any useful purpose to recount the years of faithful activity by the organization I represent in vigilant opposition to the spread of liberty destroying atheistic communism. Many of the resolutions heretofore have been introduced at hearings by this committee and by the House Committee on Un-American Activities. They are a part of the record. The history of American Legion activitiy is too favorably known to be improved by words of mine.

S. 1194 and S. 1196 are identical in their general purpose differing only in detailed mechanics. For that reason I will treat them as one in this discussion except to point out portions of one which might be preferable to portions of the other.

The legislation is intended to implement present law and to provide specific controls to prevent and stop a real present danger to the security of the United States.

At this late date extended argument as to the nature of the Communist conspiracy is not required. In times past we have had to look to Communists' own doctrines, interpretations, and declarations of intent to show the party's true nature as the slavishly obedient, willing instrument of a foreign power. That is no longer necessary. Today in the files of this committee, the House Committee on Un-American Activities, and in the domain of public knowledge, there is an increasing record of acts and betrayals in attempted fulfillment of the conspiracy. The Chambers-Hiss incident has more closely associated the pumpkin with spies and stolen secrets than with the traditional observances of Halloween and Thanksgiving.

Those who lament this legislation as an intrusion upon fundamental American rights of free speech and free assembly completely ignore the nature of communism. Communism is not an idea. Communism is not a club. Communism is not a political party. It is an organized international conspiracy. It is directed from Moscow according to a central plan based upon Stalin's version of Lenin's version of Karl Marx' 101-year-old plan of world conquest. American Communists are bound by iron discipline to carry out the orders given them from abroad. They are not formulating ideas. They are carrying out orders. They are not expressing ideas. They are handing out Soviet propaganda. Won't ideological legal obscurationists learn that they are not dealing with individual thoughts or individual ideas or individual acts. They are dealing with a criminal conspiracy. These are not the free ideas of free individuals. They are the imposed directives of foreign schemers. Unquestioning acceptance is a condition precedent for party membership. Those who join the party surrender individual status. They accept puppet status intentionally and knowingly. They become a part of a foreign intelligence corps to carry out the orders of their commanders. This is not a debating society for expressing ideas in the public forum. It is a conspiracy criminal in its nature and damnable in its intent. The principle of free speech is nowhere involved. We are not dealing with the expression of thoughts or ideas. At the risk of being redundant, please let me point out again this is conspiracy in execution. Acts pursuant to the conspiracy are ordered acts. Thoughts pursuant to the conspiracy are ordered thoughts. They are imposed; not freely conceived.

How can those who would argue otherwise ignore compelling recent evidence? Only recently French Thorez and Italian Togliatti, obedient to their orders, blithely announced that another war would find France's Communists and Italy's Communists teamed with their Bolshevik compatriots on the side of Russia. The sound of their voices had scarcely been stilled when the American stooges in Stalin's international act obediently picked up the theme and meekly echoed in effect, "We too will play with Russia." Let us quit kidding ourselves. We cannot permit ourselves to be confused. We can't afford to be mistaken. Communists, their aides and dupes are not welfarers seeking to correct the world's ills. They are not debators arguing abstract ideas. They are coldly scheming revolutionists and betrayers; bent upon a mission of liberty destruction; lured by a dream of personal power.

Free speech is of the essence of freedom. It must be protected, true. But you cannot permit it to be prostituted. Argument against these bills in the name of free speech is not argument to protect free speech. It is argument to extend it. Again let me repeat we are dealing with a conspiracy, not with a debating society. Eight hundred millions of enslaved peoples covering one-fifth of the world's surface are strong argument for us not to be mistaken. Paraphrasing Mr. Justice Jackson's learned statement in his recent Supreme Court decision, we should not convert the Bill of Rights into a suicide pact.

That specious argument about driving Communists underground is so frivolous as to deserve no rebuttal. In its nature this conspiracy is underground. Witnesses in New York who were underground with it testify to the fact that only the false facade of pretended American loyalty shows. The rest is hidden. Schemes of betrayal are laid in secret. Acts are executed in stealth. Stolen secrets are handed over in darkness. What is above ground now? The Mundt and Ferguson bills are calculated to expose, not to conceal.

Exposure is necessary. Organizations should be identified. Literature should be marked. The migration of international contact men and messengers should be stopped. We cannot permit Americans to be victimized. Again we are not dealing with idea salesmanship. Were we, fears could be set at rest. Communism would be overwhelmingly rejected. The selling of Communists is the criminal salesmanship of confidence men and crooks. Americans are entitled to be protected from such fraud just as they are protected against offers of fraudulent securities.

One word about limitations upon employment. No man has an inalienable right to be employed in Government. Government, like the individual, has a right to select its employees. Employees of Government who, in the course of their daily work, are entrusted with the intimate affairs of Government must be absolutely reliable and trustworthy. We have already had too much proof that Communist adherents and sympathizers are not. Sound judgment dictates that they be barred from such employment. No legal right is being abridged. In a humorous vein, I might remark that millions of Americans don't even recognize the right of Republicans to be employed in Government. I know of no reason why tears should be shed over Communists being deprived of the opportunity. It seems laughable that they want so much to earn their bread at the expense of the Government to which they admit no obligation of fidelity.

Legislation like S. 1194 and S. 1196 is needed. To argue that laws now on the books which heretofore have proved inadequate are sufficient is to ignore the fact that until now conspirators have escaped penalty for their participation in the conspiracy. Even known Communist spies have escaped indictment though they have been tried and convicted in other lands. The Mundt or Ferguson bill or a combination of them should be adopted.

They Came to Washington To Meet

EXTENSION OF REMARKS
OF
HON. JAMES V. BUCKLEY
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. BUCKLEY of Illinois. Mr. Speaker, with my distinguished colleagues from Illinois and my good friends, Mr. LINEHAN, Mr. MACK, Mr. SIMPSON, Mr. O'HARA and Mr. CHESNEY, I attended with other Members of the House the reception graciously tendered the Congress by the National Lumbermen's Association. At that delightful gathering a most unusual event occurred, which I am sure will be of interest to the Members of the House and which is well-told in the following dispatch in the Springfield (Ill.) State Journal of May 16, 1949:

TWO FORMER LIEUTENANT GOVERNORS MEET FIRST TIME

WASHINGTON, May 15.—Two of three living former lieutenant governors of Illinois met for the first time Saturday.

They are Hugh W. Cross, of Jerseyville, and Barratt O'Hara, of Chicago. Cross is a Republican, O'Hara a Democrat. The third ex-lieutenant governor and also a onetime Democratic Governor of Illinois is John Stelle.

O'Hara was the youngest lieutenant governor in Illinois—just 30 years old—when he was elected in 1912 on the Democratic ticket when headed by the late Gov. Edward F. Dunne. He served in Springfield from 1913 to 1917.

In 1916 he was Democratic candidate for United States Senator, in 1920 for governor and in 1936 for Congress-man-at-large, but failed of election in those vote races. Nominated for Congress from the new second district in Chicago last year, he unseated Republican Representative Richard B. Vail, a one-termer.

A former Chicago newspaper editor, he had been practicing law until he reentered politics.

Cross, with four terms in the State legislature, and as speaker in 1939, was elected lieutenant governor in 1940 and reelected 4 years later on the G. O. P. State slate headed by former Gov. Dwight H. Green.

He announced himself as a primary rival of Green last year but shortly thereafter withdrew. He was appointed to a Republican vacancy on the Interstate Commerce Commission by President Truman this year on the recommendation of Senate Majority Leader SCOTT W. LUCAS, Democrat, Illinois. His term expires at the end of 1952.

This data and reminiscences were exchanged by the two former lieutenant governors after their introduction to one another here by Illinois Representative SID SIMPSON, Republican, Carrollton, from the Cross twentieth district.

O'Hara remarked that though a Member of Congress, he was still called "Governor," the typical salutation to a lieutenant governor.

"They address me the same way around the commission offices," Cross said.

Swivel-Chair Martyrs

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by H. C. Brady, United States Chamber of Commerce, at the citizenship luncheon, Statler Hotel, Washington, D. C., May 2, 1949:

The Associated Press announcement of this meeting stated that the speakers would be Democratic Congressman JOHN W. McCORMACK, of Massachusetts, the House majority leader, and Republican H. C. Brady, small-business man from Wichita, Kans. That practically makes Congressman McCORMACK and me political bedfellows. Few people today can see any appreciable difference between the programs of the Democratic and Republican Parties.

I appreciate this opportunity to share in a discussion of the challenge to heroic citizenship which our times present to the business and professional men and women of America. Our feats of industrial mass production and our growing mastery of the sciences have brought to our people a fuller life. They stand proof-positive of the incentives to progress that exist in a free society. Accompanying this progress have come threats to our political processes. What these threats are and how business and professional people may become more effective in combating them will be the subject of my remarks. Keep in mind these are but the opinions of one man, and that one man fresh from the prairies of Kansas where things never seem as critical as they appear to be in Washington.

Few of us realize the significance of the difference between the United States of 1949 and the infant Republic of 1787 as it affects our representation in the National Congress. In 1787 we were a struggling sea-coast Republic, supported by a simple, individualistic, agrarian economy. We imported but 10 percent of our needs and consumed 90 percent of what we produced. The primary problem in the administration of a Central Government at that time was the problem of distances. We were limited in transportation and communication by the ox cart and the pony express. Distances made the divisions of interest among our people largely geographical in character. Under such circumstances, it is quite natural that the pattern of representation in our National Congress was fixed upon a geographical basis. In the meantime, we have experienced a transition from a simple agrarian Republic into an industrial world power.

Radio has made communication instantaneous. The airplane has erased geographical barriers. It is but 4½ hours now by plane from Wichita in the heart of America to the Federal Capitol at Washington. In fact, you can fly from Wichita to Washington almost as quickly as you can get your baggage after arriving at the Washington airport. The unfettered individualism of simple farming communities has disappeared before the complex interdependencies of an industrial society.

What effect has this had upon Federal legislation? Geographical divisions of interest have almost disappeared. This is why our Senators and Representatives are seldom called upon by delegations pleading the interest of the State of Kansas or the State of Washington. They are surrounded by delegations pleading the legislative interests of the miners, the farmers, the bankers, the school teachers, the doctors, or the realtors. The aircraft riveter in the Boeing plant in Wichita has more in common with the aircraft riveter in the plant at Seattle, in matters of Federal legislation, than the Wichita riveter has with his neighborhood grocer down the street. Thus, the horizontal geographical divisions of interest of the Republic of 1787 have disappeared before the vertical occupational divisions of interest of industrial America of 1949. We are confronted with the problems of a geographically representative Congress struggling with the legislative needs and demands of an occupationally divided society.

This explains the growth of the pressure-group lobbies in Washington. They are a natural expression of occupational-group interests seeking legislative advantages over or protection from the legislative advantages of other occupational groups. The temptation and danger of this situation is the disparity of political strength of the different occupational groups. There are from fifteen to twenty million members of organized labor, all conscious of their special interests in matters of national legislation. There are more than 5,000,000 farmers; a million school teachers. My professional group, the realtors, number about 45,000. In a voting contest, we would about tie the preachers. This explains why certain occupational groups feel strong enough politically to abandon a policy of peaceful persuasion and threaten political assassination in their ruthless invasion of the rights of minority groups. Smaller occupational groups, pleading for their economic lives, discover themselves to have been written off by political strategists as being politically expendable. In the days of geographical divisions of interest among our people, the small States enjoyed protection from the numerical superiority of large States by equal representation in the Senate. The minority of occupational groups of today enjoy no such protection from the domination of large occupational groups. This situation constitutes a recognized peril to our constitutional guaranties of minority rights. How are we to be saved?

To expect a geographically representative Congress to save us from these mounting threats of occupational pressure groups is to betray our ignorance of the nature of modern politics. Politics is a business. Politics is a big business and politics is an expensive business. The business of politics is to win elections. Simplicity and individualism in politics vanished along with the simplicity and individualism of our oxcart, town hall, agricultural society. Politics has taken on the specialization, mass organization and merchandising techniques of our industrial age. In politics, as in business, the organization rises in importance and the individual recedes. In politics, as in business, men must work their way up the organizational ladder. Those who rise to the stature of candidacy for Congress or other high office carry upon their shoulders not only their own political hopes and ambitions, but the political fortunes and livelihood of hundreds of career men and women in lesser offices, scores of precinct party workers and financial contributors. They are bound together in the mutual purpose of victory at the polls. To expect a public office holder to defy the majority of his constituency is as unrealistic as to expect a business man to offend his principal customer. All we can realistically expect of public office holders in resisting unreasonable group pressures is resistance short of defeat at the polls.

To further understand the challenge to heroic citizenship which confronts us as business and professional men and women, we must recognize an essential difference between private and public administration. In private business when a problem confronts us, we assemble the facts, analyze them, conclude what should be done and then do it. In public administration when a problem confronts a legislator, he must assemble the facts, analyze them, conclude what should be done, and then determine in his own mind the answer to the public administrator's eternal quandary, "Are the people ready for it?" When business and professional men and women understand and appreciate this special problem in public administration, we will become more constructive in our efforts. We will spend less time badgering public administrators into premature implementation of sound public policy and more time educating the public mind to understand its wisdom.

When we consider the power of these pressure groups, when we consider the obligation of a political candidate to win the battle of ballots for his organization, when we appreciate the folly of legislation in advance of public acceptance, we realize our public office holders have manifest more character and courage than is generally accorded them in their defense of the poorly championed public welfare. To me, the term "politician" has never carried the odium which many attach to it. There are rascals in public office as there are rascals in business; but to me, the politicians of this country represent a group of people doing the best they can to meet the mounting problems of a hazardous, thankless, and underpaid profession.

These facts of political life are strictly nonpartisan. Any party in power will accord the people as good government as the people demand. Any party out of power will curry favor from as many pressure groups as it feels essential to victory.

The late John Fields was defeated for the governorship of Oklahoma in the twenties by the colorful Jack Walton. In explaining his defeat before the Rotary Club of Oklahoma City, Mr. Fields said, "I do not want you to think I was defeated because I did not know how to be elected. All that is necessary to be elected Governor of Oklahoma, or any other State, is to call upon each organized group within the State and promise each of them something they hadn't ought to have."

The creation of the demand for sound government is a responsibility of nonpolitical leadership. If the politician must seek to win the public ballot, the businessman must seek to win the public mind. A change in the public mind will change the public ballot. A change in the public ballot will alter the program of any party in power. This is the very heart of our challenge to heroic citizenship. How can we become more effective in meeting it?

Many people believe the answer is for more businessmen to run for public office. If politics is a profession that requires special training, I believe we should generally leave office holding to trained politicians or career men. I believe success in a mercantile enterprise is no greater evidence that a man would succeed as a public officeholder than I do that a successful county commissioner is qualified to operate a department store. Businessmen should make available to public official their technical knowledge and counsel, encourage efficient public administration, but devote themselves most earnestly to the responsibility of educating the people

to appreciate and demand sound public policy.

This requires organization. A weakness of American business has been the tendency of component groups—the realtors, the bankers, the doctors, the manufacturers, the railroaders, the builders, and others—to pursue their independent ways in national affairs. They have logically concerned themselves with the fields in which they are best informed, which also is the field in which their self-interests lie. However sincere purpose, it has made them vulnerable to the accusation of special pleading. If all business and professional groups could unite under the leadership of their local chambers of commerce, they could more effectively champion the public interest involved in preserving the individual incentives and the personal liberties of a free society. Local chamber of commerce membership cuts across business and professional group lines and could give a unity of purpose and presentation which is more effective. A similar unity of leadership could be achieved on a national level through the United States Chamber of Commerce.

The integrity of our leadership must be recognizable. We must be more forthright in repudiating those elements of the business community who embarass legitimate enterprise by shabby demonstrations of unrestrained greed. The vision of our leadership must recognize the specializations and interdependencies of an industrial society make untenable the great freedom of personal action and social irresponsibility which characterized frontier life. The fruits of industrial mass production are not without price, but the people will not turn back. The task of our leadership will be to harmonize the essential guaranties, restraints, and regulations of such a society with the preservation of vital spiritual values and economic incentives that have been our heritage. There must be charted a new course between the extremes of personal license and statism. It can be done and it can become the significant contribution of our generation to the science of government.

However, the true challenge to heroic citizenship is not organizational, but personal in character. Businessmen have too generally attempted to meet their citizenship responsibilities by proxy. They have sought the services of political mercenaries. They have preferred to contribute dollars rather than hours. They have been inclined toward swivel-chair martyrdom.

There is nothing I enjoy more on a Kansas winter evening when blizzard winds are blowing than to come home from the office, eat a warm dinner, get into some slacks, stretch out on the davenport in the drowsy comfort of my overheated living room, pick up Carl Sandberg's Remembrance Rock and read about the privations of the Pilgrims and the suffering of Washington's men at Valley Forge. I read of businessmen, lawyers, and farmers gathered in Philadelphia, about this time of year, drafting a Declaration of Independence. I read that remarkable document. They didn't draw up a beautiful resolution and hire an executive secretary to fight the war while they went about their business. They closed their immortal document with their personal pledge, "In support of which we pledge our lives, our fortunes, and our sacred honor." Then with shame I reflect upon my own indifferent citizenship. Never in these momentous years, in my alarm over social and political trends, have I yet developed a concern that carried with it a consecration that has prompted me to pledge in its behalf my life, my fortune, and my sacred honor, or any part of them. The men at Philadelphia did. As a citizen of my times, I have never been even personally inconvenienced.

We pass resolutions in our local chambers of commerce to be published in the newspaper with no names attached. That wasn't the John Hancock approach. At Philadelphia, the boys all signed individually. They didn't yield to the cowardice of anonymity.

The public-affairs committees of chambers of commerce have been constructive influences. Their influence will grow as they overcome the tendency of cautious businessmen to yield to the considerations of propriety in conflict with principle. Wendel Phillips once said, "How prudently most men sink into nameless graves, while now and then a few forget themselves into immortality." It's time for American businessmen to forget themselves into immortality.

Frequently from the ranks of business leadership come suggestions of compromise with collectivist thought. They advocate the sponsorship of lesser evils to avoid greater evils. They feel we can best develop an immunity to the spreading contagion of world communism by administration to the body politic of small doses of socialism. Such thinking supports much of the legislation now before our National Congress. I am not of that school of thought. I believe that if such legislation is enacted we will discover we have not administered a vaccine but an opiate. We will not have developed in the body politic an immunity but a dependency upon the drug which calls for constantly increasing doses.

It is the responsibility of business leadership to recommend solutions to the problems of our times. But let us advance only solutions which we honestly believe to be sound economically, socially, and spiritually. Someone must be the custodian of truth while others experiment with folly.

This challenge to heroic citizenship has another personal aspect. Each of us as a businessman is a test tube in this social laboratory of a world in which we live. Does your private secretary's knowledge of you lead her to believe your expressed political views are in the public interest? Do your employees have reason to respect your political views because of treatment received under your management? Have we manifest the spiritual restraints that alone can save men from antisocial exploitation of economic incentives? Let none of us believe a newspaper advertisement or a campaign contribution can offset our failure to live a decent social philosophy among our employees and our neighbors.

Yes, this is an age of organization. We must study organizational techniques and employ them. But the priceless ingredient in organizational excellence is not numerical strength nor material resources, but personal consecration. It's nature's way of enabling the pygmy to topple the giant. When our concern for the preservation of our way of life prompts us to pledge our lives, our fortunes and our sacred honor, we will become effective in public affairs. Out of such consecration will grow an intensity of conviction that will persuade those who cannot comprehend the logic of the issues involved or distinguish fact from demagogery. We will discover the secret of democracy—the intuitive ability of the people to detect an honest man.

In 1878 my grandfather left the State of Iowa to take up the life of a homesteader in Kansas. He was possessed of a wife, two babies, a team and wagon, $100 in cash, and a few miscellaneous tools. He had no social security, no unemployment insurance, no guaranteed market for his produce. He knew of the prairie hazards of drouth, grasshoppers, and the absence of a doctor for his babies. Yet he moved westward. He was a possessor of the faith that "God helps those who help themselves." He expected to encounter nothing beyond those horizons which God and he couldn't handle.

He constructed his sod house, two windows, and a dirt floor. The family subsisted upon a diet of cornbread, beans, and sorghum molasses. A social welfare worker of our time would have been appalled. There was substandard housing for you. There was deficiency in diet. There was an environment from which, judged by any standard she knew, nothing could emerge but juvenile delinquency and bitter antisocial attitudes.

It didn't work out that way. Why? The children emerged from that humble environment exalted by the inspiration of a father and mother whom they had seen hurl a matchless courage against the adversity of their environment and, in that courage, triumph over it. My grandfather never felt underprivileged. Before him was the hope of proprietorship. In his heart was the pride of self-sufficiency.

We are overlooking in these days an historic sociological truth. A family before whom is the hope of proprietorship and who possess a pride of self-sufficiency will rise above the deficiencies of their physical environment. The finest public housing which money can buy will not arrest the moral disintegration of a family before whom the hope of proprietorship has vanished and who have lost their pride of self-sufficiency. More deplorable in America than the shortage of homes is this shortage of hope.

I have not capacity or desire to predict the outcome of our struggle against the mounting tide of revolutionary thought which flows in upon us. Will we have the courage to stand up to it? When our grandchildren read the record of this period, will they have reason to hold us in reverent admiration or will they write us off as a group of sniveling swivel-chair grumblers?

The Dairy Industry

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, May 19 (legislative day of Monday, April 11), 1949

Mr. WILEY. Mr. President, one of the vital issues pending before us at the present time is the substitute version of the amendment to H. R. 2023 which the Senator from Iowa [Mr. GILLETTE] and I offered on behalf of ourselves and 24 other cosponsors. The purpose of that amendment, as my colleagues know, is to protect our great dairy industry, while repealing all Federal excise taxes on oleomargarine. There have recently been many editorial comments on this issue in my own and other States.

I ask unanimous consent that there be printed in the Appendix of the RECORD two such editorials, one from a great newspaper in the heart of Wisconsin, the Fond du Lac Commonwealth Reporter, and the other from the famous dairy magazine, Hoard's Dairyman. Both these editorials comment graciously regarding my own efforts on behalf of the dairy farmer, but whether they praised me or criticized me, I feel that they shed light on this issue. I am particularly glad that Hoard's Dairyman commented on the splendid efforts of my good friend Charlie Holman and two of our ablest Congressmen, the Honorable AUGUST ANDRESEN of Minnesota, and the Honorable REID MURRAY of Wisconsin.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Fond du Lac (Wis.) Commonwealth Reporter]

NATIONAL DAIRY MONTH

Senator ALEXANDER WILEY, of Wisconsin, is introducing a resolution in the United States Senate asking that President Truman proclaim June as National Dairy Month in honor of the American dairy industry.

Dairy month, itself, is not a new idea. The several governors each year set aside a month to honor the great dairy industry, but the observance is not Nation-wide and does not attract the importance to which it is entitled to.

In discussing the objectives of National Dairy Month, Senator WILEY says:

"We will be impressing upon the American people the importance of the purchase of adequate, nutritious, wholesale dairy products, particularly for the Nation's youngsters. Unfortunately, in the past, even when our people have had sufficient money to spend for food, they have not always invested it as wisely as they should in nutritious products. Dietitians have pointed out that the American people could stand a lot of improvement in their eating habits. Particularly, they should drink more milk, eat more butter, more cheese and other products so essential for health."

There are many other reasons for observing National Dairy Month. It would call attention to the critical problems faced by the huge dairy industry. Some people have erroneously assumed that the farmer is in a wonderfully prosperous condition, that he has no worries. A close look at the dairy industry, however, will disclose that prices have fallen considerably, particularly in those milksheds not close to the metropolitan centers. Sometimes prices are made to look high by merely lumping together the prices the farmer receives in the prosperous New York milkshed and those in northern Wisconsin where farmers do not have available a major city consuming population readily at hand.

The purchasing price of the farm dollar has declined sharply because the farmer still must pay artificially high prices for feed and machinery, while the prices of his products are declining. There was a day when the farmer could keep a hired man for $30 a month. Today the average for Wisconsin is $106.

Dairy exports also have been skidding and at present there is a serious threat in Congress of further inroads being made in the butter market. As important as cotton oil and soybean oil are in the production of oleomargarine, it must be admitted that in the principal cotton and soya producing centers dairying actually accounts for a greater proportion of the farmers' income than the former two items.

Senator WILEY is the leader of a group of 25 dairy State senators who have introduced an amendment in the congressional butter-oleomargarine fight. Actually, they are not seeking an unfair advantage for butter over oleo. On the contrary, they seek repeal of the Federal oleo taxes and simply ask that artificial oleo not be given an unfair advantage over butter. The Wiley bill permits States that want yellow-colored oleo sold within their borders to have it. It bans, however, interstate shipment of yellow-colored oleo.

Observance of National Dairy Month will impress upon the country the importance of butter in the national diet. It will tend to increase the consumption of all dairy products.

[From Hoard's Dairyman of May 25, 1949]

WASHINGTON DAIRY LEADERS

Before many days or weeks have passed the yellow oleo-butter controversy will have been resolved in Congress. We take this opportunity to recognize four of the most prominent men who have devoted their untiring efforts on behalf of the dairy farmers of the United States.

There are many other men who have worked long and hard to prevent oleo's masquerade as yellow butter. The following, however, deserve special consideration and appreciation from all dairy farmers:

Charles W. Holman, National Cooperative Milk Producers' Federation: Representing over 430,000 American dairy farmers, Mr. Holman has over a long period of years worked untiringly to give adequate representation of dairy-farmer problems before the United States House of Representatives and the United States Senate. This work, incidentally, is only a part of his administrative responsibilities as secretary of the National Cooperative Milk Producers' Federation.

Few of us will ever appreciate the tremendously long hours and gruelling effort that Mr. Holman has put forth to maintain and preserve the identity of butter.

ALEXANDER WILEY, United States Senator from Wisconsin: Although burdened with many pressing administrative responsibilities, Senator WILEY in recent years has been one of the United States Senate's most vigorous defenders of the dairy farmer. His work in the Eightieth Congress last year was primarily responsible for the failure of pro-oleo legislation to pass prior to adjournment.

At the present time he is leading a bipartisan coalition of 27 United States Senators in a hard-fought effort to prevent the passage of the House-approved pro-oleo measure. He hopes to substitute the dairy compromise legislation on the Senate floor and secure approval from both Houses of Congress.

AUGUST H. ANDRESEN, Congressman, First District, Minnesota: Mr. ANDRESEN for many years has been the acknowledged leader of friends of the American dairy farmer in the United States House of Representatives. He has consistently sponsored realistic dairy-farmer legislation, designed to be of specific benefit to the dairymen of the Nation and to the country at large.

An influential and highly respected senior member of the House Committee on Agriculture, Congressman ANDRESEN has been an outstanding proponent of the dairy-industry compromise legislation designed to solve the long-time conflict between oleo manufacturers and dairy farmers.

REID F. MURRAY, Congressman, Seventh District, Wisconsin: Mr. MURRAY, drawing on a wide range of experience, including that of professor of animal husbandry, county agent, and various other fields of endeavor, has become the most colorful and persistent champion of dairy farmers in the United States House of Representatives. Carrying the brunt of pro-dairy debate on the House floor, his aggressiveness and determination have marked him as one who will be long remembered in the annals of American dairying.

Abolition of Electoral College

EXTENSION OF REMARKS

OF

HON. HENRY CABOT LODGE, JR.

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Thursday, May 19 (legislative day of Monday, April 11), 1949

Mr. LODGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a condensation of a statement by Basil Brewer, publisher of the New Bedford Standard-Times, which he made before the Judiciary Committee on May 3, 1949, in regard to Senate Joint Resolution 2, which proposes the abolishment of the Electoral College and that the electoral votes of each State be divided in proportion to the popular votes in presidential elections.

There being no objection, the condensation of the statement was ordered to be printed in the RECORD, as follows:

CONDENSATION OF STATEMENT BY BASIL BREWER, PUBLISHER, NEW BEDFORD (MASS.) STANDARD-TIMES, MAY 3, 1949, IN ANSWER TO THE REPLY OF SENATOR HENRY CABOT LODGE, JR., ON APRIL 18, 1949, TO MR. BREWER'S FORMER STATEMENT TO THE UNITED STATES SENATE SUBCOMMITTEE ON THE JUDICIARY OF MARCH 9, 1949, ON S. J. RES. 2, A BILL TO ABOLISH THE ELECTORAL COLLEGE AND TO DIVIDE THE ELECTORAL VOTES OF EACH STATE IN PROPORTION TO THE POPULAR VOTES IN PRESIDENTIAL ELECTIONS

In submitting my reply to Senator LODGE and other material, I wish to state, as I did on the occasion of my former appearance, I am appearing as a patriotic duty and in no sense as a partisan, nor am I concerned with personalities.

The first of my statements of March 9, 1949, before this committee, which Senator LODGE challenges in his reply, is the following: "I am astonished to find the Congress in process of considering changing the electoral system of the country without thorough study of its implications."

The answer is that I did not make the statement the Senator attributed to me. My statement was: "Yet I am astonished to find the Congress in process of considering changing the election system of the country without thorough study of its implications."

The Senator changes my words "election system" to "electoral system," an entirely different matter. By changing my language, the Senator is enabled to accuse me of alleging the "electoral college" has not been previously and fully discussed, and to reply at length to a statement I did not make.

Senator LODGE also selects for comment, my statement that "This is the election machinery which, on the whole, has worked well for 150 years."

The Senator then comments: "The contention that the electoral college procedure has 'worked well' during the term of its existence has been so thoroughly refuted over the years by historians, students, lawyers, experts in political science, journalists, statesmen, and the plain facts of history that no useful service would be served by reviewing all the manifest defects of the system here."

Here again the answer is, I made no such statement as the Senator attributes to me. I did not say that "the electoral college procedure has worked well during the term of its existence." I said the "election machinery, on the whole, has worked well for 150 years."

Who can gainsay the fact the American election system has worked well, on the whole, and in spite of minor defects? How otherwise can we explain the progress of the American people, the still free and untrammeled ballot, the fact America is today the world's most powerful and most peaceful Nation?

Only the United States has made the tremendous changes from the civilization of the eighteenth century to the present era without impairment of its form of free government.

Were Senator LODGE engaged in a simple expedient to abolish the fiction of the electoral college there would, I believe, be little opposition.

It is here proper to say many, and perhaps a very large majority of the American people, who know at all about Senate Joint Resolution 2, are under the impression its main purpose is to abolish the electoral college. To most Americans the electoral college is a

useless appendage, which "elects" the President and Vice President long after the country knows who are elected and by what popular and electoral votes they have been elected.

Senate Joint Resolution 2, as is well-known, eliminates not only the electoral college but revolutionizes the entire Federal election system.

From misquotation of my language and misconstruction of my meaning Senator LODGE proceeds to ambiguity:

"Mr. Brewer asked: 'Should it not be the duty of Congress to make the most searching investigation into the future implications, as well as the immediate effects, of proposals as fundamental as this?' And immediately afterwards, Mr. Brewer said: 'Senator LODGE's statements in behalf of his amendment are full of inferences and speculations.'"

"Frankly, it is somewhat difficult to reconcile these two propositions. In one breath the witness (Mr. Brewer) calls for 'future implications,' and in the next breath chides the sponsor of this amendment for doing that very thing."

What is there to be "reconciled" between a statement that it should be the duty of this committee and the Congress and all concerned to study carefully the "future implications as well as the immediate effects" of this constitutional amendment, and the charge that Senator LODGE—already fully committed to this bill—is trying to justify the bill by assumptions and speculations?

No one, including the Senator, denies the importance of the bill, the need for studying its effect from every possible standpoint.

Is there any inconsistency between urging the committee to make searching investigation before acting and charging that Senator LODGE's conclusions as to the benefits are speculative and not well-founded?

Need I remind the committee that on March 9, 1949, in defending his first edition of The Electoral College versus the Will of the People—the Case for Reform, Senator LODGE said, "Mr. Brewer, when I wrote that booklet I did not know there was any other side."

This booklet was dated July 1948, 7 years after Senator LODGE proposed his first bill to change the election system of the country.

In no respect are the views of proponents and opponents of Senate Joint Resolution 2 more divergent than as to the resolution's effect on splinter and so-called nuisance parties.

Senator LODGE believes that nuisance parties, such as he designates the Wallace party of 1948, are a product of what he calls the all-or-nothing system by which a successful candidate for President in a State gets all its electoral votes.

Nowhere can I find in any of Senator LODGE's arguments evidence to support his oft-repeated claim that Senate Joint Resolution 2 would eliminate the Wallaces and reduce the danger of splinters.

The nuisance party, as Senator LODGE calls it, is as old as our election system. In the main, they are protest movements, spearheading revolt in one form or another against the ruling parties. While generally short-lived, they make an impression large or small, for good or evil, before being absorbed. They are in my opinion, unobjectionable in a democratic system, and may be useful.

The name splinter parties more properly applies to the type which have sprung up in almost every European country where democratic government has been attempted, especially since World War I.

A splinter party system is the opposite of the two-party system which in general has controlled American politics since the formation of our Government.

Recognizing the dangers inherent in "splinter" parties, Senator LODGE said on March 9, 1949, in discussion following my statement: "Now, on this coalition party business, I have lived a great deal in France and I have seen the dreadful damage that a rainbow alinement of ideological parties does to a country. It makes it utterly impossible for a citizen to fix responsibility. It tends constantly to stress divisions in the community and split the whole thing up."

Under the Lodge plan, no longer is it necessary for a successful candidate for President or Vice President to have a majority of the electoral vote. Nor is there any limitation on the percentage of electoral vote necessary to win. Any percentage of the electoral vote, and, by the same token, any percentage of the popular vote can, under the Lodge plan, elect President and Vice President.

Those with experience in municipal elections, wherein plurality vote only is required, know the result of such a system; a multiplicity of parties and candidates, the more candidates the more chance to cut down the vote of leading candidate or candidates. In most cities operating under such a system, and in some State elections, notably Texas, run-off elections have been the only answer. No run-off provision is contained in the current Lodge amendment.

"Splinter" parties thrive on "proportionate" voting, which is started at the Presidential and Vice Presidential level by LODGE's election plan. They thrive on plurality voting systems where there is no defined percentage of total vote required for election and no provision for run-off. They cannot exist for long where a majority of all votes cast is required for election.

If, under the Lodge system, the electoral vote is split 40–30–20–10, how long will these "splinter" parties be content to be counted out when together they have a majority vote? They very well may push for representation at the congressional level, the bipartisan Government board level, and in court and other political appointments.

Prof. Lucius Wilmerding, Jr., noted economist and author, says in the Political Science Quarterly for March 1949:

The Lodge proposal "carried to its logical extreme would require the creation of a plural executive—as recommended by Benjamin Franklin and others in the Federal convention—in order that the several parties might share in it in proportion to their numbers * * * It is, to be sure, unlikely that the adoption of the Lodge amendment would actually lead to the creation of a plural executive. There is more danger that it might give countenance to a move for some form of proportional representation in our legislative bodies, National, State, and local."

In the detailed answer which Senator LODGE filed with the subcommittee on March 18, 1949, of the most important matters covered in my statement, the effect of the proposed amendment on the Republican Party, on the two-party system, and ultimately on the Democratic Party, was largely ignored by the Senator.

In a thoroughly documented statement I had showed, under the pending bill, and using the four elections of Roosevelt as criteria, the Republican Party would have been required to have a 7,000,000 to 8,000,000 popular vote plurality in each election in the 37 States outside of the South to elect the President and Vice President.

Subtracting the popular vote plurality of the Democratic Party in the 11 States of the solid South in these same elections, the Republican plurality in the Nation, as a whole, would have had to have been 4,000,000 to 5,000,000 to secure election in any one of the four presidential elections of the Roosevelt era.

It seems clear that so far as his own party, the Republican Party, is concerned, Senator LODGE admits the terrific handicap it would face under his bill and with this the danger to the two-party system. He stakes all on the ability of his bill to "change the voting habits of the American people," notably in the South.

That the southern Senators, whom Senator LODGE secured as cosponsors for Senate Joint Resolution 2, do not share his views as to the possibility of changing "voting habits" in the South is shown by the record of subcommittee hearing of April 26, 1948.

It is grossly unrealistic, in my judgment, for Senator LODGE, or anyone else, to put faith in this bill's working a revolution in voting habits of the crucial South.

I applaud Senator LODGE's statement, "If the thing is right, it ought to be done, no matter what party is helped or hurt by it." It also is true, in the course of our history, parties rise and fall. Perhaps the day of the Republican Party, Senator LODGE's party, soon is to be over.

But if the Republican Party is to go, let it not be at the hands of its supporters. Let it not be legislated out of business, by friends as well as foes, under some misguided idea they are bringing about a Utopian improvement in our election machinery.

If the Republican Party is to go, let it not be brought about by supporters of the two-party system, whatever party they belong to.

Said Senator LODGE on March 18, 1949, in replying to my statement to this committee, "I subscribe entirely to Mr. Brewer's conclusion that you cannot destroy the Republican Party without destroying the two-party system."

In further support of the threat in Senate Joint Resolution 2 to the two-party system, I quote from a letter dated April 20, 1949, to Mr. Edward Simmons from Robert G. Dixon, assistant professor of government and politics of the University of Maryland.

Referring to Senate Joint Resolution 2, he says:

"My own reasons for doubting the wisdom of the proposed change spring not so much from fear of the rise of a multiparty system—which is unlikely in the foreseeable future—but from the fear that it would tie the solid South, like a millstone, around the neck of the present Republican Party. Senator LODGE apparently desires and expects that the so-called proportional representation plan of assigning electoral votes in each State would restore the two-party system in the South. While I share his desire I cannot go along with his expectation. The anti-Republican conditioning runs too deep. Instead, I should expect the voting habits in the South to remain about as they are with the result that the proportional representation plan would cause the Republicans to lose far more electoral votes to the Democrats in the close Northern States than they would pick up from the Democrats in the South. Thus, the full political burden of that historical accident—the solid South—would fall upon the present Republican Party and it would be doubtful that that party, weakened as it already is, could survive as an effective national force. Instead of strengthening the two-party system the Lodge-Gossett resolution might go far toward strengthening the one-party domination of the presidency of the last 17 years."

It is clear that not only in the four Roosevelt elections must any candidate other than the Democratic candidate have a lead of 4,000,000 to 5,000,000 votes to win elections to the presidency, but also, under normal conditions in the South in the 1948 election, the same would have been true; this, of course, had the Lodge-Gossett plan been in effect in these five elections.

Any materially less lead in popular vote for the party other than the Democratic Party, and this party is defeated.

This, of course, is the answer to Senator LODGE's oft-repeated claim his bill would lessen the chance of a candidate for President being elected without a popular vote plurality.

Another striking instance of the working of the Lodge plan is the election of 1900. In this election, President McKinley was elected over William J. Bryan with an electoral vote of 292 against 155 for Bryan and a popular vote lead of 851,459 over Bryan.

Under the Lodge plan, Bryan would have defeated McKinley by an electoral vote of 218.8 against McKinley's 214.5; this in spite, of course, of McKinley's lead of 861,459 in popular vote, the largest popular vote majority ever given a candidate for President up to that time.

An outstanding and curious feature of the pending bill is the phenomenal publicity campaign which has been and is being conducted in its behalf.

I have spoken of a booklet which has been widely circulated, entitled "The Electoral College versus the Will of the People, the Case for Reform, Statement of HENRY CABOT LODGE, Jr., etc."

The title of the booklet itself is prejudicial, suggesting the electoral college mainly is involved, and forecloses any possibility the booklet is a dispassionate statement of the facts of both sides. The contents of the booklet fully confirm this.

Confronted with the above facts on March 9, Senator LODGE said, "Mr. Brewer, at the time I wrote that booklet I didn't know there were two sides to this subject." And a few moments later he said, "In my new edition of this pamphlet, which I put out in January 1949, I have put in on page 5 the objections which have been raised. * * * This will show I have tried to make every effort to be fair."

I now have before me the booklet of January 1949, carrying the same title as the booklet of 1948. This 1949 edition is equally one-sided as the first edition of 1948. In fact, but for rewording the introduction and adding the names of the new sponsors, the early pages are almost identical with the former issue. No editorials nor any articles opposing the bill are included in the booklet.

Far from giving the other side of the subject, the objections which Senator LODGE stated he included in edition 2 are identical with those listed in edition 1, except that one is added. In both booklets Senator LODGE minimizes the objections to his bill rather than answers them.

If this bill is right, why is this volume of support material necessary? Why the urgency?

This can hardly be the mood of seasoned statesmanship which, having made a full and fair presentation, should be willing to rest its case with the people.

It is well known Senator LODGE supported for 7 years an entirely different electoral bill from the one he now urges.

As late as March 19, 1947, Senator LODGE reintroduced in the Senate a joint resolution entirely different from the one he now sponsors. He proposed a constitutional amendment to provide for the popular election of the President and Vice President of the United States, a resolution which previously had been introduced in the House and was the same as Senator LODGE had introduced in the Senate in 1941.

Under this bill, the electoral college would have been abolished, as well as unit voting by States, and whatever candidate for President or Vice President had a plurality of the popular vote cast would be elected.

A few months later, Senator LODGE abandoned his bill providing for election of President by direct vote and endorsed the current bill.

It is quite clear Senator LODGE switched his position from direct election of President and Vice President by popular vote to the present bill, Senate Joint Resolution 2, because, as he and Representative GOSSETT agreed, there was no chance of getting the former bill, providing for direct election, approved by the smaller States and the States of the solid South.

Is the Senator's urgency a result of a deepening of his convictions for the present bill as the debate progresses?

Or is the Senator less certain as to the wisdom of this bill now he sees other able and patriotic men opposed?

These are questions that cannot help but occur under the circumstances, and only Senator LODGE can answer them.

What electoral reforms are really needed and what are the means to accomplish them?

What changes are advocated in the pending bill which either are impractical or carry with them evils worse than those which they seek to cure?

We have discussed the so-called "all or nothing" system by which the popular vote of the State decides which party secures the State's electoral vote. Even if this relic of State's rights were outmoded and wrong, we have showed it cannot be abolished without grave threat to the two-party system.

Another danger pointed out by the critics of our present system is that of a President being elected by an electoral majority, but without a plurality of the popular vote. If we assume such a contingency is basically wrong—what is the remedy?

We have showed the "remedy" provided in the current bill is to abolish the requirement for a majority of the electoral vote for election and substitute election by plurality, however small.

Another objection to our present system is the supposed evil lurking in the constitutional provision by which the House of Representatives, voting by States, is called upon to decide an election where no candidate for President receives a majority of the electoral vote.

This was emphasized by some in connection with the 1948 election where it could have developed neither President Truman nor Governor Dewey had a majority of the electoral vote.

I am one of those who believe such a situation, fully covered by the Constitution, had it occurred, would have been taken in its stride by the American people without protest, affording again to the world an example of self-government at work.

The current bill attempts to remedy the danger by abolishing majority of electoral vote as a requirement for election. Plurality of electoral vote, however, small, under the Lodge bill, is the only requirement. But, as has been proved, even by such complete abandonment of majority rule, the possibility of a President being elected by a plurality of electoral vote and without a plurality of popular vote still exists.

There remain for summation only such minor considerations as the alleged "disfranchisement" of votes at the national level, under the "all or nothing" system of State voting, and the alleged evil of the "electoral vote majority" being often much greater than popular vote majorities or pluralities.

These are nuisances rather than evils; they are academic rather than real.

As aptly expressed by Herbert Weschler, of the Columbia University School of Law, "an electoral showing does not augment that (an election victory); it only modifies the mathematics of the failure."

There are two changes of the American elections machinery which should be made.

One is to abolish the fiction of the electoral college and individual electors, retaining the number of electoral votes and formula for determination as now in the Constitution, and retaining the present method of election.

The other is to revise the plan for congressional referendum in elections for President and Vice President where no candidate secures a majority of the electoral vote.

The present plan calls for a decision in the case of President by the House of Representatives voting by States and in the case of Vice President, by the Senate.

This should be amended, by providing that the House of Representatives and the Senate by joint vote should make the decision both for President and Vice President, with each Congressman and each Senator voting as individuals and not by States.

The Senate and House of Representatives combined have the same number of Members as there are electoral votes in the States. Congress is the logical and only body to which the country can turn to umpire undecided elections.

If majority government still is desirable in America, this is the best way, and perhaps the only way, to resolve the most controversial feature of the country's election plan.

No revolution of voting habits is involved, nor in my opinion is any required at this stage of the Nation's history.

These two changes would, I believe, correct what 90 percent of the American people are thinking about when they endorse reform in our election system.

These changes are, I believe, largely uncontroversial. I could wish that Senator LODGE would change again his position on electoral reform and support these two simple and satisfying provisions.

Gentlemen, the bill you have been so patiently and carefully considering should not become law.

In its place, I earnestly hope your committee or some other Member or Members of the Senate will reduce to clear legal terms the two suggestions I have outlined above and submit a constitutional amendment embodying them for approval of Congress and the States.

Heavy Taxes and Socialism

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 19 (legislative day of Monday, April 11), 1949

Mr. McCLELLAN. Mr. President, I ask unanimous consent to insert in the RECORD an editorial entitled "Heavy Taxes Bring Socialism," from the Arkansas Democrat of Monday, May 16, 1949. I should also like to have printed along with the editorial a letter from Mr. R. B. Nunnery, addressed to me on May 17. I wish to state that the editorial very fully expresses my own personal views.

There being no objection, the letter and editorial were ordered to be printed in the RECORD, as follows:

R. B. NUNNERY & CO.,
Little Rock, Ark., May 17, 1949.

Senator JOHN L. MCCLELLAN,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MCCLELLAN: It seems hard to convince the Congress, and the President, that our citizenship urgently needs a stopping of Governmental spending and a relief from the onerous, confiscatory taxes of war times that I am wondering if your placing the enclosed editorial from the "Arkansas Democrat" in the CONGRESSIONAL RECORD might not somehow find its way to their attention? The price which our people and our country is having to pay and will have to pay through the degeneration and ultimate destruction of our form of government is too serious to allow indifference to continue at the sentry post in Washington.

May I join with others of your friends and constituents in the plea that you will exert every ounce of your powerful influence to

save our country from what this profligate adandonment and indifference is absolutely, certainly leading us into.

Sincerely yours,

R. B. NUNNERY.

[From the Little Rock (Ark.) Arkansas Democrat of May 16, 1949]

HEAVY TAXES BRING SOCIALISM

Vote yourself some more Government hand-outs, aids, and boons. This is the political rallying cry in every campaign. It has been growing in audacity and brazenness for more than a dozen years. Yet even now millions do not seem to realize what a malignant swindle they are buying.

First of all, Government has no money to give anybody, except the money it takes from the people. We can get from Government only the revenue we pay it in taxes, less the cost of maintaining a horde of bureaucrats, and the waste that flourishes on huge spending of other people's money.

Second, and the deadliest part of it all, is the fact that heavy taxing, and more and more Government regulating and bossing, are a sure road to socialism. Almost never is socialism brought in by the Socialists themselves. The swap is made, as it was in most of Europe, by well-meaning liberals in the orthodox parties, with their spending and taxing to help the little man.

Over and over again, freedom has been destroyed to the battle cry of protecting the people's freedom. Socialism has been the result—let us think of what it means.

It is the end of a nation's great days. For it kills ambition by wiping out the rewards that a man may win under private enterprise, by inventing something new, by doing an old thing better, or taking a long chance on some risky project.

When socialism takes over, there are no more Rockefellers, Edisons, and Fords to enrich life with conveniences and luxuries never heard of before, to create millions of new jobs, add enormously to the wealth for investment and to pay taxes, and thus build greater vigor and strength into the Nation.

This blight on our economic life is what we are buying with our rapacious taxes to provide more Government services and regulations. The seat of the trouble is in Washington, which has set a reckless spending pattern for the States and local governments to follow.

And there will be more of the same, with the deadening hand of socialism closing upon us, unless we tell our Congressmen to stand against it. Enormous new Federal spending is urged. Senator MCCLELLAN says it would add twenty-five billions to the annual cost of the Federal Government, now rising above forty-two billions.

Are we going to let the politicians bribe us with our own money to accept the socialistic government which wrecked Europe, and finally made it a charity case for Americans to help back onto its feet? Either we stop now, or we continue a political joy ride with disaster at the next bend.

Quality in Education Exemplified at New England College, Henniker, N. H.

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Thursday, May 19 (legislative day of Monday, April 11), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an editorial entitled "Hard Things Must Be Endured; High Places Must Me Sought," which appeared in the New Hampshire Morning Union of May 11, 1949, and which describes the new New England College in Henniker, N. H.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HARD THINGS MUST BE ENDURED; HIGH PLACES MUST BE SOUGHT

Anyone discouraged by the state of education in this country who happens to be driving through Henniker would do well to stop and visit New England College. His spirits will be raised.

There, in Henniker, is an educational institution whose emphasis has been placed on the quality of the faculty and the quality and intelligence and character of the students, not on the quantity and quality of the bricks and stones of the college buildings.

This writer has often felt that in the last 40 years American education has suffered from a brick and mortar cancer. Beautiful and lofty structures have crowded up all over American college campuses. They would be most attractive in themselves if one did not have to pause and consider that they consume, very much as cancer does, money which would have been better spent for the real educational purpose, which is to give the students the very best type of intellectual stimulation and instruction.

Of course, the reason for this is simple. Wealthy individuals seem to delight in perpetuating their names on buildings which they hope will last as long as the pyramids. It is true also that in the United States more emphasis is placed on material than on intellectual or spiritual matters, or matters of character.

A visit to New England College reminds one of the great days of New England teaching. Then magnificence of thought and not of building was the sign of a great educational institution. It was once said of the great president of Williams College that the perfect education was Mark Hopkins on one end of a log and a student on the other.

At Henniker that sort of philosophy seems to be the order of the day. President Laurie Davidson Cox himself represents an interesting, challenging approach to life. After retiring from one successful career, at a time when many men want to sit in the sun and reflect on the past, he began hustling around building a future and doing it without the pomp and ceremony usually attached to college presidents, and yet with a quality of culture and wisdom so often missing in some of the high-pressure executives now running our large educational factories.

Finally, in an age of fancy and pretentiousness, modest New England College has for its motto the Latin words, "Dura duranda, alta pentenda." For people such as this writer, who has long ago forgotten his Latin, the translation we find is "Hard things must be endured, high places must be sought." This, too, is reminiscent of the traditional American philosophy upon which the greatness of this Nation has been built.

This newspaper wishes New England College and Dr. Cox every success for the future. The only question is what will happen when some of the alumni are spectacularly successful in the world of finance and begin to give the college elaborate piles of masonry and brick? The real test of New England College and Dr. Cox will be how they can then rise above material symbols and maintain their present lofty plane.

W. L.

More Byrds in the Senate

EXTENSION OF REMARKS

OF

HON. JOHN J. WILLIAMS

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Thursday, May 19 (legislative day of Monday, April 11), 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD six editorials to the effect that more Byrds are needed in the Senate.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Columbus (Ohio) Sunday Dispatch of May 15, 1949]

TRUMAN IS NOT JOVE

The politics behind President Truman's uncalled-for attack on Senator BYRD last week are quite simple. The important point about that outburst, however, is that it illustrates, as few things have, the centrally evil fact of the New and Fair Deal which has endangered the American system of government continually since the first must legislation submitted to Congress by President Roosevelt in 1933.

"There are too many Byrds in Congress" was typical of the President's bludgeoning wit. And had he gone only that far he might have indulged his vanity of political Jupiter confounding his foes with a terrifying thunderbolt or two. But he went on. "What this country needs," said Mr. Truman, "are Congressmen able to see things in the terms of national interest rather than local interest and make large plans rather than small ones."

We may lay aside for a moment any consideration of whether or not Senator BYRD's concern with economy in Government is a matter of national or local interest, or whether his constant and courageous work in behalf of economy is planning in a large or a small way. The fact is that Senator BYRD gave the President the logical and the dignified answer his irresponsible accusation merited. "I will not accept his (the President's) dictation in matters of legislation," the Senator replied. "I owe my allegiance to my constituency of Virginia. So long as I remain in the Senate I will vote as my conscience dictates and represent the wishes of my constituents."

Senator BYRD, therefore, obviously sees his task in the brightest and clearest possible light. He was not elected to betray the voters who sent him to the Senate. Nor was he elected to follow docilely the leadership of the President. He was elected, in fact, to resist the domination of any interest which might threaten the welfare and safety of Virginia. He, and every other Senator and Representative in Congress are spokesmen first for the interest of those at home who sent them to Washington. And specially are they spokesmen against any action or policy which threatens the solvency, the political independence, the constitutional freedom or the lawful security of their folks back home.

President Truman, as did President Roosevelt before him, often loses sight of this basic fact. President Truman's attempted ridicule of Senator BYRD revealed a shocking trend of thought, a trend which happily must have its limits simply because the whole fabric and tradition of government is exactly contrary to it. The American system of checks and balances with its separation of powers was devised to bar completely any development along this line.

When and if the legislative branch of our Government becomes permanently secondary to the executive branch, the whole system of individual guarantees of freedom is in danger. And in that event neither Senator BYRD nor any other Congressman would have anything to do in Washington. President Roosevelt carried this threat as far forward as possible. And, under him the traditional liberties of the Nation were weakened by the gargantuan Federal juggernaut he erected. Today it costs more, it demands more and it restricts more than do all the State governments.

Surely, President Truman cannot really know what he is doing when he openly expresses a desire for the liquidation of such stalwart men as Senator BYRD. Virginia's Senator has been long in the forefront of those patriotic Americans who have battled ceaselessly—and effectively—to restrain the encroachments of Federal bureaucracy, Federal greed, and Federal power into the lives of individual American citizens.

President Truman's rightful place is solidly behind the men in Congress, who like Senator BYRD, would protect not only the individual citizens of the Nation but the Nation itself from the dangers of overfederalization and uncurbed and dangerous extravagance.

[From the Danville (Va.) Register of May 1949]

TOO MANY HARRYS

Coming out of the White House offices after a call on President Truman, Gilbert A. Harrison, national chairman of the American Veterans' Committee told reporters that the President had expressed the opinion that "There are too many Byrds in Congress" and that the President wants the veterans to help elect Congressmen who see things in the national interest, rather than local interest, and make large plans rather than small plans.

The difference between Harry Truman and HARRY BYRD is wide indeed. They represent two wings of the Democratic Party so far apart that it is difficult to conceive of both as Democrats. HARRY BYRD is a Democrat in tradition of the Party, when it was totally American in concept. Harry Truman represents the wing of the Party which has gone hunting for the socialized state that will relieve the individual of responsibility and guarantee security from the cradle to the grave.

HARRY BYRD consistently has fought in Congress and in the conventions of the Democratic Party for the independence of the individual, local government, and State government. He also has waged a consistent, although losing fight, for national solvency and for a measure of economy that will not force Uncle Sam to dip into the pocket of the working man for one-fifth of his weekly pay to maintain the bureaucracy Mr. Truman would expand further.

Harry Truman is under the delusion, and is doing his utmost to convince the people, that passing a law is the remedy for everything, provided it carries an appropriation.

HARRY BYRD, who was poorer than Harry Truman, started work at 16. He learned early that work, only hard work, ever got anybody anything worth having.

Harry Truman thinks Congress can legislate equality.

HARRY BYRD knows that equality has to be deserved and earned; then, and only then, can it be protected by law.

Harry Truman thinks Congress can legislate full employment.

HARRY BYRD knows that Congress can do no such thing. He knows that if business is restricted and hampered it will be able to hire fewer and fewer people, and that eventually business will not pay enough taxes to finance the "benefits" given in the form of Government subsidies and compensations.

Harry Truman thinks his Fair Deal can share the wealth.

HARRY BYRD knows that wealth is production and that production must be increased if there is to be more to share with anyone.

Harry Truman thinks everyone can have high wages by passing a law establishing high wages.

HARRY BYRD knows that wages have to be earned by production great enough to pay them or else there soon will be no wages. A bankrupt corporation pays no wages; a closed factory provides no jobs.

Harry Truman believes the Government can do everything for the individual.

HARRY BYRD believes that making him dependent upon his Government cannot do anything basic for the individual because the Government has nothing except what the working taxpayer gives it, and the Government is nothing but the will of the people.

Which of the Harrys is the more democratic?

Which of the Harrys is seeing things in terms of national interest?

Which of the Harrys is making large plans for the good of the people of the United States?

Where does the planning of Harry Truman—as expressed in his promises and his proposals to the Congress—lead? To a debt that soon may have fixed charges equal to the national income? Is he strengthening the moral fiber of the individual American by making him dependent upon his Government for everything?

What about the course of HARRY BYRD? He stands for policies which have proved themselves in every situation; policies reflecting the courage and independence of the American, the resourcefulness of men and women who have built a great Nation out of a wilderness. HARRY BYRD believes in thrift, in paying one's way, in working to have more of life's good things. He did it himself; Virginians always have done it. HARRY BYRD is unwilling to see Americans become public wards. His fight is an unpopular one among those seeking to escape individual responsibility for the welfare of themselves, their families, their communities, and their State.

Because he has pride in his Nation, in his people, and in himself, HARRY BYRD contends for these policies against VITO MARCANTONIO, against CLAUDE PEPPER, against HUBERT HUMPHREY, against Philip Murray, against Francis Pickens Miller; yes, against all comers who look to Government for things the individual should do for himself. That is why HARRY BYRD finds himself so often opposing the recommendations of Harry Truman.

Posterity will look back upon 1949 and determine which Harry was right.

[From the Staunton (Va.) Leader of May 10, 1949]

BYRD PURGE?

"If the President means he intends to purge me from the Senate because I will not accept his dictation in matters of legislation, then I'll be on hand when the purging starts."

This statement by Virginia's Senator HARRY F. BYRD was a prompt and proper retort to a reported remark by President Truman yesterday that there are "too many Byrds in Congress."

Of course there is only one BYRD in Congress, and the President must have had him in mind; and the statement credited to the White House is not at all out of line with what that source might be expected to say. Senator BYRD never has failed to differ with any President he thought was wrong, Roosevelt and Truman included.

Mr. Truman's crack about the Virginian appears certain to stir fresh speculation over whether the President will use his influence in an effort to defeat for reelection those Democrats who take a leading part in opposing his program. Senator BYRD's present term does not expire until 1953, so Mr. Truman's remark scarcely is open to interpretation as made with intent to influence a Virginia election. The late President Roosevelt tried, without success, in 1938 to purge Democratic Senators TYDINGS, of Maryland, and GEORGE, of Georgia.

Mr. Truman's remark reportedly was made under these circumstances: Mr. Gilbert A. Harrison, national chairman of the American Veterans' Committee and one of those who called on Mr. Truman yesterday, told reporters: "He told us there were too many Byrds in the Congress. He wants us to see that Congressmen are elected who are able to see things in the terms of national interest, rather than local interest, and make large plans, rather than small plans." The veterans calling at the White House were among a group interested in pushing congressional consideration of housing legislation.

Senator BYRD repeatedly has charged the Truman administration with waste and extravagance, and more recently figured prominently in preventing committee approval of the Presidential nomination of former Washington Gov. Mon C. Wallgren to be Chairman of the National Security Resources Board. So the President has no great affection for the outspoken senior Senator from this State.

Virginians, who know Senator BYRD for his independence of thought and action, will applaud his summation of the case in these terms: "I owe my allegiance to my constituency in Virginia. So long as I remain in the Senate, I will vote as my conscience dictates and to represent the wishes of my constituents."

[From the Northern Virginia Daily, Strasburg, Va., of May 11, 1949]

TRUMAN'S FLANK ATTACK

The Northern Virginia Daily is not in position to state that there is a definite connection between President Truman's violent outburst against Senator BYRD on Monday and the bitter anti-Byrd campaign that is being waged in connection with the current gubernatorial campaign in Virginia. But the timing of the President's attack on Virginia's senior Senator, and the fact that his statement was so similar in tone and spirit to the speeches and statements of Senator BYRD's political foes in Virginia, suggest that the President was not unmindful of the political situation in this State when he made his flank attack on Senator BYRD in Washington.

Senator BYRD is not the only United States Senator who is fighting the dangerous pension grab which the administration is now seeking to bludgeon through Congress. He is not the only Member of Congress who fears that our country is headed toward national bankruptcy and seeks to stay the tide of reckless spending and reduce the enormous cost of Government. The necessity for economy if we are to survive is gaining increased recognition daily. Senator BYRD has been a leader in this fight, but he is by no means the only Senator who holds these views. Yet the President went out of his way to tell a veterans' committee that there were "too many Byrds in Congress" and to advise them to go out and elect Congressmen favorable to his tax-and-spend program.

Looked at from any standpoint, that was a rather vicious dig. It was especially vicious and ugly coming from the President of the United States at a time when Senator BYRD's foes were "ganging up" on him in his home State. But Mr. Truman's blast is not likely to hurt Senator BYRD, either in Congress or in Virginia. Such statements usually react against those who make them and those

whom they are intended to benefit. Certainly the voters of Virginia would resent any attempt on the part of the President to intervene in Virginia politics or even to influence indirectly political sentiment in the State. Senator BYRD is not a candidate in this election, but he is the recognized head of the State Democratic organization and he has been the chief target of the anti-organization spellbinders, most of whom follow the Roosevelt-Truman party line.

[From the Roanoke (Va.) World News of May 11, 1949]

FOOT-IN-MOUTH HARRY AGAIN

It is well known by now that President Truman and our Senator BYRD do not see eye to eye. In fact, no two fellows named Harry were ever further apart in their perspectives of government and economics.

Senator BYRD came up the hard way. He made his own fortune through diligence, intelligent application, and old-fashioned work. While he may represent a political machine after a fashion, it is his own organization. That machine has given Virginia good government for more than two decades. No man, even his most bitter enemies, has ever dared to suggest a lack of honesty in that government. He believes in a fundamental principle of spending no more than can be collected in proper taxes.

President Truman came up in politics via the notorious Pendergast machine. Beside it the Byrd machine is as a lily or a rose. The record does not show that Mr. Truman ever was any great shakes as a businessman, although he did work hard at it. Having no appreciation of the relationship between earnings and taxes and having been "finished" in the New Deal school of "tax and tax and tax, spend and spend and spend," he is unable to understand a man who insists on preventing outgo from exceeding income.

The speech Senator BYRD made last week excoriating the present trend of excessive spending which he said will lead to more taxes or a huge increase in the national debt angered the President no little. Placed atop BYRD's successful maneuver in blocking confirmation of the President's pal, Mon C. Wallgren, to be Chairman of the National Security Resources Board, this was a bit more than the man from Missouri could stand without sounding off. And, Truman-like, he picked the wrong place to sound off.

As UP Correspondent Lyle Wilson points out, it isn't considered cricket for a White House visitor to repeat Presidential conversations. However, Gilbert Harrison, national commander of the American Veterans' Committee, an extremely liberal body, didn't know the rules. He blurted out what Mr. Truman supposedly said:

"He told us there were too many Byrds in Congress. He wants us to see that Congressmen are elected who are able to see these things in the terms of national interest, rather than local interest and to make large plans rather than small plans."

Overlooking the fact that Congressmen are elected to represent their constituents and skipping the business of trying to find out what the President might have meant by "large plans" and "small plans," we can observe that Mr. Truman definitely was guilty of a serious error of tact and decorum when he said there are too many Byrds in Congress. He might have recalled if his temper was not so short, that his predecessor once thought there were too many Georges and Tydings in Congress, but he got his ears pinned back trying to purge them from the Senate.

Senator BYRD's reply was dignified but it was to the point and it leaves no room for doubt:

"If the President means he will attempt to purge me from the Senate because I will not accept his dictatorship in matters of legislation, then I will be on hand when the purging starts. I owe my allegiance to my constituency of Virginia. So long as I remain in the Senate I will vote as my conscience dictates and to represent the wishes of my constituents."

The Senator had intended retiring when his present term ends in January 1953, but in case Mr. Truman decides to run again about the same time in 1952, he will find BYRD in there pitching again. A man of honor can do nothing else.

The gratuitous insult of the remark and the plain threat to all Southern Congressmen last week by Senator MCGRATH, Democratic Party chairman, only serve to widen the breach between real Democrats and the left-wing element from North and West now in control.

If the President had in mind developing better cooperation in the Eighty-first Congress he picked a most miserable way of showing it.

We gather from the irritated snapping of President Truman that somebody has been giving him the Byrd about some of his plans and nominations.

[From the Nassau Daily Review-Star of May 11, 1949]

GOVERNMENT WOULD GO OVERBOARD WITHOUT MEN LIKE SENATOR BYRD

President Truman's desire to see Senator HARRY F. BYRD, of Virginia, and others who oppose his program defeated when they come up for election is not illogical. In politics the only way an individual can achieve his objective is to muster more votes than the opposition.

There is, however, strong sentiment throughout the country for the cause espoused so ably by Senator BYRD during his years in the Senate. We have on our desk a full-page advertisement sent by the Omaha World-Herald, one of the influential newspapers of the West.

Accompanying the advertisement is a letter from Publisher Henry Doorly in which appears this tribute to the Virginian:

"Senator HARRY BYRD for 15 years has been one of a few Senators who have protested strongly against the waste and extravagances of a spendthrift administration. The situation has become so serious, with projected appropriations of many billions of dollars each year for social welfare, subsidies, etc., etc., that unless a real effort is made to stop it, it will be too late, and we will all be sunk."

The Review-Star cannot imagine any greater tragedy than a full Congress dedicated to all the things President Truman has proposed. Without the restraining influence which even a minority can exercise, the Federal Government would go overboard on a great many projects.

Experience has shown that the social planners are insatiable. Few would begrudge the expenditure of a few hundred millions for slum clearance to clean up some of the worst spots in our largest cities, but they know that the objective of the advocates of public housing calls eventually for about 80 percent public housing and 20 percent private housing in the United States. England has already reached a ratio close to that and it is not solving its housing problem as rapidly as we have solved ours since the war.

There might be some advantage in a Federal appropriation of $300,000,000 for public schools in areas where local resources are totally inadequate, but the admitted goal of advocates of Federal aid for education is about $2,000,000,000 a year and it runs all the way from free lunches in kindergarten to free tuition in tax-supported colleges and universities for all.

These issues involve more than a question of how much we can afford, although obviously there is a limit to that. They involve a complete change in our economy and perhaps total replacement of our representative government and free enterprise system with some kind of a regimented welfare state. Unless we are prepared to go all the way with President Truman and the left-wingers from whom he gets a lot of his inspiration, the Byrds are vital in Congress.

Republic of Korea Determined Not To Surrender to Communistic Totalitarianism

---

EXTENSION OF REMARKS

OF

HON. JOSEPH R. FARRINGTON

DELEGATE FROM HAWAII

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 18, 1949

Mr. FARRINGTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a statement made by Dr. Pyung Ok Chough, special representative of President Rhee, and Chief Korean Delegate to the United Nations under date of May 16.

The statement follows:

By mutual agreement between the Government of the Republic of Korea and the Government of the United States, and in consultation with the United Nations Commission on Korea, measures are being promulgated for the final withdrawal of the American armed forces in Korea. The withdrawal will be effected within a reasonably definite period of time. On that eventful day the Korean people will recall with sad but grateful memory the three full years in which they and the American people fought, shoulder to shoulder, with patience, understanding, and cooperation, for the noble ultimate objective of establishing a unified, democratic, and independent Korea.

This coming withdrawal bears important significance for both countries. As for the United States, it will testify to the world that in spite of all destructive communistic propaganda, she has had no other motive in occupying south Korea than to redeem her solemn promises pledged in the declaration of Cairo in which the United States, China, and the United Kingdom pledged to make Korea free and independent. The withdrawal of United States forces is not to be construed as implying that the United States has no further interest in Korea. On the contrary, it means only a change of form and method in assisting Korea to the realization of her complete independence and sovereignty.

On the part of Korea, the withdrawal of the American armed forces will prove to the world that she is capable of managing her own affairs, provided that she is not overrun by hostile foreign forces, or foreign-supported domestic elements. The Korean people will witness the withdrawal of American forces with gratitude to those American friends, military and civilian, who assisted in laying the political, economic, and educational foundations upon which the modern democracy of Korea is built. They also firmly believe that continued political, economic, and military support will be forthcoming from the United States.

The Republic of Korea will face the new situation with greater determination and a sense of greater responsibility. It realizes that its responsibility is great and its path is strewn with great obstacles. The nationally compelling task, the unification of Korea, is still an unsolved tragic problem. It has to achieve democracy in both political

and economic life. The south Korean economy has to be further strengthened even before achievement of unification. Political stability must be maintained.

To insure the stability of the Government is the most urgent problem. The communistic forces have been, are, and will be carrying on activities to overthrow the Government. Even under American military government, hundreds and thousands of good citizens were killed by communistic terrorists. In the period from February 1948 to February 1949, in Jei Ju Island alone, 12,000 people were murdered, and 15,000 houses or buildings were burned. On another occasion more than 3,000 people were massacred within a week's time. Even now, by utilizing mountain and sea-coast entrances, illicit persons, and contraband are smuggled in to carry on guerrilla warfare and terroristic activities. At least 30 to 40 citizens are being killed every day. To this, an unfortunate international situation has been added. The Russians and the northern regime have entered into a practical alliance, north Korea being assured of military and economic aid. Further the north Korea regime and the expanding Chinese Communists have made a military alliance. Three divisions of the north Korea army are fighting in China now, and aggression from the north into south Korea is expected any time.

In the face of these dangers, I believe the American people will realize how critical and important are south Korea's problems of national defense. Present armed strength is far less than that of the north. All our armed services have to be strengthened. The withdrawal of the American forces and our national preparedness must go hand in hand. The Korean people are grateful for American economic aid, but they must also have further military aid.

We Koreans feel that the United States, and the United Nations have a joint responsibility in the destiny of the Republic of Korea. It was through the leadership of the United States that the problems of Korean independence were laid before United Nations. It was the United Nation that sponsored its birth; the Government of the Republic of Korea looks to that august body for collective security, and it is hoped that all the member nations of the United Nations which supported the General Assembly resolutions of December 12, 1948, will accord full recognition to it. Already the United States, China, the Philippines, the United Kingdom, and France have granted their full recognition. My Government also expects from the United States a definite assurance of military support in case of aggression by foreign forces or by foreign-supported domestic elements.

It also urges that a new military agreement be made between the Republic of Korea and the United States, reviving the friendly spirit and tradition embodied in the Treaty of Friendship and Commerce of 1882, which was entered into with Korea under the administration of President Arthur, the first clause of which reads:

"If other powers deal unjustly or oppressively with either Government, the other will exert their good offices, on being informed of the case, to bring about an amicable arrangement, thus showing their friendly feelings."

The only existing military agreement, which was signed on August 24, 1948, by President Syngman Rhee and Lieutenant General Hodge, must be replaced with a new one.

The Republic of Korea desires to assure all democratic nations of the world that the Korean people are determined not to surrender to Communist totalitarianism. They will fight to the end. They will faithfully discharge their duty as the bastion of democracy in the Far East.

Scholarships to Communists

EXTENSION OF REMARKS

OF

HON. JOHN L. McCLELLAN

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Thursday, May 19 (legislative day of Monday, April 11), 1949

Mr. McCLELLAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a telegram addressed to me under date of May 17, 1949, from Mr. Med Cashion, of Fayetteville, Ark., regarding the employment or the financing of a man named Freistadt, who is a Communist, and who is now under investigation by the Joint Committee on Atomic Energy.

There being no objection, the telegram was ordered to be printed in the RECORD, as follows:

FAYETTEVILLE, ARK., *May 17, 1949.*

Senator JOHN L. MCCLELLAN,
Senate Office Building,
Washington, D. C.:

Think the Freistadt atomic scholarship an astoundingly scandalous instance of flagrant misuse of tax money that we all work hard for and pay. Lilienthal's statements to committee May 16 relative to these scholarships show him to be unfit to head Atomic Commission. I say put him out and anyone else who agrees with him. Such scholarships should go only to loyal, sincere American citizens. Why throw billions around all over the world to stop Russian communism only to permit and even foster their steady boring from within here at home? If that is the way tax money is to be used, I think it time the taxpayers went on strike. Every Russian sympathizer should be peremptorily put out of Government service. I do not like it all a damn bit.

MED CASHION.

Teaching of American Ideology in Los Angeles City Schools

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1949

Mr. JACKSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement of policy adopted by the Los Angeles City Board of Education:

STATEMENT OF POLICY

THE TEACHING OF THE AMERICAN IDEOLOGY IN LOS ANGELES CITY SCHOOLS

Introduction

The Los Angeles City Board of Education believes that the greatest contribution public schools can make at a time of national crisis is a program of education dedicated to build an America united and strong behind the principles of her democratic heritage.

America will only be united and strong when her citizens, and especially her youth, reaffirm and live out the passion and faith in the declaration of democracy which inspired the founders of our Nation to pledge to each other, under divine Providence, their lives, their fortunes, and their sacred honor in its support.

To meet this national responsibility, we submit a three-point program.

Program

Point 1: The Los Angeles City Board of Education recognizes that we are living in an ideological age. This is a new factor in world affairs that education must meet. Los Angeles schools must play their part in this.

Nations are mobilized behind systems of ideas. They are engaged today in a globe-encircling ideological war.

The materialistic ideologies of fascism and communism have been on the march with power, plan, and purpose in this twentieth century. Democracy, as conceived by Washington, Jefferson, Lincoln, and other early statesmen, can only survive if we affirm boldly the ideology that will put the democracies on the offensive in this war of ideas.

Yet, it has been said that the democracies, ideologically, are at the bow-and-arrow stage in the era of the atomic bomb. Gen. Omar N. Bradley, Army Chief of Staff, says, "A tragically divided world is engaged in a contest of perseverance and in a conflict of ideas. Despite the opportunities of free education in these United States, too many young men come into the Army appallingly ill-informed on the issues and crises that warrant their service." General MacArthur puts it that the democratic nations must become equipped with the moral weapons to repel the totalitarian advance.

Point 2: To build a united nation the citizens of democracy must know their ideology. This becomes the duty of the schools.

The followers of Marxism and Hitlerism have long been trained in the ideology of godless materialism and ruthless totalitarianism for world conquest. The Communist revolutionary leaders in every country today are the product of the Moscow schools for training in ideological warfare. Hitler trained his youth proficiently by putting ideas in their heads before he put guns in their hands. These militant, undemocratic ideologies have gained power out of all proportion to their numbers because their proponents had been skillfully educated in their principles and doctrines based on class and race warfare.

The schools of the democratic nations must, therefore, teach their future leaders the democratic ideology which is based on moral and spiritual concepts.

We look to our educators to teach these concepts by developing, in every area of learning, the simple basic principles of (a) sound, moral standards; (b) faith in God; (c) respect for human dignity.

Life service and not lip service to these principles is our great national need.

Point 3: The Los Angeles City Board of Education is confident that schools can meet this new factor in the world today and fulfill their responsibility to our Nation. This can only be done, however, if our personnel are committed to the American ideal. Only those who accept and believe in the American principles can successfully teach them to others.

To this end, the Los Angeles City Board of Education directs that our personnel reaffirm their loyalty to this Nation, as evidence of their personal devotion to the principles of our democratic ideology as set forth in the Constitution of the United States of America.

Conclusion

Thus, Los Angeles will lead the way in this forthcoming critical year with her school system fortified to meet the need of an ideological age. Her children will be trained in the ideals of our great American heritage in schools manned by people whose undivided

loyalty has been proudly proclaimed. They will be the responsible citizens who, loving our way of life, will make this Nation united and strong, and keep her free.

Then, what Lt. Gen. Albert B. Wedemeyer, Director of Plans and Operations, United States Army, called for in speaking in Los Angeles will become a reality. He said:

"The most powerful influence for peace on earth today is the spiritual force exerted by a strong America of free peoples who have the will to remain free and who are determined to assist free men everywhere to protect their cherished freedom.

"If all Americans firmly resolve to take every measure necessary to indicate to the world that we are determined, we will then have the strength and unity to creat a spiritual resurgence in which the dignity of man receives full recognition."

Adopted by the Los Angeles City Board of Education.

Members of the board: Olin E. Darby, president; Mrs. Eleanor B. Allen; Roy J. Becker; J. Paul Elliott; Lawrence L. Larrabee; Mrs. Gertrude H. Rounsavelle; Maynard J. Toll; Alexander J. Stoddard, superintendent of schools.

Small Business and Unemployment

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. PATTERSON. Mr. Speaker, the gentleman from Texas [Mr. PATMAN] who is chairman of the Select Committee on Small Business, has acted with his usual dispatch in answering my inquiry concerning the action contemplated by his committee in bringing to the attention of Congress the necessity for legislative assistance to small business.

Unemployment is not in itself an end result of depression, but rather the moving finger which brings about economic doldrums. The first hit by lack of consumer capital and the last to recover is the small-business man. When the financial and civic contributions of small industrial, retail, and service establishments decline, so does our whole economic future.

I wish to include in my remarks the exchange of correspondence with the chairman, the gentleman from Texas [Mr. PATMAN], on the efforts of his committee in relieving the burdens upon small business:

MAY 13, 1949.

Hon. WRIGHT PATMAN,
Chairman, Select Committee on Small Business, House of Representatives, Washington, D. C.

MY DEAR MR. CHAIRMAN: Our Nation is now facing a period of rising unemployment. It is evident throughout the land that production has decreased in industry—bringing about a subsequent recession in retail and service establishments. Leading economists predicted many months ago that a trend of increased or decreased employment would be definitely established by the end of April. This date has come and gone with unemployment and consequent individual hardship upon the rise.

It goes without serious argument that the economic welfare of America is dependent upon the continued successful operation of small business. From this field of endeavor comes a great portion of the middle-class group which is the backbone of our Nation.

It would seem entirely within the jurisdiction of your committee to, at this time, recommend to the Congress for appropriate action legislative proposals to stimulate small business activities.

Particularly appropriate, in my mind, would be measures effecting a revision of the tax structure so that incorporated and unincorporated small business might seek, with some success, greater amounts of venture capital for necessary maintenance and expansion. Bankruptcies in small businesses have tripled in the State of Connecticut over the previous year, and this foreshadows serious economic dislocation. Many veterans of World War II, who have established enterprises of sound foundation, have suffered severe business casualties in recent months, arousing serious concern in our State.

Any action by your committee, predicated upon relief for small business, would receive my whole-hearted cooperation during the legislative process, and I am certain the commendation and support of all members of the Congress.

Please be assured that I am grateful for any consideration given to these views by your honorable committee.

Sincerely yours,

JAMES T. PATTERSON,
Member of Congress.

SELECT COMMITTEE ON SMALL BUSINESS OF THE HOUSE OF REPRESENTATIVES,
EIGHTY-FIRST CONGRESS,
Washington, D. C., May 17, 1949.

Hon. JAMES T. PATTERSON,
House of Representatives, Washington, D. C.

DEAR MR. PATTERSON: I am in complete accord with your statement of the situation which confronts the small-business men of this country today. Our committee has under consideration several items of prospective legislation, some of which are as follows:

1. A requirement that small business be given a fair and substantial share of all Government procurement.

2. An increase in the fines for violation of the antitrust laws.

3. Modification of royalty oil contracts providing for premium payments between the Government and independent refiners.

4. A study of a revision of the tax and finance structure for the purpose of producing legislation that will increase venture capital and banking facilities.

5. A bill to establish a Federal statute of limitations on treble damage actions brought for violation of antitrust laws.

6. A study to determine what effective and equitable legislation could be passed to divest certain large corporations and chains of the power of bigness, whether actions are legal or illegal.

I want to assure you that your views will be submitted to our committee and I only wish that a greater number of the Members would view with alarm the situation which you have so adequately and logically pointed out.

Sincerely yours,

WRIGHT PATMAN.

Your Job, Young America

EXTENSION OF REMARKS
OF
HON. HENRY J. LATHAM
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. LATHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by Ralph E. Becker, chairman of the Young Republican National Federation, before the annual convention of the Council of Young Men's Republican Clubs of Massachusetts, April 2, 1949:

YOUR JOB, YOUNG AMERICA

It is a real pleasure for me to be talking to you young people of Massachusetts. We are meeting in convention in a challenging and adventuresome period.

This is a period of confused thinking. Americans and people the world over are confused about human rights, States' rights, and economic rights. People are beginning to define and restrict the word "freedom" so that it means only certain things. To some, the only thing that freedom typifies is the right to breathe free air. Freedom has come to mean that a man should be free of his right to think and act for himself. That's why I'm happy to be in Boston.

Traditionally, this area has typified basic freedom. Such rights as political freedom, constitutional freedom, and economic freedom have their roots deep in the history and soil of Massachusetts.

You may recall that 174 years ago this very month the Minute Men of Lexington and Concord fired the shot symbolizing freedom and liberty which was heard around the world. This was your State's sublime and everlasting contribution to the establishment of our Nation.

Therefore, it is fitting that my theme tonight be about the necessity for young people to participate in politics. Why? Because you must actually participate in politics to preserve these basic and fundamental freedoms which have made our country the greatest country in all the world.

I have traveled the length and breadth of this country for almost 3 years to the extent of over 150,000 miles. This contact with people in all walks of life has convinced me that young people, in particular, still want the type of government that was envisioned by our forefathers right here in Boston.

It is always interesting to hear young people talk about the future. They all want the opportunity to progress according to their own individual initiative. They want the opportunity to earn their own money by hard work. But we must recognize that many young Americans have fallen prey to political Pied Pipers. This group has developed a curious attitude. They say, "We want security and a good job, and the country owes it to us." They don't care what they do, nor how far they sell their souls and their freedom for it.

But on the other hand, there is the other kind of young people who really want to get out and work. They want to make something of themselves, and most of all, their country. These young people are constantly thinking, planning, and working for better things, both for themselves and for all people everywhere.

It is odd that both of these groups of people will call themselves liberals. You should be concerned with the misuse of the word liberalism. As I read and reread my history, I find that our development of the free enterprise system and the meaning thereof has always been representative of the most advanced thought in the world. It has been shocking to people in many foreign countries, and still is. Free enterprise, free initiative, and all of the principles laid down by our political ancestors right here in the capital of Massachusetts, has been the most liberal thought in politics since the beginning of time.

I find people every day calling themselves liberals who would destroy this free-enterprise system, replace it by the same statism and state monopoly or controlled industry, as Truman and his administration proposed for steel, for medicine, et cetera. And what

concerns me about this is that it has attracted youth and young people all over the land and, yes, all over the world, under the guise of the word "liberalism." This is nothing but demagoguery.

In Russia the young Communist leaders recently met in conclave. This is the same Communist Party which operates so effectively right here in the United States under the same name, "liberal." Secretary Nikolai A. Mikhailov called on the young Communists to take a more active role in combating a certain revival of church activity which seeks its influence among youth. He went on to say that the young Communists cannot be neutral about religion, which he says in direct contradiction to science and to this new liberalism. He said the young Communist must increase the propaganda of natural science in combating religion. The word "liberalism" has been much used. This is just one of the groups who are calling themselves liberal today. Watch for it and be on your guard.

The practical facts are, that our Government functions solely through the work of political parties—and inevitably so. Now, these parties, or groups of men, have all the vices, superfluities of life, and virtues with which all men, everywhere, have been endowed by the Creator. The future of our life is ever being decided by political parties.

It is a universal fact that young people are idealistic, ambitious, imaginative, and energetic. It is also axiomatic that they are aware very early of the imperfections of the society in which they live. It is equally a fact that their ambitions and their ideals and the products of their imagination are of absolutely no worth to anyone but themselves, unless they take some action toward putting their ideals and the products of their imagination into effect. Practical application is what counts.

Politics is the dynamo of democracy! The continuous fight of one party attempting to oust the other party will always continue to protect our democratic form of Government and the preservation of the two-party system. It is our generation that must preserve the two-party system.

Let me ask you this: Do you know of any way that you can get something for nothing? When we look at the record of the last 16 years—and some of you will not be able to vividly remember from personal experience the last 16 years—we find that under the "New Deal," the "Fair Deal," and in my estimation, the "fast shuffle," the trend has been to stack the deck against initiative, individual enterprise, and talent. More and more our Go ernment has reached into the lives of people and told them what they should do, how they should do it, and where. It is becoming more and more difficult for young people to achieve the future which has always been the American dream. The only way that you know you can get something is by hard work. No one is going to give it to you.

Take a look at the political record of the last 16 years. Many things were given away in the form of outright relief. There were many wasted dollars and gift dollars. Also look at the national debt and consider that somebody, some day, is going to have to pay for it.

Let me quote Abraham Lincoln. He once said:

"1. You cannot bring about prosperity by discouraging thrift.

"2. You cannot help the wage earner by pulling down the wage payer.

"3. You cannot establish sound security on borrowed money.

"4. You cannot keep out of trouble by spending more than you earn.

"5. You cannot build character and courage by taking away a man's initiative and independence.

"6. You cannot help men permanently by doing for them what they could and should do for themselves."

Therefore, how much has the New Deal given you for nothing?

I don't for 1 minute believe that everyone would not like to get something for nothing if it were possible. Quiz programs on the radio will give you the moon if you will only eat the green cheese. Pyramid clubs, which have been striking the major cities throughout the country with lightning speed, indicate our human frailty of trying to get something for nothing. However, I know, and you know, that there are very few people here in America that would like to have their Government run like a quiz program or a pyramid club. Certainly, no one honestly believes that a government can be run that way.

You young Republicans can find some wonderful examples right here in Massachusetts. The Congress of the United States has been served, and is being served, by no more distinguished and able men than your Senators LODGE and SALTONSTALL, and our good friend, the Honorable JOE MARTIN, the former Speaker of the House and the present minority leader in the Eighty-first Congress. I could not pass by this opportunity without at least mentioning the names of your other representatives in the Congress who also are doing a magnificent job—JOHN W. HESELTON, Mrs. EDITH NOURSE ROGERS, GEORGE J. BATES, ANGIER L. GOODWIN, DONALD W. NICHOLSON, CHRISTIAN A. HERTER, and RICHARD B. WIGGLESWORTH.

We also have a most capable and dynamic leader at the helm of the Republican National Committee in HUGH SCOTT. He is a real fighter and those of you who saw him in Boston recently know first-hand that he is a real fighter which is just what we need in our party. It is a great pleasure to work with him and I am glad to report to you that he is cooperating in every way with our young Republican program and its leadership.

We young people do not need something for nothing. We have the enthusiasm, the talent, the ingenuity, and the ideals to build our own individual lives, and to build our great country into something magnificent. In order to do this, we must be allowed to use these talents and to spend our energies in a system and spirit of free enterprise.

Senior leaders of the Republican Party are turning to the young people for guidance and help. They realize that young people are the growing hope of not only the Republican Party but of the country. We now, in effect, have the complete job in our hands to do. It is up to us, ladies and gentlemen, to take the action.

I think your great Bostonian, Justice Brandeis, was absolutely right when he said: "The greatest menace to freedom is an inert people. * * * Public discussion is a political duty. * * * This should be a fundamental principle of the American Government."

We must take our country out of the mire, the rut, and the socialism of state enterprise that restricts or curbs individual ingenuity, and preserve the great country which was envisioned right here in Boston almost 200 years ago. Our famous New England forefathers believed in this dignity of the individual and his intuitive ability and the freedom of the mind. The old, old traditions instilled with the young enthusiasm of ours can take us a long way. Let us not shirk our duty. Let us continue on our way, and we can and will be an enormous power.

At this point let me give you a few facts in terms of the number of young people who are of voting age. At the present time there are 46,000,000 voters between 20 and 39 years of age in the United States. This is over 50 percent of all the eligible voters. There are 2,500,000 college students in the country, of whom 65 percent are qualified to vote. This vast group represents a great potentiality of present votes, and a potentiality which will increase as years go on.

No person younger than 38 has voted for a winning Republican President. No person eligible to vote for the first time in the next election will have even been alive the last time a Republican President was elected. There is a deep and vital need to interest and hold this group of young people, and there is no other instrument of the Republican Party equipped to reach them except the young Republican movement and its component clubs.

We young Republicans of today are destined to be the future leaders and creators of good government. The future is increasingly in our hands, so let us use our hands well.

Let us then state our principles clearly. Let us stand squarely on them. Let us young Republicans work hard for the right of the individual and the dignity of man. Let us not only exercise our rights but let us assume the duties imposed by those rights. Let us go to work for a greater America now.

The Veteran's Stake in Reclamation

EXTENSION OF REMARKS
OF
HON. HELEN GAHAGAN DOUGLAS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mrs. DOUGLAS. Mr. Speaker, after every war that has engaged this country, from colonial times to World War II, we have said that veterans ought to have every chance to get a farm that it is possible to give them. Of course, no one proposes any change in that declared policy. But it is not enough that we leave our formal declaration on the statute books. We are in danger of overlooking ways to make our national reclamation program serve effectively as an instrument to provide qualified veterans with farms. Veterans are trying to point this out to us.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement to the Eightieth Congress, dated May 21, 1948, made by Mr. M. C. Hermann, quartermaster-adjutant, department of California, Veterans of Foreign Wars of the United States. Mr. Hermann defines the interest of veterans in reclamation, not only in the Great Central Valley of California, but in all of the Western States. I think we should give serious consideration to what he says here and to these views of the Veterans of Foreign Wars.

The statement follows:

My name is M. C. Hermann, and I speak as quartermaster-adjutant, department of California, Veterans of Foreign Wars of the United States. Our department has membership of more than 100,000 veterans, all of whom have seen foreign service in the armed forces. My office is at 107 Veterans' Memorial Building, San Francisco.

Before urging your committee to appropriate for the United States Bureau of Reclamation as generously as you can see your way to do—for reclamation is a productive investment, not a wasteful expenditure—I want to say just a few words about the validity of the stake of veterans in reclamation, particularly in reclamation of the Central Valley within my State. I feel it is necessary to do this, because in reading the news dispatches coming out from Washington, and in examining the propaganda in

California of those who are attacking reclamation by seeking to undermine the bureau personnel, and otherwise to obstruct enforcement of the law, it is apparent that Senator DOWNEY and some others wish Congress to believe that the interest of veterans in reclamation is something trumped up, and that we are misled in thinking that reclamation law has something to offer veterans.

In a country which from colonial times has used land to recompense its veterans, it seems hardly possible that anybody would seriously entertain the thought that a great program of watering arid land, with provisions carefully drawn to spread the benefits and stop speculation, is a program of little interest to veterans. Yet you are asked to believe exactly this, and it seems fitting to say a few words about it now, when you are deciding how much money to appropriate for reclamation, and whether to tie strings to that appropriation which would pull from office * * * the particular officials who have been distinguishing themselves by their adherence to the principles of reclamation law.

Except for the fact that I have read in the published record of previous hearings on acreage limitation a number of the things which Senator DOWNEY has to say on the subject, I could not believe that the Washington staff writer of the Sacramento Bee was telling the truth when he reported on May 11, 1948, that "DOWNEY maintained that only about 700 farms suitable for veterans could be carved out in California from excess lands, and said the Bureau was issuing propaganda about the break-up of lands to secure veterans' support."

We are glad to have from so distinguished an opponent this much of an admission, that there may be even 700 farms for veterans at stake in this great issue of sustaining and enforcing acreage limitation and reclamation law. For the sake of 700 veterans and their families, the Veterans of Foreign Wars are willing to take up the cudgels anytime, anywhere.

But we wonder whether the Senator seriously expects us and seriously expects you to believe that in protecting reclamation law there are only 700 farm opportunities for veterans at stake.

From previous statements by the Senator, and from observation of his habitual technique of concealment of the magnitude of the public stakes in this issue, I assume that his figure of 700 farms is arrived at from consideration of the extent of excess landholdings in the first unit only of the Central Valley project. Assuming for the sake of argument that his estimate is correct for the first unit only, then it appears that he hopes we will conveniently overlook the fact that the full reclamation of Central Valley will bring water to around 3,000,000 acres not now irrigated; and the additional fact that in areas ultimately to be irrigated, as everybody in California knows, are very substantial stretches of excess landholdings. That particular stake of the veterans in California we are expected to overlook.

But we are interested, also, in the excess landholdings on many reclamation projects that lie outside California, and in the excess landholdings on projects not yet under active development. We expect to protect veterans' rights on excess landholdings among the millions of acres to be irrigated in the Missouri Valley. So to us it doesn't seem quite frank that you should be told there are only about 700 farms for veterans at stake, and that veterans' organizations, in fighting to maintain reclamation law, are simply misled innocents. The truth is that we are fighting for huge acreages upon which we hope that veterans may farm, acreages so widespread and so great that we have not yet been able to attach a proper number to them, even as an estimate.

I can understand why these opponents of reclamation want you to think that the number of veterans to be hurt by amending the reclamation law is only a few—I do not think that 700 veterans are only a few—but their own record makes it crystal clear that what we are debating is the question: What are to be the chances of veterans in valley after valley, from North Dakota to Texas to the Pacific coast?

This is not the fiction of my imagination. It stands on the record as the opponents of reclamation themselves have made the record. They strive to conceal their motive of repeal by calling their attempts "exemptions," and by other devices, but the record totals up to "repeal." They began their campaign for exemptions in Colorado. Then they moved their attack to Nevada. Next they assaulted the first unit of the Central Valley project, using the ill-fated Elliott rider. Now they are trying to make a wider breach, and hope to logroll their way through the defenses of reclamation by tossing in at one and the same time exemptions in California, Colorado, and Texas.

Not satisfied with working for exemptions from the reclamation law itself, they have already begun to extend their sapping operations to the reclamation clauses which Congress insisted on placing in the Flood Control Act of 1944. A few days ago the San Francisco News exposed this move, which is included in the new river and harbor bill, just reported to the House by the Public Works Committee. The News used the headline: "Sneak reclamation attack bared." The project is in Texas. We ask the Congress not to let its own legislation, written into authorization bills, to be undermined by this new tactic.

Whenever open hearings have been held, Congress has been unwilling to repeal the reclamation law. Having failed through open hearings, the opponents of reclamation now are trying to make as unpopular as they possibly can, through one-sided hearings, these particular officials who insist on taking seriously their oaths to support and defend reclamation law. As we in California well know, the desire to make a breach in enforcement of reclamation law, by threatening the job of officials with the courage and will to enforce it, underlies the request made recently to your committee by Congressman HARNESS. His flimsy disguise of requiring that certain offices be filled by qualified engineers does not conceal his pin-point bombing of those key reclamation officials who take their obligations to the law and the people seriously.

We think that officials ought to be commended for enforcing the law, and for informing people of their stakes in the law. The veterans have gradually been learning that their stakes in preserving both the letter and the enforcement of reclamation law are high, probably just about as high as are the stakes of land monopolists and speculators in tearing it down.

We ask you to support officials who dare to enforce their fundamental laws, and to reject the flimsy and partisan attacks which seek to replace them with men who may be more complaisant.

In conclusion, I want to present excerpts from two resolutions passed by our national encampment at Cleveland in 1947. The first one reads:

"Resolved, That the Veterans of Foreign Wars of the United States ask Congress to apply the reclamation law to every publicly financed irrigation development, and to authorize Government purchase of excess landholdings under the 160 acre water limitation, in order that the existing veterans' preference may be changed from an empty gesture into a measure of prompt and substantial help to large numbers of veterans; and be it further

Resolved, That we protest any administrative relaxation of the 160-acre limitation under pressure, whether it be a weakening of the law by acquiescing in mere technical compliance, or by interpreting it to permit publicly financed water for 320 acres to man and wife, which is an obvious distortion of the original intention of Congress, and an injustice to those veterans and others for whom acreage limitation was intended to create opportunities to farm.

The second resolution reads:

"Whereas special interests which seek to avoid enforcement of the 160-acre water limitation of the reclamation law in Central Valley of California are making deliberate use of the Army Engineers as a tool to accomplish their purpose: Therefore be it

"*Resolved,* That the Veterans of Foreign Wars of the United States ask Congress to enact legislation that will place all water resource development in the Central Valley unequivocally under reclamation law and charge the United States Bureau of Reclamation with sole and entire responsibility for enforcing the law."

Gentlemen, * * * we think that these resolutions cover the old dodges, specifically. In spirit they cover the new ones, too, including the proposal that you pass a rider to drive certain officials from their posts. The propaganda of special interests in California against the law and its officers is tremendous. We believe that officials paid from the Public Treasury ought to be able to tell the people about the law, too, and without fear. We veterans want reclamation officials who will not keep silence when their law is being undermined. We oppose the attempt to force silence upon them through fear of losing their jobs. We are astonished that anyone would propose to Congress that it ought to place a premium upon nonexecution of the law. * * * May we count upon you to protect reclamation from every attack in whatever guise?

Whose Business Was It?

EXTENSION OF REMARKS

OF

HON. JOHN DAVIS LODGE

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1949

Mr. LODGE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Fulton Oursler from the Reader's Digest for May 1949:

WHOSE BUSINESS WAS IT?

(By Fulton Oursler)

When a woman jumped, one summer's day, from a high window of the Russian consulate in New York, the crash of her body on the pavement was heard around the world. But at that time the world heard only a part of the truth.

No outsider knew that Madame Oksana Stepanovna Kasenkina would never have taken that spectacular leap if a young Connecticut farm wife and her brother, a novice lawyer, had not first intervened in an affair that seemed to be no business of theirs. This brother and sister set in motion a chain of events whose climax did more than anything else, before or since, to bring home to Americans the reality of Soviet duplicity and ruthlessness.

Now, with their permission, the story can be told.

It begins in a farmhouse at Ridgefield, Conn., on August 8, 1948, a sultry Sabbath morning.

Home from early church, the family surrounded the breakfast table, where Daniel McKeon was dividing Sunday comics among the children. Louise, blond young wife and mother, scanned the New York Times. "A terrible thing is happening" she suddenly

exclaimed, and read aloud from the front page. On Saturday, a 52-year-old widow had been kidnaped by Soviet officials from an estate near Nyack.

"Just listen to what went on!" gasped Louise.

Ten days before, Madame Kasenkina, in this country to teach the children of Russian delegates to the United Nations, had been ordered to return to Moscow. Her passage was arranged on the Soviet steamship Pobeda. Instead of going aboard, she hid herself. When the vessel sailed without her, she fled for protection to Valley Cottage, home of the anti-Communist Countess Alexandra Tolstoy, aging daughter of the great novelist. Madame Kasenkina's purpose was to remain in the United States and become a citizen. But Soviet raiders pounced on her sanctuary, and now it was feared she was being shanghaied to Russia, to be liquidated.

These accusations were denied. According to Jacob M. Lomakin, Soviet consul general, who now was holding the woman under "protection" in his New York house, he had merely "rescued" her from bondage in the household of Countess Tolstoy. Known to newsmen as a churlish fellow, the dour-faced Lomakin was today all smiles. He protested that he wanted everybody to know the whole truth.

Reporters crowding his office were introduced to a pale-faced woman garbed in black, with red rings around her brown eyes. Lomakin said:

"Here is Madame Oksana Stepanovna Kasenkina. She came with us willingly. She wants to go to Russia."

These assertions were obsequiously confirmed by the woman herself. To experienced newspapermen, however, her assent seemed only an act of terrified obedience; they noticed her uneasy glances, her frightened air and plucking hands.

On that humid Sunday morning, this same ugly news story was being read in millions of safe American homes, yet it did not occur to any of us that we should or could do anything about it.

But Louise McKeon, looking across at her husband, was deeply moved:

"Prisoners of Russian officials always agree with their jailers. There are horrible ways of making people do that. I believe that woman is really going to her death."

"Probably," agreed her husband.

"Won't anything be done about it?"

"Well, after all, that consulate is technically Soviet territory——"

"Why don't we do something about it?" blazed Louise.

Dan McKeon blinked in astonishment. A new light was shining in his wife's eyes, a glow of dedication. With all her duties as mistress of a large house, mother of six children, and with club and church duties besides, why was Louise McKeon thus suddenly on fire? As the explanation dawned on him, Dan smiled. This was what came of talking recently to one of their oldest friends, Father James Keller, founder of the Christophers, who goes about inspiring ordinary people with his belief that they can by selfless acts bring about extraordinary changes in the world.

"But what can I do?" Louise had asked Father Keller. "A busy housewife, buried in Connecticut, can't help change the world."

"I don't care if you are buried in Alaska," Keller had replied. "Drop that feeling of personal futility and just try something sometime. When you do you will not be alone; the good Lord will be right there helping you."

And now, on this Sunday morning, Dan McKeon realized that for his wife this moment was her "sometime" and she was going to try something.

"But what can you or I possibly do in a case like this?" he argued. "Only the State Department can deal with Soviet Russia."

"Just the same, I'm going to do something," cried Louise. Dan McKeon rose and put his arms around her. "All right, darling, I'm with you," he said. "Now let's see—what could we do? * * * Why not talk to your brother about it? Pete's a lawyer. And he's coming up from New York today."

Now Peter W. Hoguet was a very new lawyer; only a year out of law school, he had just recently passed the State bar examinations. When he arrived at the McKeons' home they found that he was as indignant as they about the Kasenkina case. However, he didn't see that there was anything he could do.

"But no American could kidnap another American and get away with it, could he?" Louise argued. "Are Russians allowed to break our laws?"

"Sis, it's not our business."

Louise McKeon's retort was a searching question: "Well, if it's not our business, whose business is it?"

Peter Hoguet shrugged and gave no answer—then. But on Monday night as he rode the train back to Manhattan the question would give him no peace: "If it's not our business, then whose business is it?" Tuesday morning he dropped in on a friend, an experienced attorney.

"Women get queer ideas, don't they?" Peter began, offhandedly, and told of his sister's excitement. But the other man exclaimed: "She's right. Whose business is it—if not yours?"

From that moment young Peter Hoguet found his days a living melodrama.

First he decided to rely on a principle in law older than Magna Carta—habeas corpus ("that you have the body"), which is the right of any citizen believing that another is illegally detained to bring that person into a court of justice where the facts may be ascertained.

Rather than sue alone for such a writ, it would be more impressive, Peter felt, for him to appear as representative of some patriotic organization. Accordingly, he went to Christopher Emmet, of Common Cause, Inc. With Mr. Emmet's cooperation, the application was drawn, and on Wednesday afternoon Peter Hoguet held his first professional conversation with a judge in chambers; to Justice Samuel Dickstein, of the New York Supreme Court, he offered papers alleging that a woman was being held against her will in the Russian consulate "through power, deceit, and terror being exercised upon her."

So cogent were his arguments that when he left he clutched a document commanding Jacob M. Lomakin, Soviet Consul General, to be in Manhattan Supreme Court at Foley Square at 10 a. m. the following morning, Thursday, and to have with him "the body of Oksana Stepanovna Kasenkina by you detained and imprisoned, as it is said."

Now all Peter had to do was to lay hands on Lomakin, one of the most elusive men in New York. He studied newspaper photographs, to fix in memory the image of his quarry—lean, pale face; jutting, cliffiike brow; eyes like deep cisterns, almost empty of light.

In legal protocol a lawyer of record does not serve his own summons. So Peter called a friend, another young lawyer, Hugh Donohue, New York commander of the Veterans of Foreign Wars.

Their rendezvous was the lobby of the Hotel Pierre at Fifth Avenue and Sixty-first Street, across the street from the stately marble-front mansion occupied by the Soviet consular staff. Almost at the instant of their arrival, as if unseen forces were already helping, a black limousine drew up before the consulate, and a lean, pale man with jutting forehead sprang to the sidewalk.

"Lomakin!" cried Peter. The writ was in his pocket; no time now to pass it to Donohue; legal etiquette would have to go hang. Peter ran across the street as a cluster of reporters deployed around the Russian consul. Furious at the ambuscade, Lomakin raked his pockets and belabored his own doorbell; lucklessly for him he was without a key. Peter sprang up the marble steps, brandishing his paper.

"Mr. Lomakin? This is a writ of habeas corpus for Mrs. Kasenkina."

Lomakin locked his hands behind his back. But Peter pushed the court summons down inside the consul's buttoned coat. Lomakin seized the detested thing to throw it into the street, and that angry act betrayed him; the order of the court was in his hands.

"Mr. Lomakin," exclaimed Peter, mopping his face, "you are now served. I'll meet you in court."

At 10 o'clock next morning the youthful attorney appeared in Foley Square. He, who had never before had a case, found himself surrounded by cameramen. In the courtroom he assembled his witnesses, Countess Tolstoy and her associates from Valley Cottage. But where were Lomakin and Madame Kasenkina? Would the Russian official disregard an order of the New York Supreme Court?

When Justice Dickstein appeared on the bench, Peter Hoguet arose and announced: "Your Honor, I am ready to proceed."

But Russia was not ready. Indeed, it looked as if Peter Hoguet was beating his head against an iron curtain. In Washington the Russian Ambassador, Alexander S. Panyushkin, had declared that the entirely inadmissible assumption that Lomakin could forcibly detain Madame Kasenkina was incompatible with the dignity of the consular office. And the United States Department of State had telegraphed Gov. Thomas E. Dewey, suggesting that Justice Dickstein defer further action. To this plea Justice Dickstein agreed for two wholly sensible reasons:

1. Word had been received from Lomakin that he needed time to consult with his embassy. Under the fair play of American courts he was to be given that time.

2. There was need to consult with the State Department on whether Madame Kasenkina had been brought to this country under diplomatic privileges or as a mere consular employee. That technical point might determine the whole issue.

What the judge did not know, nor did Hoguet, was that a Soviet ship was to sail at midnight of this same Thursday; within a few hours, Madame Kasenkina was to be shipped out. Then the habeas corpus writ could never be enforced.

Madame Kasenkina knew that she was to be a passenger on that ship. While Peter Hoguet stood glum and forlorn in court, the pallid woman in the case was being held in a third-floor room of the house on Sixty-first Street.

Through an open window came the noises of the city: cars, trucks, the shrill voices of children in Central Park nearby. Fantail pigeons fluttered on her window sill, but Stepanovna did not see. Overcome with lassitude, lost in a mental cloud land, she slumped in a rocking chair. She has told friends that she scarcely heard the music coming from a portable radio on the bureau. If guards had suspected that Madame Kasenkina understood a little English there would, of course, have been no radio in the room.

Madame Kasenkina's mind had gone back to the year 1937. In those days she was a teacher in a biological institute in Moscow and her husband was also a science teacher. In the middle of night, heavy blows on the front door aroused them from sleep; Soviet troopers broke in, seized her husband and dragged him off. She never saw him again; never even learned his offense.

From that moment Madame Kasenkina dreamed of escape from the Soviet Union. But she had gullefully concealed her hope

as she played the role of a fanatic servant of the totalitarian state. At last she had been brought to the United States. She had determined never to go back to Russia. Yet, here she was, trapped like an animal—and, so she believed, no one, anywhere, cared what happened to her.

Presently she stood up and walked to the window. Looking out toward the street, she saw a sight that startled her, even in her misty state of mind. A crowd was staring at the front of her prison house. Police had to hold them back. What had brought all those people here? She must try to understand, try to clear her head. Last night a nurse had come to her bedside, thrust a needle into her arm, spurting into her veins the narcotic often used by Soviet police. Under its influence the mind of the drugged person becomes a dream world and all resolution fails; it was the purpose of the drug, Madame Kasenkina has stated, to break her will.

Still blear-eyed from the dose, confused when she so desperately wanted to think, Madame Kasenkina swayed dizzily toward the bathroom. She fumbled with the cold-water spigot, bent over and splashed the chilly stream over head and cheeks. Now she began to think more clearly. Again she started toward the window, when she heard a voice from the radio uttering her name. What was the man saying, the newscaster with the excited voice? Intently she listened, hearing her name repeated, mispronounced but unmistakable. She was overpowered with emotion. A little part, at least, of what she heard she could translate.

There had been court action on her behalf. This news rekindled her mind and soul. Now she knew why crowds filled the street below. She was not abandoned; the fate of an individual still meant something in America. Somebody had tried; somebody did care. All those people cared.

In that ineffable moment of realization, Madame Kasenkina was inspired to any sacrifice that might blazon the truth unmistakably to the people. She turned resolutely to the open window. Leaning far out on the projecting ledge she looked down three stories to the concrete pavement of a walled-in yard. It was a moment of Gethsemane. Two floors below she saw a telephone line strung across the court. She aimed her body at that wire, and jumped. The wire, though it nearly severed her hand, broke her fall and saved her life.

All America knows the rest of the story. From a bed in Roosevelt Hospital, the crippled Madame Kasenkina was a more effective witness against tyranny than she ever could have been on a witness stand. And with what world-stirring results.

Consul General Lomakin had to leave this country in disgrace. Other officials were also called home. In the pillory of international news they, and the mighty Molotov with them, had been exposed as arrant liars. Not only in the United States but throughout Europe the Kasenkina case galvanized public opinion against Soviet lawlessness.

Today, Louise McKeon knows that her old friend, Father Keller, was right; that a single individual can set far-reaching events in motion. The pattern of her brother's life is altered too. Putting aside his ambition to have a private practice, Peter Hoguet has taken a Government post in Washington.

And Madame Kasenkina? Wounds and broken bones largely healed, she now lives in retirement in a lonely corner of Long Island, and spends her time writing a book of her experiences for those whom, one day, she will be able to call her fellow Americans. Never again can she feel alone; for she is one in spirit with all those who, like herself, would offer to die that freedom may live.

Pacific Northwest People Do Not Want CVA

EXTENSION OF REMARKS
OF
HON. HARRIS ELLSWORTH
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. ELLSWORTH. Mr. Speaker, the proponents of the proposal to bind most of five States in the Pacific Northwest in the chains of a Columbia Valley Authority are apparently attempting to make us believe that the people of those States want this legislation passed. Nothing could be further from the truth. The Governors of the five States all oppose the CVA. Many leading newspapers are actively opposed to the CVA and most newspapers have printed editorials either expressing doubt about the advisability of it or in opposition. Nearly all of the Chambers of Commerce of the region have voiced disapproval of CVA and numerous regional organizations have been outspoken against it. The Legislature of the State of Oregon in the 1949 session overwhelmingly defeated a proposed memorial to Congress favoring CVA.

Mr. Speaker, under leave to extend my remarks I wish to include the following editorial printed in the Portland Oregon Journal, January 7, 1949. The Journal is one of the great newspapers of the West:

A CVA NOT THE ANSWER

President Truman will find no quarrel with residents of the Pacific Northwest when he says "we must push forward with the development of our rivers for power, irrigation, navigation, and flood control." He is talking our language.

Nor will the President get any argument in this region over the necessity for basin-wide development of the Columbia River. That, too, has been our objective for, lo, these many years.

When he says, however, that "we should apply the lessons of our Tennessee Valley experience to our other great river basins," he will find plenty of argument from the Pacific Northwest if by that he means that he favors a TVA or regional authoritarian type of development for the Columbia Basin.

The question of a Columbia Valley Authority has bobbed up again and again in the past 10 years. It has been advocated in various forms by former Secretary of the Interior Ickes, former Senator (now Representative) Mitchell, former Senator Bone, of Washington, Senator Taylor, of Idaho, Representatives Horan, Smith, and Rankin, and others.

While these proposals have ranged from the independent superstate type like TVA (with control not only of power development, flood control, navigation, and irrigation, but also of schools, highways, various industries, and social work) to an advisory agency representing local interests, there has never been agreement. And bills implementing these proposals have gotten nowhere.

Frankly the Journal does not believe, until he clarifies the point, that President Truman favors another TVA for the Columbia, Missouri, and other basins. Two years ago when he recommended a $250,000,000 program for Missouri Valley, he indicated that he expected the program to be carried out by the Army engineers, the Bureau of Reclamation, and the Soil Conservation Service of the Department of Agriculture, much as Columbia Basin projects are handled.

The President also made it clear that speed, rather than involvement in ideological arguments over the administrative pattern, was the important thing. He seemed to favor the Missouri Basin Interagency Committee as a democratic compromise. And it may be assumed, until he indicates a change of heart, that he favors the same sort of approach (through the Columbia Basin Interagency Committee) for the Columbia.

The inter gency committees, composed of field representaties of the interested Federal agencies, with the governors of the varicus States as advisers, have done much to alleviate the conflicts between such agencies as the Army engineers, the Bureau of Reclamation, the Departments of Agriculture and Commerce and to unite these regions on a basin-wide development program. The Missouri Valley committee, quite frankly, has done a better job than the Columbia Basin committee because the Governors of Missouri Valley States have taken a much more active part in committee deliberations.

The Columbia Basin Interagency Committee would be materially stronger and more useful in evolving a comprehensive and unified river-development program if the governors of the various Pacific Northwest States were made actual, rather than advisory, members of the committee, and took more active part in its deliberations. If advisory members were then named from organized agriculture, industry, and labor, we would have something workable and locally controlled. And there would be less agitation for a super-State type of authority such as TVA.

A Columbia Valley Authority is neither wanted nor needed in the Columbia Basin.

Who Do You Believe?

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. JENKINS. Mr. Speaker, the Athens Messenger of Athens, Ohio, asks, "Who do you believe?"

The editor of this widely read newspaper sets forth some very interesting sentences in an editorial on this subject which appears in a recent issue of that paper.

This editor is an intelligent man and his paper has probably a wider circulation than any paper in the country published in a city of less than 10,000 population.

This is the editorial:

WHO DO YOU BELIEVE?

The present clash between Herbert Hoover and a Federal bureaucrat over social security funds needs clarification. The ex-President says the worker will have to pay twice for this beneficence, while the do-gooder says Mr. Hoover does not know what he is talking about when he warns against creeping socialism.

Mr. Hoover points out that because the Federal Government is using social-security funds for operating needs and replacing the borrowed funds with Government bonds, we will have to pay for social security twice. First there is the pay-roll tax called social security and second we must pay off the bonds with general taxation. The social security

director insists Mr. Hoover does not get the point in the new program, he does not understand modern social ideas.

It seems to depend on how you feel about socialism in its various aspects. Some people seem to have the idea that pay-roll taxes are not taxes at all nor are they burdensome. As a matter of fact they are passed on to the people in the form of higher prices and increased wages, which bring higher prices. But the serious thing, in the minds of most of us, is the fact that the social-security collections are not available to those who pay it in. Right now Americans are paying more into the fund (which is replaced by I O U's in the form of bonds) than is being taken out, but in a few years experts say this will end and the Federal Government must then redeem its bonds and to do this, the taxpayer must provide the money.

This is the sort of financing that those who favor advanced social ideas have been able to carry out because the whole thing is so befogged and hidden behind Federal screens the people who expect to profit by social security believe they are going to get back the money they pay in. They will get this money back but they will pay it twice instead of once if Herbert Hoover is right. And nobody in Washington can be found who will not admit the ex-President has made the most thorough study in Goverment operation in a century.

Basing-Point Decision Important to Worcester

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks in the RECORD to include therein a recent very timely and well-considered editorial which appeared in the Worcester (Mass.) Telegram on the question of the basing-point decision.

There is pending before the House a bill introduced by me to clarify this decision and therefore this editorial is particularly significant.

BASING-POINT DECISION IMPORTANT TO WORCESTER

The United States Supreme Court last week upheld a Federal Trade Commission order which outlawed the basing-point pricing system for rigid steel conduit manufacturers. The manufacturers are in the Mid-West but the decision could have as immediate an effect in Worcester as in Pittsburgh or Cleveland.

"Basing-point," in and out of the news for the past 2 years, is the simple device by which a manufacturer averages out the freight charges in figuring the selling price of his manufactured product. Then he sets a uniform delivery price, so that the buyer in a distant city pays the same as the buyer in the very city where the manufacturing plant is located.

The method was outlawed for the cement industry in a Supreme Court decision handed down last year. Since that time the steel industry, the major industry using the basing-point system, has been seeking to test whether the ban would apply to it also. This decision on the conduit manufacturers could be the test the steel industry sought.

The Federal Trade Commission ruled that the conduit manufacturers—as the cement manufacturers did before them—violated the Fair Trades Act by fixing prices in restraint of trade.

Since the Cement decision, the steel industry has been using the f. o. b. delivery system, awaiting such a test before the Nation's highest tribunal. It would appear at this point, that the f. o. b. system will have to remain in effect.

This means that steel delivered in Worcester costs more than steel delivered in any one of two dozen major manufacturing cities located nearer the steel-producing plants in Pennsylvania, Ohio, and Illinois and that it costs more to sell Worcester-made steel products in the major distant markets of the country. It puts Worcester, indeed all of New England, at a technical competitive disadvantage which could seriously affect jobs. Two bills now before Congress call for the legalizing of the basing-point method.

Effects of the decision will not be felt immediately. Gradually, through the years, there will probably be a shift of manufacturing emphasis in the heavy industries. One of two things could happen in this natural evolution: steel-producing industries could decentralize toward the steel-using markets (of which Worcester is one) or the steel-using industries could move toward the steel-producing centers.

Address of Hon. George J. Bates, of Massachusetts

EXTENSION OF REMARKS
OF
HON. CARL VINSON
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. VINSON. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include an address made by the Honorable GEORGE J. BATES, Member of Congress, at the ceremonies incident to the commissioning of the U. S. S. *Salem* at Boston, Mass., on May 14, 1949.

Admiral Denfeld, Captain Daniel, officers and members of the crew, ladies and gentlemen: Since most of my life has been interwoven in the development of Salem, I am particularly pleased to have this opportunity to participate in the commissioning of this modern cruiser perpetuating the name of Salem.

The Navy, and the people of America who are its stockholders, are proud of the great seafaring tradition which had its inception in the port of Salem, and which in the early days, was the principal source of our earliest maritime power. There lies the legend of American prowess on the seas. From that port sailed our early privateers, the ships which helped to win our freedom in the Revolution. At the beginning of the Revolution, there was no American navy.

It is well for us, on this occasion, to pay tribute to the men of old Salem who wrote such outstanding chapters in the city's maritime history They were men of daring initiative, willing to take risks and whose skillful execution brought great success. These men organized the shipbuilding industry in old Salem and brought in the greatest shipbuilders. Most of the vessels used in the Salem trade were built in Salem. They came and went from Salem, and were in charge of Salem masters with crews from Greater Salem. They were men who were proud of their home town and contributed in many ways to make it one of the leading communities in the Nation. They brought great wealth to Salem and made it a great maritime and world market center. These were the captains and the seamen who played such vital roles in the Revolution and made it possible for the United Colonies to be free and independent. These early merchantmen suffered much as they were plagued with ferocious pirates and lawless privateers haunting the trade routes of the world. Hundreds of American merchantmen were seized in their own harbors and carried off before the eyes of their owners who could only stand by in speechless rage and sorrow at the loss of the labor and investment.

The old sea chronicles of Salem are filled with episodes of misfortune, encounters, battles, and escapes. The soaring men and boys of Salem had never known peace or safety on blue waters. When danger threatened their country, the men of New England, and Salem particularly, swiftly and eagerly turned to the building of privateers as a weapon to harass and injure the foe. Such men as these were trained in a stern school to fight for their own. When the time came they were also ready to battle for their country. Salem sent to sea 158 privateers during the revolution. They carried 2,000 guns and were manned by more than 6,000 men—a force equal in number to the population of the town of Salem. These vessels captured 444 prizes, or more than one-half the total number of prizes taken by all the Colonies during the war. Their astonishing adventures were all in a day's work and were commonplace to the actors. The merchant explorers and fighting seamen of old Salem sailed where no other ships had dared to go. The chronicle of its past greatness afloat must be cherished as a previous asset and illustrious heritage as we salute the new *Salem* of the new era, confident of the glory and accomplishment that will be hers in the years to come as she sails the seven seas with the Stars and Stripes, symbolic of free democratic people, flying high.

In this age of speed, atomic energy, and twentieth-century progress, it is well to recall the deeds of a race of red-blooded Americans who won the honor for the flag and renown for the city and Nation during the era of its struggle for very existence. The records written by these men who made Salem one of the most famous ports of the New World a century ago are more than local annals. They are a brilliant chapter of American history.

During the war years, occasions such as these never failed to stir our hearts because the connection between the event and the ultimate defeat of the enemy was readily seen. In these years of uncertainty such occasions appear, of necessity, much less frequently. Their dedication, however, is nonetheless pertinent—dedicated as they are to the ultimate winning of the peace throughout the world.

This modern cruiser, upon whose decks we stand today, reflects the handiwork of the men and women of the Fore River Shipyard. Like the humans who created her, she must have a name. The world will know her as the U. S. S. *Salem*, a name she will bear with pride. We are all proud of her, and I know we will follow her career with a paternal interest, as she becomes a unit of the greatest navy in the world. She is the third of a class of three cruisers who have the distinction of being the heaviest "heavys" in the world and is comparable in size with some of the famous dreadnaughts of the First World War. This colossus of steel and skillful planning will be unsurpassed by anything afloat, in modernity, efficiency, and seaworthiness.

She is a completely air-conditioned warship designed to increase the fighting efficiency of her crews and to improve living conditions on board.

Among the primary tasks of ships of this type, as vital today as they have ever been, are the protection of our trade upon the seas.

and the seizure of bases from which our soldiers and our airmen can effectively operate against the enemy. This protection of our sea-borne commerce and seizure of overseas bases, against enemy-organized resistance, are tasks which the Navy, and only the Navy, can accomplish.

The Fast Carrier Task Force, of which this cruiser will become a part, is the most flexible, mobile, and economical weapon we have. It establishes the conditions under which long-range amphibious operations are possible, and no other agency of the armed forces is able to establish those conditions. Measured by any standard, hits per gallon of gasoline, hits per pound of plane weight—reflected in time and effort of airfield construction, hits per dollar invested in flight crews, hits per hour flown, and above all, in hits per ton dropped, the aircraft of the Fast Carrier Task Force were superior weapons.

If unfortunately we should become involved in another great war, we will undoubtedly have better and more powerful weapons, but the over-all strategy will probably not be very much different than in wars of the past, for the ultimate objective will be to break the will of the enemy to resist; in simple words, to make him cry "Quit." New weapons will engender new tactics to a degree, but we must remember that new weapons have definite limitations and that push-button warfare is not here. There is no cheap and easy way to win wars, and we cannot place too much reliance upon unproved weapons. No one, I am sure, is justified in predicating our present conduct upon an uncertain future. It is far better for those in whose hands rests the military security of the country to stand on the firm ground of demonstrated capabilities and, rising to their tiptoes, to see as far toward that future horizon as they can. This is a far better method than going to a soothsayer or looking into a crystal ball to establish a pattern of conduct upon which the security of the Nation may depend.

Here on this continent our forefathers established a system of government, and a way of life which has proved to be the world's greatest contribution to human freedom and the dignity of man.

It must not perish.

With the greatest combination of sea/air power that the world has ever known, forged stronger and stronger through the addition of modern warships like the U. S. S. *Salem*, we can best insure that it shall not perish.

As our paths turn homeward and the bow of the *Salem* points toward the open sea and world, we leave Captain Daniel and his men with sincere wishes for smooth sailing and good luck from Americans everywhere, confident that under divine guidance, the new *Salem* today is destined to a career of service and glory matched only by the rich traditions of old *Salem*'s maritime history. God speed you and guide you.

Missouri Governor Punctures Poor Joke

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an editorial which appeared in the Saturday, May 21, 1949, issue of Labor entitled "Missouri Governor Punctures Poor Joke":

MISSOURI GOVERNOR PUNCTURES POOR JOKE

Judging by an article in the St. Louis Post-Dispatch, we think Missouri's Democratic Governor Forrest Smith deserves a word of commendation.

The chamber of commerce of the State's capital, Jefferson City, gave an elaborate dinner, with various skits which were supposed to be funny.

The feature of the evening was a shabbily dressed man. He was to come in three times, putting on an act ridiculing the Governor's past attempts to get bigger pensions for more poor old people in Missouri.

Governor Smith saw through the intended ribbing when the man made his first appearance, and hit at that brand of fun-making.

"I think it is poor taste for capitalists and bankers to sit here at this fine feast and poke fun at our unfortunates," the Governor declared. "We should not make fun of poverty, at the expense of the unfortunate poor people, for they are part of us.

"There is a public responsibility to feed the hungry and clothe the naked. I am proud I recommended a social-security program liberalizing pension payments and eligibility requirements."

After that blast, the chamber of commerce called off the second two appearances of the shabbily dressed man.

Fiscal Window Dressing

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. REED of New York. Mr. Speaker, under leave to extend heretofore granted, I am inserting in the Appendix of the CONGRESSIONAL RECORD an editorial which appeared in the Wall Street Journal on May 18, 1949, as follows:

REVIEW AND OUTLOOK

FISCAL WINDOW DRESSING

Representative MILLS, acting for the majority members of the House Ways and Means Committee, yesterday introduced a bill to change the way corporations pay their income taxes.

The Mills bill would require that taxes on 1949 income, which corporations normally pay in March, June, September, and December of 1950, be paid instead in two installments in March and June of 1950. Thereafter corporations would pay twice a year instead of four times a year.

This plan, if approved, would neither increase nor decrease the amount of taxes a corporation has to pay, nor in the long run would it change the Government's revenue picture. The plan, on its face, is neither more nor less logical than the present four-installment method.

But there is more to the plan than might meet the casual eye. It was conceived as a clever method of making the Federal Government's budget picture look better than it is, at least temporarily. It's a rinky-dink for getting a pretty set of account books in which the red ink doesn't show up.

The trick works like this: The Government runs its fiscal year on a cash basis beginning each July. Thus two of the tax payments made by corporations for a calendar year now fall in one fiscal year and the other two payments in the succeeding fiscal year. For the fiscal year 1949–50, under the present system, the Government would get only the March and June payments of the taxes to be paid in 1950. The payments received in September and December 1950 would be credited to the Government's 1950–51 fiscal year.

The effect of the proposed change would be to allow the Government to take credit for all the corporation income taxes payable in the calendar year 1950 in its fiscal year which ends June 30, 1950. The effect is like drawing an advance on salary—it makes you seem flusher for a while but you are really no better off than before.

Now look what this does. For the first year—i. e., the fiscal year ending June 30, 1950—the Government picks up nearly $4,800,000,000 more in receipts. With $4,800,000,000 more in receipts, what's all this fuss about a deficit or more taxes? Why, the Government will have money to burn.

Mr. MILLS says proudly this would more than wipe out the anticipated deficit of $3,000,000,000. He and some other lawmakers even talk about how it will open the way for tax cuts. One would think that $4,800,000,000 had been produced from the air, possibly by spontaneous generation.

What of the 1951 fiscal year? How does it get repaid the $4,800,000,000 it lost to the 1950 fiscal year? Why it borrows from 1952. Uncle Sam goes on indefinitely living on a salary advance.

Suppose something happens in 1951 or 1952? Suppose business falls off and there isn't $4,800,000,000 to shift? Well, that way a 2 years' deficit could show up in 1 year, but since that possibility is in the future the legislators won't worry about it. Anyway, in the long run the Treasury would really be no worse off than under the old system; it would all come out even in the wash

It would indeed. Changing the bookkeeping system, setting up two pay days instead of four, won't change anything else. The evil in the Mills' method does not lie there.

The Mills' plan is bad because it is an opiate, because it can lull Congressmen into thinking they have cured the budget cancer when all they really do is postpone necessary surgery. It's like the morphine that makes the patient think he doesn't need an operation after all because the pain has gone.

Whenever a shaky company starts jiggling its books it is time for the stockholders to watch out.

Nixon Not Fooled

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Richmond (Ind.) Palladium-Item for May 17, 1949:

NIXON NOT FOOLED

There are no illusions about the threat of Communism in the thinking of Representative RICHARD NIXON.

This California Congressman and member of the House Un-American Activities Committee made his position clear here before the Earlham Institute of Foreign Affairs.

Russia is committed to a policy of using any means, including war, to bring the world under its thumb, NIXON said.

He cited the failures of appeasers in dealing a decade ago with the leaders of both Fascist and Nazi aggression.

NIXON is a young forward-looking lawmaker. He believes in dealing with world problems in a realistic manner.

Communist treachery is not to be underestimated. The goal of communism is plain. There is no place for wishful thinking while

living in a world where cold facts must be met.

The Communist regime in Russia is maintained by fear and violence.

Blood purges nip off every threat within their own boundaries. The Russian people themselves are kept in virtual slavery. Ironclad censorship by the government keeps the people ignorant of the truth behind world events.

Subversive forces are at work in the United States and other democratic countries. Always the purpose is to stir up strife, create discontent, and foment riots and confusion.

The soft handling of Communists and their fellow-travelers in this country goes back to the Roosevelt family and the New Deal.

President Truman's administration inherited much of this attitude.

It was Truman who repeatedly labeled the Red spy hunt in this country as "red herring" dragged out for political purposes. He ignored the findings of congressional investigators.

Not until the American people demand and get an unyielding policy from the Congress and the White House against Communists will the Communist menace be met adequately.

Our national mind has been poisoned with the hope that Dictator Stalin will mend his ways in Moscow.

Everyone familiar with communism knows that it depends on revolution to achieve its goal of world conquest.

NIXON'S appearance here served to reemphasize the need for unrelenting prosecution of the drive against the enemies of democracy.

Pros and Cons of the North Atlantic Security Pact

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Edgar Ansel Mowrer:

PROS AND CONS OF THE NORTH ATLANTIC SECURITY PACT

(By Edgar Ansel Mowrer)

As the North Atlantic Security Pact comes nearer, various groups in the United States are trying to prevent the Senate's acceptance of it. It is proper that their arguments should be met.

First objection: The NASP is a military alliance; the United States has never accepted a military alliance in time of peace since the original alliance with France (which we broke). To enter one today means: (a) that we repudiate George Washington's warning; (b) that we put ourselves at the mercy of allies whose acts we cannot control; (c) that we commit ourselves to the use of force.

Answer: The world of George Washington is gone forever. America is no longer protected by distance. It is a prominent part of a single world neighborhood. What was valid in 1800 is invalid in 1949. To refuse an alliance with European countries because we cannot control their (possibly imprudent) actions is to suppose that Europeans know less about the horrors of war than we do. Those who argue this way are isolationists who have not accepted the Truman doctrine. Today American armed force is all that stands between the Red Army and its goal of world-wide Communist domination. If we are not ready to use force, we must first resign ourselves to watching our possible allies (like China) swallowed one by one.

Second objection: Since we cannot enter an automatic alliance (meaning, go to war without a declaration by Congress) we are falsely raising the hopes of our European friends who may count on our support and then find themselves let down.

Answer: Our European friends are better aware of the American constitutional limitations than most Americans. If they nonetheless want a written pact with us, it is because they feel safer with it than without it. To question their wisdom is to presume that we understand their national interest better than they do.

Third objection: We do not need the iron bands of a military alliance in order to go to the aid of a European friend that is being attacked. The silken threads of common interest will be strong enough.

Answer: It is not only necessary that we be ready to fight beside our allies, it is also necessary that we make common military preparations with them in advance. The Netherlands and Belgium refused to ally themselves with Britain and France until they were actually attacked by Hitler in June 1940. By that time it was too late. The advancing French and British troops were caught in a bad situation in the middle of Belgium and defeated by the Germans. If a military alliance had existed before the war, these British and French troops would have started the war in carefully prepared positions. They might well have beaten off German attacks.

Fourth objection: To conclude the NASP is to provoke the Soviet Union. How would we like to see Russia have a military alliance with Mexico right on our borders?

Answer: To imagine that the U. S. S. R. is a nervous old lady is to misunderstand the nature of the Soviet church state. Not strength but weakness provokes Stalin. Soviet Russia had an armed Poland on its borders for nearly 20 years and never attacked anybody. Soviet aggression does not result from suspicion but from the Soviet belief in the need to conquer and communize the world.

Not all of those who fear lest we provoke Russia are as innocent as they sound. Some of them inwardly hope that the United States will not be ready to fight to defend western Europe. Others secretly welcome further Soviet grabs as more liberation.

Fifth objection: In creating the NASP the United States of America should move slowly, and not expose almost defenseless countries such as Norway to premature attack at a time when we are not yet ready to defend them.

Answer: This seems to me valid. I should have liked to see, first, an agreement between the United States of America, Canada and the five original European countries; then, the needed military plans and preparations for common defense; and only after that the extension of the pact to exposed countries like Norway and Denmark, and to weak countries like Italy and Greece.

CONCLUSION

The NASP is a step toward a solution of the European security problem. For, so long as Europe remains disarmed and weak, the Soviets will be tempted to strike. Making Europe militarily independent is even more important than making it economically prosperous.

These are the two sides of a common problem. Once Europe and Asia have been stabilized, the real problem, which is the elimination of war, can perhaps be solved. Without such stabilizations, this problem is insoluble.

Reorganization of the Government as Recommended by the Hoover Commission Urgently Necessary

EXTENSION OF REMARKS
OF
HON. GORDON L. McDONOUGH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. McDONOUGH. Mr. Speaker, the Hoover Commission report is receiving the thoughtful attention of the average citizen because it has ferreted out the truth about the colossal waste, inefficiency, duplication of services, and lack of unity in the agencies of the executive branch of our Government which are costing the taxpayer billions of dollars each year.

Only through the elimination of wasteful pointless spending and adherence to the simple principles of good management can the taxpayer hope for future relief from present high taxes. If economy in Government does not become a major factor in Government spending at home and abroad, not only will tax relief be impossible but sooner or later higher taxes will be required to meet Government obligations under a program of unlimited spending.

Today we have big government in the United States. In the last 20 years our Nation's expenditures have increased from $4,000,000,000 to $42,000,000,000 annually. Our total civilian employment has jumped from 600,000 to 2,100,000. Our national debt has fastened a mortgage of approximately $7,000 on every family in America, and taxes absorb about $1 from every $5 produced in the national income.

In the Executive Branch of the Government, the Hoover Commission reports 1,812 departments, agencies, boards, and bureaus operating without regard to the simple principles of good business management. Sixty-five heads of agencies report directly to the President, a process which would leave the President no time at all for matters of broad policy and affairs of state if he were to devote but 1 hour a week to each agency report.

Budgeting in these agencies ignores the basic principles of economy and indicates what money will buy but not what purpose expenditures will serve. Accounting sometimes lags years behind expenditures. Any private business or household would go broke if run on the same lines as the agencies in the Executive Branch, and the need for sweeping changes is evident.

The Hoover commission was assigned the task of investigating the situation and recommending corrective measures to limit government expenditures to essentials by the elimination of duplication and overlapping of services.

Some 25 major problems of government were selected for study, and research committees were appointed to get to the bottom of each problem. Some 300 workers, all specialists in their field, labored from 10 to 14 months getting facts, analyzing figures, searching his-

tory, and preparing detailed reports. Each research committee presented a final report to the commission, which in turn, prepared the final report to the Congress.

The reports of the research committees alone totaled over 2,000,000 words, the most monumental work of government research in all history.

Mr. Hoover set the pace for tireless labor presiding at all meetings throughout each day including week ends. He devoted 10 to 14 hours a day in the shaping of reports into what he termed "an orderly pattern of government."

The report already sent to Congress justified the effort expended in its preparation, and sets forth a complete blueprint for good government.

We need good government today as recommended by the Hoover Commission not only as a measure for economy but to secure our fundamental personal freedom and to preserve our national security.

Today Government decisions touch every phase of our lives from agriculture to atomic energy, and a personnel of the highest caliber should be required to staff a government that has such a decided effect on the daily lives of all of us.

Our resources, financial, material, and human, must be expended wisely and in limited quantity to fulfill our most important obligations both foreign and domestic so that too great a drain on them does not result rendering us unfit to defend ourselves against the very forces, at home and abroad, which seek our downfall. In the words of the Hoover Commission Committee on National Security:

> Victory by bankruptcy may be the Machiavellian aim of the Kremlin. * * * Burdens such as we are now bearing, if substantially increased, might become intolerable. The premium upon economy, therefore, becomes higher than ever before in our history; it may be said that our national security depends upon it.

If the recommendations of the Hoover Commission are put into effect in the executive branch of the Government, the potential savings to the Government cannot be estimated. Mr. Hoover personally has expressed the belief that at least three billions a year can be saved without the loss of any essential service to the people. If the upward trend in Government spending is checked, this in itself would bring an inestimable saving to the Nation.

Congress has already acted to clear the way for the reorganization. Legislation has passed both the House and the Senate to empower President Truman to begin the task. As soon as the minor differences between the House and Senate bills are resolved and the legislation is approved by President Truman, he will assume the responsibility for initiating the necessary changes in the executive branch.

In my opinion, the report of the Hoover Commission is a challenge to our democracy. It points the way toward good government and away from wasteful spending which could undermine our democracy. And only good government can serve the people most efficiently and extend the maximum benefits of government to our citizens.

I wholeheartedly approve of the recommendations of the Hoover Commission, and I urge that the Congress in the future take whatever action may be necessary to facilitate the actual work of the reorganization.

Hoover Commission Report

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer of May 17, 1949:

IT MUST NOT MOLDER

The Hoover Commission report is something more than a revelation of the indefensible waste and the administrative confusion that exists in the executive branch of the Federal Government.

It constitutes a momentous challenge to the American people.

Are they capable of developing a national will to bring about a more efficient, more responsive, and less costly Federal Government? Or will they surrender to a change-resistant bureaucracy, which is counting on public apathy and the running of time to protect the enormously expensive and inefficient status quo that exists in Washington and in the Government's operations across the face of the Nation?

A test is at hand. President Truman is again asking for the enactment of legislation giving the Executive the power to carry out, subject to congressional veto, many of the far-reaching improvements in the administration of the Federal Government that were recommended by the Hoover Commission.

Sentiment in favor of the passage of this legislation must be made apparent to Congress. Passage of this measure is imperative to a start in translating the monumental undertaking of the Hoover Commission into actions that will stop at least some of the waste and untangle the confused chain of governmental command extending down from the President. It is necessary, also, to pin-point the responsibility for instituting major improvements in the sloppily administered Federal Government. Mr. Truman has asked for that responsibility; it should be given to him.

It is easy to find recruits for tax-spending projects, and for projects that add another dangling function to the Federal Government, from among the intended beneficiaries of such projects. But it is difficult to obtain recruits for a project such as sound reorganization of Government that will benefit all the people, not just a few special segments of the population.

Fortunately, a recruiting agency for this high purpose has come into being. It is the Citizens Committee for Reorganization of the Executive Branch of the Government, which is dedicated to the proposition that the Hoover Commission findings and recommendations are far too valuable, too essential to the health of the Federal Government, to be allowed to molder, as those with a vested interest in the status quo would like to see them do.

The committee is headed by Dr. Robert L. Johnson, president of Temple University, who has already shown that he will give energetic, competent direction to the committee's task of preventing the Hoover Commission report from being filed and forgotten, to the herculean task of trying to develop a national will to achieve a less wasteful, better organized National Government.

The committee has enlisted as members of its Board some of the outstanding leaders of agriculture, organized labor, education, business, and political affairs in the United States. It seems to us to be a hopeful sign that Dr. Johnson's committee has obtained the participation in the formulation of its program of such men as William Green, president of the American Federation of Labor; Philip Murray, president of the Congress of Industrial Organizations; former Secretary of State James F. Byrnes; former Postmaster General James A. Farley; Capt. Edward V. Rickenbacker, president of Eastern Airlines, who counts mills as well as pennies in conducting a financially successful commercial aviation system, and former Vice President John N. Garner, to say nothing of a group of the foremost industrialists of the country.

The Commission that served under former President Hoover and conducted the most intensive inquiry ever made into the functioning of the executive branch of the Government, provided a blueprint that must be utilized. Not to do so would mean that, at a time when their burden of taxation has become oppressive, the American people have lost a priceless facet of the American character; the power to carry into intelligent, constructive action righteous indignation against sloth in government and insidious extensions of government into their lives and into their purses.

The man who performed a magnificent service for his country by directing the survey which brought strikingly to light the worst deficiencies in the administration of the Federal Government will be an honored guest of Ohio next month. Mr. Hoover will come to Delaware on June 11 to speak at the inauguration of Arthur S. Flemming, a member of the Reorganization Commission, as president of Ohio Wesleyan University. We hope Mr. Hoover will, in his address there, convey, as he ably can, a sense of the crying need for cleaning up an administrative morass.

Memorial Day Prayer

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. MICHENER. Mr. Speaker, on March 4, 1949, I introduced House Joint Resolution 185. This is in keeping with a resolution passed unanimously by the Congress a year ago.

It has been my hope that this resolution would be favorably reported by the committee and passed by the Congress. While the time is getting short, I am yet hopeful. In this connection, I am pleased to include an editorial from the Jackson (Mich.) Citizen Patriot of May 15, 1949, which is pertinent. The editorial reads as follows:

MEMORIAL DAY PRAYER

Senator HOMER FERGUSON'S resolution to make a prayer for peace a permanent feature of our National Memorial Day commemoration is due to come before the Senate

soon. In the House, Representative MICHENER's similar resolution has been held up in committee. Yet it is difficult to see why such a measure should lack unanimous consent in both Houses of Congress.

As we said a year ago in suggesting the first Memorial Day peace prayer, the United States calls itself a Christian nation. If we are correct in that designation, then we as a people believe in prayer. Certainly a day devoted to memory of Americans who have given their lives for their country is a proper occasion to pray for peace. In fact, no other observance of that day is more fitting.

There are before Congress numerous other bills calling for various prayer days and similar observances. We hope that we have no stubborn pride of authorship in this particular idea, but we are a nation striving for peace, and Memorial Day is an occasion which reminds us of the tragic cost of war.

A year ago when this newspaper first suggested that Memorial Day be thus observed—a suggestion which brought forth a Presidential proclamation so designating a period of the day—a year ago the whole world seemed close to war. Tensions were severe in Europe. Today the world seems more relaxed. The blockade of Berlin by Soviet Russia has been abandoned. The Marshall plan and the Atlantic Pact appear to be cooling Red ardor for strife.

Who is there to say that the prayers which went up last Memorial Day were not answered?

But if we are a Christian nation, as well as a peaceful people, isn't it logical that at least 1 day of the year should be especially dedicated as a time to intercede with the Supreme Being in behalf of peace?

Should We Abandon Our Freedom?

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. WOODRUFF. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Los Angeles Examiner of April 10, 1949:

SHOULD WE ABANDON OUR FREEDOM?

(By E. F. Tompkins)

Hardly observed by the vast silent majority of the American people, a spreading and seductive movement is progressing across the country to repeal the Declaration of Independence and to nullify the Constitution of the United States.

The undeclared objective is to be accomplished by establishing a form of world government based upon the existing organization of the United Nations.

At the very least, if the enterprise succeeds, this country would be required to abrogate a large part of its national sovereignty.

Eventually, we would probably be compelled to merge our citizenship with alien and distant races, who do not share our language, our customs, our principles of law, our traditions of individual liberty or our ancestral experience in the arts and qualifications of democracy.

Obscure in its origin, the movement was initiated some years ago by Mr. Robert Lee Humber, a lawyer of Greenville, N. C., who formulated a proposal, for submission to State legislatures, to "declare that all the people of the earth should now be united in a world federation."

Since the formation of the United Nations, the movement has been carried further by new organizations, supported by notable names.

One of the most active groups is the United World Federalists, Inc., headed by Mr. Cord Meyer, Jr., which has a global prospectus and which claims the backing of Gov. Chester Bowles, New Deal Democrat, of Connecticut; Gov. Alfred E. Driscoll, Republican, of New Jersey; United States Senator Robert C. Hendrickson, of New Jersey; Gov. Luther Youngdahl, of Minnesota; and Associate Justice William O. Douglas, of the United States Supreme Court.

Another group is Federal Union, Inc., represented by Mr. Clarence Streit, a former Rhodes scholar, which as a beginning would recombine the United States into the obsolete British Empire.

Still another group, led by former Supreme Court Justice Owen J. Roberts, would start with an Atlantic Union, and progressively include all of Europe, the Americas, Asia, Africa, and Australasia.

Former Secretary of War Robert P. Patterson and former Under Secretary of State Will L. Clayton like the Roberts approach.

Then there is the American Association of the United Nations, of which former Under Secretary of State Sumner Welles is an honorary president.

Since the movement was instituted by Mr. Humber—way back yonder and way down in Dixie—the legislatures of 17 States have been deluded into adopting formal resolutions favoring limited world government, which is the basic idea.

Efforts are now being made to join Alabama, California, and Maine to the list.

Developing this aspect further, the United World Federalists, Inc., has devised a new model resolution for the legislatures directly seeking a change in our Federal Constitution and calling upon Congress to summon a national constitutional convention for the purpose.

Furthermore, the United World Federalists has established local propaganda chapters in 600 communities and colleges; has won the support of the pretentious American Academy of Political and Social Science; and has under way a $500,000 expansion campaign to transform the United Nations into a limited world government.

The danger that this backward step in freedom and civilization may be brought about by well-meaning faddists is growing imminent.

The legislatures of 36 States can compel Congress to call a constitutional convention for a specified purpose; and nearly half of the requisite number of States have already sanctioned, in effect, this procedure which would ultimately result in their own political extinction.

The old and defunct League of Nations was an attempt at limited world government which started in the travails of one global war and expired in the bloodshed and anarchy of another.

The existing United Nations, with its 200 or more commissions and councils, is developing into a scheme of world socialism, sustained chiefly by American taxpayers and providing notably a sheltered haven for foreign espionage and intrigue in this country.

Experience thus proves that a limited system of world government must either dissolve itself in disappointing futility or else become unlimited government over all the diverse peoples of the earth.

Under such a system—

The American people would no longer be permitted to write their own tariffs or immigration laws, or to regulate their own banking and currency practices for the free movement of goods and persons across national boundaries is an essential idea of world government. International monetary controls have already been set up in the United Nations and Congress has already scuttled our protective tariff system and repealed the statutes prohibiting Asiatic immigration.

Under such a system—

Our natural resources, and the fruits of our productive free enterprise, could be exhaustively looted for the benefit of covetously less able and less industrious populations elsewhere.

Under such a system—

American labor would have to compete at home and abroad with alien pauper labor, and the American standard of living would vanish.

Under such a system—

We would have to share our privileges of citizenship with the aborigines of Africa and the hordes of the Orient, and in the end be overwhelmed by their migrations.

Under such a system—

We could maintain no national defense without the express assent of foreign powers.

Under such a system—

Our flag would cease to command respect, our institutions would become degraded, and an American would never again inherit the pride of our ancestors in being an American.

Polish Church Fights Odds

EXTENSION OF REMARKS
OF
HON. CHESTER C. GORSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. GORSKI of New York. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Sun of May 10, 1949:

POLISH CHURCH FIGHTS ODDS—RED-RUN REGIME, HOLDING ADVANTAGES, IS OUT TO END THE CLERGY'S INFLUENCE—BOUNDARIES TANGLE DISPUTE

(By Judy Barden)

WARSAW, May 9.—"Let the church look after the welfare of the people in a future world. Our job is to look after them here." This is the way a Polish official today summed up the war which is going on between the church and the state.

The state long ago decided to give up, as far as the old people were concerned. It wants children and is determined to have them no matter what fight the church puts up.

The state has all the advantages. It is playing its hand slowly, but it is steadily chipping away the church's ancient prerogatives. The controlled press keeps up a constant flow of vicious attacks against the priests, but it is not anticipated that anything similar to the Mindszenty trial will happen here.

HITLER'S METHODS

Hitlerite methods are being used in an effort to break the clergy's power. Priests are arrested on obscene charges. Many have been tried and sentenced for being active collaborationists of the underground. There doesn't appear to be any organized underground movement, but anyone against the Government is considered a traitor wishing to overthrow it. At least two priests were recently sentenced to death on this charge.

Religious instruction is optional for school children and must not be enforced by teachers. Marriage and divorce are under civil control. If a Pole wishes a church wedding, he can have it, but he must also go through a civil ceremony or his marriage is not recognized.

Politics complicate everything. The church in Rome has refused to recognize the border changes in the west which gave Poland territories which had been under German control before the war. The Allies have all but given up in this matter, but the church hasn't. Most of these territories still form parts of German dioceses. Polish priests in these areas technically remain under the supervision of German bishops.

The Vatican has expressed sympathy for these people, and the Germans interpret this as support for their claims to get the regions back. Churchmen find the situation awkward. The Government never ceases to take advantage of the church's dilemma.

Nevertheless there are Poles who apparently see nothing wrong in going to confession in the morning and a Communist rally in the afternoon. These two loyalties are bewildering to a western visitor. Many believe that church and state could cooperate in the rebirth of the country—a sort of peace-at-any-price attitude.

The generally acknowledged leader of this school is Cardinal Sapieha, of Krakow.

POLES RESPECT CARDINAL

This 80-year-old cardinal, who remained in Krakow throughout the German occupation, has the respect of every Pole for the manner in which he stood up against the Nazi Governor-general, Hans Frank. However, leadership in the church is not in the hands of Cardinal Sapieha. Bishop Wyszynski of Lublin, a younger man, is Achbishop of Warsaw and Primate of Poland.

For a time, after his election in January, it appeared that an agreement might be reached. The church asked to be left alone. All it wanted was an atmosphere of good will. However, the government reply was almost an ultimatum. It demanded that the church cease complaints that it was being attacked by the government; that it instruct bishops and clergy to cut themselves off completely from the underground, and that the church bring pressure to bear on the Vatican to recognize the new western boundaries of Poland.

The church agreed to punish any clergymen whom the government could prove were criminals, but refused to have anything to do with the boundary problem, saying this was a matter between the government and the Vatican.

Things were quiet for a short time. Then recently a pastoral letter warned churchgoers not to believe everything they may read against the church. Apparently the church anticipated another attack.

The problem of the church appears hopeless. It it comes to an agreement it will lose centuries-old influence. If it doesn't make an agreement, more restrictions will be placed upon it.

General Pulaski's Memorial Day

EXTENSION OF REMARKS

OF

HON. FOSTER FURCOLO

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1949

Mr. FURCOLO. Mr. Speaker, under the leave to extend my remarks in the RECORD, I am pleased to call the attention of Congress to the following resolution passed by the Board of Aldermen of the City of Chicopee, Mass.:

Resolution relative to General Pulaski's Memorial Day

Whereas a resolution providing for the President of the United States of America to proclaim October 11 of each year as General Pulaski's Memorial Day for the observance and commemoration of the death of Brig. Gen. Casimir Pulaski is now pending in the present session of the United States Congress; and

Whereas the 11th day of October 1779 is the date in the American history of the heroic death of Brig. Gen. Casimir Pulaski, who died from wounds received on October 9, 1779, at the siege of Savannah, Ga.; and

Whereas the States of Arkansas, California, Connecticut, Delaware, Illinois, Indiana, Kentucky, Louisiana, Maryland, Massachusetts, Michigan, Minnesota, Missouri, Nebraska, New Hampshire, New Jersey, New York, Nevada, Ohio, Pennsylvania, South Carolina, Tennessee, Texas, West Virginia, Wisconsin and other States of the Union, through legislative enactment, designated October 11 of each year as General Pulaski's Memorial Day; and

Whereas it is fitting that the recurring anniversary of this day be commemorated with suitable patriotic and public exercises in observing and commemorating the heroic death of this great American hero of the revolutionary war; and

Whereas the Congress of the United States of America has, by legislative enactment, enacted from October 11, 1929, to October 11, 1946, to be General Pulaski's Memorial Day in the United States of America; Now, therefore, be it

Resolved by the Board of Aldermen of the City of Chicopee, Mass.

1. That we hereby memorialize and petition the Congress of the United States to pass, and the President of the United States to approve, if passed, the General Pulaski's Memorial Day resolution now pending in the United States Congress,

2. That certified copies of this resolution, properly authenticated, be sent forthwith to the President of the United States, the Vice President of the United States, the two United States Senators from the Commonwealth of Massachusetts, and to the Representative in Congress from the Second Congressional District of Massachusetts.

Adopted by the Board of Aldermen of the City of Chicopee, at a meeting held on April 5, 1949.

Attest:

ARTHUR BALTHAZAR,
City Clerk.

Postal Reclassification Bill Should Be Taken Up By Congress Now

EXTENSION OF REMARKS

OF

HON. HAROLD C. HAGEN

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1949

Mr. HAGEN. Mr. Speaker, on May 9 I introduced H. R. 4595. The measure applies to the field service of the Post Office Department and is in the form of a postal reclassification bill. It is identical with measures introduced by my colleagues, the Honorable JOHN E. LYLE, JR., of Texas, and the Honorable GEORGE P. MILLER, of California.

The basic objective of this proposed legislation is to correct a number of the inequities existing in the act of July 5, 1945. It is a most reasonable proposal and I am convinced that its modest cost will permit enactment in the current session of Congress.

A similar proposal, known as S. 1772, has been introduced in the Senate by Senators MCKELLAR, of Tennessee, FREAR, of Delaware, HUMPHREY, of Minnesota, KEFAUVER, of Tennessee, LANGER, of North Dakota, BALDWIN, of Connecticut, ECTON, of Montana, and HENDRICKSON, of New Jersey.

Public Law 134, the Postal Reclassification bill, is definitely in need of correction in several sections. I believe that my bill, H. R. 4595 is the key to the solution of several of these inequities.

For many years past postal workers have been discriminated against in the matter of annual leave and sick leave. Section 1 of the bill would amend section 6 of the Postal Salary Classification Act to provide postal employees with sick and annual leave on the same basis that such leave is now provided for most other employees of the Government. The section which it is proposed to amend now provides 15 days of annual leave and 10 days of sick leave each year for postal employees, while employees other than postal, subject to the general leave system, receive 26 days of annual leave and 15 days of sick leave each year. The principle of this legislation has been endorsed by the United States Civil Service Commission.

Moreover, the measure would establish a genuine longevity system in the postal service by granting full credit for all past service in the allocation of meritorious grades. Under present law, employees in the field postal service must wait 3, 5, and 7 years—a total of 15 years additional—before becoming eligible for the longevity grades. My bill establishes four longevity grades and full credit is allowed for all past service.

Another gross inequity gravely in need of correction is the extremely low entrance grades given postal employees. My measure proposes to eliminate the four lower grades in all categories by placing employees in those grades automatically in grade 5. Most of the employees in the lower grades are military veterans who entered the service following World War II. They are definitely entitled to this timely recognition.

The measure also provides for a horizontal pay increase of $150 per annum to those employees granted increase of $450 under the provisions of Public Law 900, Eightieth Congress. This justifiable action is prompted by the testimony given by the Postmaster General before the House Appropriations Committee earlier this year. At that time the Postmaster General indicated that if Congress had granted a $600 increase in 1948, the employees would not be demanding additional increases this year. The Postmaster General is held in high esteem by all employees and I wholeheartedly concur in his views on this vital subject.

Additionally, the measure proposes to establish a $100 annual uniform allowance for letter carriers and other employees designated by the Postmaster General to wear such uniforms. Such allowances are generally granted policemen, firemen, guards, watchmen and others required to wear uniforms by the various departments and agencies of the Government. Simple justice demands

that similar allowances be granted uniformed postal employees. As a matter of fact, I have long felt that uniformed letter carriers and other postal workers were entitled to a uniform allowance. On the first day of the present session, January 3, I introduced H. R. 397 which would provide a $100 uniform allowance for these employees. I am advised that Postmaster General Donaldson on more than one occasion has indicated the attitude of the Post Office Department to be one of complete sympathy with this type of legislation.

Finally, the measure proposes to abolish the out-moded Efficiency Rating System in the field service of the Post Office Department, but authorizes the Postmaster General to remove any officer or employee whose services are unsatisfactory. This feature will undoubtedly save hundreds of thousands of dollars in printing meaningless forms and time consumed establishing equally worthless efficiency ratings. Elimination of this obnoxious system would be most helpful in building employee morale.

It is estimated that the measure will cost approximately $162,600,000. However, it must be borne in mind that the complete elimination of the highly controversial Efficiency Rating System will greatly reduce this cost estimate.

The National Association of Letter Carriers and all other postal organizations are solidly supporting these amendments to the Postal Reclassification Act. The employees' representatives have already appeared before a subcommittee of the Senate Post Office and Civil Service Committee in behalf of the companion measure in the Senate. They undoubtedly will express similar words of approbation in connection with my bill, H. R. 4595, and similar measures if and when public hearings are held before the House Post Office and Civil Service Committee. I strongly urge that such hearings be scheduled immediately and that the measure be acted upon favorably in the House of Representatives at an early date.

Medical Care Not All in Health

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. BEALL. Mr. Speaker, under leave to extend my remarks, I include in the RECORD the last of a series of articles on Maryland Solves Health Program. This article was written by Dr. Maurice C. Pincoffs, professor of medicine, Maryland University School of Medicine. This article is in connection with those written by Agnes E. Meyer and published in the Washington Post. It follows:

MEDICAL CARE NOT ALL IN HEALTH

(By Dr. Maurice C. Pincoffs, professor of medicine, Maryland University School of Medicine)

Before commenting on the medical-care program in Maryland which has been described in the preceding articles in this series, I wish to draw attention to the fact that a medical-care program is only a part of a health program. Since medical care is delivered by practicing physicians, dentists, nurses, and other professional people, it is flattering to us to have our functions considered all that is necessary for good health, but it is not true.

The incidence of physical and mental disabilities in the population depends as much upon the living conditions, character, intelligence and education of the individuals in the population as it does upon the medical care they receive when they fall ill or are injured. Such factors as adequacy of diet, housing, recreation, working conditions, avoidance of accidents in the machine age, community sanitation and other protection against infectious diseases are all important factors in health. So also are confidence in the future, stable nervous systems, temperance, moral stardards, education and common sense. A health program must aim to influence as many of these factors as possible. It is well to remember in these days that measures to provide for the care of illness do not insure health.

Although medical care is not the sole important factor in a nation's level of health it is of vital importance to those who are ill or injured since it can often save or prolong lives, shorten a period of disability, prevent or minimize residual handicaps, restore peace of mind, or, in other words, cure or alleviate illness or the results of injury. Moreover, the same physician who treats the disability serves as adviser as to the importance of measures which the patient must himself undertake in order to maintain his health in the future.

The delivery of adequate medical care to the patient has become increasingly complicated and expensive as medical practice has become more specialized and more dependent upon hospitals, trained assistants, special equipment and tests. How to make all of these as widely available as possible is one problem that equally concerns the public and the physician.

A further important consideration is that advances in medical knowledge are being made at a steadily increasing rate and there is no reason to feel that this rate will slacken. Adequate medical care is dependent upon the efficient and rapid transmission of this new knowledge to all medical personnel and the interpretation of its significance to the public.

MORE PERSONNEL NEEDED

A third problem arises from the fact that as medicine has acquired methods for attacking successfully more disease conditions, a larger number of medical personnel is required than when watchful waiting and palliative drugs were all that could be done. Moreover, the medical personnel now requires more years of training. There is at present a real shortage of physicians, dentists, nurses, dietitians, and clinical pathologists.

There has been a growing understanding on the part of physicians and laymen that, in view of these problems connected with the provision of medical care, it is necessary that the medical resources we have should be organized to the best advantage, and that systematic planning for their further development be undertaken. The program of medical care in Maryland arose in response to this need for better organization in order to meet the problems (1) of wider distribution of costly medical services to those unable to pay, (2) of enabling practicing physicians to keep more in touch with advances in medical knowledge, (3) of utilizing our limited resources to the best advantage.

To those in the medical profession who were studying the situation it was evident that both the public who received medical care and the professions and institutions involved in giving medical service should take part in the planning of a program of medical care. Moreover, the planning body should be permanent, not temporary, since there would be constant need of adjustment to new conditions. Finally, the planning body should have official sanction if its recommendations were to be fruitful of results. These requirements were met when, at the request of the Medical and Chirurgical Faculty, the Governor of Maryland authorized the addition to the State planning commission of a standing committee on medical care with representation in its membership of the general public, physicians, dentists, nurses and all agencies concerned in giving medical service or education.

A permanent planning body so composed and with official standing is an essential feature in a State organization for medical care. It can undertake studies of special problems, bring together in conference the different health agencies and initiate action to have new programs put into effect. The medical care programs for the counties of Maryland and for Baltimore City, which have been described in this series of articles, followed upon recommendations from the committee on medical care. Prior to these recommendations, the support of the medical and dental professions and of the hospitals had been obtained. It has been our experience that if a program for improvement of medical care has the support of all those concerned with medical service and of the representatives of the general public, it will receive support also from the State legislature.

To administer these county and city medical-care plans the State and city departments of health were designated. Advisory councils were appointed to each, and in the counties the local health officer who administered the program in his area also had an advisory committee. Those who have read the Administration bill S. 1679 will note that this same pattern of State administration for the benefits of so-called national health insurance is prescribed in that document. It is, we believe, a good pattern to follow, but in order to function it requires full-time health officers who can give adequate time to this aspect of their duties. It will be a number of years before many of our States have a sufficient number of such personnel. This is not only a question of available funds but of the shortage of trained public health officers to fill such positions. To attempt to put into effect a complicated Nation-wide program of the kind envisaged in S. 1679 without being able to man it with trained administrative personnel is sure to lead to confusion and inefficiency.

INTEGRATION OF CARE

The departments of health are the natural agencies to administer a medical care program, since they are manned by physicians who have an understanding of medical problems not possessed by welfare workers and also because the health departments administer a number of other clinic programs (cancer, tuberculosis, venereal diseases, maternal and child welfare, etc.), which must naturally be integrated with medical care in the home and the doctor's office. The integration of these activities leads to their housing in a health center. The manning of these special clinics by local physicians brings them in contact with the consultants in special fields, chiefly from the medical schools in Baltimore. As this feature of the program develops it is felt that it will do much to keep the practitioner in rural areas abreast of medical advances. This effort is supplemented by postgraduate extension courses given by the University of Maryland in the smaller cities of the State.

In the city of Baltimore the principle of integrating all existing facilities with the new medical care plan has led to a radically different program in which under the health

department the large outpatient clinics of the hospitals assume medical responsibility for a given number of indigent patients residing in their area of the city, and associate with themselves for this purpose practicing physicians of the area concerned. This is an example of the flexibility of medical care planning on a local level and of its adaptation to bring into working combination all the existing medical facilities.

In both the counties and the city of Baltimore, participation in the program is voluntary, both on the part of the patient and the physician. Patients choose their physician and can change physicians. Doctors can accept or reject patients. Stress has been laid on reducing paper work to a minimum.

The Maryland plan of medical care is still in evolution. It still does not cover the medically indigent. It must have larger financial support from the State before the gap can be closed between those who can afford insurance coverage and those indigents who are now provided for by the present plan. The medically indigent do not now lack free hospitalization in serious illness, and in the cities they form a large proportion of the free outpatient clients. In the rural districts their home and office care is still dependent on the physicians' generosity. I feel that our medical care program should be extended to cover them.

Those who have read this interesting series of reports on the Maryland program of medical care to which I have added this closing statement must have noted the fact that Maryland has been cognizant for some years of defects in the provision of medical care and has taken energetic action to remedy these defects.

The physicians of Maryland and the people of Maryland have accepted the principle that those who cannot pay for medical care must be provided with it at the expense of the taxpayer. They have agreed to the administration of the medical care program by Governmental agencies, the health departments. Why then, it may be asked, do the people of Maryland and the physicians of Maryland oppose compulsory "national health insurance"? Why did the Maryland Legislature pass a resolution opposing it? Why did the physicians of Maryland in a recent questionnaire vote 1,602 to 62 against it?

PATERNALISM SHUNNED

The people of Maryland like to refer to their State as the "Free State." They do not favor a paternalistic form of national government which forces people to do what it considers wisest for them. They have a considerable distrust of the efficiency of Federal bureaucracies as administrative agents. They prefer more local control over the expenditures of tax funds. Furthermore, the doctrine that those without means have a right to livelihood or medical treatment at the expense of others appears to them illogical and un-American. They believe firmly in the older, opposite doctrine of the duty of those who have, to help those in need. As for medical insurance, they believe in it heartily and over a third of them are insured in the Blue Cross plan alone, not counting commercial insurance policies. However, they want to take it or leave it as they wish. Marylanders do not like compulsion. It may be recalled that they never ratified the Volstead Act.

As for the physicians of Maryland, they not only greatly dislike the principle of compulsion in regard to medical care, but in addition feel that the program will further overburden them and result in a lowering of medical standards. They resent the inevitable paper work attached to Federal administrative methods which will reduce their time available for care of patients. They fear the type of burdensome regulations which may result.

It seems to me quite true that entirely apart from the step toward socialism which national health insurance carries with it, part of the bill which deals with the administration of medical care is wholly impractical under present conditions. All practitioners are overloaded with work now and young men shy away from general practice because the number of patients often spells hasty, inadequate diagnosis and treatment. Free medical care, as has been shown in England, multiplies calls on the physician for entirely minor complaints. The patient given a hasty examination, a slap on the back and a prescription may be satisfied, but the physician knows he is doing a poor job.

The present complement of medical personnel and of hospital facilities would have to be greatly expanded to handle the demands that would be made upon it by free medical care without lowering intolerably the quality of medical care.

It is my belief that every encouragement and if necessary Federal assistance should be given to States to assist them to set up tax-supported medical-care plans for the indigent and medically indigent in accord with the principles of the Maryland plan. For those in higher brackets of income, insurance against the cost of serious illness is available. Federal assistance for the expansion of training of medical personnel and for rural hospital and health-center construction will greatly assist in increasing the number of physicians and of other medical-service personnel, and in locating them in smaller communities. These practical measures will cover our serious immediate needs and are far sounder in principle, far more economical in administration, and far better insurance of good medical care than the socialistic program proposed by the President.

Chicago's City Council Endorses H. R. 4009

EXTENSION OF REMARKS
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. O'HARA of Illinois. Mr. Speaker, in the second city of America, Chicago, the people are looking forward hopefully to the passage by this body of H. R. 4009. Approximately $55,000,000 of municipal and State moneys have been contributed to the cause of slum clearance and the decent housing of families in the low-income classification in Chicago. Chicago and the State of Illinois, having so magnificently participated in the great task of bringing sunshine into the lives of the less fortunate, welcomes the anticipated participation of the Federal Government as a partner in completing the job of converting the slums of despair into islands of hope, gladdened with the laughter of little children growing up in a clean and wholesome environment.

No one in Chicago has worked with greater zeal and industry for the clearance of the plague spots of the slums than the young and brilliant Alderman Robert Merriam, the great son of a great sire, who on his return from the battlefields of Europe was elected to the seat in the City Council of Chicago once occupied by his father, the distinguished and beloved Charles E. Merriam, and by the great junior Senator from Illinois, the Honorable PAUL DOUGLAS.

Under the leave granted me, I insert the resolution of Alderman Robert Merriam which was passed by the City Council of Chicago on May 12, 1949:

Whereas the city of Chicago faces an acute shortage of housing accommodations for its many citizens; and

Whereas the lack of adequate housing is a continual threat to the health and well-being of many of our citizens; and

Whereas the people of the city of Chicago have expressed their determination to assist to the limit of their financial ability in the construction of new housing and the eradication of slum areas; and

Whereas the mayor's program for housing, approved by the City Council of the City of Chicago, calls for liberal Federal assistance in carrying out this program: Therefore be it

Resolved, That the city council do hereby endorse House bill No. 4009 known as the Housing Act of 1949, which provides (1) Federal aid to localities for the clearance of slums in blighted areas; (2) Federal assistance for a low-rent public housing program; (3) an expanded program of housing research, designed to stimulate new methods of construction; and (4) a farm housing program; be it further

Resolved, That copies of this resolution be sent to all of the Congressmen from the Chicago district.

Assails United States Attackers

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. PHILBIN. Mr. Speaker, under leave to revise and extend my remarks in the RECORD, I include the following article which appeared in a recent edition of the Clinton (Mass.) Daily Item concerning the speech which I made at the dedication of the new American Legion home at Maynard, Mass., last Sunday:

ASSAILS UNITED STATES ATTACKERS—CONGRESSMAN PHILBIN IN MILITANT ADDRESS HITS SOCIALISTIC AND COMMUNISTIC SYSTEMS

Speaking at the dedication of the new American Legion home, in Maynard, Sunday, Congressman PHILIP J. PHILBIN, of this town, sharply assailed the proponents of socialistic and communistic systems working to regiment the American Government and economic system.

Praising the Legion and other veterans' organizations for their peerless service to the Nation in war, Congressman PHILBIN stated that it is no less important that they should strive militantly to protect the Nation at peace.

"There is a great deal of unsound and visionary political thinking in this country today," he said, "and most of it stems from sources which are un-American and militantly opposed to the American way of life.

"It is for us to recognize before it is too late that freedom in all its ramifications is the central theme of the American political and economic organization. To the greatest extent achieved in history, our Nation has managed through struggle and turmoil to protect the great basic rights of the individual which derive from freedom.

"This one fact, more almost than any other save the favor which the Almighty has bestowed upon us, has been responsible for the phenomenal growth, power, plenty, and

high standards of the Nation. A free economy unhampered by but a minimum of governmental edict contributed more to build up America and make it a land of unparalleled opportunity and abundance than all the bureaucratic regulations in the world.

"Let us recognize that this free economy and freedom itself are interwoven, that we cannot have one without the other, that where a super regulated government comes in, freedom and all that it means goes out.

"Many nations overseas have discovered this sad reality and everywhere that the genius of man has been shackled, there is servitude, poverty, and economic privation.

"A free government can also be destroyed by indiscriminate and uncontrolled taxation prompted by the unsound idea of spreading bureaucracy over the field of free individual enterprise. Americans are a tax-ridden people today in local, State, and national affairs. Unquestionably, we must continue to assume vast and necessary obligations, both at home and abroad.

"But if we would survive as a great dynamic force dedicated to the freedom and happiness of our people and the welfare of a peaceful world, we must absolutely avoid discouraging and stifling the initiative of the individual through oppressive taxation. The all-embracing and all-vital thing is to keep alive the spirit of enterprise and to keep open the doors of opportunity in this country.

"The Communists are hoping and waiting for the collapse of our economy and are doing everything to load it down with expenditure and debt so that it cannot possibly endure. It is the duty of the veterans, every other patriotic group and every patriotic citizen militantly to assail and oppose the proposals which radical thinkers are making to induce us to change our free institutions, our way of life, our abundant human and material resources for the oily promises and blandishments of the advocates of the totalitarian state.

"Regimentation violates the very intent of every true American. We cannot permit any class of our citizens, whether it is labor, management, small-business men, or doctors and professional men to be converted by law from the free status they enjoy as American citizens into civil servants and puppets just as in the Marxist or socialistic superstate, under the pretense of social reform.

"The noble veterans, with unmatched bravery and sacrifice, have dispatched Hitler and Tojo and all the other dictators who were seeking the destruction of American freedom. Now, in this crisis that confronts us affecting the perpetuation of our cherished freedoms, political, social, economic and civil, I am confident that the veterans joining with all other liberty-loving, clear-thinking patriotic Americans will defeat those who are seeking to inaugurate the slave police regimented state in this country and thus fasten an abominable servitude upon the American people."

Congressman PHILBIN praised and lauded the leaders of the American Legion at every level who, he said, have labored unselfishly with other veteran groups and the Congress to effect a proper rehabilitation of our veterans, and to assure that those who had fought to save the Nation, their families and dependents would be treated considerately by the Government in accordance with their just desserts for the great sacrifices which they have made.

"In wartime," he said, "When the flags were flying and the cannon were roaring and the planes were droning and these gallant boys were offering their all to the Nation so unselfishly and magnificently, we said that we would never forget them.

"Now let us keep that promise. Let us continue to keep it in the future so that the veterans and their dependents will not be sacrificed at a time when the Nation is dispensing unbounded largesse upon foreign countries, or at any other time."

How About a Little Justice at Home?

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. ENGLE of California. Mr. Speaker, under leave to extend my remarks in the RECORD I wish to include a letter which points out that the War Damage Commission awarded the Balatoc Mining Co. in the Philippines $4,500,000 as damages sustained during the last war. The letter further points out that similar treatment has not been given the gold miners in this country whose mines were closed down during the war by an unprecedented Executive order which caused millions of dollars in damage. Moreover, similar treatment has not been accorded miners of strategic and critical minerals and metals who suffered losses when the Government, after inducing them to go into production, preemptorily and without notice cut off purchasing contracts. The Rules Committee has just granted a rule on a bill which I introduced [H. R. 834] which will correct this latter injustice. Another bill is pending now before the Judiciary Committee of the House to secure just compensation for the American gold miners.

The letter referred to follows:

CALLAHAN ZINC-LEAD CO., INC.,
New York, N. Y., March 23, 1949.

Mr. JAMES WHITE,
Care Senator Patrick McCarran,
Washington, D. C.

DEAR MR. WHITE: On the very unlikely chance that it has not been previously brought to your attention, I quote as follows an article which appeared in the New York Sun day before yesterday:

"BENGUET UNIT GETS WAR-DAMAGE AWARD

"The War Damage Commission has awarded the Balatoc Mining Co. $4,500,000 as damages sustained by the last war and has made a down payment of $1,500,000, it was announced today.

"This down payment enabled Balatoc to liquidate its debt to the Benguet Consolidated Mining Co., the parent company, and Benguet in turn paid off its debt to a bank and the four Haussermann family trusts. Benguet and Balatoc are now free of debt. The mining properties are in the Philippines."

I imagine that I need not comment on the facts disclosed above. In our instance, our Alaskan properties were as directly damaged by the war as were those in the Philippines. We are faced not only with loss of previous investment but also with loss of the property to RFC whose loans cannot be repaid because the war and its aftermath have prevented operations since 1941. I enjoyed the privilege of meeting you in Washington last week and want you to know again that we stand foursquare behind you in your efforts to obtain redress for losses suffered by gold-mining companies because of the war and to remove the gold-mining industry of the country from the class of "untouchability" which makes it as high a crime to a United States citizen to touch gold as for a Hindu to touch an untouchable. Not even uranium ore is so discriminated against.

With best wishes.

Sincerely,

JOSEPH T. HALL.

Behold Our Protectors

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. JENKINS. Mr. Speaker, probably the most important problem that our country faces now is the problem that comes to us by reason of the activities of the Communists outside our country and of those within our country.

I think that no fair-minded American agreed with Mr. Truman when he said in effect on many occasions during the campaign last fall that the disclosures then being made by the Congressional Committee on Un-American Activities were merely "red herrings." No one has ever been justified in suggesting any defects in the President's Americanism. At least, I never questioned it and I would defend him against any such imputation. But the President was unwise in making that statement.

Recently some light has been shed on this subject by the press which implies strongly that the President had poor advice from his Attorney General, Mr. Tom Clark.

However that may be, the editor of the Columbus Evening Dispatch, one of the leading newspapers in the country, has something to say on that subject.

In view of the fact that the Columbus Evening Dispatch has an able editorial staff, and in view of the fact that this great paper "covers central Ohio like a blanket," I am extending my remarks with a copy of that editorial:

BEHOLD, OUR PROTECTORS

Last Wednesday evening, Attorney General Tom Clark came to Columbus to address local Democrats at the Jefferson-Jackson Day $25-a-plate dinner. Of all things, he said the administration was "alert to the perils of communism and * * * intensely fighting it on every front." He also claimed that the administration has done more to stamp out subversive influences than any other administration.

Indeed. We submit that the whole problem of subversion, communism, and the world Communist menace has received greater impetus, comfort, and abetting under the administration and its predecessor New Deal administration than under any other in our history.

It was the New Deal administration which recognized Soviet Russia in the first place.

It was under New Deal aegis, or at least indifference, that Communists were able to gain control of many strategic American labor unions.

It was under the New Deal brand of diplomacy that the Allies lost the early peace through New Deal concessions to Soviet imperialism at Tehran, Yalta, Cairo, and Potsdam.

It was under New Deal diplomacy that once-free Baltic, east European, Balkan, and Asiatic nations were deliberately and literally sold out to the Communists of Russia as part of the Roosevelt "grand design."

It was under the New Deal administration that Communists infiltrated one important Federal Government agency after another—and even the administration has owned to having had to discharge many because they

were belatedly (after much public pressure) "discovered" to be Communists.

It was under New Deal diplomacy that millions of dollars' worth of American wealth and property were handed over free of charge to one Communist country after another.

It was during the New Deal administration that leftists enjoyed White House bed and board and an agency, now branded as subversive by Attorney General Clark's own Department, enjoyed the sponsorship of the wife of a President.

It was the wife of a New Deal President who repeatedly and personally intervened to force the admission, over State Department protests, of a notorious Communist to this country.

It is under a New Deal administration that an indicted Communist, Gerhardt Eisler, enjoyed freedom of movement under bond to ply his trade and to skip the country while ordinary citizens, like any of the rest of us, would have languished in jail for a comparatively minor offense.

Alert to the perils of communism? Attorney General Clark might better have said, aware of the fruits of our sins.

The blood is on the head of the New Deal. While the claim that the administration is doing "more to stamp out" subversion than any other is open to debate, it is true that recent administrations are responsible, more than any others, for a situation requiring that any "stamping out" be done.

Congress Must Make Decision in 60 Days on Deficit Financing—Budget Balance Unlikely for Many Years to Come if Spending Forces Win

EXTENSION OF REMARKS
OF
HON. CHARLES B. HOEVEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by David Lawrence taken from the Washington Evening Star of Wednesday, May 18, 1949:

Within 60 days America must make a fateful decision. It may affect the course of our economic life for a decade or more. It may weaken America as a world power or it may strengthen America's position as the bulwark of the postwar world.

The decision relates to whether the United States is to embark on an era of deficits in the Federal budget. If it does, there may not be another balanced budget for many years to come. If deficit financing comes, economic troubles will multiply and then aid to Europe will be jeopardized.

The struggle is between the forces that want to spend and those that want to save.

MEANS BUYING OF VOTES

Politics and selfish lust for continuance in political office are back of one, and fear of economic chaos is back of the other.

In such a contest—which, in reality, means buying votes by bribing a minority segment of an uninformed electorate that can hold the balance of power in elections—the chances favor the politicians who want to do the bribing. An informed majority can overcome any such minority.

The Federal budget which President Truman recommended last January is close to $42,000,000,000. He now wants to increase it by nearly $2,000,000,000. There are projects pending which have the administration's blessing and which could add several billions more. Receipts are estimated at $39,000,000,000.

In the White House is a practical politician. If Congressmen don't vote for administration measures, Mr. Truman threatens to withhold appointments they favor. When the Federal Government votes money that benefits a particular group of voters, Mr. Truman exacts his price-support at the polls. If a group of citizens doesn't vote for him though it has received financial benefits, he calls that group ungrateful.

Mr. Truman's speech accepting the Democratic nomination at Philadelphia last summer, in which he said labor and the farmers would be ungrateful if they didn't support him, could be regarded as a bit of campaign oratory but for the fact that as late as 2 weeks ago, in talking with a group of agricultural editors, he again adopted the same meretricious approach when he said that in the last election "the farmers apparently realized which side of their bread was buttered."

As long as a President of the United States sets the pattern in the handling of public funds and gives the impression that it is his own money and not the taxpayers' that is being spent, it will be difficult to get a budget cut.

ACTION UP TO CONGRESS

Congress, by a coalition of Republicans and Democrats, must therefore do the budget cutting. It seems passing strange that this Nation, which managed to live without hardship only 2 years ago under a Republican Congress with a $38,000,000,000 budget, should now have to spend many billions more.

The cry of Mr. Truman for more taxes at this time is at variance with the advice of his own party leaders and the President's own economic advisers. Whatever were the mistakes in reducing taxes a couple years ago, a greater mistake would be made now in increasing tax rates. The true answer is to prune the budget. It can be done. One way is to pass all appropriation bills now pending but require the head of every agency or department to regard its appropriations as an over-all sum and to require that 10 percent be cut, leaving it to each agency to determine from which of its many items the 10 percent should come. The agencies and departments know best where cuts can really be made.

Some such approach is imperative if the budget is to be balanced. It is no longer a job to be expected from the Executive, for he wants to spend and spend. The country can be spared an economic catastrophe only if Members of Congress are alert to the dangers that lie ahead, and that's where an aroused public opinion becomes essential.

Unemployment and the New England Power Compact

REMARKS
OF
HON. JOHN E. FOGARTY
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 18, 1949

Mr. FOGARTY. Mr. Speaker, I was very happy to listen to my colleague, the gentleman from Connecticut [Mr. PATTERSON], talk about the unemployment situation that exists not only in Connecticut but in all of New England. I think he remembers that Gov. John O. Pastore, of Rhode Island, a few months ago instituted a new program proposing that all the New England States get together and form a New England Development Authority. Three States have ratified this program, but the States of Vermont and Maine have seen fit not to ratify it because of the power lobbies that exist in the legislatures of those States at the present time. If a program like that could have been worked out it would do much to relieve unemployment in New England. We find that we are now paying three times the power rates that are paid in the TVA area or on the west coast where they have public power projects. If we could get one for New England, if all the States in the New England group would follow the leadership of the Governor of Rhode Island in such a compact I think we could do something about the unemployment that exists there.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. FOGARTY. I yield.

Mr. McCORMACK. I may state that what the gentleman has said is absolutely correct.

The SPEAKER. The time of the gentleman from Rhode Island has expired.

Those Snow-White Chinese Reds

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by James F. Kearney from America for May 14, 1949:

THOSE SNOW-WHITE CHINESE REDS

(By James F. Kearney)

(Father James F. Kearney, S. J., has years of personal experience of the Chinese people in general and of Chinese Communists in particular to qualify him as a critic of Edgar Snow's journalistic gyrations on the present Chinese tragedy. Fr. Kearney spent 18 years working in the Chinese mission field, as teacher, editor and radio-league director.)

With world Communist "peace" congresses cheering the news of Red victories in anguished China, here in America there are still men trying to soothe us with the idea that maybe things aren't so bad out there after all. Take the case of Edgar Snow. In answer to the question: Will China become a Russian satellite? (Satevepost, 4/9/49), Mr. Snow says he believes there is a good chance that Red China will not play Stalin's game.

The Post editor's statement that the author of the article knows the Chinese Communists perhaps better than any other American warrants examination of the record of this authority on the China Reds. In the beginning of the article in question, Mr. Snow says: "It has never been my contention that the Chinese Communists are not really Communists." If he will consult his own book, People on Our Side (Random House, 1944, p. 290), he will read: "For Americans with little background on China the term 'Communist' may be misleading. The fact is that 'communism' was never established in China * * * and Chinese Communists never claimed otherwise." In the course of

years we find that Mr. Snow has contradicted himself half a dozen times on this particular point. When the Party line says these Chinese are Red, then for Edgar Snow they become really Red; if Moscow calls for another color, he complies in his cheerful, dogmatic statements. In quoting Mr. Snow, therefore, one should give the exact year, month, day—perhaps even the hour—he held that particular opinion. It is all so reminiscent of the Communist policy of confusion.

A couple of thousand Catholic missionaries have lived in Chinese Communist-held areas for quite some time. If Mr. Snow or the editors of the Post wish to inform themselves of real conditions in those territories, they should condescend to consult the nearest Catholic editor. The Catholic press, for years, has faithfully reported eyewitness accounts by bishops, priests and sisters, and has published reliable news items gathered by NCWC correspondents.

The facts Mr. Snow and the Post editor might learn are as follows: in Red areas, although the people are told they are sovereign, they have nothing to say. The Red regime has promised heaven, and has given the poor people hell. To date the Chinese Communists have piled up a hideous record of murder (almost a hundred missionaries since VJ-day) terrorism, pillage, land confiscation; denial of free speech, free press, free worship; suppression of mission schools; violation of every basic principle an American holds dear.

In case Mr. Snow should say these reports are exaggerated, or unauthenticated, we refer him to quotations from the China Weekly Review (Nov. 15, 1947, p. 350), a leftist Shanghai magazine for which he used to work. On the land-reform program, we read: "Article 2: Land ownership rights of all landlords are abolished." "Article 3: Land ownership of all ancestral shrines, temples, monasteries, schools, institutions and organizations is abolished." "Article 11: All land deeds and all notes on debts contracted prior to the reform of the agrarian system shall be declared null and void." This is the program Mr. Snow is asking Americans to subsidize, as the Post article reveals.

The following statement by P. Joliet, a Frenchman, is merely one of hundreds that could be quoted to indicate the feeling of the Chinese toward the Reds:

"Having lived constantly in close contact with the peasants in North China for 10 years and experienced every stage of the conquest of that region by the Eighth (Red) Army, I have been a witness of the attitude of the population in regard to them and can give my word of honor that 99 percent of the population (others say only 95 percent) curse the Red regime in their heart, and even openly when they are assured of privacy and can speak in Chinese to a foreigner whom they trust. All praise the regime in words, hide their resentment and show themselves satisfied when they have to speak through an interpreter to foreigners. This is out of fear of reprisals: torture, pillage, forced labor. Hence, the testimony of any foreigner accompanied by Communists has no value as an indication of the true mentality of the people."

M. Joliet, who knows the Chinese language and mentality thoroughly, singles out Edgar Snow's Red Star Over China as a book that definitely does not represent the Chinese peasant's real reaction to communism. He and all China residents know that during the past year, at the mere rumor of a Red advance, even the poorest in a Chinese village would drop everything and run. The thousands of destitute refugees from Red areas, who have been cared for by missionaries, and others near the large cities are eloquent proof of what the people think of China's Reds.

In his Post article Edgar Snow has summed up his reasons for believing we can deal with Chinese communism. We select a few points for examination.

1. The contention that Moscow can't hope to control China is based on the belief that China's Marxists have been internationalists in theory but nationalists in practice. This is the present theme song of most United States leftists. Back in the early 1920's Moscow's leaders argued: "World revolution isn't progressing very well in Europe. It will begin effectively only when Asia's hundreds of millions of oppressed peoples have been put into motion. Far-off China is the key to Bolshevist success." There is little attempt by leftists to deny Moscow's influence in the early days of the Chinese Red party, but they deny it is clear after 1927. Before the House committee in March 1948, however, Mr. William Bullitt testified:

"In 1934, when I was Ambassador in Moscow, the Soviet Government issued a book [we bought copies for the United States Government] entitled 'The Strategy and Tactics of Communist Revolution in China,' in which it listed 40 directives it had given the Chinese Communist Party on how to conduct its affairs. In 1935, when I was at Moscow, representatives of the Chinese Communist Party were prima donnas at the meeting of the Third Internationale in Moscow. The party line has never been broken by the Chinese Communist Party. * * * The same man, Mao Tse-tung, is conducting the Communist Party of China today who has conducted it for the past 20 years."

To show how the Chinese Reds have always veered with the party line: Early in 1935 they were instructed by Moscow, says Freda Utley (who once worked in the Moscow bureau directing China Red affairs), to cease fighting Chiang Kai-shek and the Kuomintang and try to make an alliance with them against Japan. They did so. After the Russo-Japanese pact in April 1941, the Chinese Reds obediently followed Russia in recognizing Japan's Manchukuo, and denounced all Chinese who objected. In the 1944 Japanese drive south, which almost lost the China war for the United States and Chiang, the Chinese Reds did nothing serious to prevent this or to cut the Japanese communications. Our missionaries lived in those areas and report that one-tenth of the Red effort was expended against the Japanese, the other nine-tenths to consolidate their own position for postwar work against the Chinese Government.

2. Mr. Snow goes on to say: "Except Yugoslavia, China has the only Communists who actually came to power without direct political or military dependence upon Russian arms." By Russian arms he doubtless means arms manufactured in Russia. In his article he never mentions the well-known fact that Russia turned over to her Chinese satellites the huge supply of Japanese arms they captured, and which by treaty should have gone to the Chinese Government. Major General Chennault, who should be a better authority on this point than Edgar Snow, estimates that there was enough Japanese matériel to equip a million Chinese Reds for 10 years of fighting. This single item represents Moscow's huge stake in the outcome of the China war, and far outweighs anything the United States has contributed to stave off a Kremlin victory. Yet it does not prevent Mr. Snow from asserting: "From the best information I could get when I was in Korea in 1946, the Russians had given little help to the Chinese Reds. The latter were rather inclined to look upon their 'loyal allies' as an obstacle."

3. The next affirmation of note is this: "It is doubtful if 10 percent of the Chinese Central Committee are Soviet-educated. In the rank and file not one in 10,000 has been sent to Russia." That is just about the right proportion needed to take over any nation for the Kremlin. "They have learned their Marxism largely from the history of the Chinese party, the textbooks and doctrines worked out in the writings of Mao Tse-tung." If Mao were not an orthodox Marxist, that might be dangerous; but in 1945 he stated categorically to newsman John Roderick: "Chinese Communists are completely, irrevocably, and aggressively Communist in the full sense of the Marxian and Leninist word." General Wedemeyer before the House committee in March 1948, was asked: "Are the Chinese Communists primarily Communists, or Chinese patriots?" His reply: "Mao Tse-tung, through Chou En-lai, stated categorically to me that they are Communists as such. They are definitely Communists as we understand the term Communist. I asked them: 'If you had to choose between the Communist movement and your country, China, which would you choose?' Chou En-laid said: 'the Communist side.'"

Further, when the Cominform denounced Tito last year, Mao denounced Tito; when Reds in all the big countries made their open profession of loyalty to Stalin in case of war against the Soviet Union, the China Reds, according to an April 3 Associated Press dispatch from Shanghai, obediently followed suit by denouncing the North Atlantic Pact and declaring they would "march forward hand in hand with the ally of China, the Soviet Union * * * to overthrow the entire imperialist system and realize the liberation of all mankind."

In this question of the strained relations between Mao and Stalin that Mr. Snow has conjured up, where does America come in? Mr. Snow thinks of everything: "So long as it is true that the United States is the main support of the old regime in China * * * Americans will easily hold their present position as foreign enemy No. 1." How can we escape that odious title? It's all very simple. Mr. Snow pictures it thus: Mao Tse-tung has outlined a huge reconstruction program. But the new Communist state is really in a bad way and deserves American sympathy—"It starts off with a nation that is bankrupt * * * its cities ruined, its railways wrecked, its machinery antiquated or useless, its river and canal systems broken down, its people hungry, weary, and ragged, eager to work but lacking tools." That's where Uncle Sam comes in. "If the new regime is to make a speedier success of modernizing China than its predecessors, it will have to seek aid wherever practical, rather than abide by ideological preferences."

One has to admire the temerity of Mr. Snow in asking the United States taxpayer to finance a needy Red regime in the midst of the cold war between us and Russia. To see its absurdity, it is only necessary to ask what our reaction would have been to a similar request from a pro-Hitler American asking us to finance a newly conquered puppet state. The British in Hong Kong, who held much the same opinion as Edgar Snow about the Chinese Communist desire for trade with non-Soviet states, have already been sadly disillusioned by their experience in newly captured Tiensin and Peiping and have had to close down their offices. The recent naval incident on the Yangtse augurs a speedy end to such ideas.

Were Mr. Snow a real authority on the Chinese Reds, he would know what everyone who has lived with them for a long period knows, that they have no desire to build up the living standard of their people. On the contrary, as a foreign doctor who got caught in Chefoo when the Reds moved in told me over a year ago in China: "The aim of the Reds is to reduce everyone, rich and poor, foreigner and Chinese, to the level of the Shanghai beggar." Edgar Snow, having lived in Shanghai, knows what that means. My guess is that if there is any important foreign trade going out of the newly conquered China ports, it will go to Soviet Dairen and Port Arthur, so generously handed over to Moscow by an ailing President Roosevelt without previously consulting Chiang Kai-shek, head of an allied government.

If there is any important element in our State Department taking Mr. Snow's ideas

seriously, this may explain the disastrous Far Eastern policy the Department has been following. Mr. Snow's opinions may be due to ignorance, but the State Department has been kept well informed on the real character of China's Reds. American Catholics could help by backing up those Senators who demand a quick investigation of those responsible for engineering the collapse of the only group resisting Red domination of China. Those who sold Chiang down the river would like to do the same for General MacArthur; and their master plan also calls for turning the Philippines and southeast Asia over to Moscow. It ought to be possible to replace these men with Americans.

Railway Safety

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT OF HON. MELVIN PRICE, REPRESENTATIVE IN CONGRESS FROM THE TWENTY-FIFTH ILLINOIS DISTRICT, BEFORE THE SUBCOMMITTEE ON RAILWAY SAFETY OF THE HOUSE INTERSTATE AND FOREIGN COMMERCE COMMITTEE, CONSIDERING H. R. 530 AND H. R. 378

Mr. Chairman and members of the committee, I appreciate very much an opportunity to appear before you this morning. I am here for the purpose of supporting and urging you to support adequate legislation in the field of railway safety.

There is a general conception on the part of the American railroad passenger that his safety is fully protected by Federal legislation. Unfortunately this is not so and I hope that the Congress can now proceed to the correction of some of the obstacles in this important field. One of my primary interests as a Member of Congress has been the promotion of passenger and employee safety on the Nation's railroads.

I come from a railroad family and I represent here in Congress one of the largest railroad concentration points in the whole world. The subject that you are discussing here today is not a matter of statistics with the people of the Twenty-fifth District of Illinois. It is small comfort to the widow of a victim of a railroad accident to know that that tragedy is duly recorded in some statistical volume prepared by the Federal Government. On the basis of these statistics, we must move toward a broadened and enlarged safety program that will more than pay for itself when viewed in terms of long-range gain.

Upon being elected to Congress for the first time in 1945 I introduced legislation requiring carriers by rail to install and maintain adequate electronic communications systems. In each succeeding Congress I have reintroduced this legislation in the hope of obtaining action. You are today considering my latest bill, H. R. 530, which I introduced in this Congress.

In addition to my bill you are considering H. R. 378 introduced by the distinguished chairman of your committee, our beloved Uncle BOB CROSSER. This bill is substantially the same legislation that I have introduced with certain refinements found necessary in view of the administrative problems inherent in carrying out this program of electronic installation.

I am informed that Chairman CROSSER and the members of the Interstate Commerce Commission have satisfactorily worked out with the Federal Communications Commission certain procedural obstacles involved in the licensing of radio equipment in the railroad field. Based on these conferences, Mr. CROSSER had worded his bill in such a way as to carry out these agreements. In addition to the licensing difficulty solution, your chairman has incorporated in his bill some legislative recommendations contained in the latest annual report of the ICC which that agency felt advisable in the field of safety. Although at times in the past I have been somewhat critical of the Interstate Commerce Commission in the field of railway safety, I am glad to note that the agency is now determined to move forward in this vital undertaking. For these reasons I am here today not in behalf of my own bill, but rather to urge your committee to report favorably to the House Mr. CROSSER's bill, H. R. 378.

Someone once said that figures can't prove anything but that anything can be proved with figures. In the field of railway safety this is generally true. Statistics in railway accidents can be interpolated in many different ways. There are some who say that accidents per passenger mile should be the basis. Other observers insist that the number of accidents per train mile should be the basis. For my purposes, I will confine myself to simple and easily understood figures that I hope will be helpful in this discussion. In the years 1938 to 1948, inclusive, 50,501 American men, women, and children were killed on the Nation's railroads. In this same period 583,123 people were injured. There are 225,000 miles of operating railroad trackage in this country. Although the following percentages are very difficult to obtain and sometimes not clearly shown, we can get some idea as to the protection that is afforded American rail traffic. Of these 225,000 miles of tracks, 105,000, or approximately 47 percent, are protected by some type of signal equipment; 120,000 miles of American railroads, or 53 percent, have absolutely no safety protection. This 47 percent protected trackage is distributed as follows: Thirty-three percent is protected by automatic block-signal equipment; 14 percent is protected, and I use this word guardedly, by manual block-signal equipment. In addition to this block-signal protection, a small percentage, roughly about 9 percent of the Nation's rail trackage, is protected by train-control and train-stop equipment.

From these figures we see that roughly half the railroad trackage in this country has absolutely no protection. H. R. 378 which you are now considering provides that the carriers be required to install certain electronic train communication and control equipment. I am frankly amazed that the railroads have not done this on their own motion a long time ago. Certainly the radio has proven advantageous in all other related transportation fields.

Immediately upon invention of the radio in the early years of this century oceangoing ship operators adapted it to their usage. Aviation transport has long since recognized radio as fundamental in the field of passenger and employee safety. As a matter of fact, both oceangoing traffic and air traffic have long since regarded radio as basic and are moving ahead in the field of radar and other electronic development.

Obviously there is great dissimiliarity between railroad, aviation, and water transportation. Financing is dissimilar and usage is dissimilar. On the other hand, the limited experimentation in the field of radio communication that has been carried on in the American railroad systems prove that this medium has many advantages in the railroad field. The Pennsylvania railroad has installed radio on an experimental basis between Harrisburg and Pittsburgh, Pa., and are working toward its development on other stretches of track. The Missouri Pacific has 150 miles of radio intallation at Alexandria, La. It is my hope that this beginning can be carried forward to the benefit of all of us.

In my opinion, the significant value of radio is that it affords a very cheap means of communication between train-control towers and locomotive cabs on stretches of right-of-way that are not now protected by block-signal equipment or train-stop equipment. Obviously the cost per track-mile of covering this unprotected right-of-way will be substantially lower than the cost of installing block-signal equipment.

At this point I should like to emphasize my belief that radio cannot be used to displace automatic block-signal equipment. Rather I feel that the two mediums should be used in conjunction with one another. I believe that the installation of automatic block-signal equipment should continue at an accelerated pace because it has proven to be one of the most dependable of all safety devices.

There are many other serious problems inherent in the field of railway safety. The matter of track construction, bridge standardization, crossing protection, the safe and efficient operation of hand and motor cars, and many other problems require our attention. I am sure that your committee will agree with me that the Congress should leave no stone unturned in this continuing effort to improve safety on our railroads. Let us give to the Interstate Commerce Commission the tools with which to do this job. In my opinion Mr. CROSSER's bill, H. R. 378, is a long step forward in the right direction and I hope that the Congress will enact it with dispatch.

Secretary Brannan's Farm Program

EXTENSION OF REMARKS
OF
HON. ED GOSSETT
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 20, 1949

Mr. GOSSETT. Mr Speaker, my district, the Thirteenth District of Texas, has long been one of the leading cattle-producing areas of our States. Among our most enterprising citizens have long been the ranchers and cowmen.

The new proposed farm program, as announced by the Honorable Charles F. Brannan, Secretary of Agriculture, is being debated and discussed throughout the country. Mr. Bryant Edwards, president of the Texas and Southwest Cattle Raisers Association, has recently testified before the House Committee on Agriculture concerning the views of the Texas cowmen of the proposed plan as it affects their industry. The cowman is a rugged individualist and wishes to remain as free as possible of Government regulations and controls. Mr. Edwards' testimony should be read by each Member of Congress. I therefore am placing it herewith in the CONGRESSIONAL RECORD:

Mr. Chairman and gentlemen of the committee, my name is Bryant Edwards. I am president of the Texas and Southwestern Cattle Raisers Association, for which organization I am now appearing. The principal office of the association is located in the Burkburnett Building, Fort Worth, Tex.

For our organization and for myself I thank you for the privilege you are extending us in allowing us to appear at this

time and express our views concerning the proposals that have been made recently to you by the Secretary of Agriculture.

At the outset I want to make one thing perfectly clear. I speak only as a cowman—a producer of range beef cattle and the organization I represent is composed of that type of people. My remarks are confined strictly to an expression of the views of range producers of beef cattle. I do not, in any way, make any representation to you relative to any other segment of agriculture. But the views I express here today is believed by me to be the view of the beef cowmen of the Nation.

We have read Secretary Brannan's proposal in its original form and have seen his supplemental explanatory remarks. We are also aware of the testimony given by the Secretary before this committee. And we have seen many comments on this plan in the country newspapers in the range country. Our remarks are founded on these items. We have not seen the proposed bill which Secretary Brannan stated had been prepared in the Department of Agriculture.

We are opposed to Secretary Brannan's program insofar as it relates to beef cattle and beef. We want no part of it.

Among the reasons for our opposition to the Secretary's plan are the following:

I. HISTORICAL

At no time in the history of this Nation has our industry ever sought governmental support of prices. Nor has our industry ever been subjected to any character of program even resembling such a plan.

Even at the time when other segments of agriculture were recommending to the Congress the adoption of programs of price supports our industry consistently asked to be left out of all such movements. The production of cattle has never been classified by the Congress as a basic industry largely because the people engaged in that industry have uniformly opposed such classification. For the same reasons beef cattle have never been classified as a basic commodity. And beef, which is the ultimate form of our production, has likewise always avoided classification as a basic commodity. These statements refer both to the basic law and to the Steagall amendment.

The position of our industry is unchanged. We realize that, regardless of whether we are included in or excluded from artificial definitions, the importance of our industry is well known and appreciated. And we realize that our industry contributes substantially to the general agricultural income. We have neither the desire nor the intent to allow that contribution to decrease. But we know that the basic character of our industry, and the nature of the people engaged in it are such that the prosperity of our branch of agriculture is better served by allowing us to live and operate in our historically independent but self-sustaining way.

II. INDEFINITENESS OF THE PLAN

One thing that bothers us is the fact that we, and apparently the Secretary also, do not know how his program would work with reference to beef cattle.

I refer you to the Secretary's testimony as evidence of the fact that he had not thought this item out thoroughly. Until it was so thought out it should not have even been suggested to the Congress or to the industry. And Secretary Brannan told you he had not consulted the beef-cattle industry at all. The Secretary, in answer to questions asked him by members of the committee, stated that he had not worked out the proposed program with reference to beef cattle in detail. He also made frequent reference to the fact that many items important to the industry had not been worked out and that "we will have to take a good look at that."

As illustrating the indefiniteness and uncertainty of the Secretary's position on items of essential importance, even his contradictory position, we point out that he stated in referring to hogs that the subsidy would be paid by buying pork. He then stated, in his supplemental filed statement, that an analagous program would be carried on in beef cattle, leaving the inference that the beef cattle subsidy would be paid by buying beef. Then he stated that the subsidy on beef cattle would be paid to the producers directly but modified this plan by saying that this subsidy would be paid to the last handler of the live animal, with the hope and expectation that the subsidy would be passed on back to the original producer. Experience has taught us, and should have taught everyone, that such hope and expectation is not realistic.

The Government has had experience in the payment of consumer beef subsidies. In the first place the Government was never able to evolve a workable plan for the direct payment of subsidies to beef-cattle producers. It could not even evolve a plan it would try out. And when payment of such subsidies was attempted by indirection through the processors of beef, the friction of travel wore out the payment before it reached the producer.

Let us look at just one problem involved. It was stated that subsidies would be paid according to grades of the cattle. Who would grade these cattle? Where would they be graded, and when? An army of graders would be required to cover all the cattle markets. What would be done with reference to the substantial number of cattle sold for small-town slaughter? Who would grade or count them?

In selling cattle the producer tries to hold the grades up. The buyers try to press the grades down. Difference in judgment makes trades. But the ultimate grading is done on the carcass after slaughter. Would the Government attempt to follow every animal from the range to the rack? If so the task would be gigantic and the employees in this industry alone would outnumber the armed forces.

It is no wonder that the Secretary was both contradictory and uncertain when he was questioned about the application of his plan to the beef-cattle industry. We feel that when he takes a good look at this problem he will strain both his optic nerve and his patience before he comes up with a practical, workable plan of operation. It is certain that he has none now.

In any event it is expecting entirely too much to ask our industry to accept a plan, program, or proposal when even the author and proponent of that plan does not know how it is supposed to work. Our business cannot, and in fact no business can, operate on guesses, hopes, and dreamy expectations. In any plan of operations in any endeavor success depends on details carried out. Here we cannot know the details.

We people in the business of producing beef cattle are independently ambitious. We trade with each other all of the time, trying to outguess each other. We like this system and we do not want it interfered with. The proposed plan, with its accompanying controls, would take out of our economic life factors we like. We want to preserve our system and our independence.

Even if the basic philosophy of the program was not repugnant to us, which it certainly is, we could not accept a plan that is as indefinite and uncertain as is the Secretary's plan with reference to beef cattle.

III. NO NECESSITY FOR THE PLAN

In the Secretary's supplemental statement given to this committee on April 25, 1949, the following statement is made:

"I don't suppose anyone on the committee expects us to be in a program of supporting the price of beef cattle or lambs in the near future; but if and when we are, the operation would be analogous to the hog example I have just given."

We are sure that no one expects the Government to support beef-cattle prices at any time soon. We are equally sure that no one in the business of producing beef cattle wants any such thing now or ever.

We have always been able to supply the demand for beef in this country without governmental price supports. We can still do so, and unless the Government intrudes too much into our business we will do so.

It may be interesting to point out some facts to the committee that are not generally known. We cattle producers of the United States are now producing, and for many years have produced, one-third of all of the beef produced in the world. The whole world annually produces about 65,900,000,000 pounds of meat. Of this total production from thirty-seven and one-half to thirty-nine and one-half billion pounds is beef and veal. The annual beef and veal production of the United States is 12,000,000,000 pounds, or approximately one-third of world's total. And the remarkable thing is that we Americans eat all of our own production, together with a small amount imported from Canada.

The American people are real beef eaters. Fortunately, the American ranchmen are real beef producers. And these ranchmen have been able to supply the demand for beef for many years without the necessity of governmental subsidies. They do not now want this hand-out. They do not need it to make them produce. And they do not want to be forced to accept a subsidy instead of a fair market price.

The statement has been made that it is desirable to increase the beef cattle population of this country. With time, which such a movement requires because of the laws of nature, this can and will be done. The sometimes ridiculed law of supply and demand will accomplish the desired result. There is already a trend in the industry to increase this beef cattle population. The record shows that approximately 200,000 more 1- and 2-year-old heifers were kept on the range this year than last year. This means an increased breeding herd with resultant increased cattle population. The trend is not panicky. There is no big plunge. It is a gradual, healthy movement. It will continue to the saturation point. And we do have a saturation point. Range land will support only so many cattle, and when that number is reached no more can be successfully grazed. Fortunately that point of saturation is well above the possible demand or requirement of this country. We now have about 78,500,000 head of cattle in this country. About 42,000,000 of these are beef cattle. During the war we had 85,000,000 head of cattle, with half of them dairy cattle. Now we have 5,500,000 more beef than dairy cattle. And the number of beef cattle is again increasing. From wartime emergency demands we expected a reduction. We had it. We expect some further reduction in effective demand and we are attempting to adjust ourselves to such changes.

It is obvious that, insofar as the beef cattle industry is concerned, the proposed plan is unneeded.

IV. FUNDAMENTAL OBJECTIONS

We ranch people do not like the basic philosophy of the proposed plan.

We do not believe in hand-outs, call them subsidies or production payments or anything you like. We believe that we, as a part of the citizenship of this Nation, should do our full part toward supporting our Government. We do not expect the Government to support us.

Our fathers built our industry on the American principle of free enterprise and

independence of thought and action. We can imagine the graphic language that would have been used by one of our trail-driving ancestors to a proposal of a subsidy by the Government. And we can imagine what would have happened to some economist who would have had the temerity to tell an old cowman that the Government, or in particularly the Secretary of Agriculture, would tell him how many cattle he could raise, or how many he could sell or where or when he had to sell them. And the character of the cowman has not changed.

And that is what the Brannan plan means. Perhaps not just yet, but it is the beginning of complete, unqualified, and absolutely controlled economy. This is strong language, but this conclusion is logical when you study that plan.

The plan now calls for immediate unlimited production with support prices applicable to only a part of such production. But the Secretary asks for authority to impose production controls and marketing quotas, either or both, as he may see fit. Imposition of the subsidy plan necessarily involves such controls. The Secretary has so stated and some members of the committee have agreed to this proposition. It is said that no one wants to impose complete controls—that producers should have faith in their officials and in their Government. Perhaps the present or even the next set of officials might not want to exercise this system of complete controls if given the opportunity, but some day there will come on the scene an individual who would not waste his given opportunity. And we do not want to give to anyone that opportunity. I am reminded of a statement made by Thomas Jefferson, the philosophy of which is applicable to the proposed plan. He said:

"Free government is founded in jealousy and not in confidence; it is jealousy and not confidence that prescribes limited constitutions to bind down those whom we are obliged to trust with power."

We may sound old-fashioned, but we still believe in the philosophy of Jefferson and we know no person in whom we have such confidence that we would entrust him with the power now requested by the Secretary of Agriculture.

While Safety Is of Essence and Prime Concern in Commercial Aviation, National Defense and Security Dictates That Air Power Pilots Obtain the Maximum War Service Performance Out of Every Type of Military Plane, Even at the Risk of Personal Safety

---

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 20, 1949

Mr. BOYKIN. Mr. Speaker, it was with profound interest that I have listened to the debate presented in these halls with respect to the career compensation bill, H. R. 4591, now before the Committee of the Whole House.

The bill, I am happy to record, applies with equal weight to the Army, Navy, Air Force, Marines, Coast Guard, the Reserve components thereof, the Geodetic Survey, the National Guard, and the Public Health Service.

Mr. Speaker, I want to say that having read the records of the hearings held before Mr. KILDAY's committee that that committee and this House are to be congratulated upon the splendid work performed in bringing forth, in curing and in perfecting the original bill as presented.

I doubt if there was a single pertinent fact of any consequence that was not fully investigated, probed, and every facet of the question exhibited, discussed, and disclosed before the bill was reported out of that committee.

Likewise, Mr. Speaker, I want to express my own appreciation—and I know I bespeak the appreciation of every House Member—to the members of the Advisory Pay Commission, commonly known as the Hook Board.

That Board, made up of a set of estimable and totally disinterested business executives, gave unstintingly of their time for upward of a year and a half—to an intimate study of these pay requirements.

Their studies comprehended not alone a cross section of civil as well as military pay standards in the United States—but those of foreign governments in their relation to civil pay as well as the foreign military standards of compensation.

It so happened, Mr. Speaker, that on Wednesday last, May 11, I was in attendance at the hearings before the Committee of the Armed Services of the Senate. The committee was that day holding hearings with respect to a bill authorizing the construction of transonic and supersonic wind tunnel facilities for the United States Air Force.

The Honorable W. Stuart Symington, Secretary of the Air Force, was in attendance and testifying. He made one prophetic expression which in challenging the imagination seemingly thrilled the newsmen and the photographers present, for upon concluding that statement, the cameras began to click.

Since the end of the war—

Secretary Symington stated—

We have felt both the full impact and the full meaning of jet and rocket power—the achievement of speeds far in excess of those ever before attained by man—speeds in the transonic and supersonic ranges. Since the initial break through the sonic barrier by Air Force in the fall of 1947, our pilots have flown hundreds of miles per hour beyond the speed of sound.

It is not necessary for me to point out the guarded manner in which Secretary Symington expressed the speed at which our airmen are flying through the heavens as of this very hour.

You will note that he said "our pilots have flown hundreds of miles per hour beyond the speed of sound," and, Mr. Speaker, I am advised that at sea level—sound travels at a rate of 760 miles per hour.

At any rate, Mr. Speaker, the young intrepid Americans of our Air Force are now hurling through space at something more or less than 1,000 miles an hour or at a speed that will enable them to take off from our country and set down on European shores in the space of but several hours.

Mr. Speaker, in the early part of February the Honorable FRANCES BOLTON, in addressing this House, told of the new P–47 jet bomber that crossed the continent in 226 minutes.

Vision with me—

Said Congressman BOLTON—

this latest type bomber plane of our United States Air Force. Built to carry a 10,000-pound bomb load, it is itself a giant fabrication of 125,000 pounds of iron and steel, aluminum, copper, magnesium, lead, tin, zinc, glass, plastic, fuel, and a host of other organic and inorganic materials, flying through space nearly 7 miles above the earth, and at an average speed of 607 miles an hour in a nonstop transcontinental flight.

I am happy to see this Congress give such profound consideration to a career compensation bill which will insure to our Nation the retention of men trained to fly such aircraft and administer the tremendous funds which are being expended in behalf of national security and defense.

I am thus concerned because the safety of this Nation, as well as the national economy, dictate that those charged with the expenditure of billions of dollars in the management of our armed services should be the best personnel obtainable in these United States. To effectuate the policies of economy as declared by this Congress those now in charge should either possess or be given the best business and administrative training that can be devised.

Mr. Speaker, as you well know, the newly created United States Air Force has no academy comparable to West Point and Annapolis. In order to reduce the cost of training young officer personnel the Air Force attempted to secure college graduates by offering direct commissions as second lieutenants in that service. The particular need was for young men educated in the fields of business administration, finance, personnel management, communications, physics, chemistry, electrical, civil and mechanical engineering.

Considerable publicity was given to that offering through various media—newspapers, magazines, articles and by posting notices thereof on bulletin boards of various schools and colleges throughout the United States.

In the city of New York, where more than 100,000 young men eligible for commissions are enrolled in colleges, and after 2 weeks of advance publicity, only six inquiries were made by personnel who were qualified under the regulations specified in the announcement.

Of the six young men who did apply—after learning the pay scale, the potential earning power and other factors relevant to making a career of the United States Air Force—five of the six who had inquired—immediately lost all interest. The other completed his application. This was forwarded to the proper headquarters and accepted. However, when this successful applicant received notice to report at Air Force offices—he replied in writing and stated in substance that he had given further consideration to the opportunities available in civilian life and was no longer interested in an Air Force career.

I am particularly anxious to see how the Committee will undertake to permanently establish in all Government departments of our armed services men

trained in business administration and be expected to continue in those services in the years which are to come.

May I suggest to the consideration of my colleagues in this House that any pay bill or schedule of pay that we here legislate which renders a future in the armed services conducive to men of good character and high business ability would increase the value of every dollar that is to be spent under their direction and administration.

Hon. Robert P. Patterson, former Secretary of War, in addressing the Committee on Military Affairs of this House with respect to pay increases for the armed forces said:

> To maintain an Army capable of insuring the defense of this Nation, it is imperative that its leaders be obtained from among able young men of broad vision. The best-qualified men of our country must be induced to seek the Army as a career. It will be impossible for the military service to procure or retain the more outstanding men who are competent to assume positions of great responsibility unless they are compensated on a basis similar to that provided for responsible civilian positions.

Hon. W. John Kenney, Assistant Secretary of Navy, in discussing the same, spoke as follows:

> But there is another and equally important reason supporting this requested increase, the need to attract and hold keen and intelligent officers and men. Modern war needs more than brawn—it calls for men capable of quickly mastering complex skills, and the very men who have the requisite education and aptitudes are the men who are wanted and well paid in civil life. If we are to have competent volunteers, we must compete for them, for they are an essential factor in our national security—and to compete successfully we must offer remuneration that a good man can afford to accept.

Since the termination of hostilities in World War II a great number of good officers have resigned their commission. For the first time in history West Point Academy has had many vancancies. While there has been no official explanation of this issued by the military, in all likelihood it has been occasioned by the belief that the future offered to graduates of these great military academies is not comparable to that offered to graduates of other schools of higher learning either by private industry or the private practice of their chosen professions.

Mr. Speaker, it has always intrigued my mind to understand the basic reason for the establishment of what are called occupational hazards to professional soldiers and others in the military departments of our Government

It is because of that I determined to make specific inquiry with respect to the section of H. R. 2553 having to do with hazard pay and learned that remuneration and payments are made additionally to regular compensation for men engaged in highly dangerous occupations. Among these are deep-sea diving, operating submarines, mine-destruction crews, under-water demolition, to men in crews engaged in digging up unexploded bombs, and those engaged in flying aircraft in the United States Air Force.

Now, Mr. Speaker, the information I received with respect to what is called flying pay is a method of compensating, or should I say, reimbursing the average flying personnel, at least in part, for the personal loss which he suffers and which the average nonflying personnel does not suffer.

Among other losses which accrue to our flying personnel—and for which I hope proper provision will be made—the most clearly defined and readily understandable is what is called the lesser total career pay.

Mr. Speaker, the lesser total career pay is defined as being the sum of money that an Air Force pilot, bombardier or other flying man or his family will never get because of the shorter life expectancy of all military flying men.

Mr. Speaker, I would not for a moment attempt to say that what we have read in the daily press, in our magazines, and hear over the air about the ever-increasing safety of civilian airplane travel is not true.

The facts are that commercial airplane accident fatality rates as reported by the United States Civil Aeronautics Board clearly show that accidents in commercial flying have steadily declined from 20.9 per 1,000 employed flying personnel in 1931 to 2.8 per 1,000 in 1941 and for the year 1948 was 1.7, or less than 2 persons per 1,000 flying personnel employed.

It is unfortunate, however, that the marked steady decline in accident rates in commercial flying is not true of military aviation. Unlike commercial flying, military aviation constantly requires maximum performance even at the expense of safety factors. In the ascertainment of total career pay, it is necessary to determine the aircraft accident fatality rate of our military aviators because the 12-year shorter life expectancy is caused by, and directly measurable from, the rate of fatalities incurred in aircraft accidents.

Let us now contrast the deaths occurring in civil aviation with those of our Air Force.

The records disclose those accident fatalities to be as follows:

Noncombat death rates of flying officers and enlisted personnel, Air Corps and Air Force

	Mean strength	Rate per 1,000 per annum
1930:		
Regular Army Air Corps officers	1,125	13.3
Extended-duty Reserves	153	39.2
Enlisted personnel	11,134	.8
1931:		
Regular Army Air Corps officers	1,224	5.7
Extended-duty Reserves	241	33.2
Enlisted personnel	11,845	.3
1932:		
Regular Army Air Corps officers	1,243	8.9
Extended-duty Reserves	270	55.6
Enlisted personnel	13,150	.7
1933:		
Regular Army Air Corps officers	1,264	5.5
Extended-duty Reserves	208	59.7
Enlisted personnel	13,112	1.1
1934:		
Regular Army Air Corps officers	1,283	10.1
Extended-duty Reserves	259	46.3
Enlisted personnel	13,821	1.0

Noncombat death rates of flying officers and enlisted personnel, Air Corps and Air Force—Continued

	Mean strength	Rate per 1,000 per annum
1935:		
Regular Army Air Corps officers	1,291	7.0
Extended-duty Reserves	311	41.8
Enlisted personnel	14,245	.8
1936:		
Regular Army Air Corps officers	1,352	14.1
Extended-duty Reserves	316	44.3
Enlisted personnel	15,238	1.1
1937:		
Regular Army Air Corps officers	1,406	10.7
Extended-duty Reserves	369	19.0
Enlisted personnel	16,020	1.1
1938:		
Regular Army Air Corps officers	1,433	9.1
Extended-duty Reserves	515	25.2
Enlisted personnel	18,536	.7
1939:		
Regular Army Air Corps officers	1,620	7.4
Extended-duty Reserve officers	660	19.7
Enlisted personnel	18,839	.7
1940:		
Regular Army Air Corps officers	2,040	8.8
Extended-duty Reserve officers	842	22.6
Enlisted personnel	36,418	.8
1942–45:		
Officers	122,823	22.5
Enlisted personnel	100,332	14.5
1947:		
Officers	25,538	10.8
Enlisted personnel	11,711	9.3

Explanatory: Graduate cadets on duty with organization during 1934-37 included in the extended-duty Reserves. Enlisted strength excludes flying cadets. 1930–40 data on fiscal year basis; calendar year basis thereafter.

It thus becomes apparent that while the hazard of civil aviation declined from 20.9 to less than 2 per 1,000 persons, the death rate of military-flier personnel in the postwar period, 1945 to 1947, is approximately 10.05 per 1,000.

Mr. Speaker, further computation at hand clearly disclosed the fact that due to his 12-year shorter life expectancy, the average flying officer will receive $64,744 less lifetime pay than will a nonflying officer in any of the several air arms of the different services.

This is a measure of but one type of loss suffered by our military aviators because of their choosing that career in the armed services of our country. It takes no account whatever of their known losses resulting from cumulative physical and nervous strain, injuries resulting in early retirement, and 12 years less of life. It, therefore, becomes apparent there is no compensation whatever—at the present time—provided for the shorter expectancy, the extra hazard of major or minor injuries, the physical and nervous strain, or for the significant, even though incalculable loss of 12 years of life for the average military flier.

For many years past the New York Life Insurance Co., one of America's largest, oldest, and most important insurance companies, has provided flying coverage to all our military flying personnel at a premium of 60 cents per month per $1,000 of insurance and payable for a period of 10 years.

Now, Mr. Speaker, I am authoritatively advised that due to the high rate of losses in life and based upon the recent experience of flying personnel, this company on April 15 of this year has altered its insurance rate. Henceforth the payment of 60 cents per month per $1,000 will be applicable to the entire life of the policy.

Now, Mr. Speaker, let us assume that a man carried an average of $10,000 insurance in our flying forces in the New York Life Insurance Co.

Immediately upon receiving flying status his life insurance premium would be increased a matter of $6 per month or $72 per year. Assume now that he continued his flying service for a matter of 20 years. In such an event, the increase in his life insurance premium directly chargeable to his flying status would then be in the round sum of $1,440 for a $10,000 policy.

Of a certainty, such a surcharge is highly indicative of the hazards of flying service—in our armed services—as proven by the experience tables of the actuaries of the New York Life Insurance Co.

Mr. Speaker, in conclusion may I say that I hope this Congress will legislate a pay bill that will spell out in clear concise, understandable language just what each man in every grade and rank of our armed services will receive as annual compensation.

I do not mean that we legislate as to the amount in dollars that each grade and rank will collect from the pay officer and then immediately, under the same law, be compelled to pay some portion back to some other pay officer or internal revenue man.

For us in Congress to tell a man that we will pay him $3,000 per year for doing thus and so, then pay a man to hand out that legal remuneration—and then pay still another man or group of men to take back some of the pay which we authorized the first man to pay out—is to my way of thinking the most highly organized and legalized bureaucratic stupidity imaginable.

I am hopeful that at long last we will determine a just and fair rate of pay—and then pay it—to those who fulfill their duties.

We in Congress can ourselves begin to economize and save millions in the appropriations that we make to the Army and to the Internal Revenue Bureau out of the Treasury of the United States if we do not pay the Internal Revenue to collect from the armed services some given percent of what we in Congress determined should be paid to them.

Divided Parties

EXTENSION OF REMARKS

OF

HON. HAROLD D. DONOHUE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Friday, May 20, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following timely editorial which appeared in the Worcester (Mass.) Telegram of May 18, 1949:

DIVIDED PARTIES

Congress may be unduly slow just now—just as it has sometimes been in the past—but that is not sufficient reason to abandon the American system of divided powers. Of course, the British parliamentary system occasionally works better than our form of government. The British method is the more unified and the more flexible. In England the legislature and the executive are virtually one, and when party leaders disagree about policies, they can have a general election and find out what the people want.

Yet there are certain advantages in the more rigid American way. The elections at fixed intervals give Presidents a good chance to carry out their ideas; and they also protect the people from excessively long periods between elections. The people cannot remove a President or choose a new Congress whenever they may wish to do so; they can, surely, retire a President at the end of 4 years and they can choose a Congress every other year.

So the country is not going to the dogs merely because President Truman is having trouble with the Dixiecrats. Disputes within parties are not new. In the early months of the Hoover administration the insurgent Republicans of the West teamed up with the Democratic Party. The late Senator Moses of New Hampshire called them "sons of the wild jackass." But there is no East-West split in the Republican Party today.

Physician, Cure Thyself

EXTENSION OF REMARKS

OF

HON. EUGENE D. O'SULLIVAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 20, 1949

Mr. O'SULLIVAN. Mr. Speaker, there used to be a time in this Nation's history when everyone was quite mindful of the old directive, "Physician, cure thyself." Nowadays, very few seem to know about it at all, or if they do, they brush the thought aside and rush pell-mell and headlong into the attack against the other fellow, who is no more vulnerable than they themselves are. Indeed, they may be likened to the Biblical person who sees the mote in the other person's eye and ignores the beam in his own eye. Too many persons are in that class of human beings who want to enforce all laws, including the law of economy, upon the other fellow. They seem to be loath, oh, so very loath, to first set a good example themselves, and then call upon the other person or group to square up to the example which they have properly and nobly set. When an improper or unwarranted act is committed by a person or group, it returns to plague and haunt them. The old adage used to express this thought is that chickens come home to roost, but this is the first time that the chickens came home to roost in broad daylight before the clucking, the cackling, and the crowing had gotten well under way.

A few days ago I received from Hon. Hugo F. Srb, clerk of the Nebraska Legislature, the following document memorializing the Congress of the United States which, in toto, is as follows:

Legislative Resolution 27

Resolution memorializing the Congress of the United States in respect to the budget for the next fiscal year

Whereas it is the general consensus that sources of Federal revenue are seeking lower levels and this consensus is supported by all official calculations which have been made of the economic developments of the first calendar quarter of 1949; and

Whereas new taxes at such times as these may accelerate a minor business decline into a major depression; and

Whereas if the President's budget were enacted, the Federal tax bill would amount to at least a fifth of the individual's income: Now, therefore, be it

Resolved by the members of the Nebraska Legislature in sixty-first session assembled:

1. That the Legislature of the State of Nebraska respectfully request the Congress of the United States to make a 10 percent cut in all Federal expenditures possible.

2. That Nebraska Senators and Representatives now in the Congress of the United States be and hereby are respectfully requested to use every effort at their command to obtain the reduction in the Federal budget for the next fiscal year.

3. That copies of this resolution be transmitted by the clerk of the legislature to the Vice President of the United States as presiding officer of the Senate of the United States, to the Speaker of the House of Representatives of the United States, and to each Member from Nebraska in the Senate of the United States and in the House of Representatives of the United States.

CHARLES J. WARNER,
President of the Legislature.

I, Hugo F. Srb, hereby certify that the above is a true and correct copy of Legislative Resolution 27, which was passed by the Legislature of Nebraska in sixty-first regular session on the 13th day of May 1949.

HUGO F. SRB,
Clerk of the Legislature.

From the foregoing you would naturally presume that ideas of economy would surely have been put into practice at home, but unfortunately such is not the case as the following recent news items from the Omaha World-Herald will abundantly prove:

UNITED STATES CUT IN SPENDING URGED BY LEGISLATURE—MOVE IS TAKEN IN RESOLUTION BY STATE BODY—NORMAN INTRODUCER OF PLEA TO MAKE SLASH IN GOVERNMENT COST

The Nebraska Legislature Friday added its voice to the growing cry for a slash in Federal spending.

By a vote of 26 to 5, the legislators adopted a resolution urging Congress to make a 10 percent slash in all Federal expenditures possible. The resolution had been offered by Senator W. J. Norman, Omaha.

Voting against it were Senators Lester Anderson, Babcock, Carson, Cretsinger, and Schroeder.

Commented Senator N. F. Schroeder: "It's silly? How can we ask Congress to cut down? Look at our budget."

The 1949–51 State budget bill now under debate by the legislature is the largest in Nebraska's history.

Senator Norman's resolution declares:

1. If President Truman's proposed budget is accepted by Congress, the Federal tax bill would amount to at least one-fifth of the individual taxpayer's income.

2. New taxes at such times as these may accelerate a minor business recession into a major depression.

3. It is the general opinion that sources of Federal revenue are seeking lower levels. This opinion is buttressed by all official calculations of economic developments for the first quarter of 1949.

The resolution urges Nebraska's Representatives in Congress to use every effort at their command to reduce the Federal budget for the 1949–50 fiscal year.

Senator Norman earlier Thursday had warned his colleagues of the trend in Federal spending and taxation.

STATE COST DOUBLES IN 10 YEARS—NUMBER OF EMPLOYEES APPROXIMATELY TWICE IN SIMILAR PERIOD

(By Harold Andersen)

The State of Nebraska is spending approximately twice as many of the taxpayers' dollars as it did 10 years ago.

In the same 10-year period, the number of State employees also has approximately doubled.

These figures came to light Saturday in a check of records in the office of the State tax commissioner and the legislative council:

For the 1937–38 fiscal year, total expenditures channeled through the State government were $29,062,986.

In the 1947–48 fiscal year the figure had climbed to $61,387,320.

The totals include money from all sources—taxes, fees, and other cash receipts and Federal funds.

There were 4,724 State employees on January 1, 1939.

By December 1948, the pay roll listed 9,184 employees.

Bulk of the jump in spending has come since the end of World War II.

SPENDING $61,387,320

In fiscal 1945–46, for example, the State spent $35,920,563, compared to the $61,387,320 total for the 1947–48 financial year. The total for 1940–41, the last prewar year, had been $31,907,105.

(The State property tax levy has increased 93 percent in the 3 years since the war, Robert Armstrong, president of the Association of Omaha Taxpayers, Inc., reported Saturday.)

Increased Federal-fund allotments account for part of the higher rate of expenditures.

In 1941–42, the State got $9,598,247 in Federal funds. In fiscal 1947–48, the Federal Government allotted the State $15,719,657.

Lion's share of the increased expenditures have come in four State agencies—department of roads and irrigation, State assistance department, the University of Nebraska, and the board of control, which has charge of State institutions.

TWO REPORTS ON THE TAX TAKE—NEBRASKA'S DOUBLES; UNITED STATES TOTAL 37 PERCENT—CALLAN VOICES PLAN TO STEM INCREASE; BLANK CHECKS CUT

(By Harold Andersen)

The State government is spending at approximately twice the rate it did 4 years ago.

State Senator John Callan, of Odell, called attention to that fact Saturday, then declared:

"I just wish we could make the people realize what is happening."

The Odell lawmaker, veteran chairman of the legislative budget committee, offered these figures:

In the 1943–45 budget period, State spending totaled approximately $61,000,000 for the 2 years.

During fiscal 1947–48, expenditures had zoomed to $61,387,000 for the single year.

The $120,911,000 appropriation for State government for the 1947–49 budget period more than doubles an allotment of $55,200,000 for 1937–39.

The capitol reporter for the Journal newspapers had this to state about the bulging Nebraska budget:

RECORD-BREAKING BUDGET OFFERED—CUTS GOVERNOR'S PROPOSALS BY MORE THAN $6,000,000

(By Burt James)

A record-breaking State appropriation of $130,471,251 for the 1949–51 biennium was recommended Monday to the legislature by its budget committee. Of this total about $20,685,000 will be from property-tax funds. The balance of the money for operation of State government for the period from July 1, 1949, to June 30, 1951; will come from these sources:

Cash funds (sales taxes and license fees), $54,881,118.

Federal funds, $39,125,970.

Reappropriations, $4,309,162.

The national pattern of the Republican leadership seems to have seeped into Nebraska. Their policy is to howl about economy and do nothing helpful to bring it about.

Since the Republican Party has been in control in Nebraska the word "economy" has been an obsolete word and the whole State programs for roads and improvements have gone to pot. Money has been spent with the raging passion of a wastrel, and the people have nothing to show for it as far as getting the worth of their money is concerned. The highways are in a deplorable state. A costly building was built by a Nebraska State department near the State penitentiary almost secretly and without authority, the property of the State has been grabbed by State officers and servants, and raids upon the taxpayers have been made with impunity. Gasoline taxes have melted away like snow would in Nebraska in mid-August. The great saving administrations of Govs. Charles W. Bryan and Ray L. Cochran are but a memory. The voters, though not approving, permit the merry old wastrel elephant to forage and forage where he will, and devour the substance of the people. How long, oh how long will the Republicans be permitted to run hog wild in Nebraska. I pray heaven that the voters will not be gullible enough to ever repeal the constitutional amendment prohibiting the creation of a bonded debt. If that ever happens Nebraska will have to be given back to the Indians, if they will take it.

The belly groans from the Nebraska Legislature remind me of the old fable about the mountain laboring and bringing forth a mouse.

In conclusion, I wish to say that it behooves us to practice economy not only in our homes but also in the Nation, State, and in every other entity of government, but we should not by so doing cripple the Nation in this very crucial period. Let us not do now what a Congress did before World War II, and economize to the extent of almost getting our Nation destroyed just to plague and spite a Democratic President.

The reports of the Hoover Commission should be adopted into law and all overlapping, duplication, and waste should be stopped.

The present administration is doing all that it can to cut expenses. Did not the Veterans' Administration lop off 8,000 from its pay roll? Are not the other bureaus waiting to do likewise if our friends in the Senate ever get through raving?

In this connection, let us look at the Federal side of the expense ledger: Former President Herbert Hoover last week estimated that twenty-three billions of the forty billions to be appropriated by this Congress will go to keeping communism from spreading all over the world. He said that other billions go for paying for the last two great wars. That would leave our actual expenditures just about double of what they were before Pearl Harbor.

I certainly hope this effort of mine alerts Nebraska before it is too late.

Radio Broadcast of Albert L. Warner

EXTENSION OF REMARKS

OF

HON. ALVIN E. O'KONSKI

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 20, 1949

Mr. O'KONSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of broadcast by Albert L. Warner, Mutual Broadcasting System, Washington commentator, on the program Congress Today, originating in the radio galleries of the House of Representatives, Capitol, Washington, D. C., May 19, 1949:

Here now is a different story about economy. It's the story of the way in which the Veterans' Administration has put into effect a cut of 8,500 in its personnel.

It is a story of 45 young men, veterans from New York City, now employed by the Veterans' Administration in its regional office. All of them are either amputees with a leg or arm, or minus two limbs, or they are blind.

All of them have been told they are to be fired from their jobs. Seven of them, including two blind boys, have already received their notice to quit. It is not because they haven't been doing their work. It is simply because the VA has decided that to keep in line with the Budget Bureau's recommendation to Congress as to what its appropriation should be, people must be fired. These and other disabled veterans are on the list.

They went around to various offices on Capitol Hill today, swinging on crutches. A blind boy rested his arm lightly on the arm of a friend whose hand was artificial.

They got little more than a run-around. The only one who really looked after them was Congresswoman EDITH NOURSE ROGERS, Republican, of Massachusetts, a member of the House Veterans' Affairs Committee.

She took them all to lunch in the Senate restaurant. They weren't her constituents; they were from New York. But they were disabled veterans and her boys.

Senator IRVING IVES, Republican, of New York, and Representative ARTHUR KLEIN, Democrat, of New York, dropped in and said a few words. Mr. KLEIN talked about possible legislation to give amputee veterans in the civil service special preference. A representative of the VA was there. He was sympathetic, but he didn't offer tangible help on the firings.

A slim young fellow with thinning black hair sat next to me as I visited with the group. You wouldn't know he was a blinded veteran with both his eyes gone. His name is Robert E. Lackey. He was 2 years in the Army. He has worked for 3 years in the Veterans' Administration as an information clerk.

He has all the information at his tongue's tip for other veterans who come to the VA office and need to be told what are their rights and what to do and where to go. He has a very good civil-service rating for the 3 years work.

Then, out of the blue sky—which he cannot see—he got this formal notice, "To

Robert Lackey, one, because of reduction in the personnel ceiling, the New York regional office is forced to reduce its staff, etc. Your active service must be terminated June 11, etc. We appreciate the contribution you have made to the Federal service."

Mr. Lackey was upset. He asked to be put in another VA job. He was offered a reduction in grade and a job as a clerk-typist. That job offered to a blind man, which, of course, he could not fill.

"I have a wife and two children," he told me. "We have just started buying a home. I've got to have my job. This is my second trip to Washington in a week," he went on.

"I left New York at 3 a. m. last Saturday morning and spent all day trying to see Congressmen or VA people. It wasn't any use. I went back to New York at 5 a. m. Sunday. Now I'm back here again. I've hardly slept. I have been desperate. I've been filling this job to everyone's satisfaction, but I'm afraid I can't get any other.

"If no one else will help me," he said, "I've got to see the President."

The strain of the past week was too much for the boy. It brought on a searing headache behind his blind eyes. One of his friends helped him out of the dining room. Mrs. ROGERS called a doctor.

The Veterans' Administration budget for the next fiscal year is $5,500,000,000. If they can't make that cover continued employment of badly disabled veterans in VA jobs, some people think there needs either to be a shake-up in the top leadership of the VA, or a reshuffling of the way the Federal Government proposes to spend its money on domestic and foreign programs.

A blind veteran and his job are perhaps more important than anything else.

Hocus-Pocus

EXTENSION OF REMARKS
OF
HON. THOMAS A. JENKINS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 20, 1949

Mr. JENKINS. Mr. Speaker, a few days ago a bill was introduced in Congress seeking to amend the law providing for corporate taxes. This bill would accelerate the payment of taxes that are paid by corporations. In effect, this bill would call for the payment by corporations of the first half of their taxes much sooner than they would otherwise be paid. The purpose of this amendment would be to enable the administration to keep from showing such a large deficit. This is a most unusual procedure. It is not honest financing.

The Washington News, one of Washington's leading newspapers, has expressed its views in a clear and forceful editorial, which I include as a part of my remarks, as follows:

HOCUS-POCUS

A man already up to his ears in debt and living beyond his income, which was large, wanted to buy a yacht. So he drew 6 months' salary in advance and blew that in as a down payment.

"I'm a financial genius," he said. "I've discovered a painless way to balance my budget and still have the good things of life." And he enjoyed that pleasant delusion until the sheriff showed up with a summons to bankruptcy court.

That's fable. This is fact:

Representative WILBUR MILLS, of Arkansas, and other Democrats on the House Ways and Means Committee have proposed a painless way to balance the Government's budget without any disagreeable necessity to cut spending or levy higher taxes.

Congressional tax experts estimate that, at present tax rates, the spending proposed by President Truman would mean a Federal deficit of about $3,000,000,000 in the next fiscal year, running from July 1, 1949, to June 30, 1950.

Under present law corporations would pay Federal taxes on their 1949 incomes in four instalments, due in March, June, September, and December of 1950. The Mills scheme is to change the law and make them pay up those taxes earlier, half in March and half in June.

That would concentrate a full year's collection of corporation taxes into the last 6 months of the Government's fiscal year. In those 6 months the Government would collect about $4,600,000,000 more than it expects to collect under the present system.

So, instead of a $3,000,000,000 deficit, the Government would end its next fiscal year with a surplus of around $1,600,000,000 on its books.

This scheme is dangerous hocus-pocus. In the long run, it would not add one cent to the Government's revenues. It would merely create a brief bookkeeping illusion of a balanced budget, and, while that illusion lasted, it would discourage efforts in Congress to cut spending and encourage reckless demands for more spending.

The Secretary Has the Power and the Funds and Controls This Situation

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 20, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the following article appeared in the May 4 issue of the Washington Times-Herald:

NEW ORLEANS, May 3.—A deeply shocked priest charged today that 150 displaced persons resettled on Louisiana sugarcane plantations are so ill-paid that their babies "are crying for food and milk."

But the priest, the Reverend Carl Schutten, said the DP's are no worse off than native-born Americans who plant, cultivate, and harvest sugarcane in Louisiana. A total of 25,000 to 30,000 persons is officially estimated to be working in the cane fields now.

PAID $2.90 A DAY

Men—American and foreign—are paid $2.90 each for a 9-hour day. Women are paid $2.80 each for an 8-hour day. Father Schutten said that when they can't work because of rain, they aren't paid. He estimated that cane-field workers average about four full days a week—a wage of less than $12.

Father Schutten and the Reverend J. Stanley Ormsby, of the national Catholic bishop's resettlement program, inspected the homes of DP's on four plantations last Saturday. Father Ormsby has returned to New York.

"Officials of the national Catholic bishop's resettlement program will probably take some action after receiving his report," Father Schutten said.

"I'm interested in the plight of them all—American or DP, white or black," he said. "My going to see the DP's merely opened my eyes to what exists."

Father Schutten said homes furnished for the DP's and other sugarcane workers are "not bad." But they have to furnish their homes, pay their electric and gas bills, and buy their food and clothes, he said.

CALLS IT SEMISERVITUDE

"The plantation commissary is the only place where the DP can cash his check. As a result, he has to do all his dealings there, where prices are considerably higher than they are in New Orleans," he said.

"When he gets into debt for $100 or $200, he finds that he can never leave the plantation because he will never have enough money to pay his debts."

Father Schutten said it amounted to semiservitude.

He said most sugarcane workers can't afford to wear shoes during the week; if they had shoes they have to save them for Sunday. He said he suspected that during rainy spells, some women went without food, so their children could eat.

"I was shocked beyond words," he said.

In connection with this situation, I also include a letter from Mr. Ralph S. Trigg, Administrator of the Production and Marketing Administration, United States Department of Agriculture, dated March 25, 1949, which follows:

UNITED STATES DEPARTMENT OF
AGRICULTURE, PRODUCTION AND
MARKETING ADMINISTRATION,
Washington, D. C., March 25, 1949.

Hon. REID F. MURRAY,
House of Representatives.

DEAR MR. MURRAY: This is in response to your telephone request to the Sugar Branch for information concerning features of the Sugar Act and its administration.

One of the basic features of the Sugar Act is the provision for making conditional payments to growers who comply with certain conditions. Appropriation requirements for these payments are more than offset by excise tax collections authorized by a provision in the Internal Revenue Code with respect to sugar processed or imported for direct consumption in the United States. This tax is equivalent to five-tenths cent per pound, raw value, or 0.535 cent per pound, refined value. Revenues from this tax amounted to approximately $71,247,000 in fiscal year 1948, and it is anticipated that they will approximate $72,800,000 in 1949.

The rates of payment under the Sugar Act are established in section 304 of the act and vary from 80 cents per 100 pounds of raw sugar produced for the smallest growers, to 30 cents per 100 pounds for the largest growers. Payments have averaged around $60,000,000 per year in recent years and are expected to be around $65,000,000 annually when production is equivalent to the quota in each of the domestic areas.

One of the conditions growers must comply with in order to obtain Sugar Act payments is the payment of wages not less than those determined by the Secretary of Agriculture to be fair and reasonable. The Secretary is required to consider differences in conditions among the various producing areas, and the standards established by him under the Agricultural Adjustment Act in making these determinations. Among the conditions considered in the establishment of minimum wage rates are the price of sugar and net returns to growers, as well as the cost of living. The degree of mechanization and the productivity per man-hour varies greatly for the different areas. To illustrate, Hawaii with an annual production of close to 1,000,000 tons of sugar employs only 25,000 workers to operate its plantations and raw-sugar mills, whereas Puerto Rico, with only a slightly larger production, employs 135,000 workers. A part of this difference can be explained by the fact that the Hawaiian harvesting and grinding season runs throughout most of the year, whereas the Puerto Rican harvesting and grinding season is much shorter. Nevertheless, the difference in degree of mechanization is primarily respon-

sible for the difference in the labor requirement per ton of sugar between the two areas.

The small sugar-growing enterprise in the Virgin Islands should be considered more in the nature of a work-relief project than a commercial undertaking. Prior to the establishment of the Virgin Islands Company, private mills in that area had all closed and the population on the island of St. Croix was left without a major means of livelihood. Although both the yield per acre of cane and the sugar content per ton of cane are very low, the reestablishment of the sugar industry has afforded employment to a large number of workers on the island. Efforts are also being made to develop more remunerative enterprises.

In Louisiana and Puerto Rico the wage determinations provide escalator clauses requiring that wages paid farm labor in the production of sugar be increased with increases in the price of sugar. In the case of Hawaii, the wage rates are actually determined by the terms of the contracts between the various plantations and the labor union. Since such wage rates are high enough to meet the standards provided under the Sugar Act the determination amounts to little more than the requirement that persons employed on the farms be paid in full for all such work as required in section 301 (c) (1) of the act.

The 1949 basic hourly rates for the several areas are as follows:

	Nonharvest	Harvest
	Cents	*Cents*
Sugar beets	60	65
Louisiana	32	39
Florida	45	45
Hawaii	78.5	78.5
Puerto Rico	29	29
Virgin Islands	25	25

It should be pointed out that the basic hourly rates shown above are for the lowest rate worker. Higher rates are provided for skilled or semi-skilled workers in all areas except for the Virgin Islands.

In addition to the above cash payments, farmers in all of the domestic areas, except Hawaii, are required to provide laborers without charge the customary perquisites. These usually consist of housing, garden plots, and in some cases vegetables, meat, milk and medical services. In Hawaii, the labor unions demanded and received in wages the cash equivalent of perquisites. In most of the areas piece work rates are used to a large extent. Payments to laborers per hour under piece work average about 50 percent higher than minimum rates established for work on a time basis.

You also asked for information on the restriction of imports of refined sugar and the way that such restrictions tie into the Sugar Act as a whole.

As a means of providing a supply of sugar that will be consumed at prices which will not be excessive to consumers and which will fairly and equitably maintain and protect the welfare of the domestic sugar industry, Congress provided in section 201 of the act that the Secretary of Agriculture determine for each year the amount of sugar needed to meet the requirements of consumers in the continental United States. In section 202 of the act Congress then established the maximum quantities of sugar that may be supplied by each of the domestic areas and the Republic of the Philippines. The remaining quantities required must, accordingly, come from Cuba and other foreign countries.

Although the Sugar Act is designed largely to maintain and protect the domestic sugar growing industry, it also provides for the maintenance of our mainland refining industry. Accordingly, Congress established quotas on the importation or shipment into the mainland of direct-consumption sugar (primarily refined sugar) as follows:

	Short tons
Puerto Rico	126,033
Hawaii	29,616
Philippines	56,000
Cuba	375,000

For a similar reason, quotas were established for the importation of liquid sugar in terms of wine gallons of 72 percent total sugar content as follows:

Cuba	7,970,558
Dominican Republic	830,894
Other foreign countries	0

Essentially the quotas on importation and shipments to the mainland of direct-consumption sugar were established at the levels such imports or shipments had attained prior to the enactment of the Jones-Costigan Sugar Act. Major attention was given to this feature of the legislation in the enactment of the Sugar Act of 1937. Without undertaking to review the matter in detail, it appears that Congress concluded that such imports and shipments reflected conditions prior to the enactment of special sugar legislation and that, since the major objective of the Sugar Act was to protect and maintain a limited domestic producing industry, it would be inconsistent to permit the market improvement anticipated from such legislation to result in an expansion of foreign and offshore refining industries at the expense of the established mainland refining industry.

You also ask for our comments on the degree of industry cooperation we have received in the administration of the Sugar Act. The Sugar Act is recognized to be of vital importance to the domestic sugar industry and we have received a very high degree of industry cooperation in its administration.

Sincerely yours,

RALPH S. TRIGG,
Administrator.

My only comment at this time is that the official letter from the Agricultural Department definitely shows that the Secretary of Agriculture has the power, authority, and funds to remedy this situation.

Appalachian Electric Power Co. Nationally Recognized for Rural Electric Program

EXTENSION OF REMARKS
OF
HON. TOM B. FUGATE
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Friday, May 20, 1949

Mr. FUGATE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article printed in the Bristol Herald-Courier, April 7, publicizing the Appalachian Electric Power Co. for national recognition in receiving the Thomas W. Martin award for 1948.

The Appalachian Electric Power Co. is to be congratulated in rendering service to the area that they serve in such manner to be selected from among more than 500 electric companies in the Nation for this honor. Service rendered to rural communities and agriculture, generally, is the basis of qualification. From my own observation, the Appalachian Electric Power Co. has done a good job in supplying the electric needs of southwest Virginia.

The article follows:

AEP NATIONALLY RECOGNIZED FOR RURAL ELECTRIC PROGRAM

ABINGDON, April 7.—Appalachian Electric Power Co. received national recognition yesterday for its rural electrification program when the power company was presented the Thomas W. Martin award for 1948 at the Edison Electric Institute meeting in Chicago.

Offered by Thomas W. Martin, president of the Alabama Power Co., and established in 1932, the award is given to the company from among the more than 500 electric companies in the Nation, whose activities contribute most successfully to rural electrification and agricultural advancement.

L. L. Koontz, system rural supervisor of Roanoke who compiled the report of activities for Appalachian, received the award on behalf of the company from H. M. Sawyer, chairman of the awards committee for Edison Electric Institute, which sponsors the contest annually.

Appalachian received the award for its outstanding job nationally, not only in the extension of its rural lines, but also in the agricultural advancement and development of the area in Virginia and West Virginia which the company serves.

During 1948 Appalachian constructed a total of 3,414 miles of rural line to serve 24,453 new rural and farm customers in 51 counties in Virginia and West Virginia. The 1948 activity brought Appalachian's total number of miles of rural lines to 16,601 and the number of rural and farm customers to more than 148,000 at the end of the year.

Appalachian's rural organization, consisting of agricultural engineers, rural representatives, power engineers, and home economists, carried out an extensive and planned program of service to the rural areas. This service included such things as cooking schools, demonstrations of proper wiring for the farm and home, and the use of time and labor saving devices both in the home and on the farm to increase efficiency and productivity.

In the Abingdon district, which includes the counties of Washington, Scott, Dickenson, Russell, and part of Wise, last year Appalachian built 437 miles of rural lines to serve 2,564 new farm and rural customers. The 1948 rural line-building program in the five-county area brought the total number of miles of rural lines to 1,842 serving 13,224 farm and rural customers at the end of the year.

$8,000,000 PROGRAM

Appalachian's rural-line program during 1949 calls for an expenditure of more than $8,000,000 throughout the entire area. Of this amount, plans call for more than $1,000,000 to be spent in the Abingdon district in the construction of 486 miles of rural lines to serve 2,904 more rural-area residents.

The power company's rural-service program touched many of the people in the five-county area during 1948, always endeavoring to improve methods of the individual farm and home, as well as the general welfare and economic stability of the community.

Demonstrations of fluorescent lights for use in tobacco grading were functions carried out by Appalachian in the Abingdon area. This was the beginning of a program to help tobacco farmers increase their net profit from the area's biggest money crop.

The company's agricultural engineers helped A. D. Herald of Greendale solve a problem of watering cabbage plants more than 400 feet from the water source. The construction of a dam and the installation of a 1-horsepower motor to run a pump solved the problem and helped Mr. Herald financially.

COOKING SCHOOLS HELD

These are but two of the ways Appalachian helped the people of the five-county area during last year. Housewives in this section

thronged to cooking schools at Damascus and several other places in the area, in which Appalachian cooperated with dealers and distributors.

Appalachian's rural supervisors and agricultural engineers worked closely with 4-H club, FFA, FHA groups, home demonstration clubs, and other groups in the five-county area. Wire repairing demonstrations were held for many of these groups.

Appalachian cooperated with VPI extension service in conducting the Claytor Lake lamp sale in the five counties of the Abingdon district to raise funds for the development of a camp site for youth and farm groups at the lake.

Appalachian's rural lines are being extended as fast as labor and materials become available.

Dependence, Not Security

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 20, 1949

Mr. McCULLOCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cleveland Plain Dealer for May 1, 1949:

DEPENDENCE, NOT SECURITY

Security is the magic word that is being used to entice Americans into the treacherous labyrinth of the welfare, or hand-out state.

It is a powerful lure, because everyone is in favor of security. Who doesn't want it? Who, especially what politician, would be so rash as to advocate insecurity?

The dictionary definitions of security include the following: "the condition of being protected or not exposed to danger; freedom from fear, anxiety or care; freedom from uncertainty or doubt; confidence; assurance."

Thus, to most people nowadays security means a steady job, an adequate income, a comfortable home, a nest egg for emergencies and old age, and provision for a decent burial.

Before the New Deal came to the United States these were the objectives that men worked to attain through their own efforts. Some achieved various stages of success, while others failed because of misfortune or their own incapacities.

In those days the victims of temporary or permanent insecurity either relied on relatives or friends to support them or tide them over, or their minimum needs were supplied by charity and local governmental agencies.

But during the depression the strain on relatives, friends, local governments, and charitable organizations was too great. The New Deal first took over the relief job and then secured adoption of the principle that it was the duty of the Federal Government to help those who, for one reason or another, were prevented from attaining security or who lacked the ability or the ambition to strive for it.

Now, however, something new has been added to the New Deal. It is President Truman's so-called Fair Deal, which has emerged in the form of various legislative proposals as an attempt to make everyone—the rich as well as the poor, the capable as well as the incapable, the industrious as well as the shiftless—dependent on the Federal Government for security.

So you want a steady job? Under the Truman program it would be up to the Government to provide it. The so-called full-employment act is supposed to guarantee everyone a job, and the Government Employment Service is supposed to find one when you want it.

So you want an adequate income? The Government will establish a minimum wage. It may not be much, but after the Government increases the taxes sufficiently, everyone will take home the same pay, and it will be pretty close to the minimum wage for the kind of work you are accustomed to doing.

So you want a comfortable home? The Government will build you a house or an apartment and, of course, tell you where to live and how much rent to pay.

If you happen to be a farmer, the Government will also guarantee your income, provided you plant what the Government tells you to plant, run your farm the way the Government tells you to run it, and fill out all the forms. You won't have to worry about floods, droughts, or surpluses.

So you want a nest egg for emergencies and old age? Forget it. If you get sick or have an accident the Government will pay your doctor and hospital bill. The Government will also provide you with false teeth and a toupee if you need them. If you happen to be out of a job, in case the full employment idea doesn't always work, the Government will see that you get unemployment compensation. When you get too old to work, or reach the compulsory retirement age, the Government will give you a pension. And when you die the Government will bury you.

This is what is called social security by the exuberant Fair Dealers. Actually it would be a system of universal dependence on the Government. Nobody would have to plan and save for the future, be industrious or resourceful or work hard because the Government would take care of everything.

But before the Government could ladle out all these benefits, it would have to reach into your pay envelope to get the money to pay for them. Part of this money would be used to pay the salaries of the hundreds of thousands of Government employees who would be required to keep the records, administer the program and enforce it. The rest of the money extracted from your pay envelope would be borrowed by the Government to help meet its general operating expenses. When the time came to pay out the security benefits, the Government would take the money out of the regular taxes. So you would pay twice for what you got.

Of course, the Government wouldn't take everything out of your pay envelope. After deductions for income tax, old-age assistance, socalized medicine and a few other things, including union dues, you would still have some pocket money left, assuming that your employer was still in business after he had paid all his taxes and pay-roll assessments, and that he still had something left to put in the pay envelope in the first place.

Whatever pocket money you had left you could spend in any way you pleased. But there would be no assurance that it would buy the same amount of groceries or fertilizer tomorrow that it would buy today, or indeed that there would be any groceries or fertilizer to buy.

Security, it's wonderful.

Comments on the Proposal To Increase Postal Rates

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 20, 1949

Mr. KEATING. Mr. Speaker, under leave to extend my remarks, I include the following testimony which I have today given before the House Committee on Post Office and Civil Service in opposition to certain of the provisions of H. R. 2945, a bill to increase substantially postal rates:

STATEMENT OF HON. KENNETH B. KEATING, OF NEW YORK, BEFORE THE HOUSE COMMITTEE ON POST OFFICE AND CIVIL SERVICE, MAY 20, 1949

Mr. Chairman and members of the committee, I appreciate this opportunity to appear before your committee to express opposition to certain of the provisions of H. R. 2945. I am particularly concerned over the provisions for the greatly increased rate on second-class mail. According to information which has been furnished to me, the enactment of this legislation would result in forcing to the wall many of the religious periodicals, nonprofit publications, and the small weekly newspapers. The increase in their costs necessitated by this drastic upward revision in potsage rates would create such a burden that they would not be able to continue in business without greatly increasing their subscription rates, which in turn would reduce the number of their subscribers so greatly that they would be forced out of business. In other words, they would be impaled on the horns of a serious dilemma.

The managing editor of the Rochester Catholic Courier Journal, for instance, has given me an analysis of the effect of the legislation on this valuable and useful religious publication. The weekly increase in mailing costs would amount to $172.75. Putting it another way, the present mailing cost is $3,432 a year, whereas under this bill the cost would be $12,415. Divided between the 27,500 subscribers the present mailing cost is 12½ cents per subscriber, whereas under this bill it would be 45 cents per subscriber. To meet this added cost would require an increase in each subscription of 32½ cents, which in and of itself is a sizable item. Then on top of that, if the publication contains between 25- and 50-percent advertising, the postage is increased 25 percent, and if between 50 and 75 percent, it is increased 50 percent.

I am told that it is impossible to publish a weekly newspaper of this kind which carries less than 48- to 55-percent advertising content. That means that the subscription price would have to be increased somewhere between 40 and 50 cents, in order to meet this charge. The result, of course, would be to lose a large number of subscriptions which have been built up over a period of years by hard work and quality performance.

I have cited this as a typical example of the problem faced by religious periodicals. Many others have been in communication with me on this subject. They urge that if the provisions of this bill with reference to second-class mail matter are enacted, an exemption be included for non-profit publications or those which are solely designed to advance the religious or cultural interests of our people.

Similar strong cases against these postal increases are advanced by various fraternal organizations, which publish magazines for circulation to their membership. Typical of this situation is a resolution which I have received from the Rochester Lodge of Elks, opposing this bill.

Another proposal which disturbs me in this legislation is the suggested substantial increase in the cost for carriage of books. It seems to me this may constitute a serious interference with the dissemination of educational matter, which is so essential to the public welfare. Rates on books, I am informed, have already been increased more since 1942 than other postage rates. A great many constituents, active in the educational field, and students in various grade and secondary schools have communicated with me

on this subject. I hope the committee, as it gives consideration to any increase in this field, will take into serious account the importance of maintaining the free flow of informational and educational media.

It is important to bear in mind that the theory behind postal concessions is that they facilitate the spread of information and public enlightenment. It must be frankly recognized that low rates aid the growth of large and profitable publishing ventures, especially magazines, but they also have been an important contributing factor in the establishment of the position of the United States as among the most literate of nations.

There is another factor in this question of postal increases which is particularly pertinent just at this time. The effect of the enactment of this bill on a large number of small businesses would be extremely serious. Many of them have written me in great alarm over the increase in their expenses which would thus be effected. If we were facing the likelihood of a continued upward swing in business, if we had prospects of the continuance of a seller's market, this problem would not be so pressing. Unfortunately, that is not the economic outlook. One small manufacturer of greeting cards points out that the effect on his business of passing this bill would be to increase his postage costs 43 percent. Another, in a similar line of business, which is highly competitive, calls attention to the fact that postage rates were already raised 25 percent as of January 1 this year, and that under this proposal it would increase his rates an additional 26⅔ percent. I am very much worried over the effect which the hasty passage of this legislation would have on the various businesses, most of them of modest volume, engaged in this line of endeavor and fear that it might be the cause of throwing out of employment a substantial number of workers all through the country.

It is appreciated that the cost of carrying mail has increased over the years along with everything else. Some modest increase may be entirely reasonable. The particular legislation before this committee now, however, provides for a schedule of increases which I feel sure is not warranted by a full and fair consideration of all of the factors involved. I hope, therefore, that if any bill is reported favorably it will be one which drastically differs from the measure now before this committee.

The Late Honorable George Gordon Battle

EXTENSION OF REMARKS

OF

HON. JOHN H. KERR

OF NORTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 20, 1949

Mr. KERR. Mr. Speaker, under unanimous consent, I include in the RECORD a tribute paid to Hon. George Gordon Battle, a native of North Carolina and my congressional district, by that great Democrat and great American, James A. Farley.

George Gordon Battle will rank high in the galaxy of great men his native State has contributed to this Nation.

Mr. Farley said:

The death of George Gordon Battle on April 29 in Fredericksburg, Va., has been noted with deep regret by his many friends, both in the South and in New York where he was in active law practice for more than 57 years.

Born in 1868, at Cool Spring Plantation, Edgecombe County, N. C., he received his preparatory schooling at Hanover Academy in Richmond, and his college training at the University of North Carolina, and the University of Virginia. He then came to New York, served a law clerkship, and attended Columbia law school. This fine background formed the basis for his successful legal career. He was admitted to the New York Bar in 1891. Although he served as deputy assistant and assistant district attorney of New York County during the early years at the bar, he will chiefly be remembered as a distinguished lawyer, outstanding citizen, and a valuable and loyal member of the Democratic Party.

He formed an early partnership with Bartow S. Weeks, who later became a justice of the New York Supreme Court. When H. Snowden Marshall, who was later United States Attorney for the Southern District of New York, joined them, the firm became Weeks, Battle and Marshall. In 1911 James A. O'Gorman, who had resigned from the New York Supreme Court to become United States Senator, became a partner in the firm and the name was changed to O'Gorman, Battle and Marshall. At the time of his death the firm was Battle, Fowler, Neaman, Stokes and Kheel.

He was an outstanding public figure, known with affection and respect by every New York judge and lawyer, and by thousands of laymen, interested in good government, politics, philanthropy and religion. In court he was a worthy opponent and his name inspired confidence in the cause he advocated; but his passing will especially be felt by those who knew and loved him for his courtly manners and personal charm.

Through the years of personal achievement and success which he spent in New York he not only always preserved the attributes of a southern gentleman, but all things pertaining to the South were at all times close to his heart. One of his hobbies was history, and many volumes about the South adorned his law office as well as his residence. Indeed, he died while on his way to his summer home in Orange County, Va. It was perhaps in accordance with his wish to go, with the knowledge he had come home.

His wide interests in New York, as well as in the South and in the Nation are reflected by a glance at the organizations of which he was a member; the Association of the Bar of the city of New York and the New York County Lawyers Association; the New York Southern Society (of which he was a former president), the Virginians, and the North Carolina Society of New York; the Society of the Friendly Sons of St. Patrick, the Kane Lodge of the Masonic Order, and the St. Nicholas Society; the Down Town Association and the University, Church, Metropolitan, Calumet, Manhattan, and the National Democratic Clubs.

Taft-Hartley Disgrace

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Friday, May 20 (legislative day of Monday, April 11), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article by Mr. A. F. Whitney, president of the Brotherhood of Railroad Trainmen, which appears in this week's issue of Trainman News.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

TAFT-HARTLEY DISGRACE

(By A. F. Whitney, president, Brotherhood of Railroad Trainmen)

Some pollsters have asked why the Brotherhood of Railroad Trainmen is so vigorous in demanding repeal of the Taft-Hartley Act. There are several reasons.

First, the Brotherhood of Railroad Trainmen is a liberal, progressive organization. It has the vision to know that if certain segments of the American labor movement are weakened by the Taft-Hartley law, it cannot hope to escape discrimination.

Secondly, it represents several thousand employees of intercity bus and industrial railroad companies who come under the terms of the Taft-Hartley Act.

Thirdly, its members recognize, as was pointed out by the Federal Trade Commission, that America is in grave danger of losing its free enterprise economic system and its basic traditional freedoms unless the monopoly problem is solved. The essential purpose of the Taft-Hartley Act is to weaken labor unions, and thereby strengthen the giant monopolies in this country.

In 1926, the Congress enacted the Railway Labor Act which established the legal right of railroad workers to form and join labor organizations of their own choice without employer interference. In 1935 this right was accorded to industrial workers by the Wagner Act. Many fascist-minded leaders of corporations employed crafty lawyers who declared in an undemocratic chorus that the law was unconstitutional. But their predictions were rebuffed by the highest courts of the land, and delayed by this legal procedure, the law did not become effective until 1937.

The Wagner Act was superseded by the Taft-Hartley Act August 22, 1947, and during the 10 years of its existence, more than 7,000,000 employees voted in representation elections conducted by the National Labor Relations Board, with 80 percent voting in favor of union representation, creating a favorable atmosphere for collective bargaining which greatly strengthened the arm of democracy in our Nation.

In 1937 60 percent of the workers were involved in strikes which included the issue of union recognition, but in 1946 but 12 percent were so involved. Prior to the adoption of the Taft-Hartley law there were but few union-busting employers who stood out against collective bargaining. The enactment of the Taft-Hartley law was an invitation to the near-Fascist industrialists to attempt to crush the unions; as a matter of fact, many of the supporters of the law, with brazen effrontery, admitted that its purpose was to weaken labor organizations and strengthen monopolistic industries at the bargaining table and this, according to the records, was accomplished in 1946, when the profits of industry went to approximately $21,000,000,000.

The Wagner Act stimulated the organization of workers, improved wages and working conditions, and increased the badly needed purchasing power which was helpful to every segment of our society. The proportion of national income going to corporate profits increased from 5.3 percent in 1935 to 12.2 percent in 1947, and the proportion going to employees in wages decreased from 65.3 percent to 63 percent during the same period.

From 1935 to 1947 the over-all increase in corporate profits after taxes was 687 percent as compared with an increase in employee wages of but 244 percent. Corporate profits have become so staggering that the propagandists no longer estimate them on the

basis of capital investment, but, to veil the truth, they now estimate profits in relation to total sales.

While these blood-curdling facts stagger the minds of our patriotic citizens, the money-hungry Donald R. Richberg, who got his start through labor unions, recently proposed that the size of labor unions be curbed to keep them from growing too powerful. Richberg alleged, in a speech delivered to the annual convention of the Chamber of Commerce of the United States, that many unions had grown out of hand, and further alleged, with brazen effrontery, that some unions are strong enough to dominate national as well as local industries. We imagine that his audience was pleased with his remarks. Richberg's wretched sterility of good American philosophy is shameful, and causes those of us who knew him when he was advocating the uplift of democracy, to blush.

The repeal of the obnoxious Taft-Hartley law is in the interest of American labor, American businessmen, educators, the clergy, the medical profession, and every person in our great Nation. The supporters of the Taft-Hartley law ignore the lessons of the 1929 debacle which preceded one of the worst panics in American history, and further ignore the fact that the Wagner Act, which gave the working people the right to organize and bargain with the great industrialists of the Nation, brought about prosperity through an increase in purchasing power.

The maintenace of high purchasing power is necessary to preserve our free enterprise system, and at this particular time is imperative if we are to meet our interest obligations and liquidate our public debt.

These are some of the reasons why the Brotherhood of Railroad Trainmen, a democratic American institution, has a vital interest in the repeal of the Taft-Hartley law.

The anonymous editorial writer of the Cleveland Plain Dealer, in his article of May 15, 1949, disregards the fundamental principles involved in the repeal of the Taft-Hartley law and in his effort to smear the President of the United States goes into ancient history.

With the record before us, how can any honest man criticize the President of the United States for remaining steadfast in demanding the enactment of the administration's labor bill which would repeal the Taft-Hartley slave-labor law?

This bill has the support of the labor committees in the Senate and the House, and this support was given after an exhaustive investigation of the iniquities of the Taft-Hartley law. Who can justly criticize the President for insisting that the administration's labor bill be not watered down?

The stalwart Members of the Congress who are insisting that the bill be made a law without amendments are to be applauded by the patriotic people of the Nation, since they are adhering to the voice of the people who effectively determined the issue on November 2, 1948.

The pollsters who predicted President Truman's defeat during the 1948 campaign were slapped down by the voters on November 2, 1948, but they have not quit. They now hope to defeat the administration's bill by their propaganda against the people, but this psychology of iniquity will not be effective except with the few gullible, and those in the Congress who are carrying the banner of Wall Street.

To water down the administration's labor bill would be to surrender to TAFT, BYRD, and WHERRY in the Senate, and to BURTON, COX, HALLECK, BOLTON, HAGEN, HOFFMAN, JENKINS, JUDD, O'HARA, ST. GEORGE, and others who supported the Wood bill in the House.

The strength and vigor of a democracy rests upon the courage of the President and the Members of the Congress to carry out the will of the people. To repudiate the rights of the American working men and women by yielding to the amendments to the administration's labor bill would be a betrayal of duty to the American people and a surrender to the Republican Party, the author and supporter of the notorious Taft-Hartley law.

Iowa's Contribution to Chemurgy

EXTENSION OF REMARKS
OF
HON. HENRY O. TALLE
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 17, 1949

Mr. TALLE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an interesting article written by Gordon R. Coleman, a student of chemical engineering at the University of Iowa and printed in the bulletin of the Iowa Development Commission under date of May 15, 1949, as follows:

IOWA'S CONTRIBUTION TO CHEMURGY

(By Gordon R. Coleman)

In past years the corn cob was a nuisance in the Corn Belt States. Millions of tons of cobs were produced in a normal year for which there was only limited use. During World War II, however, finely ground cobs were found useful as a nonabrasive cleansing agent for metals. Now organic matter and rust can safely be cleaned from engine parts which were formerly damaged when blasted with an abrasive such as sand.

Furfural, the magic chemical so valuable in petroleum refining, is primarily produced from oat hulls but can be made from cobs. Furfural has a score of industrial uses. When reacted with carbolic acid, for example, it yields a plastic such as those used in automobile steering wheels. Another use is in the manufacture of abrasives.

Nylon can be made from cobs. One bushel will provide enough nylon to make 40 pairs of hose, a synthetic feat made possible by the genius of the late Dr. Wallace Carruthers, of Des Moines. Even the cornstalk has uses in the manufacture of wallboard and associated fiber products.

The golden oil grown in Iowa's soybean crop is becoming important in the chemurgic field. One-fifth of the soybean is oil. Currently, the primary use of the oil is in food products. It is also used in making soap, linoleum, paint, resins, insecticides, printing ink, salad dressing, rubber, and butter substitutes, and additional products.

Scientists during World War II found that a mixture of pure protein from soybean meal mixed with water had amazing fire extinguishinging qualities. Fire foam, as it came to be known, was adopted as standard fire fighting equipment on all naval vessels, and was used extensively in all branches of the service. Another important use of soybean meal is as glue. It is water resistant and has many industrial uses such as in the manufacture of plywood.

The primary products and the waste materials of Iowa's agriculture have only begun to star in the amazing drama of chemurgy. Ideas from scientific research at Iowa State College and the University of Iowa may serve as the basis for many new industries in Iowa.

The day may come when we will drive home from our work in an automobile using fuel produced from corn products. The auto may run on tires of synthetic rubber made from substances obtained from corn. The auto's paint may be lacquer produced from corn. Synthetic fibers from corn may form the basis of our clothing. The house in which we live may be built with wallboards made from corn fibers. Our furniture and floors may be protected with a finish in which corn products play a part.

The corn which we eat as a vegetable and indirectly as meat may well represent only a small fraction of our actual consumption of the products of the cornfield used in the making of the thousands of things which enter into the daily life of every one of us.

Statement of Carl H. Wilken, Economic Analyst, Raw Materials National Council, Sioux City, Iowa

EXTENSION OF REMARKS
OF
HON. ROY O. WOODRUFF
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. WOODRUFF. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement of Carl H. Wilken, economic analyst, Raw Materials National Council, Sioux City, Iowa, before the House Committee on Agriculture, May 18, 1949:

Mr. Chairman, members of the committee, I appeared before the House Committee on Agriculture in 1947 with a fairly comprehensive statement as to a long-term farm program with my recommendations. Nothing has happened since then to change the basic factors which enter into our economic problem. Instead, the record since then substantiates my analysis at that time.

I am going to be brief and specific as I know the committee is about ready to close the hearings. The question you have to answer is, What are we going to do after hearing all the different groups? My purpose in appearing before the committee is to set forth as simply as I can the key factors which will determine whether any farm bill will do what is required.

First of all I want to point out that gross farm income is based on two factors, the number of units of production and the price per unit.

In 1947 and 1948 we produced approximately 140 percent of our 1929 agricultural production. At the price which prevailed, this resulted in a gross farm income of approximately $32,500,000,000 from the sale and use of crops on the farm.

As a result of this production and price level, we had a national income of approximately $225,000,000,000, the highest employment in ratio to population that we have ever had and a balanced national budget. Stated simply, our production and price level was sufficient to operate our economy on a sound basis.

Our first need then is to keep up the unit production in order that we may have the physical materials to employ labor and second, we must maintain our price level to generate the income to consume and distribute our products.

A 10 percent curtailment of our current production would cause a loss of 10 percent in our income and at the same time disemploy 10 percent of our labor. In other words, when we talk about parity of income for the farmer, we must bear in mind that parity prices alone are just part of the problem. We need parity prices and at the same time we must have the unit production to employ all of our labor. Ninety percent of physical production will require approximately 110

percent of the parity price to create parity income.

I feel that most of our confusion in regard to the so-called farm problem is due to the failure of interested parties to dig deep enough to get out the real facts.

Several times in appearances before the House Committee on Agriculture I have pointed out that for approximately 25 years each $1 of gross farm income has created $7 of national income. This has been true in spite of prosperity, depression, war, reconversion, and legislation. I have attached a table showing the record from 1929–1948, the past 20 years.

This simple relationship cannot be refuted except by the use of generalities based on theory rather than a thorough analysis of our economy.

With the definite knowledge that we will lose $7 of national income for each $1 that gross farm income drops, we are forced to the conclusion that we cannot afford to permit farm prices to drop below an average of 100 percent parity. We hear a lot about the cost of maintaining our farm-price structure. That is not the question we should be asking. We should be thinking of the loss we will take if we don't maintain farm prices.

For example, the drop in farm prices since last September has wiped out approximately $4,500,000,000 of potential gross farm income even though we maintain the same unit production in 1949 as in 1947 and 1948. Through the 7 times turn of gross farm income this means that we have kicked over $30,000,000,000 of potential national income out of the window.

What effect has this had? We are faced with a Federal deficit, we have disemployed some of our labor and the end is not in sight unless steps are taken to keep up the farm income, the gear wheel of national income.

In discussing the matter of prices, the term parity has been used. Parity is in reality the average cost of production plus the average profit for all business. A study of our economy will reveal that the comparison of prices the farmer pays as compared to the price he receives is a very accurate equation. For each 10 percent of parity we have at stake 10 percent of gross farm income, 10 percent of national income, 10 percent of retail sales, 10 percent of total wages and salaries, 10 percent of employment, and 10 percent consumption of goods.

If we permit our farm prices to average only 90 percent, then we must be content to have only 90 percent for the other segments that I have mentioned. I would like to illustrate that in this way. In the 10-year period 1930–39, using 1929 as 100, farm prices were 82 percent of parity. Employment averaged 81 percent of parity.

Last year the Senate passed what was known as the Aiken bill, which provides for a sliding-down scale of 60–90 percent of parity. In testifying before the Senate Committee on Agriculture, I told them that if the bill ever became law it would legislate the country into a depression. Why did I make that statement? The Raw Materials National Council has been impartial and we think in terms of facts only.

Here are the facts. The record of the Bureau of Agricultural Economics as published in their pamphlet, the Agricultural Situation, reveals that using the current method of calculating parity, the farmer in the 5-year period 1930–34 averaged 66 percent of parity or 6 percent more than the floor price under the Aiken bill. What was the result at that time? We had about one-third of our labor unemployed and were suffering a loss of about $45,000,000,000 a year in national income.

Then we started in with farm legislation, WPA, etc. But we were afraid to provide legislation to give the farmer parity. In the 5 years, 1935–39, the farmer received 84 percent of parity as an average. In 1939 we were still running a national deficit of over $3,000,000,000 and still had 8,000,000 unemployed. In other words, with 16 percent below parity for agriculture, approximately 16 percent of our 1939 labor force was unemployed. With this definite ratio of farm prices and income to employment and other factors, the Aiken bill, if it is permitted to operate, will force a depression. I know that was not the intent, but 2 times 2 makes 4, and arithmetic pays little attention to theory or legislation.

WHY 60 PERCENT OF PARITY?

Why did we have the Aiken bill with its 60-percent price floor? Why have we failed to solve the farm problem after 20 years of legislation? Primarily because society does not like to pay its board bill.

All of last year everyone was discussing the high cost of living, and many of our efforts, especially over in the Agricultural Department, were directed toward reducing farm prices. As a result we have lost a potential of over $30,000,000,000 of national income since September last year. The interesting thing about it all is that the American public didn't have an increase in their real cost of living in 1947–48. They merely had an increase in the price level, which in turn increased the income of the Nation in proportion.

For example, in 1939 the gross farm income was approximately $10,000,000,000, we had a national income of $72,500,000,000, and the public spent $15,800,000,000, for food. In 1948 the gross farm income was $32,500,000,000, our national income approximately $225,000,000,000, and the public spent $48,800,000,000 for food, or 21.8 percent of their income in both years.

In 1948, however, because of the increased per-man production as compared to 1935–39, the consumer received approximately 15 percent more food for the same percentage of income. The simple facts are that the real cost of living is lowest when the farmer receives an average of parity for sufficient production to fully employ our labor force. Until this committee realizes that simple fact, the various pressure groups will create a state of confusion that will make sound farm legislation an impossibility unless the committee has the courage to force the public to pay the farmer the price he must have if the United States is to avoid bankruptcy and chaos.

In connection with what I have stated up to this point, I want to give you a brief picture of two other segments of our economy, total wages and salaries and retail sales volume, to prove that these groups did not suffer from the level of farm prices that prevailed in 1947–48.

In 1939 retail sales were approximately $42,000,000,000, and in 1948 they totaled approximately $130,000,000,000. On the other hand, total wages and salaries in 1939 were $45,000,000,000, and in 1948 they approximated $137,000,000,000. You will note the balance between the rise in retail sales and total wages. This is the natural result of the laws of exchange which govern our economy. Wages go into the price of goods and wages are the market for goods. They have to be in approximate balance if trade is to continue.

I might also point out that in the past 20 years, in spite of all the legislation, depression, war, and reconversion, these ratios in 1929, in 1939, and 1948 were in almost exactly the same balance.

Starting now with the basic assumption that society cannot afford not to pay the farmer an average of parity, without having society suffer in proportion, what can we do about it? Theoretically we have a problem such as that of law and order. Everyone should be a good citizen and a police force should therefore be unnecessary. But time has proven that we need a police force.

In the same way if society wants to eat, live, and work, it must be compelled to pay its board bill. Society, having the facts properly placed before it should cooperate to maintain an average of 100 percent of parity for agriculture, thus in turn avoiding the need of having a policeman on every man's farm and in every market place.

Stated simply, if society is willing to pay the farmer at the rate of $2.20 per bushel for wheat and 80 cents per pound for good steak, we can have a national income of $225,000,000,000, a total pay roll of approximately $135,000,000,000, and a retail sales volume of about $130,000,000,000. This would mean prosperity.

If, on the other hand, society, in its desire to obtain cheap food, insists that we have $1.10 wheat and 40 cents per pound for beefsteak, then society must accept one-half as much in wages and have only one-half as much retail sales volume, only one-half of the 1948 national income, bankruptcy, and unemployment.

With a full realization that we cannot afford not to pay the agricultural industry an average of 100 percent of parity, what steps can be taken to get the job done? Before giving my recommendations, I would like to briefly set forth our relationship to the balance of the world.

As I have pointed out, in the United States we have a seven times turn of our gross farm income into national income. This is due to our efficiency under which approximately one farmer produces enough for six other workers. In the balance of the world it takes one agricultural worker to produce enough for himself and one other worker. The rest of the world, therefore, has an income approximately two times its farm production. As a direct result, the 6 percent of the world's population, living in the United States, has 45 percent of the income in terms of dollars.

Because of this difference in efficiency, on the basis of an hour of work, the cost of living in the United States is about one-half that of England and about one-eighth that of Russia.

In the 20-year period 1929–48, the United States has required approximately 3.1 percent of its national income in imports to supplement our own needs. In the war period, 1942–48, when we had automatic tariff protection because of the lack of production in other countries, we imported only about 2 percent of our national income. During that period we had a 90-percent support price for many agricultural products at practically no cost to the Government and in turn to society. They suffered only from the pangs of prosperity.

The situation, however, has changed and the world is coming back into production. The imports have had a definite effect on our farm price structure. For example, in the years 1947 and 1948 we permitted the importation of approximately 840,000,000 pounds of fats and oils in excess of our exports.

As a direct result, the price of fats and oils has dropped an average of about 15 cents per pound. On the basis of 10,000,000,000 pounds of fats and oils produced in the United States, this has reduced the income from fats and oils about $1,500,000,000 and in turn was the leading factor in reducing our potential national income over $30,000,000,000 since last September.

The low price of lard, which is now selling on a basis of 11 cent hogs, has had a repercussion on the livestock market. The result of it all is that we are now faced with the problem of losing money on peanuts, soybeans, flax seed and other items in the support program. Elimination of the net imports, with a tariff or import fee at the parity level, would have maintained the fats and oils prices, and in turn the price of other products which were indirectly affected.

The fallacy of trying to curtail our production to meet this competition can be illustrated by tung oil, produced from tung nuts in six of our Southern States. Tung oil is a strategic material for war, and in

recent weeks the Communists have taken over the tung oil area in China, our principal source of supply.

Our domestic industry produces only about 20 percent of our needs. But, in spite of this limited production, importations from China have forced the price down from 38.6 cents per pound under OPA price ceilings to 19 cents per pound. Our producers face bankruptcy and, if they discontinue their production, we will lose this source of strategic material and become dependent on Communistic Russia for our supply. An import fee, quotas or tariff, whatever you wish to call it, would have maintained the price without any cost to the Government or society. In fact, with the ratio of $7 of national income for each $1 of gross farm production, the increase in our national income from a proper price for tung oil would have greatly exceeded any possible benefit from buying cheap tung oil from China.

Without a tariff or equalization fee to protect our domestic price level, we are forced into the position of supporting the price structure of the entire world to provide parity for agriculture and in turn, national solvency for the United States. With a tariff as a support price, our problem is relatively simple.

An equalization fee or import fee at the parity level would automatically and indirectly support the price of 85 percent of American production without any further legislation. A tariff at the parity level protects our domestic trade volume and also, by protecting our ability to consume, protects our volume of foreign trade. Commodity loans on eight basic, nonperishable crops, which take up 85 percent of our harvested crop acres, would support directly a sufficient foundation of price for our internal market. These loans should be callable at parity.

Reserves of at least 50 percent of these nonperishable crops should be carried at all times to protect our source of supply in peace and war and to protect our livestock industry which processes more tonnage of raw materials than all of our other factories combined.

With such a reserve any further increase in production can be controlled by a soil conservation program. Crop acres can be shifted to grass. Our harvested crop acres total about 365,000,000 acres. At a cost of about $10 per acre, 10 percent of this acreage could be shifted to grass at a cost of $365,000,000. This would remove any possibility of surplus production. The amount thus spent is not a cost but an investment in a source of future materials and income for the Nation.

Last year our total exports of agricultural products amounted to $3,420,000,000. The extreme cost, even if we gave these exports to other nations, while at the same time protecting our price structure at a level of $225,000,000,000, would be a minor item of costs to the American people.

If this committee will draft a program providing for price supports at the parity level, which should be at 169 percent of the 1925–29 price level in order to be at par with the increase in the price of gold, through tariffs or equalization fees, commodity loans at 90 percent of parity, and make provisions for a soil conservation program, such as I have suggested, you can underwrite, weather permitting the production, the national income of the United States at $225,000,000,000 a year and pay off the national debt in 50 years.

For each 1 percent that average farm prices are permitted to go below parity, the Nation will lose approximately $2,000,000,000, and all segments of our economy—agriculture, labor, business, trade, service and government—will lose its proportionate share.

In closing, our foreign economic policy, if it is to be successful, must start with parity prices for agriculture in the United States. From that as a foundation, we should help bring about a reorganization, in the years to come, of foreign exchange and wage levels at a par with the American dollar and price level. In trading with other nations we must realize that in the same way that economic laws of exchange require parity for our own farm production, we must be willing to pay parity for any imports which we may need to supplement our own production.

World economic problems are the result of too low a price for farm products, and we cannot bring about world recovery by reducing our price level to that of the rest of the world. To do so will mean a depression, national bankruptcy and world poverty as a stepping stone for communism.

[Prepared by Carl H. Wilken, economic analyst, Raw Materials National Council, Sioux City, Iowa]

Year	Gross farm income (billions)	Percent gross farm income of National	Mineral production (billions)	Combined or total raw material income (billions)	National income (billions)	Percent of raw material income to National
1929	$13.0	14.8	$5.8	$18.8	$87.3	21.4
1930	10.5	14.0	4.7	15.2	75.0	20.4

1946	27.1	15.2	9.1	36.2	178.3	20.3
1947	33.0	16.2	12.4	45.4	202.5	22.4
1948 [1]	32.4	14.4	15.6	48.0	225.0	21.3

[1] Estimated for 1948.

NOTE.—Gross farm income is total farm production sold, plus farm products used on the farm. Total average percentage of gross farm income to national income 14.3 percent or approximately $1 of gross farm production to $7 of national income.

Average percentage of total farm and mineral production 20.2 or approximately $1 of raw material income, farm and mine, for each $5 of national income. Percentage of parity for raw materials determines the percent of prosperity and each 1 percent of parity for raw materials represents approximately $2,000,000,000 of national income. Society cannot afford to permit raw material prices to go below parity and employment and national income will ratio directly to raw material income in ratios set out above.

Year	National income (billions)	Total imports (billions)	Percent of national income	Retail sales in billions	Percent of imports to retail sales
1929	$87.3	$4.4	5.0	$47.0	9.3

Now You See It, and Now You Don't

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, May 20, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, many a man has lost a coin because he believed that the eye is faster than the hand and that under one of the three half walnut shells manipulated by the circus hanger-on was a little black ball.

The administration has a somewhat similar game it is playing with the American people. Through the expenditure of billions of dollars it is trying to fool the American people into believing that it really fears and wants to rid this country of the Communists. But some of us who watch its manipulations doubt whether it really has any such purpose in mind. Some think that, like the circus grifter who never leaves the ball under any shell, the administration has no real intention of ousting the Communists.

An editorial from the Chicago Tribune of May 19, 1949, calls attention to the administration's strange behavior. The editorial is as follows:

STRANGE BEHAVIOR

A citizen trying to find some rule to cover the Truman administration's conduct toward subversive characters would be greatly confused. In the same day's news he would find two administration leaders defending the grant of a tax-free Atomic Energy Commission fellowship to an avowed Communist, while the Federal parole board was refusing parole to an unwavering anti-Communist who also happened to have been anti-New Deal and anti-Semitic.

The Communist, Hans Freistadt, a naturalized Austrian, was awarded a $1,600-a-year Government fellowship at the University of North Carolina for research in supposedly nonsecret fields of science. It is admitted that his loyalty was not investigated in advance of the award. Chairman David Lilienthal, of the AEC, and Dr. A. N. Richards, president of the National Academy of Sciences, defended the award of public money to this Communist and others. They said they did not want to deter "sensitive" radicals from doing scientific work by investigating them.

William Dudley Pelley, former Silver Shirt leader, was denied parole on a wartime conviction for sedition, although he has been eligible for parole for the last 21 months. Both the trial judge and two of the three Federal prosecutors who appeared against Pelley urged his release, but the parole board, which is responsive to the wishes of Attorney General Tom Clark, held that he must remain in prison.

Pelley and others who have felt that his conviction was unjust have contended that his writings—to the effect that the Roosevelt administration deliberately solicited war although knowing our 1941 defenses were inadequate—have been vindicated by history. They assert that he committed no crime against the United States, and that all that he did do was arouse the animosity of the administration, incur the enmity of Communists who sought to put this country into war as Russia's ally, and offend a religious minority.

The contrary aspects of the Freistadt and Pelley cases evoke the not unnatural question: How Communist is the Truman administration? The public by now is acquainted with the fact that the Roosevelt administration was an ally of Communists both domestically and in external policy. It admitted many Communists into responsible Federal posts and permitted them to be commissioned as officers in the Army. It extended lend-lease to Russia before the United States was at war and then embraced Russia as a wartime ally.

The Truman administration has a mixed record. In foreign affairs it poses as an opponent of Soviet Russia, building military and economic alliances against communism. In domestic matters it protected Communists and sympathizers with communism in the bureaucracy, and now it defends the award of tax money for scientific research by Communists. But, in doing these things, it insists that an anti-Communist who also attacked the administration must remain in prison, while at the same time it seeks to jail the 11 top leaders of the Communist Party for advocating the violent overthrow of the Government.

This record, as confused as the mind of Truman himself, can only, we repeat, evoke the question: How Communist is this administration?

Mixing Politics With Medicine

EXTENSION OF REMARKS

OF

HON. THOMAS A. JENKINS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, May 20, 1949

Mr. JENKINS. Mr. Speaker, the question of whether our country should be put under socialized medicine is one of lively interest. If we adopt this program when a baby is born it will be met by a Government inspector of some kind who will stamp and catalogue it so that its actions will in some respects at least be restricted from the cradle to the grave.

The National Republic—a widely circulated patriotic magazine—in one of its recent issues contains an article written by Dr. Dan W. Gilbert which I wish to have printed in the CONGRESSIONAL RECORD. The article is as follows:

MIXING POLITICS WITH MEDICINE

(By Dr. Dan W. Gilbert)

An all-out drive is now under way to impel Congress to enact a compulsory health insurance program, entailing the political distribution of medical services to the American people.

The background of this high-pressure campaign is very interesting, even amazing, when thoroughly understood by our people and Congress it is certain to contribute greatly to discrediting both the political medicine program and the socialist-minded theorists who are sponsoring it.

Although launched on the highest level of solicitude for the general welfare, the social reform movement for compulsory health insurance soon got all snarled up with the personal political ambitions of certain bureaucrats. Without even getting on the statute books, the political medicine program has already got completely bogged down in petty and sordid politics. In view of what has happened so far, we can only shudder as we contemplate the terrible damage that would be done to the health of our people if medical care were actually made a political football, to be distributed under political rule and bureaucratic red tape.

The kick-off for the present political medicine drive was supplied, innocently enough. The President of the United States wrote a letter to Mr. Oscar R. Ewing, the Federal Security Administrator, asking him to "undertake a comprehensive study of the possibilities for raising health levels" among our people.

The President's letter was dated January 30, 1948.

On September 2, 1948, Mr. Ewing submitted a 186-page report, entitled, "The Nation's Health—a Ten-Year Program." One of the most important members of the Ewing Commission, which presumably approved Mr. Ewing's report, was Dr. Paul R. Hawley, medical chief of American forces in the European theater of war, later returning to the United States to become chief of the Medical Bureau of the Veterans' Administration.

In a letter to Senator Lodge, reprinted in the CONGRESSIONAL RECORD, Dr. Hawley charges the Ewing report is filled with untruths and borders on sharp practices. Dr. Hawley declares that the Ewing Commission was not consulted, and had no voice in compiling the Ewing report.

Meanwhile, to the accompaniment of Nation-wide beating of left-wing propaganda tom-toms, the much-ballyhooed Ewing recommendation for a compulsory health insurance system was presented to Congress substantially in the form of Senate bill 5 (H. R. 783).

Covering 84 pages, S. 5 bears the impressive title "A bill to provide a national health insurance and public health program." It was introduced by Senators WAGNER, PEPPER, CHAVEZ, TAYLOR, MCGRATH, and MURRAY.

What does Senate bill 5 really do?

It makes Mr. Oscar R. Ewing a virtual political czar over the distribution of medical care to our people.

This is the way it is done.

The bill provides for establishing a National Health Insurance Board of five members. The bill states, "All functions of the Board shall be administered by the Board under the direction and supervision of the Federal Security Administrator."

To advise the Board, there is established—under the bill—a National Advisory Medical Policy Council.

The 16 members of the Council shall be appointed by the Federal Security Administrator for 4-year terms. Senate confirmation of these appointments is not required by the terms of the bill.

Thus, Senate bill 5—which is intended to carry out the recommendations of the Ewing report—makes the Federal Security Administrator (Oscar R. Ewing) the one who directs and supervises the National Health Insurance Board, while he appoints (without the advice and consent of the Senate) the 16 members of the National Advisory Medical Policy Council.

The Board and the Council are the two agencies established by the bill to administer the whole National Health Insurance and Public Health program.

Since the proposal to distribute medical care to our people under the political direction and supervision of Mr. Ewing gives new power and prestige to the Federal Security Agency, it is not surprising to learn that there is also proposed a new political elevation for Mr. Ewing and the department of government which he heads. The United States News, January 28, 1949, says, "The President and his Federal Security Administrator want to give FSA full departmental and Cabinet status. The new Cabinet member, of course, would be Mr. Ewing. If their plans work out, he would be dealing out billions for aid to perhaps as many as 125,000,000 people, with a lot of votes involved."

It is the custom of Cabinet members to do heavy electioneering for the reelection of their chief. The Secretary of Labor will campaign among union members. The Secretary of Agriculture will campaign among the farmers. Would the Secretary of Health and Social Welfare—or whatever he is called—spread political propaganda among the hospitals?

We are not trying to answer such a question.

It is enough to take note of the manner in which public health reforms—through the proposed legislation—are made to serve personal political purposes.

In transmitting his report to the President, Mr. Ewing declares that it is intended to present plans to raise the national level of health during the next decade.

The Taylor-Pepper-Wagner-Chavez-McGrath-Murray bill proclaims as its purpose the preservation and improvement of the health, vigor, and security of the American people.

But, in pursuit of this purpose, Mr. Oscar R. Ewing is virtually made a bureaucratic overlord in control of the two agencies that will distribute medical care to our people on a compulsory political basis.

The late Harry Hopkins was a powerful political force, by virtue of his role as head of WPA. To him was attributed the coining of the slogan, "We are going to tax and tax, spend and spend, and elect and elect."

At one time, WPA provided livelihoods (and political propaganda and pressure) to more than 5,000,000 families in America. But no one was forced to go on WPA—it was left on a voluntary basis.

Under the proposed compulsory health insurance plan, all holders of social-security cards—60 percent of all our people—will be obliged to submit to taxpaying participation at the very beginning. Mr. Ewing promises the other 40 percent of our people will be brought into the system on a compulsory basis later on.

The manner in which political medicine opens the door to political regimentation of all our people was clearly described by Prof. Rexford G. Tugwell, at one time head of the so-called Brain Trust and more recently a leading sponsor of the Wallace-Taylor Presidential ticket.

Dr. Tugwell said, "There is a little group of a quarter-million men in this country who visit each and every family in the home at least once a year or who are called on in their offices. They have in their charge the most precious thing that each and every individual citizen has—his or her health. They are chosen because they are the one person in all the world that these citizens, who are their patients, will trust their most cherished possession to.

"Those men are the physicians and the dentists of the country. If we can ever control the medical and dental professions, we will control the thinking of the entire United States."

Need we say more?

Whether deliberately designed for that purpose or not, the Taylor-Chavez-McGrath-Murray-Wagner-Pepper bill appears to be a long step toward the Tugwellian goal of political control of the people's thinking through bureaucratic degradation of the medical and dental professions.

Informed—yes, outraged—public opinion in America should require congressional defeat of this bold and insolent move to impose totalitarianism upon our people under the guise of a health and welfare program.

Prayers-for-Peace Crusade

EXTENSION OF REMARKS
OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Friday, May 20 (legislative day of Monday, April 11), 1949

Mr. BRIDGES. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD the translation from French of the article published May 5, 1949, in Le Travailleur, Worcester, Mass., entitled "Prayers-for-Peace Crusade," by Jean de Luz.

The prayers-for-peace crusade is an outgrowth of a suggestion made by Mr. Herve J. L'Heureux, of Manchester, N. H., before the William H. Jutras Post of the American Legion at Manchester, October 28, 1948.

Very fittingly the movement has taken hold not only in the various States of our country but in countries abroad. It is an encouraging sign at a time when so many other efforts for peace are being frustrated by forces more interested in imposing their philosophy upon free peoples everywhere. I commend the article for the reading of my colleagues.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PRAYERS-FOR-PEACE CRUSADE

(By Jean de Luz)

(Translation from French of article published May 5, 1949, in Le Travailleur, Worcester, Mass.)

The DuBois Courier Express of DuBois, Pa., published the news that the Montgomery Post of the American Legion has endorsed a program which calls for every citizen to pause daily at noon, to lift his heart and mind to God, and to utter a short prayer for universal peace.

In making this appeal the Montgomery Post of DuBois joined a spontaneous movement, originated at Manchester, N. H., October 28, 1948, at the Last Man's Club, William H. Jutras Post No. 43 of the American Legion.

Mr. H. J. L'Heureux is the originator. On October 28, 1948, the William H. Jutras Post of the American Legion, at the suggestion of Mr. L'Heureux, formulated the following resolution:

"Having complete confidence in the ability of our fellow men, with the aid of Almighty God to establish a just and enduring peace in the world,

"We, the members of the Last Man's Club, William H. Jutras Post No. 43, American Legion, do hereby unanimously resolve to pause for 1 minute in the midst of our daily task, at 12 o'clock noon each day, and, raising our heart and mind toward God, ask Him to help us adjust our international differences to enable the nations of the world to secure an equitable and abiding peace; further,

"We urge that this movement be endorsed by all the spiritual, civic, and business leaders in the United States, and that a similar resolution be adopted and implemented by every organization in our country to the end that this custom may become universal in effect."

Mr. L'Heureux is a career consular and diplomatic officer, a veteran officer of the Department of State, who has spent 10 years in Europe. What he saw and heard implanted in him an unshakeable conviction that in addition to being adequately prepared, and having the determination to fight with force of arms, if necessary, to preserve liberty, the United States should undertake something concrete to correct false impressions prevailing abroad which, at the same time, should be a clear manifestation of the true character and ideals of the American people. Who cannot foresee good effects from this custom if it is developed on a national scale? From this practice of a moment of prayer for peace would spring a unity of thought, a unity of purpose. It would give moral encouragement to the millions who, for a brief space after the war, enjoyed the illusion of liberty but who now, instead of building their lives in security and peace, look to the future with dread. It would demonstrate that the American people are God loving, God fearing, and peace minded.

Through the Voice of America, for example, peoples in other lands could be increasingly encouraged to join us, spiritually, in the accomplishment of our commonly desired objective—peace.

This crusade, conceived and implemented by war veterans, is affiliated with no particular sect; it has no affiliation with any particular denomination or faith. Each person is invited to offer his prayer in the silence of his heart in his own chosen manner, without any prescribed form. Each person, regardless of race, color, or creed, is urgently requested not only to endorse the plan personally but also to bring it to the attention of every group with whom he associates "to the end that this custom may become universal in effect." The resolution quoted above may be adapted to any group by substituting its name for "The Last Man's Club, William H. Jutras Post, No. 43, American Legion." Business firms and other organizations are urged (1) to adopt this or a similar resolution, (2) to reproduce a circular (which may be obtained from Mr. L'Heureux) or a similar circular, and (3) to circulate it as widely as possible.

Since October 28, 1948, this prayers-for-peace crusade has spread to many States and to several foreign countries. Scores of organizations, including American Legion Posts, the Americanism Committee of the Army and Navy Union, individual units of the Gold Star Mothers and of the Blue Star Mothers, the Manchester Rotary Club, private firms, student bodies of schools and universities and church groups have adopted the above or a similar noon-day-prayer resolution. Commendatory editorials have been published. The Governor of the State of Michigan in a proclamation endorsing the movement stated: "I * * * do urge that the people of Michigan adopt this proposal and that individuals, schools, churches, and civic organizations join in this Nation-wide daily prayer program for peace and good will."

Additional information regarding this movement may be obtained from Mr. H.J. L'Heureux, chairman, Prayers-for-Peace Resolution Committee, 5201 Thirty-eighth Street, NW., Washington 15, D. C.

I have a copy of the resolution which was adopted by Barton's Bonbonniere, Inc., 80 DeKalb Avenue, Brooklyn 1, N. Y., on December 9, 1948, and which was put into effect immediately among its employees. Upon request Barton's Bonbonniere, Inc., will send copies of its resolution which carries a space for the insertion of the name of the group who desires to join the Prayers-for-peace crusade. Personal endorsements and comments, as well as copies of any similar resolution that may be adopted, may also be sent to Mr. H. J. L'Heureux.

The Manchester Evening Leader, in commending the Last Man's Club for adopting the prayers-for-peace resolution, stated: "It is fortunate for all mankind that there are those among us whose spiritual faith still stands as a formative bulwark against the rise of materialism and godlessness. There has never been a time in our history in which man was in greater need of spiritualistic inspiration and help in meeting the grave problems that have become a part of our day-by-day life."

It was an extreme pleasure for His Excellency Bishop Brady, of Manchester, N. H., "to endorse and encourage this movement which leads men to realize the power of God and the dependence of all humanity upon His divine omnipotence in a matter which so vitally concerns their present lives and the lives of future generations. May the King of Peace listen to prayer so devoutly recited and grant the favor of peace to the disturbed minds of all."

A prominent professor at the University of Notre Dame wrote: "The plan is so easy to understand; so plain and simple; so brief to carry out; so true to man's nature as a child of God; so terrifically needed for life, liberty, and the pursuit of happiness. This clear-cut, naturally and supernaturally, understandable, workable, personally appealing plan captured and captivated me. It seems also to be catching the considered fancy of people all over the land. May it win everybody everywhere."

Addressing its congratulations to the members of the Cissel-Saxon Post, No. 41, American Legion, Silver Spring, Md., for having adopted a similar resolution, the Takoma Park Journal wrote: "We commend the Legionnaires for this action in a day when wars, people, and plans seem only to beget the very thing we seek to avoid. Magnificent as we are in war, so futile are we in peace. * * * Is it not time all citizens put aside wishful thinking and, united, call in the Master Planner?"

Master Planner. What a profound expression. God created the universe and rules it with order, number, weights, and measure. If one would understand or grasp the depth of these four words which may be found in the Bible, I invite him to read the work of Monsignor Paulot, Spirit of Wisdom, in which this eminent writer strives to give a clear and comprehensive exposé of the vast import of their meaning.

The good, toward which the world aspires, is peace. Universal peace is the tranquillity of universal order through justice and charity.

All good, all perfect gifts come from above through Jesus Christ. All who invoke the name of Jesus, the Lord, will be saved, as expressed in one of the anthems of the first vespers of the Feast of the Holy Name of Jesus. Saint Bernard assures us that the name of Jesus is "light * * * nourishment * * and medicine * * *" and in the Acts of the Apostles, chapter 4, verse 12, it is affirmed that "there is no other name under heaven which has been given to man, by which we are to be saved." For, Christ is "the only saint! the only Lord! the only All High: tu solus sanctus, tu solus Dominus, tu solus Altissimus, Jesu Christe * * *!" according to these expressions which terminate the chant of "Glory be to the Highest, and, on earth, peace to men of good will" of the Ordinary of the Mass.

Strengthened by these convictions, the heart adapts itself easily to the uttering of an ejaculatory prayer like this:

O Jesus, priest and victim, resurrection and life, God of Peace, establish peace in our family and in all the families in the entire world. I place my trust in Thee, have mercy on us, forgive us, save us!

I hope that this prayers-for-peace crusade will spread rapidly throughout the entire world. And I congratulate, with all my heart, Mr. H. J. L'Heureux, who was its heavenly inspired originator.

Let Us Be Cautious; the Russians Are Clever

EXTENSION OF REMARKS
OF
HON. PHIL J. WELCH
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES

Friday, May 20, 1949

Mr. WELCH of Missouri. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following editorial from the St. Joseph (Mo.) News-Press of May 17, 1949:

LET US BE CAUTIOUS; THE RUSSIANS ARE CLEVER

There is rejoicing at the lifting of the Berlin blockade. We are sorry to be a Cassandra instead of a Pollyanna, but let us watch our step in our dealings with Stalin & Co.

The Berlin blockade was lifted for one reason. Stalin & Co. saw the blockade was a failure, and that the longer it continued, the lower the prestige of the Soviet Russian Republic.

The Council of Foreign Ministers will meet this month. America must watch its step. Let us not for 1 minute be deceived by the mentality or the obvious aims of the people who have been running Russia since the overthrow of Kerensky, the mild democrat who held power for a brief period after the overthrow of the Czar more than 30 years ago.

We shudder at the hazards from the international diplomacy of the man from Missouri. He ranks far below most of the Presidents in understanding the intricacies of dealing with foreign powers. And in dealing with Stalin, the Missouri President is confronted with a man who has all the shrewdness of a Richlieu or a Metternish or a Tallyrand, and with just about their share of virtue.

Let us face the picture as it is. Red Russia hates us. Red Russia dreams of a day when American capitalism will crash and communism will rule the world. To us this man Stalin is still the smartest swindler in the world and he will outsmart us if we give him one-tenth of a chance.

Right now Russia is strongly urging a united Germany. "All out, leave Germany alone," says Stalin. Dean Acheson should be smart enough not to agree to set up an independent Germany that would instantly succumb to Communist control. Look at some of the other European countries where Britain and America stood smiling while independent governments were set up. Those independent governments today are Russian puppets.

Watch for this too. Russia talks peace. She wants the Marshall plan to fail. Russia knows that America is geared to a cold war and in the 1 year beginning July 1 will spend $15,000,000,000 on defense and $8,000,000,000 on foreign aid. Who knows, but were it not for that, the peacetime economy of America might crash and bring another depression. Does anyone think for a second Stalin and all his tribe are not waiting and hoping for an American depression?

Watch for Russia to tell America there no longer is need for American aid to Europe. So many Americans would like to think this is true. There is real danger in one of the smartest international chess moves by Russia that the world has seen since the Congress of Vienna.

Red Russia wants western Europe. Red Russia has never once wavered from her goal of world domination. The lifting of the Berlin blockade is one tiny incident in the larger picture so far as Stalin and company are concerned. Let us be happy the blockade is lifted. But let us not overnight become convinced that Russia has been converted and is going to be a good boy hereafter. The past of Red Russia since 1918 is too clearly written in words of blood to deceive even an administration as naive as this Truman administration at times seems to be.

Endorsement of Mr. Eberharter

EXTENSION OF REMARKS
OF
HON. HARRY J. DAVENPORT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 20, 1949

Mr. DAVENPORT. Mr. Speaker, under unanimous consent to extend my remarks, I insert in the Appendix to the RECORD an editorial which appeared in the Pittsburgh Post-Gazette on May 9, 1949; and also an article which appeared in the Pittsburgh Sun-Telegraph on May 7, 1949, on the subject of the endorsement by the Allegheny County Bar Association on the nomination of our colleague, Mr. EBERHARTER, to be a judge of the United States District Court for the Western District of Pennsylvania.

[From the Pittsburgh (Pa.) Post-Gazette of May 9, 1949]

THE BAR SPEAKS UP

One happy result of the efforts of John G. Buchanan and his Old Guard colleagues to sandbag Democratic Congressman HERMAN P. EBERHARTER may be a rebirth of the Allegheny County Bar Association.

Mr. Buchanan, a corporation lawyer and past president of the local bar, is now chairman of the judiciary committee of the American Bar Association. You would imagine, therefore, that he spoke with great authority.

At the eleventh hour, with Mr. EBERHARTER'S appointment as a Federal judge here up for approval by the Senate, Mr. Buchanan lifted his voice in pious protest. The Congressman, he believed, has blots on his escutcheon. And he, John G. Buchanan, intended to expose them, as indeed he tried to do before a record turn-out of the bar association on Friday.

Perhaps Mr. Buchanan, who objected that Congressman EBERHARTER had little or no courtroom experience, forgot that the celebrated Justice Oliver Wendell Holmes never had a client. Or perhaps he couldn't document his charges of Mr. EBERHARTER'S past faults or proclivities. At any rate, Mr. Buchanan, to put it bluntly, got his ears pinned back.

Following testimony made in behalf of Mr. Eberharter by former Congressmen James A. Wright and Judge Samuel A. Weiss, and by Congressman James G. Fulton, the bar association roared down a resolution that would have practically condemned Mr. EBERHARTER. Instead the association voted overwhelmingly to endorse Mr. EBERHARTER for the local judgeship, thus nailing the lid on Mr. Buchanan's coffin.

The most encouraging feature of this episode is that members of the bar association's rank and file, who have generally been lax in the past, turned out in force to assert themselves. In effect, they proved that Mr. Buchanan and the association's then president, W. Denning Stewart, could not presume to speak for them as a whole.

By repudiating Mr. Buchanan's proposal and by going on, as they later did, to elect a slate of "New Guard" officers, these members have raised hopes that the Allegheny County Bar Association may become the progressive force within this community which it can and should be.

[From the Pittsburgh (Pa.) Sun-Telegraph of May 7, 1949]

EBERHARTER GIVEN BAR GROUP BACKING AT STORMY SESSION

The appointment of Congressman HERMAN P. EBERHARTER to the Federal bench here today had the official approval of the Allegheny County Bar Association.

A group of young attorneys turned the tables on the Old Guard and swung association support behind the veteran Democrat at a boisterous meeting yesterday.

Only the approval of the Senate Judiciary Subcommittee and the Senate itself now stands between EBERHARTER and the $15,000-annually lifetime post.

The youthful faction first howled down a resolution questioning EBERHARTER'S fitness for the job. A moment later, they jammed through a resolution expressing confidence in his qualifications for the judgeship.

OLD LINE LOSES

It was a stunning defeat for the old-line lawyers, who tossed a variety of undocumented charges at the Pittsburgh attorney-Congressman.

Among other things they claimed unverified reports that EBERHARTER had a reputation for drinking heavily, driving recklessly, and getting tough with police.

The anti-EBERHARTER forces were led by John G. Buchanan, past president of the association and chairman of the judiciary committee of the American Bar Association. Buchanan declared:

"Stories have come to me from lawyers—many lawyers—that indicate his (EBERHARTER'S) unfitness for the appointment."

But Buchanan's charges made little impression on the youthful rebels. They were spearheaded by former Congressman James A. Wright, who drafted the pro-Eberharter resolution, Common Pleas Court Judge Samuel A. Weiss and Edward V. Buckley.

FULTON ACTS

Lined up with them was Congressman JAMES G. FULTON, South Hills Republican, who flew here from Washington to defend EBERHARTER.

FULTON told the 700 lawyers assembled for the annual meeting:

"There are two routes to the bench—one, as a practicing lawyer; another as a man who makes the laws."

The South Hills Congressman was replying to Buchanan's contention that EBERHARTER dabbled too much in politics and didn't practice enough law.

After the tumultuous 2½-hour debate, the session settled down to the routine business of electing new officers. Chosen president for the coming year was Robert Van der Voort, first assistant district attorney.

Van der Voort defeated Eugene B. Strassburger, Jr. He will succeed W. Denning Stewart. Elected vice president was J. Garfield Houston.

Executive committee members elected were Paul W. Brandt, Edward V. Buckley, Thomas N. Griggs, Ira R. Hill, and Arthur L. McLaughlin, Jr. Horace J. Thomas, Sr. and Robert T. Houlden were unopposed for secretary and treasurer.

Signs of the Times

EXTENSION OF REMARKS
OF
HON. ELBERT D. THOMAS
OF UTAH
IN THE SENATE OF THE UNITED STATES

Friday, May 20 (legislative day of Monday, April 11), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted

in the Appendix of the RECORD an address which I delivered over radio station KSL, Salt Lake City, Utah, May 18, 1949, entitled "Signs of the Times."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Many things are happening in the world which show changed attitudes; things which can bring about different habits of thought in such a way that we can hope for progressive steps for a world organized for peace. Contrast 1949 with 1948.

First, the Palestinian government of Israel is a year old. All is not lovely and international conflict has not come to an end, but Israel has weathered a year of trial and tribulation. Her greatest problem is not the clash with the Arabian states but is her ability to absorb the thousands of refugees who know no other place to go but to Palestine. To me, the most promising feature of the whole Palestinian episode is that what has been accomplished has been accomplished under the auspices of the gentile nations. To persons who have read long the literature of the west that has a deep and significant meaning.

When I was in Palestine in 1913, before the First World War, there were less than 75,000 Jews in all of that country. Most of them were poverty stricken or old people who had gone back to die in the Holy Land. Tel Aviv, the great Zionist experiment, seemed doomed and Zionism in Europe was not gaining strength. The Jews in Palestine were no better off than the other people. Planning had not become a part of their activities. There had been no survey made of the industrial and agricultural possibilities of the land. No one then felt that in our lifetime they would see the beginning of the return of the Jews to the Holy Land.

For several hundred years the outstanding curse of Europe has been its tense nationalism. Division in Europe seemed to be natural, yet students of history know that nationalism itself was a rationalization in support of those who were responsible for the break-up of the Holy Roman Empire. That the division of Europe was not healthful and was an open invitation to war and conflict between the nationalistic states was recognized by many of the people in Europe. And attempts at some kind of unification have been tried many times.

When Benjamin Franklin wrote to one of his European friends telling them about the meeting of our Thirteen Original States in the Constitutional Convention he described that convention as a meeting of notables who were filled with the spirit of good Henry IV who attempted to bring about unity in Europe. An attempt to unite Europe is, therefore, not a new idea.

Unity by force has never been successful. Napoleon tried it. Hitler and Mussolini dreamed it and then tried it themselves. The Kaiser undoubtedly had in his mind the theories of making himself a second Napoleon. After the First World War Premier Briand of France proposed, as a natural outgrowth of the peace and the creation of the League of Nations, the establishment of the United States of Europe. That idea has never waned. Churchill is advocating it today. When the European Recovery Program was instituted Senator FULBRIGHT and I introduced a resolution hoping that the ideas of the resolution would be incorporated in the European recovery legislation. The resolution provided that the nations of Europe would so cooperate that this cooperation would result in the United States of Europe. We failed in that but we did get in the act the promise that whatever America did she would act looking toward the unification of Europe. And by unification we all meant the breaking down of those nationalistic attitudes of the various Western European States. Now the European recovery program is operating in such a way that all of the states who are party to the program know what the others are doing. That is a great step toward unification. In addition to that there has been organized a Council of Ambassadors and a Consultative Council. What will come from these I do not know. But the germs of possible unification are planted.

Before you hear this message there will have come and gone from Washington 18 representatives of parliaments of the commonwealth nations, men who sit in the national assemblies of Great Britain, Canada, South Africa, New Zealand, Australia, Malta, Pakistan, Bermuda, and the Bahamas. This group is spoken of as representing the English-speaking peoples of the world. English, of course, is not the native language of Pakistan, but it is the official language. One sees when one hears these men talking about their constitutions and democracies and their guaranties for liberty the fulfillment of a statement made by William Jennings Bryan when he visited India and he told his Hindu listeners who were then beginning their struggles against England to remember that no matter how much they may dislike the mother country they should ever be grateful to it for giving them access to the English language, for "It is," said Bryan, "in the English language that the literature of liberty and freedom and democracy ruled by law has been written." These men came up to our Capitol and went to our shrines, such as the Lincoln and Jefferson monuments, and they read the language of their own heart's strivings in the words of those great men which are written on the monuments.

In the east we are faced with great troubles. But we would have greater troubles if we just operated on a theory of hate. Thank goodness we have turned our minds toward constructive building and away from the notion of building our whole foreign policy on a hatred of one given state. The whole world moves and we must never forget that.

We have responsibilities in Japan because we have imposed a constitution on Japan.

The other day I was asked by the Voice of America to give a salute to Burma, the new little republic of Asia which is 1 year old. I did it in words like these:

In this world of great thrills and unexpected happenings on such a grand scale, sometimes we fail to note very important events. When I saw the first delegation from the new state of Burma come to the International Labor Organization Conference in San Francisco last summer, I realized that I was seeing what I have often thought the French people saw when they noticed for the first time our Benjamin Franklin and our Thomas Jefferson.

The birth of a new free nation means much to the people of the world, as much as to the people of that nation. Burma's growth and her past history both teach us that an independent Burma can and will take her proper place in the sisterhood of nations. She has much to contribute and also much to learn. What nation has not?

My hope for the great cosmopolitan world is that each nation will retain those things which have made it great, but also be in a position to receive from other nations those things which have made them great. The different cultures of the earth should be preserved. A unified spirit should be sought.

I congratulate Burma on her first anniversary. I believe that she and her people will preserve their own culture and lend to the nations of the world what in it is good, and that she and her people, in turn, will take the good things which the other peoples of the world have to offer.

Another fine sign is the coming to America of Nehru's wonderful sister to be India's ambassador to America. I hope this will mean a returning to the good old ideas that Ambassadors should be great persons, representing the best that their country has to offer in intelligence and accomplishment.

It is one thing to see the mighty changes taking place in the world. It is another thing to catch the spirit which is the inspiration for those changes. The world can never grow better unless we can imagine the possibilities of a better world. We will never have peace by fiat. It will come only through day-to-day strivings. That we may find ourselves on the side of those who are working for the better world speaks more for our faith than for us to display the spirit of the cynic who wants perfection in all things before he will recognize the success in anything. There are lots of things happening in the world today that are worthy of note if we could just have a chance to be free from the shrieks of those who live their life in fear and hate. Men, women, and children of the world must be here for some purpose. Let's make it possible for at least some of them to attain the fulfillment of those purposes.

We are now in the midst of the opportunity drive (United States savings bond drive). I know of no better way to benefit the individual and the purposes of democracy as we live it in America than to participate in this drive. Let's put Utah on the top.

District of Columbia Golf Courses Debacle

EXTENSION OF REMARKS
OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, May 20, 1949

Mr. RIVERS. Mr. Speaker, when I demanded an investigation into and between the activities of the Interior Department and one S. G. Loeffler, who allegedly operates the golf courses in the District of Columbia, many Members of this House thought I was talking through my hat when I stated "among other things Loeffler's franchise was more valuable than an interstate license to steal." Even segments of information coming to light on this fabulous set-up indicate now that in the neighborhood of $200,000 may be owed by Loeffler to the Government. Mind you this information is brought to light as a result of audits from the few records that the Interior Department has so generously and beneficently kept of the public's money which Loeffler had been able to handle like a drunken sailor.

It is interesting to know that in the past 10 years his company has owned and operated the private business of Riverside Stadium, with interchanges of supervisory and labor personnel between the golf courses and the private business. I hope the audit will reveal what part of the cost of such personnel was allocated to the private business and what part to the golf concessions.

The Interior Department has demonstrated beyond peradventure of a doubt their indifference to the general over-all management of these golf courses. They have forfeited all right to the future handling of these lucrative facilities. Loeffler has been permitted to remain as de facto operator for 5 months and God only knows what he is doing with the money and everything connected

with these courses. It is certain that the Interior Department does not know.

The Committee on Public Lands which has been holding intermittent hearings on this matter has been most generous in giving the Interior Department every possible consideration. I think it high time now that the hearings come to an early close and I trust that the committee will tolerate no more double talk from the Interior Department or its representatives.

I hereby call on the Interior Department to forthwith impound all moneys being derived from the operation of the golf courses and their facilities, and immediately take steps to terminate Loeffler's operation. The public has suffered long enough. The Congress must no longer tolerate such a scandalous condition to obtain in the District of Columbia.

Address of Hon. John W. McCormack, of Massachusetts, at National Public Housing Conference

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Friday, May 20, 1949

Mr. CARROLL. Mr. Speaker, under unanimous consent, I insert in the Appendix of the RECORD an exceptionally able speech given by the majority leader, Representative JOHN W. MCCORMACK, of Massachusetts, to the delegates and distinguished guests attending the closing banquet of the National Public Housing Conference.

It is highly significant that at the same meeting and just preceding the remarks of Majority Leader MCCORMACK, those who attended were privileged to hear another exceptionally splendid speech by an outstanding Republican statesman, the Honorable CHARLES W. TOBEY, United States Senator from New Hampshire. These capable leaders, although belonging to different political parties, revealed in their remarks a political philosophy which transcends party lines and is concerned only for the public good and in the public interest.

The speeches concerned the housing bill which recently was passed by the Senate and soon will come before the House of Representatives for approval. Every Member should find the time to read carefully both addresses.

President Weinfeld, delegates to the National Public Housing Conference, my colleagues of the Congress, ladies and gentlemen, it is a pleasure for me to be with you on this occasion and to participate in the closing banquet of your eighteenth annual meeting.

You have every right to be proud of your organization's accomplishments since its founding and its efforts for the enactment of progressive legislation in the interests of the people of our country, and particularly legislation relating to solving the housing problems that confront our people and our Nation. Your constructive interest is in striking contrast with the attitude of many who blindly oppose.

In the public-housing program that has been constructed to date, and that includes low-cost housing projects, sometimes referred to as slum-clearance projects, and in the projects of a similar nature that will be constructed in the future, your organization has played a most prominent and important part. In doing this you have rendered a great public service.

As you know, an effective housing bill has already passed the Senate and one more effective in its provisions has been reported out of the House Committee on Banking and Currency and a rule is now being sought from the Rules Committee. As soon as the rule is granted, it is my intention to program the housing bill for immediate consideration. To the members of the Committee on Banking and Currency, under the leadership of Congressman BRENT SPENCE, the chairman, who voted to report out the housing bill, I want to express my words of commendation and of praise. The same also applies to those Members of the United States Senate who supported the bill as it passed that body. Without injecting party politics, I am particularly pleased as a Democratic Member of the House, that every Democratic member of the Committee on Banking and Currency voted in favor of the bill as reported out of committee. I hope that when the bill comes up in the House of Representatives that it will receive the wholehearted support of both Democrats and Republicans. One thing I can assure you, and I say this with confidence, that this legislation will receive the support of the great majority of the Democratic Members of the House. I might also say that the House leadership is aware of the hostile amendments that will be offered and that we are confident that we will be able to defeat them. One thing is certain, however, that an effective housing bill will become law in this session of Congress. Such a bill will include provisions for the construction of public housing and low-cost housing projects. It has been a long fight and a hard fight and we are now coming to the end where success will be brought about, and in this success you and the members of your conference can derive great consolation in the knowledge that you played a very important part.

Speaking in Detroit recently, Ralph K. Kaul, acting director of the community facilities division, had the following to say concerning the legislation that is now before us:

"The Congress at this moment is considering legislation which would substantially increase our housing resources during the next few years and give aid to States and localities in eliminating blighted areas. The purposes of both national welfare and national security are served by this program. Slums in urban centers are noted for their excessive population density. Slums not only offer potential targets, but they also reduce the ultimate efficiency of communities in performing mobilization tasks. These slums should be demolished and the sites on which they stand redeveloped in accordance with sound city planning standards."

In that brief, terse statement Mr. Kaul made out a clear case for the passage of the legislation now pending in the Congress.

The records show that from 1900 to 1920 about 8,000,000 dwelling units were added to the Nation's housing supply, and some 7,000,000 more in the 1920 to 1929 period, about 15,000,000 in a period of 30 years, an average of 500,000 new units a year.

During the war years of this decade, building supplies and other critical material had to be used in priorities for military and naval purposes. Production of housing, as we know the term, was quite negligible. For example, in 1943, 1944, and 1945, total housing is computed at 749,000 units. However, about 30 percent of these units having been publicly financed, they thus include temporary wartime housing.

The production record of new housing for a span of 16 years from 1931 to 1946 is about 5,000,000 units excluding temporary and publicly financed housing.

In all of that period, what has been happening in terms of those things that make housing shortages such as demolition and obsolescence of existing structures coupled with the inevitable increase of demand for housing represented, for instance, in the estimated number of social families? Hauser and Jaffe, of Duke University, show that in a period from 1930 to 1945 there was an increase in social families in America of 10,000,000. You will note that this is about twice the amount which I have just mentioned as a housing credit for the period 1931 to 1946.

In appraising this problem and the changes in demand for housing we must consider the fact of increase in births, or increases in marriages, and of the large numbers who have left the farm for the city. We must consider that veterans families alone are estimated at 3,200,000—the new births in 1946 were at an all-time high of 3,153,137 an increase of about 30 percent over 1940. In 1947 there were 3,700,000 new babies, an increase of about 500,000 over 1946. Marriages are, fortunately, on the increase. Migration from the farm since 1940 is estimated at around 4,000,000 persons.

It is incontestable that we have a grave, an acute housing shortage. While it appears everywhere, it particularly does with tragic impact upon our city populations. Housing is immobile. A shortage in Boston is not alleviated by a surplus in Birmingham, or elsewhere.

Industry, the development of which is such a proud American accomplishment, tends to follow labor supply.

The great social strength of America lies in its people and its family life. Is not that strength sapped and continually threatened if housing inadequacies produce elements to cause its disintegration? This latter is no figure of speech. We cannot afford the price which inevitably we will pay if we do not as of now recognize our present ineptitude in preserving social strengths and security and adequate measures of stability, of constancy and of permanence.

Where can those social strengths survive or thrive if domicile for the family is unsatisfactory? Is the family forced by economics to be one of the fifty-odd percent that become nomadic if they do not know when or how they can obtain adequate accommodations in which to house the family?

It is the moral aspect of the present lack of housing and its effects upon our Nation that I think has been overlooked in the consideration of the legislation, which I stress tonight.

Must not we appraise realistically the prices we are paying for present underhousing and overcrowding of families? Does it need demonstration that where families live doubled up and trebled up society ought to recognize the potentials? Must not society recognize the extent to which newly married couples are forced to live with their in-laws? Does it need demonstration that stresses and strains, clashes, tenseness continually, are present in the very place that is supposed to be a haven? Certainly the psychologist and psychiatrist don't dismiss this factor in the studies which they must make in the rising number of distressing cases which come before them for professional attention. Can our approach disregard the impact upon children whose normal behavior might be a threat to preserving tenancy in even the most inadequate of quarters? Isn't it natural for the growing

generation to seek diversion outside those quarters which they are forced to call home? We must look at and note what are those diversions in locality after locality where the early teen-ager seeks and finds distraction from cramped, tense, and inadequate home conditions. Have we as individuals and as a Nation the right to overlook the mental unrest of the parents of that growing generation, of the mothers who, while observing the trend, are somewhat parentally sympathetic with an escape desire. In their wisdom they may even foresee many of the dangers, but still remain impotent to avert. For those children, the parents would willingly slave, and yet they may watch the fruit of that union speckling before their very eyes—all by reason of locality, environment, squalor, and the surrounding vice and crime which are appurtenant to the locality and the housing in which necessity, not choice, forces them to live and rear their offspring.

This Nation notes and is alarmed at divorce statistics. Is it any wonder if the rate is accelerated by reason of doubling up where a husband might feel like a boarder or a wife might feel like a mother's helper? Certainly, broken homes present problems recognized in every single medical and penal circle in this country. Some 3,000,000 families are living doubled up, but some two and a quarter million of them are represented by man and wife. Those figures present a direct challenge to any unselfish, social, or economic down-the-road thinking.

None of us should confess to atrophy when it comes to moral evaluations. Can we be unaware of the threats to morality which are inevitable in living conditions which cause grave mingling of preadolescents and of adolescents? Time does march on, and the preadolescent does become adolescent and adult. To state it very mildly, the incidental, the accidental, the casual domiciling of yesterday and of today may lead to the nasty soul-destroying promiscuity of tomorrow. Police, judges, penal authorities, corrective agencies have that problem continually. The dollar cost to society is tremendous. The cost in terms of moral values, however, just cannot be calculated. Who can appraise the tragedy to parents and to children where the rearing of the children must take place under conditions which produce continual threats to happy home life and to family development? Who can appraise the tragedies to parents and to children if the rearing of the children must be in an atmosphere which is a constant threat to the virtues? Mere subjection to the threat is inexcusable and well might be on the conscience of each member of our body politic. I maintain that no security of their own, nor their isolation, nor their insulation is any shield against the charge which I can make with respect to their responsibility.

I believe I may, with propriety, ask you to consider whether there is a real danger in the inevitable contribution which inadequate housing makes in the field of birth prevention. Families, and sometimes several couples, are living in a room, or two or three, under conditions where the addition of a baby would be a definite and absolute threat to the security of the domicile, whether it be with their own relatives or in a multiple-unit apartment block, in a hotel or rooming house. Editors have stated, and I accept their figures, that of doubled-up couples alone, of whom there are some two and one-quarter million, over half of them have no children. I submit that under other conditions one might naturally expect such couples to be initiating their own family development. I state without fear of contradiction that the housing situation contributes to that picture. No person who has convictions in this matter may be unaware of, or callous to, the obvious fact that inadequate housing is enticing, encouraging, or enforcing the practice and enlargement of said birth prevention.

Many agencies, social workers, and medical centers can furnish us with data in connection with health, the physical health of those persons who suffer from our inadequacies in the handling of our rental housing picture. I believe that we have dealt altogether too frequently with arguments based upon financial considerations—and upon theoretic arguments as to the sanctity of individual industry versus collective or Government activity in the field of housing. We have not, in my opinion, given due consideration to the moral aspects, which if we allow our standards to evaporate, will be but preliminary to the disintegration of the Nation through destruction of its moral fibers.

I join with most of our students on the subject of housing in wishing that private industry could solve the problem. I do not join with them in saying that if private industry cannot, then the Government may not. There may be many reasons why private industry will not pick up the practice apparent some 40 years ago. I do not despair in this matter, however. I believe we have not exhausted all of the possibilities for private industry to do a job which I would prefer to have them do. Perhaps we have not appropriately studied the factors of cost. Perhaps we have not adequately covered the field of inducement for large institutions to enlarge in this field. We should never let up on our efforts in this regard. If material production and the outputs of labor can permit of reduced costs, we should search for those resultants. If failures for inducements taxwise, or in zoning and community psychologies, if these are barriers, then we should examine the possibilities of their removal. However, my concern lies in the fact that it is demonstrated in tragic fashion that we have not solved the problem. Hence, my profound conviction that in the demonstrated absence of its solution, or any real nearby hope, then the aggregate of the people, the Government must do the job. I have no apprehensions as to our moral responsibility. I have no such apprehensions because I recognize the current attacks upon our morals and our moral fibers, which are generated in our present housing deficiencies. I believe that I may quote with propriety words of the spiritual leader of a great religious group. Some 18 years ago words were written by Pope Pius XI which could be uttered today with even greater force. He said, with particular reference to opportunity for family life, "If, however, for this purpose, private resources do not suffice, it is the duty of the public authority to supply, for the insufficient forces of individual effort, particularly in a matter which is of such importance to the common weal, traversing as it does the maintenance of the family and married people. If families, particularly those in which there are many children, have not suitable dwellings: if the necessities of life cannot be purchased except at exorbitant prices: indeed, it is obvious how great a peril can arise to the public security and the welfare and very life of civil society itself, when such men are reduced to that condition of desperation that, having nothing which they fear to lose, they are emboldened to hope for chance advantage from the upheaval of the state and of established order."

My answer to the problem is more housing, more public housing—and with all speed—most certainly low-cost rental housing—and certainly with units large enough to house normal families with two and three children.

A nation is no stronger than the strength of its family life. The family life is the basis of society and of government. Anything that tends to diminish the spiritual strength of the family life of a nation is harmful to a nation itself.

The pending housing legislation strengthens the family life of America. It brings new hope to millions of fine Americans, both economically and morally. In strengthening the family life of America, as it will, such legislation and the results that will flow therefrom will bring strength and vigor to our Nation and inure to the best interests of all our people.

Prayer for Peace

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 19, 1949

Mr. RABAUT. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to give a brief biographical sketch of a man who worked his way through college by operating an elevator in the Senate wing of the United States Capitol. Hervé J. L'Heureux was born in Manchester, N. H., March 6, 1899, and received a bachelor of arts from George Washington University, 1925; and a bachelor of laws degree from the University of Detroit, 1935. He has been a member of the American Foreign Service since 1930; served abroad at many posts from 1937 to 1947, his last assignment being Consul General at Marseille; member of the American Bar Association and one of the founders of the American Legion; served with distinction in World War I as sergeant and received the Silver Star, being wounded in action.

A suggestion by this distinguished citizen made in the closing months of the past year has enjoyed far-reaching spiritual influence, which recently again was recognized in Oklahoma City. The following article by Don E. Hall, published in The Little Flower Magazine of April 1949, in Oklahoma City, Okla., is worthy of recognition and I take pride in placing it in the CONGRESSIONAL RECORD:

MINUTE-A-DAY PRAYER

Last October 28, Mr. Hervé J. L'Heureux, Chief of the State Department's Visa Division, made a suggestion before the Manchester, N. H., American Legion Post that is rapidly developing into a national movement in the interest of world peace.

In his address, Mr. L'Heureux stated that it would be fitting if a custom sprang up whereby in every town and city in the country, all traffic, industry, and other activities cease for just a minute at noon and simultaneously every man, woman, and child offer up a prayer to God to grant the world a lasting peace.

The idea went over big with the local club. A resolution was adopted and within a few days, that resolution was endorsed by the local bishop, mayor, and Rotary Club.

Little by little the suggestion spread. Members of an American Legion Post down South—a civic body out West—and a fraternal order in the East were among its first promoters. Today scores upon scores of veteran and church groups, civic and fraternal clubs, schools and institutions, are pausing briefly each noon. And big and little people all over the country, each in his own individual way are supplicating heaven for protection of the world from the ravages of another war.

If you're a member of a group or organization why not try to put the idea over with it? There is no prescribed prayer—no general organization. It's just an idea that may help save mankind from the ravages of another war.

Bosses Who Joined New Deal Now Find Their Power Gone

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 20, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes, from the Buffalo Evening News of May 12, 1949:

BOSSES WHO JOINED NEW DEAL NOW FIND THEIR POWER GONE

(By Thomas L. Stokes)

WASHINGTON, May 12.—It would be rash to seize the occasion of Boss Frank Hague's overthrow in Jersey City after 32 years to forecast an end to strong city and State bosses in American politics with the power of the Hagues, Ed Kellys, and Ed Crumps.

The essence of successful politics is organization, and there always will be ambitious, clever men who will apply it to politics and seek to entrench themselves in long careers at it in the realm of city and State. It can be profitable, too.

But the pattern will be different. An era plainly is over. No better evidence is at hand than the fact that the three most powerful local bosses of the old-fashioned type in our time have fallen in the space of 2 years. There was Mayor Ed Kelly of Chicago, who retired 2 years ago when he read the signs, and Ed Crump, long-time boss of Memphis, who saw his star go into eclipse with defeat of his hand-picked candidate for the United States Senate in last year's election, and now Boss Hague, whose nephew and political heir as mayor of Jersey City was turned out of office by the boss' one-time right-hand lieutenant.

All three were powerful beyond their cities and in the State at large, and, because of that, influential in national politics. All three are Democrats, and all were always factors in their party's national conventions.

Something clearly has happened to such bossism.

Three developments of our times would seem to be responsible. One is the extension of benefits of all sorts by the National Government down to the individual citizen to supplant the favors by which local political bosses won and kept allegiance. Another is the organization of labor and its education in politics with the consequent rise of the union hall in politics to replace the old-time rallies and ward clubhouse get-togethers and bull sessions over the beer. In the 1944 campaign city bosses complained because practically nobody showed up at their ward and precinct rallies, while the union meeting down the street was overflowing. An influence also is more education and more alertness in civic affairs among citizens.

With the spread of the depression of the early thirties the Federal Government moved in with WPA to assume the big relief burden in our great cities which local bosses could not pretend to handle. The little charities promoted traditionally by local bosses, the basket of food, the sack of coal, a job for the boy, could not compete. The Federal Government was the benefactor, not only to meet these primary needs, but later in other ways through successive New Deal reforms affecting the daily lives of the boss' constituents.

City bosses recognized this and capitalized it under the old formula, "when you can't lick 'em, join 'em," and so they allied themselves with the New Deal. It was a strong sort of alliance for which both sides apologized for their own and different reasons, but a very effective one politically for both parties. It kept the bosses in power and it helped to keep the New Deal in power, for the big cities furnished the margin of victory in the big electoral-vote States when the farmers went back to the Republican Party after they had been rescued and were again prosperous.

But the bosses were the riders on the new political wagon, no longer its drivers, and their power waned gradually in the era of federally provided benefits for their constituents and the new independence of labor in their cities.

The Airlift

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, May 20, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Telegram-News, Lynn, Mass., Wednesday, May 18, 1949:

VICTORY IN "COLD WAR"

The agreement between the Soviet Union and the western powers to lift the blockade of Berlin and to reopen mutual discussions of the German problem, is generally considered to be a major victory for the west in the "cold war." It would be manifestly unwise to believe that the situation is susceptible to no other interpretation—the Kremlin has pulled many a clever trick in the past, and things are not always what they seem to be on the surface. However, the Russian blockade failed entirely to get the planned result, and the Soviet policy makers have apparently accepted that as a demonstrated fact and are embarked in a new tactical direction.

The Berlin blockade will make a colorful page in history if for only one reason—the way the air lift broke it. No one, save a few American military experts—and they had their doubts—believed that a great city, war-torn and with few resources of its own, could be indefinitely supplied by air. But the air lift did the near impossible. Food, coal, and all the rest of the necessities came in by thousands of tons each day, weather notwithstanding. The British helped materially. Every possible plane was pressed into service and kept flying. The job was done without regard to cost or risk. At times planes arrived and departed from Templehof Airdrome at 2-minute intervals day and night; Berlin was fed and sheltered.

The air lift was the weapon that made the blockade untenable. But, if Russia has really decided it is necessary to come to terms with the West, there must be other reasons back of it. One may be that the Bear has bitten off all and perhaps more than he can chew for the time being. The job of consolidating the countries behind the iron curtain is incredibly difficult. It is no secret that millions of people in Czechoslovakia, Hungary and elsewhere are restive under Soviet dictation. Russia is making an all-out effort to increase her industrial production, particularly in the heavy-goods field. The drain of her military establishment on her resources is enormous. Under these circumstances, the Politburo may have understandably decided that a prolonged truce with the West, if not a real peace, is desirable.

No one should minimize the reverses the West has received in China. It will be a miracle if the Nationalist Government survives as an effective influence. However, it is doubtful if the Chinese Reds will do much for their Russian friends. Stalin is said to have compared Chinese Communists to a radish—red outside and white inside. They have a job on their hands within China, without trying to help extend the Soviet ideology throughout the world.

Loss of Plutonium Cannot be Minimized

EXTENSION OF REMARKS
OF
HON. PAUL W. SHAFER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. SHAFER. Mr. Speaker, the competence of the New Dealers or Fair Dealers to handle the grave and vital problems posed by America's possession of the atomic bomb becomes more and more a matter of doubt, as instance after instance of blunders in security are ferreted out.

Loss of a relatively small portion of plutonium from a Government atomic laboratory may be pooh-poohed by the liberals, the Truman apologists and the weak-minded, but it cannot be minimized by intelligent Americans who want to be dead sure that the Russian spies get nothing but trouble. Intelligent Americans know that if they are not dead sure about atomic secrets, they are going to be dead, period.

But actual espionage in atomic energy plants and laboratories is no more dangerous and reflects to no greater degree on the New Dealers administering the program than does the fact that the Atomic Energy Commission, as presently constituted, actually O. K.'d the expenditure of Federal funds for use of a self-confessed Communist to specialize in atomic training in an American university.

When it was first disclosed—by a Republican Senator—that this Communist student was enjoying a $1,600-a-year scholarship paid for by Uncle Sam, David E. Lilienthal, chairman of the Atomic Energy Commission, issued a statement defending the group that had cleared the student and said that we must be careful about limiting educational freedom.

But when a Democratic Senator—a well-known fair dealer himself in certain respects—pointed out vehemently that educational freedom was hardly the issue, and that the real issue was whether or not the Federal Government would subsidize the education of a dues-paying Communist, Mr. Lilienthal hastily backtracked. He said that the Atomic Energy Commission would cut this student off from its subsidy.

All of these developments may be handled well—from a press standpoint—by the New Dealers and "fair dealers." But they cannot help but reflect on the integrity and administrative ability of men who have long been accused of being "soft" on communism and now are proved to be either soft-hearted or soft-headed. It is difficult to tell which appellation fits them most accurately.

Back when he was being confirmed as head of the Atomic Energy Commission, Mr. Lilienthal was under great suspicion in many quarters about his essential patriotism and his faith in the ultimate workings of representative government. Many Senators of his own political party fought his confirmation bitterly, but a Republican Senate actually confirmed this man in his post.

Now the chickens are coming home to roost. Instance after instance showing either sympathy for the Communists who would make over America or revealing extreme carelessness and laxity insofar as security of atomic secrets is concerned, are coming out. They reflect on Mr. Lilienthal, for if there is one man responsible, he is the man.

At the same time, the ability of the entire Fair Deal administration to ferret out Communists in Government service generally also is in question. A Department of Justice analyst who was arrested by the FBI and is now on trial in Washington, has been accused of collaborating with a Russian diplomat on espionage. Whether or not she is guilty depends upon the outcome of the fair trial she is enjoying in a free country.

But, of course, she is not the only person still employed in the executive branch, more than a year after the loyalty program began, who is maintaining friendly and confidential relations with Russian visitors, agents, diplomats, or Soviet representatives. Maintenance of such friendships between the nationals of America and Russia is a dangerous practice, for it promotes in many ways the possibilities of espionage by either accident or design.

If we are to prevent such liaison—and its possible disastrous consequences—we must withdraw official United States recognition of Russia. They will then have to take their thousands of agents home. We will have only 10 or 12 families to bring out of Moscow. The Russians come and go at will in this country. Our few representatives in Russia are cooped up in Moscow, unless they get special permission to take a trip and even on such jaunts they are followed by NKVD agents.

Washington's Most Successful Lobbyist

EXTENSION OF REMARKS

OF

HON. ELBERT D. THOMAS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Friday, May 20 (legislative day of Monday, April 11), 1949

Mr. THOMAS of Utah. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an article entitled "Washington's Most Successful Lobbyist," appearing in the May 1949 issue of the Readers' Digest.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WASHINGTON'S MOST SUCCESSFUL LOBBYIST

(By Alfred Steinberg)

(Condensed from the Sign)

Two years ago Mike Masaoka did not know beans about lobbying. Today he stands without peer among the thousands of lobbyists in Washington. His record in the Eightieth Congress was monumental—the passage of five public and 12 private bills for his Japanese-American constituents.

Mike Masaoka practices a kind of personal lobbying that is entirely new. He can't promise votes or money. His success is bound to his maxim, "Sell yourself first and then sell your cause."

Of his unbelievable record Mike says with characteristic modesty, "Anyone can sell fair play and justice." Prodded by Mike, the Eightieth Congress passed bills to provide the following: Financial relief to 110,000 Japanese Americans for losses suffered when they were evacuated from our West Coast in 1942; payment for fire damage in evacuation camps; permission for GIs to bring their Japanese brides to the United States; cancellation of deportation orders against deserving Japanese aliens; American citizenship for Japanese aliens who served honorably with our armed forces during the war. The 12 private bills which Mike obtained for individual Japanese Americans required almost as much effort as these more inclusive public bills.

In his work Mike feels that deep down he is the conscience of America; he typifies all minority groups in their struggle to win acceptance as equal partners in America.

The fourth eldest in a family of eight children, Mike was born in Fresno, Calif., of Japanese parents. A few years after he was born, his family moved to Salt Lake City, where his father, a fish-peddler, was killed by a hit-and-run driver.

Mrs. Masaoka, left penniless, managed to support her family by running a fruit-and-fish stand near the State capitol. Mike came to know many of Utah's chief politicians who were her customers. They fostered in him a deep interest in civic affairs. Today both the mayor of Salt Lake City, Earl J. Glade, and Senator ELBERT D. THOMAS, of Utah, feel personally responsible for Mike's success.

Working his way through the University of Utah, Mike still found time to become an exceptional student, public speaker, and debater. On a trip to the west coast after graduation he realized for the first time the unhappy living conditions of most Japanese Americans. College graduates worked at menial jobs. Restrictive covenants created little Tokyos. Influential newspapers directed propaganda against the Japanese Americans, who, they said, were in cahoots with Japanese warlords.

Shocked, Mike realized that the problems of Japanese Americans on the west coast could not be solved without organization and direct representation. He became active in the Japanese-American Citizens League (JACL). In 1940 he was elected Japanese American of the year.

On December 7, 1941, in a meeting hall in North Platte, Nebr., Mike was urging a group of Japanese Americans to pledge loyalty to the United States, when police entered, guns drawn. Pearl Harbor was already a fact and these were Japanese. Mike was hustled off to jail. Three days later, after Senators Thomas and Murdock, of Utah, burned up the wires to North Platte, he was released.

The darkest moment of Mike's life came in 1942, when the evacuation of all persons of Japanese ancestry from the west coast was ordered. More than 110,000 persons, including Mike's mother and his fiancée, Etsu Mineta, were taken to inland prison camps. Two-thirds of the evacuees were native-born American citizens.

Mike went up and down the coast urging the evacuees to cooperate with the Army in the evacuation, even though their constitutional rights were being violated. His listeners had misgivings. And when they found themselves in wretched camps behind barbed wire, with little to keep them occupied, they blamed him personally for their plight. Some camps hanged him in effigy and one camp erected a Masaoka tombstone.

Mike was not evacuated. In return for urging their people to cooperate in the evacuation, several JACL leaders were given permission to do what they could to improve the lot of the evacuees. Mike traversed the country, explaining their loyalty and persuading church groups and others to urge their re-establishment as a going part of the Nation. In the process, he was thrown into jail eight times and was often roughed up by police. Radio Tokyo broadcast that as soon as Japanese troops landed in San Francisco Mike would be the first American hanged.

In 1942, Mike went to Washington to ask that Japanese Americans be permitted to leave their camps and volunteer for the Army. Not until January 1943, however, were Japanese Americans permitted to do so—and then only because Assistant Secretary of War John J. McCloy took up their case. The Japanese-American 442d Regimental Combat Team was activated as a unit in Camp Shelby, Miss. Mike was the first continental volunteer.

When the Four Hundred and Forty-second originally went into action in Italy, it had a complement of 3,000 men. After 4 months in the line, its casualty rate was over 300 percent. The Four Hundred and Forty-second won more major decorations for time spent in combat than any other comparable unit. Its men won more than 9,000 combat medals. Gen. "Vinegar Joe" Stilwell best summarized the war record of the Japanese Americans: "They bought an awful big hunk of America with their blood."

From her bleak prison camp Mike's mother advised her sons to volunteer "because this is my country." Five Masaoka boys saw service in Italy and France. Four were wounded; one was killed.

When the war was over and Mike was mustered out, he knew his job had just begun. The Japanese Americans had dropped their resentment against him when he turned down a commission to become an enlisted man. Later the feeling had become general among them that cooperation in the evacuation had been wise.

Some time before the Eightieth Congress went into session in January 1947, Mike and Etsu, whom he had married just before going into the Army, moved to Washington. They opened an office in their two-room apartment. Then they walked over to the Clerk of the House of Representatives and the Secretary of the Senate and gingerly registered as lobbyists. The JACL had decided that writing letters to Congressmen and sending petitions to the President were not enough. Mike's job was to convince a majority of the 435 Representatives and 96 Senators that his proposals were worthy of passage at a time when the international scene was cloudy and inflation, housing, and labor problems loomed large at home.

His most important assignment was to remove the racial discrimination still remaining in our immigration and naturalization laws. Mike's mother and Ginzo Nakada, for example—who had come to this country decades ago, and who between them had had 12 sons in the Army—were ineligible to become United States citizens. Mrs. Nawa

Munemori, mother of Sadao Munemori, winner of the Congressional Medal of Honor, not only was unable to become a citizen but was unable to receive a California old-age pension because of her alien status.

Many of the evacuees from the west coast were now destitute. The farms of some had been foreclosed while they were away. The Government had not stored their belongings as promised. Some had been forced to sell their property for practically nothing.

About 2,000 Japanese were awaiting deportation because their temporary visas had run out. Many had worked for OSS, OWI, or the War Department. They had drawn most of the maps by which our B–29's bombed Japan. Many had taught in our military language schools. Others had broadcast or monitored radio programs to and from Japan. By helping us they had committed treason to Japan. Deserving European aliens could have their deportations canceled; these Japanese aliens could not.

Such matters constituted Mike's must legislation. Usual lobbying procedures were useless. The people he represented had no effective voting power, political influence, money. Mike looked about for a new approach. He read everything he could lay his hands on pertaining to the legislation in which he was interested. In a month he knew more about both sides of his proposals than anyone else in Washington.

He directed his first attack at the subcommittees. Few Members saw Mike the first time he called. But he got to know the secretaries of the subcommitteemen, and when they found he had something worth while to say they scheduled appointments.

There were lucky breaks, too. One secretary had just turned down Mike's request for an interview when the Senator shouted from his inner sanctum: "Wait a minute. Mike's an Irish name."

"Yes, sir," Masaoka replied quickly. "I'm part Irish—at least, I have Irish blood in me."

The Senator's eyebrows climbed and Mike hurried to explain. "When the Germans shot me up overseas I got a transfusion at an aid station. An Irishman from Boston gave me his blood."

The Senator laughed and invited Mike into his office. When they emerged an hour later the Senator had his arm around Mike's shoulders and was saying, "Now, don't worry, son. We'll do everything possible to help your people."

Mike drafted many of his bills himself, then looked for Congressmen who would sponsor them. It was a matter of selling himself and then his cause.

While he was busy with subcommitteemen and sponsors, Mike was also presenting his cause to church, veteran, and other groups. At hearings his speeches were gems of clarity, logic, and delivery. Many Congressmen affirmed that they dropped their last lingering opposition after listening to him.

Letter to Mike from Japanese aliens who had lived as long as 40 years in this country showed that State laws barred them from a great variety of jobs. Many State laws permitted persons with first citizenship papers to work at some of these restricted jobs, but the Justice Department customarily refused to issue first papers to Japanese aliens on the ground that they could not eventually become citizens.

Here again Mike decided on personal lobbying. He went to Ugo Carusi, then Commissioner of Immigration and Naturalization. Among the data he presented was the information that the Four Hundred and Forty-second had liberated Carusi's home town of Carrara, Italy. It was not long before Japanese aliens were permitted to take out first citizenship papers.

In recent weeks Mike has seen his lobbying successes crowned by House passage of the bill which, from the beginning, was his top priority—a bill permitting some 85,000 long-resident Japanese aliens (including his own mother) to become eligible for American citizenship.

Though the JACL, supported by contributions, pays him less than $5,000 a year, Mike has turned down as much as $1,000 a month just to advise other groups. To his supporters he is known as "Messiah" Masaoka. No matter how much he protests that he cannot promise success, they scoff at him. And no wonder.

Loans to Germany and Dillon, Read & Co.

EXTENSION OF REMARKS
OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, May 18 (legislative day of Monday, April 11), 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "Loans to Germany and Dillon, Read & Co." published by the Society for the Prevention of World War III, Suite 825, 515 Madison Avenue, New York 22, N. Y., a nonprofit educational organization, in its March–April and May–August 1949 issues of the magazine Prevent World War III.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LOANS TO GERMANY AND DILLON, READ & CO.

Must we always make the same mistakes? There was a time when we thought we had definitely decided not to do so. In fact, there were several times when we learned our lesson. In 1932, after we woke up to the sad realization that we were very foolish in the twenties, we were sure that we would never make the same mistake again. For instance, in 1933, the outstanding British economist and financier, Sir Arthur Samuel, said: "Germany will not be able to receive money again in Great Britain, France, or the United States during our lifetime." Sir Arthur was very upset because of the unreliability of the German borrowers. What he thought of them he summed up in one single sentence: "Abuse of credit by foreign borrowers has developed into abuse of confidence amounting to nothing less than vulgar dishonesty."

That was in the early thirties. The full impact of the loans was not felt until the German military might showed what it could do during World War II. There was no longer any doubt that the Western World had unwittingly contributed to its own misery. This time the Western World was sure it could never make the same mistake again. Having learned its lesson, the United States Government told the Commander in Chief of the United States Forces of Occupation in no uncertain language, that "no extension of credit to Germany or Germans by any foreign person or government would be permitted except that the Control Council may, in special emergencies, grant permission for such extension of credit." (Par. 50, Directive to Commander in Chief.)

The man in the street was sure that the directive meant what it said, but, as usual, he was wrong, for he was not able to see the day-by-day developments in the financial world. He is now being informed. On January 24, 1949, the Wall Street Journal broke the news to him gently when it told him "American and other foreign capital will soon be allowed to invest in western Germany, said Norman Collison, Economic Corporation Administrator for trizonia—the American, British, and French Zones." Presumably the word "allowed" was used to make the offer attractive. More details came 2 days later, when the New York Herald Tribune reported the result of a survey of American observers in the Ruhr regarding the plans of German industrialists to develop their industries. As the New York Herald Tribune stated: "Ruhr industrialists, the survey shows, are looking at the moment to the United States as the best prospect for new private funds." The amount of money mentioned by the survey was estimated at 2,000,000,000 western marks. In addition, there was also mention of 1,500,000,000 marks to expand the electrical energy in the Ruhr in order to build 22 new power plants at the coal mines.

What is the nature of the attraction Germany is exercising again? What magic is Germany using to make people forget so quickly her past record? Students of German affairs have tried to find the source of German attraction. So far they have failed. If today the world is ready to forget the past so quickly, and to add good money to bad money, will serious-minded investors not ask themselves: Was Germany such a good risk in the past? Did the American investment houses take the necessary precautions to make sure that the money loaned to Germany was wisely spent? Did they ascertain the ultimate purpose of the money? Did they make an analysis to find out whether Germany needed the money so badly?

The answer, obviously, to all these questions, is a resounding "No." The financial literature of the twenties is replete with the most glowing statements and alluring prospectuses, telling the American, British, and other investors how sound Germany was. However, it must be stated that the literature dealing with the loans made to Germany also contains numerous analyses intended to warn the foreign investors.

An extensive investigation was conducted at the end of 1931 and the beginning of 1932 by the United States Senate Committee on Finance, which attempted to find an answer to the all perplexing question: Why did the foreign investors throw away their money so eagerly and and what was the attraction Germany exercised over the Western World?

American investment houses were subpenaed to appear before the United States Senate committee. They were asked to show how much money they loaned to Germany, how much profit they made, what efforts were made to ascertain that the loans made were not in contravention of American foreign policy, and what efforts were made to protect the lenders.

The most outstanding fact that was unearthed in the course of this extensive investigation was that American investment houses were completely oblivious to the realities of the economic and financial situation of Germany. What is even worse, most of the witnesses, as late as 1932, stoutly maintained that they were not wrong in making the huge loans. To be sure, there were exceptions to this attitude. Some of the investment houses, indeed, learned their bitter lesson. Some followed the warning issued by the State Department and other responsible persons, but by and large, instead of admitting its mistakes, the financial fraternity defended itself stoutly before the Senate Committee on Finance.

As early as 1922 the United States State Department began issuing letters of warning to American investment houses, in the form of public releases. The records show that

many other letters were written directly to the banking houses by the State Department from 1922 to 1929, wherein attention was called to the large amount of American credit granted to Germany. The paragraph most often used read as follows: "Those risks which obviously concern the investing public should, in the opinion of the Department, be cleared up before any action i. taken." Since these warnings resulted in many inquiries, the State Department invariably cautioned Wall Street as follows: "If they cannot be definitely eliminated, the Department believes that you should consider whether you do not owe a duty to your prospective clients, fully to advise them of the situation." In each case, however, the State Department made it clear that it did not "positively" object to the loans contemplated.

As a result, Wall Street went on bringing out, in ever-increasing numbers, German bond issues to German states, German cities, and German industries. In fact, anything German was quickly absorbed without question. Not only that, but the record reveals that American investment houses paid handsome commissions to hundreds of American representatives in Germany whose duty it was to solicit more and more loans from all possible German sources in order to dump them quickly into the American public. And, contrary to the admonition of the State Department to take proper precautions to explain to the investors the true situation of the German economy in the twenties, the American investing fraternity made it very plain that it was not interested in making any effort to attach any conditions concerning the way in which the money was spent in Germany, nor was an effort made to obligate the recipients in Germany to buy any goods in the United States, nor force them to establish relations with American business firms.

Nor did the American investment houses make any effort to insert a provision whereby some American control over the expenditure of American money would be imposed upon the German borrowers, in order, for instance, to prevent the rearmament practiced by the Weimar Republic.

There was a time when those who suffered as a result of their folly were prone to blame the scheming Germans for their misery. They must have studied the German methods of enticing the American investors. As a result, they believed that the Germans must be blamed and no one else. Here again, the records will show that even some Germans in some cases were against the indiscriminate dumping of good American money in their country. The State Department, in one of its letters dated October 25, 1926, in an answer to an inquiry emanating from a Wall Street firm, definitely warned the latter that even the Germans did not want the money. But this warning, too, went unheeded. This is the way the State Department put it: "In this connection I feel that I should inform you that the Department is advised that the German federal authorities, themselves, are not disposed to view with favor the indiscriminate policy of German loans in the American market."

Indeed, there is evidence to show that even Dr. Schacht was amazed at the waste of good American money. But the German warnings, too, fell on deaf ears. The best way to describe how some German officials felt about the American investment houses' attitude is to quote the Prussian Minister of Finance, Dr. Koepker-Aschoff, who, on December 8, 1931, described the German reaction as follows: "During 1925 and 1926 not a week went by that a representation of a group of American banks did not come to see me for that purpose (making loans). German authorities had been virtually flooded with loan offers by foreigners."

Special mention must be made of the splendid work done by Mr. S. Parker Gilbert, American Agent General for Reparations in Germany. Mr. Gilbert cannot be accused of any animosity toward the financial fraternity, since he came from it and since he was sent to Germany by the American originators of the Dawes plan.

Mr. Gilbert was fully acquainted with the drive going on in the United States to play fast and loose with the people's money. On numerous occasions he received inquiries from investors asking him to give them his opinion regarding the soundness of proposed loans.

Mr. Gilbert's attitude was clear and unmistakable. On November 11, 1925, he flatly stated, "that the Transfer Committee on Reparations is not in a position to give assurances concerning the payment of interest or amortization on the German loans floated abroad."

Two years later Mr. Gilbert made it even more emphatic by issuing a public warning saying as follows: "Recent developments in public finance do not appear to be in the interests either of German economic life, or of the execution of the experts' plan (the experts on reparations). The evidence, in fact, is accumulating on every side that the German public authorities are developing and executing constantly enlarged programs of expenditure and of borrowing with but little regard to the financial consequences of their action."

Apparently, Mr. Gilbert despaired of being able to enlighten the American bankers at all, for a year earlier, on November 3, 1926, he openly told his honest opinion about the nature of the German loans. He expressed himself in very forceful language, but failed. He said on November 3, 1926: "I am constantly amazed at the recklessness of American bankers in offering to the public the securities of German states on the basis of purely German views."

Some outstanding experts assumed that Germany, in addiiton to the $300,000,000 to be derived from her railroads, could pay an additional $120,000,000 as a maximum. This being the case, the total German payments could not have exceeded $420,000,000. How did the New York Times arrive at an annual figure of $625,000,000?

The moral of this story is plain: While it could be reasonably argued that at the beginning of the loan spree the American public knew very little about the state of affairs of Germany, there was no doubt—on the basis of the evidence above—that the financial fraternity did nothing to enlighten the American investor and to guide him properly. Here are the results of the famous "metaphysics" mastered in the United States, according to the felicitous description of the New York Times. Since the Dawes plan—1924—Germany, according to her own figures, paid a total of $2,350,000,000 to cover her reparation payments and to service her other foreign debts.

In the same time—still according to Germany's own statistics—she borrowed from other countries the incredible sum of $3,750,000,000 with which to pay reparations. In other words, Germany borrowed $1,400,000,000 more than she paid in reparations. Two-thirds of the borrowed money came from the United States.

According to the British Royal Institute of International Affairs, between the years of 1924 and 1930, some 18 to 19 billion marks of capital were imported into Germany. Of this total, between 9 and 9½ billions were the proceeds of long-term loans and investments, and 5 to 6 billions of short-term borrowing, the remaining 3½ to 4 billion marks being the proceeds of the sale of domestic mark securities.

The above sums do not take into consideration the loans made to Germany prior to 1924, nor those floated privately. Needless to add, most of these loans are still outstanding. Which brings us back to the question we raised above: What is the nature of Germany's magic attraction? No adequate answer can be found in the tomes of literature dealing with that period.

It has been often stated that this magic attraction was due to the fact that American investment houses honestly believed that it was good business to invest in Germany. We are sorry to disagree with this interpretation, since the evidence does not bear it out.

In fact, a careful analysis of some of the activities of American investment houses will clearly prove that not only did some of them not even protect their own interests, but they clearly acted against their own interests.

For instance, on January 5, 1932, Mr. Clarence Dillon, of the house of Dillon, Read & Co., appeared before the United States Senate Committee on Finance to give an account of his firm's loans to Germany. When he was asked whether he knew that at the time the extensive loans were made to the German industrialists, the latter were already overborrowed, he replied: "I do not think any of the German industrialists to whom we loaned money were overborrowed." When he was further asked by Senator JOHNSON: "Do you remember the statement that was made by Gilbert in 1927 regarding Germany being overborrowed?" Mr. Dillon replied, "I heard you talk of it yesterday, sir."

Under further specific questioning whether he, himself, knew of Mr. Gilbert's warnings and of the fact that it was against the interests of American business, Mr. Dillon finally admitted that he understood such warnings were made.

Why did Mr. Dillon claim that the German industries were not overborrowed? Since Mr. Dillon denied, as late as 1932, that the German industrialists were overborrowed—and this in the face of all the evidence accumulated in the years prior to the Senate investigation—it behooves us to discuss Mr. Dillon's activities.

There is a pertinent reason why Mr. Dillon's case must be discussed here. To begin with, unlike most of the loans floated by the other Wall Street investment houses, those floated by Dillon, Read were made largely to the German heavy industry. These loans helped Germany to build up her war potential.

Since VE-day the name of Dillon, Read has been mentioned prominently in connection with Germany. The public at large has learned in recent times that former members of the Dillon, Read investment house have been very active in public affairs and in making our German policy. We ourselves have made an extensive analysis of the activities of Mr. Paul Nitze, former vice president of Dillon, Reed, and Deputy Director of the Office of International Trade in the State Department some 6 months ago, (Published in Prevent World War III, No. 25, May–June 1948, The Right Men in the Right Places.)

Since we are very anxious to find out why Germany has been the ever-recurring object of solicitude on the part of some American banking houses and presently of some high Government officials, we feel that the only way to answer this query is to go back to the source itself—the German industrialists. The reader will not find it all in published materials.

But we will tell something about it: Fritz Thyssen, the notorious Ruhr industrialist who has contributed so much to Hitler's coming to power, was asked at the time why he was in favor of the Dawes plan, and why he was so much opposed to the Young plan, which was the second attempt made after World War I to salvage something from the wreckage of the German reparations program. "In my judgment," Mr. Thyssen replied, "the financial debt thus created was bound to disrupt the entire economy of the Reich." And why did Thyssen take such a negative attitude toward the Young plan?

We will let him say it in his own words: "My position was largely determined by what an American banker told me and Voegler. (Voegler was the brains behind the Germans' biggest steel cartel, the United German Steel Works. He committed suicide shortly before the Allies entered Duesseldorf in 1945). I refer to Mr. Clarence Dillon of the firm of Dillon, Read & Co., a Jew, with whom we were on very friendly relations. Mr. Dillon expressly said: 'If I may give you a piece of advice, don't sign.' I have never forgotten this, and I have always remained particularly grateful for his advice for he gave it against his own interests and for the good of Germany."

We believe that the secret of Germany's magic attraction over some of the investment houses in the United States can be found in the last few words of Thyssen's confession. From this statement is it not quite clear that Mr. Dillon must have had a special soft spot for Germany? When Mr. Dillon stated before the Senate committee in 1932 that he did not think the German industrialists were overborrowed, he obviously knew full well that his statement was not correct and that the loans did not protect American interests. And when Mr. Thyssen candidly confessed that Mr. Dillon advised him not to agree to the Young plan, it is quite obvious that Mr. Dillon did not care to help the American investor or else Mr. Dillon would have advised Thyssen to agree to the Young plan and thus help salvage the American interests in Germany.

And yet it would be wrong to say that the Dillon, Read house did not profit from its relations with the German heavy industry. We will let Mr. Clarence Dillon tell it in his own words. (From his testimony before the United States Senate Committee on Finance, January 5, 1932): "In the period since the war, the total amount of those issues that we have handled, and I have not included issues where other banking houses or banks have handled the account, and where we may have participated for small amounts, but I am giving you, Senator, the figures where we have handled the account—the total of such issues amounts to $1,491,228,543."

A break-down of the total number of German loans floated in the United States by some of the most prominent Wall Street firms, reveals that the Dillon, Read & Co. shares first place with the National City Bank. This can be seen from the following partial list:

Investment house:	*Number of loans*
Dillon, Read & Co.	20
National City Bank	20
Harris Forbes	16
Speyer & Co.	8
Blair & Co.	3
J. P. Morgan	2

As regards the total amount of all foreign issues handled by the two houses most prominently connected with German loans, it is also worthy of note that the Dillon, Read & Co. and the National City Bank again are tied for first place. While the former claims of having floated a total of $1,491,228,543, the latter can boast that it floated a total of $1,500,000,000.

Since some former prominent officials of the Dillon, Read firm have been strong advocates of the rebuilding of Germany, the question is: Have they learned the lesson of the twenties? We shall let the reader judge for himself. But before doing so, let him ponder the following sentence culled from former Dillon, Read vice president—Gen. W. Draper's testimony before the congressional committee. "I personally have been one, for 2½ years, who has been attacked in the papers probably more than anyone else for trying to build up Germany and for trying to reduce the reparations program. I admit that I have had that point of view." (P. 811, hearings before the subcommittee of the Committee on Appropriations, House of Representatives, 80th Cong.)

Vengeance, Not Justice

EXTENSION OF REMARKS

OF

HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, May 20 (legislative day of Monday, April 11), 1949

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared on May 18, 1949, in Human Events entitled "Vengeance, Not Justice," by William Henry Chamberlin.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VENGEANCE, NOT JUSTICE

(By William Henry Chamberlin)

I

With the recent conviction of 19 out of 21 defendants, the thirteenth and last of a series of so-called war-crimes trials, held with American participation or under American auspices in Germany, has come to an end. As a result of these trials, 1,539 persons were found guilty and 444 were condemned to death. Most of these sentences have been executed; some have been commuted; a few are still pending.

The cost of these unprecedented trials to United States taxpayers is estimated at from nine to twelve million dollars. The cost in the sacrifice of basic ideals of equity, legality, and sound international relations is immeasurable. For these trials were not, as Supreme Court Justice Robert H. Jackson and others have asserted, a vindication of eternal principles of law and morality.

On the contrary, the whole organization and procedure of these trials represents a negation of some of the most essential elements in the Anglo-Saxon conception of the rule of law. Senator TAFT put his finger on a fundamental defect when he said recently:

"My objection to the Nuremberg trials was that, while clothed with the forms of justice, they were in fact an instrument of government policy, determined months before at Teheran and Yalta."

Other points of criticism, which future objective historians and legal commentators are not likely to overlook, may be briefly summarized as follows:

(1) There was no pretense of equal responsibility before the law. Only Germans were punished, in many cases for actions which were also committed by some or all of the victorious powers. Yet what distinguishes a genuine court of justice from a lynching mob is the observance of the principle that law is applied universally and objectively.

(2) The very important principle that judges and juries should have no personal interest or prejudice in the cases they conduct was not and could not be observed in a trial of vanquished by victors.

(3) This defect of the trials was aggravated by the excessive participation of American citizens of very recent origin—German political and racial refugees who in some cases were animated by an altogether understandable desire for revenge.

(4) The conduct of at least some of the trials was vitiated by the extortion of confessions by methods of extreme brutality and deceit.

(5) Like many other developments of the twentieth century these trials of vanquished by victors represent retrogression, not progress. They recall the practices of 20 centuries ago, when captured rulers were strangled after being led in Roman triumphs. They are more likely to promote wars of extermination than to serve as war deterrents.

(6) The trials set dangerous precedents and violated such known principles of national and international law as the rule that there can be no ex post facto punishments. Among the precedents are the holding of military and civilian officials responsible for carrying out the orders of their superiors.

Under this precedent every military or naval officer who takes part in framing war plans may be indicted as a promoter of aggressive war—if his country is on the losing side.

II

These considerations hold good quite irrespective of the fact that acts of horrible cruelty were committed by the Nazis before and during the war and that many of those who suffered death or imprisonment in the war trials are entitled to no sympathy on the basis of their records. The real case against the war trials is not what they did to some 1,500 Germans, but the serious injury they inflicted on Western standards of impartial justice and moral consistency.

One of the counts in the indictment against the Nazi leaders at Nuremberg was the planning and waging of wars of aggression. It is now a matter of public historical record, and was well known at the time of the Nuremberg proceedings, that the German attack on Poland on September 1, 1939, closely followed a secret agreement with the Soviet Union dividing a large part of Eastern Europe between the two powers. In accordance with this treaty the Soviet Union invaded, annexed, and oppressed the eastern half of Poland, and later overran the three independent Baltic Republics, Latvia, Lithuania, and Estonia.

If the punishment of aggressive war was the purpose of the Nuremberg tribunal, then the place of the Soviet representatives was in the dock with the accused, not on the bench with the judges. In view of the markedly different treatment metered out to Nazi aggression and to Soviet aggression, it seems a reasonable deduction that the Germans were punished not for waging aggressive war, but for losing it.

Many moral inconsistencies and legal non sequiturs of the Nuremberg judgment are pointed out in Montgomery Belgion's excellent work, Victors' Justice (now available in an American edition, Henry Regnery Co., Hinsdale, Ill.). One is especially worth noting. This is the verdict in the case of Admiral Karl Doenitz. The tribunal stated:

"In view of all the facts proved and in particular of an order of the British Admiralty announced on May 8, 1940, according to which all vessels should be sunk at sight in the Skaggerak, and the answers to interrogatories by Admiral Nimitz stating that unrestricted submarine warfare was carried on in the Pacific Ocean by the United States from the first day that Nation entered the war, the sentence on Doenitz is not assessed on the ground of his breaches of the international law of submarine warfare."

The implications of this ruling are breathtaking. A German naval commander was granted immunity if he committed only breaches of international agreements about submarine warfare which had been consistently practiced by the Americans and the British.

However, this principle was not observed in many of the war-crimes judgments. For, apart from the maniacal extermination of

the Jews, almost every Nazi war crime was committed by all or some of the victorious powers. This is true as regards forcible annexation of foreign territory, launching of aggressive war, rape, looting, and other excesses committed against civilians, mass uprooting and expulsions, large-scale exploitation of war prisoners for slave labor. Such actions are either criminal, regardless of who commits them, or they are not. The war-crimes tribunals meted out punishment only to Germans.

III

The moral value of the war-crimes trials was further nullified by the methods often used to extract confessions. Most notorious and unsavory was the third-degree treatment applied to the defendants in the Malmedy trial, a large group of German soldiers charged with killing American prisoners during the Battle of the Bulge.

An Army commission, headed by Justice Gordon Simpson of the Texas Supreme Court, investigated this matter recently and came to the conclusion that highly questionable methods which cannot be condoned were used in obtaining the evidence and confessions on which the Malmedy verdicts were based. Judge Edward L. van Roden, a member of the commission, spelled out these methods as: Beatings and brutal kickings; knocking out teeth and breaking jaws; mock trials; solitary confinement; posturing as priests; very limited rations; promises of acquittal.

Col. Willis M. Everett, an American officer in the two world wars, appointed counsel for the defendants, submitted a long affidavit to the Supreme Court which contains the following statement, among many other allegations of torture and improper pressure:

"The American prosecutors would make many threats of violence and torture directed toward the mothers, fathers, sisters, wives and children of various accused unless they signed complete dictated confessions of acts and deeds never committed by them, and acts and deeds of other accused never witnessed by them."

Methods frequently employed by investigators in the war crimes trials may be judged from the stenographic record of the interrogation of Dr. Friedrich Gauss, former legal expert of the German Foreign Office, by Robert Kempner, former official of the Prussian Government, now an American citizen. Trying to extort a confession, it was hinted by Kempner that if Gauss did not say what the prosecution desired he would be handed over to the Russians. The following expressions were also used in the examination of Dr. Gauss:

"You must think it over. * * * You know the old German law—Mitgefangen-mitgehangen [captured together—hanged together] * * * If I had to save my neck, I would commit any kind of perjury. You must help us to clarify the matter."

IV

The war crimes trials were as politically inexpedient as they were lacking in consideration for basic principles of law and equity. Cold-blooded reprisals inflicted by victors on vanquished, after hostilities are ended, leave a far more rankling sense of resentment than ruthless acts in the heat of combat. There seemed to be a concerted effort in the trials, whether by accident or design, to get representatives of German groups who were most opposed to Communism, notably businessmen.

The most hopeful redeeming feature of this ill-judged experiment in one-sided vengeance, masquerading under the forms of justice, was the outspoken courage of those Americans who risked abuse and misrepresentation by speaking out vigorously on the issues of principle involved.

Honorable mention should go to Colonel Everett, to Judge van Roden and to Judge Charles F. Wennerstrum, of the Iowa Supreme Court. After sitting on a trial of German generals Judge Wennerstrum sharply criticized the spirit and methods of the prosecution and summed up the whole case against the war trials when he remarked that "the victor in any war is not the best judge of war crime guilt."

Such individual criticism would not have been possible, or at least would not have been heard, under totalitarian regimes. The best policy now would be to wind up this "victors' justice" as quickly as possible, to redress immediately the grossly unjust sentences, to leave to the new West German State a wide latitude in reviewing sentences, and to hope—against the probabilities—that the precedent set will not aggravate the ferocity of the next war—should such a catastrophe occur.

The Senate and the Filibuster

EXTENSION OF REMARKS

OF

HON. JOHN C. STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Friday, May 20 (legislative day of Monday, April 11), 1949

Mr. STENNIS. Mr. President, the current issue of the magazine Survey contains an article entitled "The Senate and the Filibuster," by Lindsay Rogers, Burgess professor of public law at Columbia University. Mr. Rogers is one of the most highly regarded international authorities on political science, and I believe that his views are worthy of the Senate's attention. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SENATE AND THE FILIBUSTER

(By Lindsay Rogers)

"That remarkable body, the most remarkable of all the inventions of modern politics, the Senate of the United States." Thus Gladstone described the upper branch of the American Congress. This remarkable body has now done one of the most remarkable things in its entire history. After a long discussion of the extent to which limiting debate should be made easier, the Senate in the end relaxed—extremists say wiped out—the not-too-effective cloture rule which it had adopted in 1917.

Senatorial captains and kings of parties and sections now quarrel about other matters, but Federal civil-rights legislation was the sacrifice, and the tumult and the shouting will not die. The sincere advocates of civil-rights legislation will continue to be furious and will bring bills up again on the first possible occasion. Then the battle will recommence. Cassandras with different preoccupations foretell grave harm to the Republic, because any "fanatic minority" will be able to use an "archaic and perverse" instrument of obstruction—that is, the filibuster. "A few arrogant men will frequently tie up all public business." What should be a democratic parliament "has shackled its own hands with stubborn knots." "Just suppose that there is another Pearl Harbor," it is asked, "could there be speedy congressional action?" Are these portents of doom justified?

In a mild voice, I venture to suggest that black is not the only color at which we have to look; that, as Edmund Burke said, "all government is founded on compromise and barter" and, I suggest further, that this is especially true of the American governmental system with its separation of powers and its Federal basis. Whether or not we like all of the ways in which our Government works, it is nevertheless the system under which we now live. And, save from quarters where the Kremlin is more honored than the White House, there is no advocacy of change in principle. It is in an American setting, therefore, that we should consider the filibuster, and this, I suggest, is what the Cassandras have omitted to do.

Before I specify their sins of omission, it is necessary to explain the present situation—the parliamentary position, so to speak, and how it was reached. Legislative procedure is a dull business and a matter about which few, save members of the legislatures—and by no means all of them—know very much. Hence, it is not surprising that there has been a good deal of confusion in the public mind. That this has been the case clearly appears from the results of one of Dr. Gallup's polls which, indeed, must have increased the confusion.

"Most voters like Truman's proposal to curb filibusters," Dr. Gallup announced from Princeton on March 10. This was not quite accurate since the text of his release disclosed that on the basis of the replies of the sample interrogated, barely more than half of the voters of the country knew the simplest meaning of filibuster: "Delaying tactics such as speaking to consume time." Those who claimed to know were then asked a question which either carelessly or to achieve simplicity misstated the position: "It has been suggested that the Senate change its rules so that a simple majority can call for an end to discussion instead of a two-thirds majority as is now the case. Do you approve or disapprove of this?" It was not the case that a two-thirds majority could call for an end to discussion. That was the whole point of the agitation in the Senate.

In answer to Dr. Gallup's misleading question, there were approving majorities (from 51 to 62 percent) in four sections of the country. In the South, however, 43 percent approved, and 50 percent disapproved, and only 7 percent had no opinion, whereas, in the New England and Middle Atlantic States, 12 percent had declined to answer. These percentages for the South—an area bitterly opposed to the Federal civil rights legislation—are inexplicable save in terms of the sample not knowing the meaning of the question it was being asked.

What, with all nonessential factors being put to one side, was the situation that Dr. Gallup failed to make clear? Before 1917, it was impossible to end debate in the Senate so long as any Senator wished to speak. There were frequent filibusters, for the most part engineered by individual Senators with whom sympathizing colleagues occasionally joined. A Senator, or Senators, sought to hold up Rivers and Harbors, or Public Building appropriation bills because they failed to contain items for the benefit of their States; or, as watchdogs for the Treasury, endeavored to prevent dips into the pork barrel.

This kind of obstruction was rarely successful save in the closing days of the short session of Congress that is, the one which came to an end on March 4 in odd years and which a constitutional amendment has since abolished. In a long session of Congress which had no terminal date, filibustering was much more difficult. A Senator, or Senators, could be tired out. Even in the short

session it was rare that any meritorious legislation was defeated. The public looked upon filibustering as a political stunt with some obscene features, but it seldom became excited, and never effectively so before 1917 when a filibuster began on Friday afternoon, March 2, and continued until noon on Sunday, March 4, when the Congress had to adjourn. That filibuster prevented the passage of a bill giving President Wilson authority to arm American merchant ships.

More than 500 of the 531 Members of the two Houses were in favor of the legislation, President Wilson declared. The House of Representatives had passed the bill "by an overwhelming majority but the Senate was unable to act because a little group of 11 Senators had determined that it should not." There was one remedy, the President declared—the rules of the Senate should be so altered that it could act. Public opinion was aroused, and in special session March 8, 1917, the Senate by a vote of 76 to 3 adopted a cloture rule. This provided, in brief, that if 16 Senators signed a motion to bring debate on a pending measure to a close, the presiding officer should at once state the motion to the Senate and should on the following calendar day but one lay the motion before the Senate and order a roll call. If two-thirds of the Senators present and voting wanted debate brought to a close, the "said measure shall be the unfinished business to the exclusion of all other business until disposed of." Thereafter, no Senator could speak more than 1 hour.

Since 1917 the Senate has voted 19 times on whether debate should be brought to a close but the necessary two-thirds majority of the Senators present has been obtained in only 4 cases—the Treaty of Versailles (1919), the World Court (1926), a branch banking bill (1927), and a bill creating a Bureau of Customs and a Bureau of Prohibition (1927). The 15 other motions failed to secure the necessary two-thirds majority. Eight motions have been filed but were withdrawn before they were voted on. In the last 20 years there has been no case of the Senate restraining itself by using the 1917 rule.

Meanwhile, however, it developed that there could be filibustering in parliamentary situations to which the cloture rule might not apply. In 1922, for example, after the House of Representatives had passed the Dyer Anti-Lynching bill, southern Senators tied the Senate up completely through the use of a new device. They refused unanimous consent to dispense with the reading of the Journal, insisted that it be read and then offered amendments and corrections on which they made speeches. Such items as the exact minute that the Vice President entered the Chamber, and the question of whether the prayer should be included textually in the Journal were the pegs on which Senators hung their orations. The majority leaders admitted defeat and withdrew the antilynching measure. Hence, the Vice President did not have to rule on the question of whether the rule adopted in 1917 could be used to limit dilatory tactics on a procedural question, namely, the approval of the Journal.

When the Senate yielded to public pressure and framed its cloture rule in 1917, no one gave any thought to possible obstructionist tactics in respect of such a matter as approval of the Journal. It was thought that the Senate could, by a two-thirds vote, bring a filibuster to an end. To be sure the language of the rule only provided for closing debate "upon any pending measure," but if this language did not cover all it should have covered, the neglect was inadvertent and not Machiavellian. In the Seventy-ninth Congress, when the majority leaders in the Senate desired to bring up a measure making the Committee on Fair Employment Practice a permanent government agency, there was a ruling that the cloture rule did not apply to a motion to amend the Journal. Then in the second session of the Eightieth Congress (1948), there was a filibuster on a motion to bring up an anti-poll tax bill. Senator ARTHUR H. VANDENBERG (as President pro tempore) ruled that a motion to bring a bill forward was not a "pending measure" and that the rule of 1917 could not be invoked.

In the Eighty-first Congress (March 1949), the parliamentary situation was substantially similar. Senators interested in civil-rights legislation knew that in order to get it before the Senate they would have to amend the cloture rule so that it would apply not only to pending measures but to motions to consider and to everything else. On a motion to consider proposals of amendments from the Senate Rules Committee, there was another filibuster. Vice President BARKLEY (who had not agreed with Senator VANDENBERG'S ruling of the previous year) held that the 1917 rule covered motions as well as pending measures, and that the Senate could therefore vote on whether it desired to bring debate to a close. But southern Senators garnered enough votes from the North to secure a majority to overrule Vice President BARKLEY'S decision. Hence, the filibuster continued and ended only when there was an agreement between southern and other Senators on a new rule that was satisfactory to the former.

The Senate is now able to bring debate to a close on any measure, motion or other matter, except a motion to bring up proposals for further amendment of the Senate's rules. On this a filibuster can impose a veto. On everything else there can be cloture.

But to those who wish to put an end to debate by a majority or by a two-thirds vote, this is no victory at all. For the rule provides that there must be an affirmative vote of two-thirds of the Senators duly chosen and sworn, not two-thirds of a quorum (that is, one more than a majority of the Members of the Senate), which was the requirement of the 1917 rule. On only three occasions—the first (and the important) three in my list of four successful closure petitions—has a constitutional two-thirds majority of the Senate been in favor of closing debate.

Does this shackling of the Senate threaten disaster? Are there occasions when inability to secure the two-thirds constitutional majority may do harm to the Republic? Or is it true, as many Senators have said, that "a determined majority can break a filibuster if it really tries"?

One's views of senatorial reluctance to restrict debate may, in part at least, be connected with opinions on legislation which filibusters may kill or delay. Thus, advocates of civil-rights legislation view the filibuster with distaste, even horror. On the other hand, economic royalists may think that some day filibustering Senators could prevent the socialization of a great industry. I suggest that the issue should be viewed more in the large and that there are special considerations which justify the fact that, alone among the world's legislative assemblies, the Senate of the United States cannot end debate when a majority of those present and constituting a quorum wish to do so.

With the American Executive holding office for a fixed term and never appearing before the legislature to account for his actions, it is essential that there be some place in the congressional system where the party steam roller will meet an effective barrier. The House of Representatives cannot serve this purpose. There debate is more severely limited and freedom of decision is more restricted than in any other legislative chamber in the world. A two-thirds majority can suspend the rules and, after 40 minutes of discussion, can pass a measure with no amendment being permitted. A special order from the Rules Committee can allocate time for debate between the majority and minority and provide for a vote without any opportunity for amendments. The House must accept or reject the draft the leaders have agreed to.

Since they number only 96 and show more qualities of prima donnas than do Representatives, Senators would refuse to shackle themselves as do Members of the House when they approve a special order from the Committee on Rules. Senators would insist that amendments be voted upon. But without the possibility of parliamentary obstruction—that is, filibustering—the party steamroller, driven by a President, could move as ruthlessly on the Senate side as it does on the House side of the Capitol.

More than 20 years ago, in a book called "The American Senate," I made an argument for freedom of debate and said there was a case for filibustering. I began to write in the administration of President Harding and finished when President Coolidge was in the White House. Senator Thomas J. Walsh's committee had inquired into the Teapot Dome scandals. The Republican Party machine was powerful enough to prevent any investigation by a House committee, and Republicans in the Senate were not anxious to be inquisitors. Only because the Senators who insisted on an investigation could hold up all business until their request was granted did the Senate consent to an inquiry. As to whether Senator Walsh's investigation was in the public interest, it is sufficient to remark that 3 out of 10 Cabinet members were permitted or pressed to resign and that there were several indictments and two suicides. Although in recent years the House has done some investigating which the White House did not favor, I still think that this aspect of the Senate's refusal to limit debate is of high importance and that there would be dangers in a rule permitting debate to be closed at any time by a majority or two-thirds of those present.

More recently, the issue has arisen in a different form. Freedom of debate—which I hold to be a useful weapon when it is used against a too powerful executive—has been used to hold up important legislation which presumably a majority of the Senate desired. Should I, therefore, change my view of the filibuster? I see no reason why I must answer this question in the affirmative.

Those desiring Federal civil rights legislation have, as I have said, talked a great deal about the high-handed behavior of a minority. The southern Senators, it is charged, were able to defy "not only a majority in the Senate but a majority in the country at large." Probably a majority in the country at large was willing for the civil-rights legislation to be passed. That at least is a fair inference from the attitude that the Republican and Democratic political parties expressed in their platforms and during the campaign of 1948. Whether a majority of the majority cared much is a different matter. Moreover, it is clear that a number of Senators constituting the Senate majority wished to avoid voting for the civil-rights legislation and it was for this reason that they joined with the Dixiecrats in approving the amendment of the Senate rules which I have explained above and which will prevent any Federal civil rights legislation that is not satisfactory to the South. Senators who may be only mildly in favor of drastic legislation will not be found in the two-thirds majority of "Senators duly sworn" who must agree on bringing debate to an end. As justifying such an attitude they will point to the fact that in more than a dozen State referendum votes the electorate has always rejected proposals for fair employment practices legislation—on several occasions by a three to one majority.

But it will be asked: "How can you believe in democratic government if you are willing for a minority to prevent action that a

majority is ready to take? Are you not advocating government by a minority rather than government by majority?" My reply is that there may be matters on which a minority feels so deeply that a majority should pause and say to itself, "It is not proper for us to insist"; and that if the majority does not do this, the minority has the right to use every means of obstruction that the rules of a legislative chamber allow.

Those passionately interested in the civil rights program denounce such reasoning, but there are some lines in Shakespeare's "Measure for Measure" that apply:

"Oh, it is excellent to have a giant's strength
But it is tyrannous to use it like a giant."

It is easy to say that a minority has no right to defy a majority, but there are situations in which a majority should refrain from insisting on legislation which it knows will be passionately resented by a sizable minority, particularly when it comes from one great section of the country. On these grounds, some Senators committed to the civil-rights legislation had doubts as to whether it should be passed. Instead of frankly acknowledging their doubts and saying that they would not be tyrannous, the Senators accomplished the same result be conniving with the filibusterers and giving the Senate a rule that will make it difficult, if not impossible, for the Senate to pass any measure objectionable to a similarly constituted minority.

To protect sections was one of the reasons why the framers of the Constitution provided two Senators for each State, large or small. Happily we have had no important political issues on which the populous States have had opinions opposed to those of the smaller commonwealths. We do not worry about the fact that 23 States with 23,000,000 inhabitants have the same voting strength in the Senate as 24 States with a population of 108,000,000. But although the Southern States have less than a quarter of the representation in the Senate and far less than a quarter of the population of the country, they constitute, I maintain, a great section whose opinion should be taken account of in framing legislation principally designed to apply to its inhabitants. There should be further attempts to get part of the civil-rights program agreed to. That, I think, is not impossible, and on the basis of results, there can be later agreements on further steps.

Moreover, in the case of civil-rights legislation, there is another important consideration. Many intelligent observers, who are just as much concerned about racial discrimination as are the sponsors of the legislation, believe that Federal action would do more harm than good; that it would be so bitterly resented in the South that discrimination would increase rather than decrease. Of course, one cannot be certain of this, but the history of the experiment which President Hoover described as noble in purpose should give pause to those urging an experiment with an even nobler purpose. In forcing prohibition on areas that did not wish it, the temperance advocates turned into defeats victories that they had already won. Of course, I realize that while certain areas condoned tippling, no area of the country can have a word to say in defense of lynching. But the situations are sufficiently similar to persuade the giant to wonder whether it would be wise to use its strength.

"But," it has been asked, "will not the country face grave risks if, in some emergency, legislative action is needed quickly and a little group of willful men representing no sizable minority, no great area of the country, but only themselves, proceed to make the Senate helpless and contemptible? What if there is another Pearl Harbor?" The group, I note, would have a number 32, but I think that if such a situation arose and the national interest were imperiled, there would be an easy way out.

In 1881 the Irish Nationalists tied up proceedings in the House of Commons which was then unable itself to bring debate to a close. Mr. Speaker Brand consulted with the leaders of the Government and of the Opposition and decided to end the domination of the House of Commons by Mr. Parnell and a minority of 24.

"The dignity, the credit, and the authority of this House are seriously threatened," said the Speaker, "and it is necessary that they should be vindicated. Under the operation of the accustomed rules and methods of procedure, the legislative powers of the House are paralyzed. A new and exceptional course is imperatively demanded; and I am satisfied that I shall best carry out the will of the House, and may rely upon its support, if I decline to call upon any more Members to speak, and at once proceed to put the question from the Chair. I feel assured that the House will be prepared to exercise all its powers in giving effect to these proceedings."

If, unhappily, the United States confronted an emergency in which the safety of the Nation was at stake and the Senate filibustered, a courageous Vice President could follow Mr. Speaker Brand's course: find that he had support from leaders on both sides and then announce: "The debate has come to an end, and the clerk will call the roll." If there were a real emergency, there would be no majority to set such a ruling aside.

Endorsement of Hon. Herman P. Eberharter of Pennsylvania

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, May 20, 1949

Mr. BUCHANAN. Mr. Speaker, under unanimous consent to extend my remarks, I insert in the Appendix to the RECORD two newspaper articles dated May 7, 1949, one from the Pittsburgh Post-Gazette and one from the Pittsburgh Press, on the subject of the endorsement by the Bar Association of Allegheny County on the nomination of our colleague, Mr. EBERHARTER, to be a judge of the United States District Court for the Western District of Pennsylvania:

[From the Pittsburgh (Pa.) Post-Gazette of May 7, 1949]

EBERHARTER IS ENDORSED BY BAR GROUP—RESOLUTION OFFERED BY EX-CONGRESSMAN LOUDLY ADOPTED

(By John E. Jones)

The Allegheny County Bar Association gave Congressman HERMAN P. EBERHARTER a resounding vote of confidence Friday after beating down attempts to forestall his appointment as Federal judge.

A newborn majority of young lawyers that helped swell attendance to record proportions upset Old Guard attempts to put the membership on record against Mr. EBERHARTER'S confirmation.

They did it with two thunderous voice votes. The first was against a nonconfirmation resolution. The second was for a resolution that expressed confidence in the qualifications of the Pittsburgh lawyer-Congressman for the $15,000-a-year job.

A COMPLETE VICTORY

It was a complete victory for Mr. EBERHARTER, whose fitness for the job was questioned by senior members of the association in a 2½-hour session.

NOMINATED APRIL 26

Only remaining hurdles to his appointment are approvals in sequence by the Senate Judiciary Committee and the United States Senate. He was nominated April 26 for the bench by President Truman.

Leading the new majority at the Friday bar session were former Congressman James A. Wright, author of the pro-Eberharter resolution; Common Pleas Judge Samuel A. Weiss; Congressman James G. Fulton, Mt. Lebanon Republican, and Edward V. Buckley, Pittsburgh lawyer.

They saw nothing inconsistent with Mr. EBERHARTER'S qualifications for judge ("A judge is made by experience; he's not born," said Judge Weiss) and the off-side performances attributed to EBERHARTER in the past by the association's officers.

UNFITNESS IS CHARGED

The performances were read into the record by John G. Buchanan, past president of the county bar group and chairman of the American Bar Association's judiciary committee.

"Stories have come to me from lawyers, many lawyers," Mr. Buchanan declared, "that indicate his [EBERHARTER'S] unfitness for the appointment."

Traffic court documents of Pittsburgh and Washington, D. C., and newspapers of Washington and Newark, N. J., indicate Mr. Buchanan said, the Pittsburgh Congressman has been addicted to reckless driving; to resisting arrest when apprehended, and to imbibing to extents which caused police here and in Newark to raise eyebrows and hale the suspect before magistrates.

There was another and more serious charge, undocumented in its presentation, and not privileged for publication. The bar association is not a privileged body. It is a private corporation. Mr. Buchanan said the case is known to the Attorney General's Office in Washington which is assumed to have O. K.'d Mr. EBERHARTER for the Federal bench.

All of this had no influence on the EBERHARTER defenders, one of whom—Congressman FULTON—made a special trip by plane to Pittsburgh to speak on his colleague's behalf.

"There are two routes to the bench," Mr. FULTON declared. "One, as a practicing lawyer; another, as a man who makes the laws."

That was in response to Mr. Buchanan's assertion that Mr. EBERHARTER'S interest in politics had been "so absorbing as to keep him out of the practice of law."

Mr. Wright forecast that Mr. EBERHARTER will bring to the bench "an experience that very few men can equal."

More than 700 of the 1,100-member bar association overflowed the association's assembly hall in City-County Building for the session. W. Denning Stewart, president, presided.

[From the Pittsburgh (Pa.) Press of May 7, 1949]

CANDIDATE GIVEN GREAT OVATION—COUNTY BAR ENDORSES EBERHARTER FOR JUDGE—LAWYERS DEFEAT RESOLUTION ASKING NOMINEE TO ANSWER CHARGES

With a wall-shaking roar, the Allegheny County Bar Association yesterday endorsed Congressman HERMAN P. EBERHARTER for the Federal bench here.

A moment before, it had voted down with equal volume a resolution which was in effect an ultimatum.

The defeated resolution would have required Mr. EBERHARTER to ask within 5 days for the right to appear before the association and answer serious allegations made against him.

EIGHT HUNDRED ATTEND MEETING

If he failed to make such a request, the bar association would have been on record as opposing his confirmation by the United States Senate.

The high-ceiling bar association room on the ninth floor of the City-County Building was jammed to overflowing with about 800 perspiring and impatient attorneys when President W. Denning Stewart called the meeting to order at 3:30. They represented three-fourths of the membership.

Fifteen lawyers paid back dues in order to put themselves in good standing so they could vote on the EBERHARTER question and to take part in the annual election.

BUCHANAN MADE CHARGES

John G. Buchanan, past president of the county bar and at present chairman of the judiciary committee of the American Bar Association, made the charges against Mr. EBERHARTER.

James A. Wright, former Democratic colleague of Mr. EBERHARTER in Congress, led the fight to defeat the Buchanan resolution. He also made the motion which brought Mr. EBERHARTER the association's endorsement.

He was backed up strongly by Judge Samuel A. Weiss, also a former congressional colleague of the judicial candidate, and by Republican Congressman JAMES G. FULTON, who flew in from Washington to attend the meeting.

APPLAUD SPEAKERS

Quite a few office-holding Democratic attorneys were in the crowd and they cheered and applauded vigorously when Messrs. Wright, Weiss, and Fulton gave their answers to some of the Buchanan charges.

While the members listened in strict silence, Mr. Buchanan detailed for nearly an hour the reasons why he believed the association should pass his resolution.

He said Mr. EBERHARTER lacked the legal knowledge, through failure to practice law, to sit on the Federal bench—that he had talked to many lawyers who said they had never heard of him in their practice and who advised him of "his unfitness for the office."

CITES COMMITTEE'S POWER

He said that, as a member of the judiciary committee of the American Bar Association, he and his fellow committeemen have passed on the qualifications of many candidates for the Federal bench. The committee has the power, he said, to approve or oppose confirmation of candidates in the name of the entire association.

"Never has the committee heretofore been confronted with such reports as it has received in the Eberharter case," Mr. Buchanan said.

He carefully pointed out that he did not have full, docketed information on some of the charges he made, though he had tried to obtain it. He said he was told when he inquired of the United States Attorney's office that the information he sought was confidential.

ALLEGED ARREST

He said one report goes back to prohibition days when a complaint was made before a United States Commissioner that Mr. EBERHARTER resisted a Federal officer while he (Mr. EBERHARTER) was transporting moonshine. He said he was told the charge was dropped when Mr. EBERHARTER paid for repairs to the agent's car, damaged during the incident.

"When I asked for the record in that case," Mr. Buchanan said, "the United States district attorney told me they were secret but will be available to the Senate Judiciary Committee."

Mr. Wright, Judge Weiss, and Mr. Fulton did not refer to this alleged arrest during their defense of Mr. EBERHARTER.

ANOTHER CHARGE

"The other charge was far more important," Mr. Buchanan said. "The administrator of the Public Works Administration asked the Department of Justice to investigate to see whether Mr. EBERHARTER, then a Congressman, should be prosecuted. If found guilty, he could be fined $10,000, sent to prison, and forever barred from holding a position of honor and trust in the Federal Government.

"The story as it came to me was that a bid was submitted by a contractor for a PWA job. The bid was the low one received but the financial responsibility of the contractor was questioned.

"Mr. EBERHARTER interceded for him and he got the contract. Mr. EBERHARTER is said to have charged the contractor $5,000, but when the contractor complained, he reduced the charge to $3,500 but actually was paid only $1,000."

DID NOT PROSECUTE

"The United States Attorney, after investigation, I am told, decided there was nothing to prosecute.

"But should not Mr. EBERHARTER now publicly state whether he made a $5,000 charge, later agreed to accept $3,500 and whether he received $1,000—in short, was he guilty as charged?"

Judge Weiss replied to this charge by stating that, in the first place, the contract was for the Highland Park Bridge and was given out by the county commissioners and not by the Public Works Administration.

ENGAGED EBERHARTER

He said that when the county commissioners apparently intended to give the job to a higher bidder, the contractor with the lowest bid engaged Mr. EBERHARTER as counsel. And by threatening to get an injunction against the commissioners, the judge said Mr. EBERHARTER was able to get the low bid accepted.

"He asked for $1,000 for his legal service and he received $1,000," Judge Weiss said.

Judge Weiss, Mr. Wright, and Mr. Fulton all praised Mr. EBERHARTER's service in Congress, emphasizing that he was almost always present for roll calls and missed very few meetings of the important Rules Committee of which he is a member.

STRESS QUALIFICATIONS

All three men made a point that Mr. EBERHARTER's studious interest in his work in Congress has qualified him for the Federal judiciary.

To the report that Mr. EBERHARTER was taken off a Pennsylvania Railroad train at Newark, N. J., in 1945 because he was drunk and creating a disturbance, Judge Weiss, who said he is a tee-totaler, shouted:

"Who says that only tee-totalers are eligible to sit on the bench?"

And he added that after the last bar association party for the superior court judges, some of those present were lucky they didn't crack up their cars while driving home.

READS NEWSPAPER CLIPPINGS

Mr. Buchanan read clippings from Pittsburgh and Washington papers to show that Mr. EBERHARTER had other brushes with the law in traffic matters.

One of these was in 1939, he said, when an officer arrested him on the Boulevard of the Allies and reported he had liquor on his breath. A police physician reported he was not under the influence of liquor and he was fined $10 for a traffic violation—reckless driving.

Mr. Buchanan also read news stories concerning a traffic incident in Washington which resulted in "someone paying a $25 forfeit after the Eberharter car had made a wrong turn and the driver refused to stop, dragging a protesting officer for 30 feet or more."

COMMITTEE HAS DATA

Just before the vote was called for, Mr. Buchanan said all of this information is in the hands of the Senate Judiciary Committee, which reports to the Senate whether or not it believes the entire body should confirm a nomination of the President.

He also said that he tried to give the information to a secretary to President Truman but was told the man was "too busy" but would call back. He never did, Mr. Buchanan said.

TWO RESOLUTIONS

The Buchanan resolution was:

"I move the adoption of the following resolution: That this association opposes the nomination of HERMAN P. EBERHARTER as a District Judge of the United States for the Western District of Pennsylvania, and requests that the United States Senate reject his nomination, unless within 5 days from this date the said HERMAN P. EBERHARTER shall request an opportunity to be heard personally at a meeting of this association to prove his qualifications and fitness for the office of district judge."

The Wright resolution was:

"*Resolved*, That the Bar Association of Allegheny County express itself as having confidence in the qualifications of Congressman HERMAN P. EBERHARTER for the office of judge of the District Court of the United States for the Western District of Pennsylvania."

North Atlantic Pact

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 20, 1949

Mrs. ST. GEORGE. Mr. Speaker, under unanimous consent to revise and extend my remarks in the Appendix of the RECORD, I include the following speech made before the Senate Foreign Affairs Committee by former Representative Hamilton Fish:

At the outset of my remarks I desire to congratulate Chairman CONNALLY for urging full diplomatic recognition of Spain. It is sheer humbug to maintain an American Ambassador in Soviet Russia, the most despotic and tyrannical government in the world, and refuse to send an Ambassador to Spain. What is sauce for the Communist goose is sauce for the Fascist gander.

While Soviet Russia is conducting a cold war against us and directing Communist expansion by propaganda, revolution, and force in China and throughout the world, Spain is on our side against world communism but is powerless to promote fascism beyond its borders. It is none of our business what forms of government exist in Soviet Russia or Spain as much as we may disagree and deplore them. How long will Secretary Acheson abuse the patience of the American people in relation to China and Spain? How long must the American people endure his ineptitudes and blunders?

The attainment of world-wide communism is still the guiding policy of the Red plotters in the Kremlin at Moscow. As a result of our tragic policy of appeasement toward the

Chinese Communists and our ignoring of the Wiedemeyer report, China is being turned over to world communism and the rest of Asia will fall like a ripe plum. Within the next decade when Soviet Russia is prepared and has a supply of atomic bombs I predict she will start World War III and unleash at least 2,000,000 highly trained Chinese soldiers to march on the Suez Canal and fight at Armageddon.

The Communists throughout the world have never deviated since 1917 from their fundamental objective of achieving world communism.

I quote from the Communist manifesto by Karl Marx and Friedrich Engels which is the bible of all Communists:

"In short, the Communists everywhere support every revolutionary movement against the existing social and political order of things. In all these movements they bring to the front, as the leading question in each case, the property question, no matter what its degree of development at the time. The Communists disdain to conceal their views and aims. They openly declare that their ends can be attained only by the forcible overthrow of all existing social conditions. Let the ruling classes tremble at a Communist revolution. The proletarians have nothing to lose but their chains. They have a world to gain."

As a former noninterventionist leader in Congress, and proud of it, as every statement we made has been vindicated many times over by time and events, I find myself now compelled, because of the rotten mess we made of it in Europe, to urge our joining the North Atlantic Pact as a peace measure in defense of the remaining free nations of Europe against Soviet aggression. Having helped to wreck and ruin half of Europe we have certain moral obligations toward the nations of western Europe, including Germany, not to let them be swallowed up, one by one, by the Red octopus. In addition, our own national security is involved with half the world already Communist. The place to stop the Red armies is at the Elbe and the time is now.

Let us be realistic. The Russian Communists have a definite plan of world revolution and armed conquest. The Marshall plan is merely a relief and rehabilitation measure providing food and equipment for Europe. It does not protect or defend the free nations of Europe from Soviet armed aggression. It does not achieve security for ourselves or any other nation. Without the North Atlantic Pact our foreign policy is useless and bankrupt. The Marshall plan is nothing more than a paper blockade and as ineffectual. It opposes a paper curtain to the iron curtain. It neither frightens, checks, or defeats the Communist plan for revolution and conquest. It assumes that the nations receiving our gifts automatically increase production and acquire moral force and physical power to withstand the Communist colossus. No nation ever restored its stability and strength by depending on hand-outs. That can only be done by their own efforts and hard labor, but even then a defensive military alliance is necessary.

The Communist aggressors fear and respect only military might. We should immediately reinforce the Marshall plan by the North Atlantic Pact together with Britain, France, Italy, Belgium, Holland, Norway and Denmark. If I had my way Spain would also be included. It should be done at once so that there will be no doubt of a united military front of all western democratic nations and Spain to oppose and crush any attempt by the Red Army to violate the peace of the world by overt acts of aggression in western Europe.

It is their only chance to survive as free nations. Let them pool their armed forces under a single general staff. Once the Communist armies overrun Europe it will be the end of Great Britain and we will be confronted with an aggressive and militant Communist Europe. The Communists are on the march in China and will probably overrun all Asia within a few years. Our own security is at stake, and if western Europe falls before the Communist juggernaut, it would leave us almost alone to wage an irrepressible war with world communism.

Although world communism is on the march in Europe and Asia, it is not inevitable here. It must be stopped. It can be stopped.

The words of Patrick Henry apply today more than ever before: "Is life so dear, or peace so sweet as to be purchased at the price of chains and slavery?"

That is the paramount issue in the world today—freedom and democracy or slavery and totalitarianism.

There can be no compromise between freedom and slavery, nor between communism and Americanism.

Buffalo Harbor Improvement

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 20, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution of the Common Council of the City of Buffalo:

CITY OF BUFFALO,
May 19, 1949.

Hon. ANTHONY F. TAURIELLO,
House of Representatives,
Washington, D. C.

DEAR SIR: Pursuant to directions of the Common Council of the City of Buffalo, I enclose to you herewith copy of a resolution adopted by that body at a regular session held May 3, 1949, in relation to Buffalo Harbor improvement.

Respectfully submitted.

JOSEPH J. TRONOLONE,
City Clerk.

Resolution 218

Resolution on Buffalo Harbor improvement

Whereas the deepening and improvement of the Buffalo Harbor is a matter of deep concern to the citizens of the city of Buffalo and particularly to business and industry using its facilities; and

Whereas certain improvements to said harbor were authorized by act of Congress, dated March 2, 1945, as set forth in House Document No. 352, Seventy-eighth Congress, first session; and

Whereas it has been indicated that the improvement as authorized would not at present be adequate to meet future navigation requirements; and

Whereas Hon. ANTHONY F. TAURIELLO, Member of the House of Representatives, introduced a bill to review the reports on Buffalo Harbor as submitted in said House Document No. 352, with a view to determining if any further improvements in said project should be made. Now, therefore be it

Resolved, That the Congress of the United States is hereby memorialized to approve and pass Congressman TAURIELLO's bill, known as H. R. 3823, Eighty-first Congress, first session; and be it further

Resolved, That copies of this resolution be transmitted by the city clerk to the President of the United States, the majority leaders of the House of Representatives and the Senate, the Members of Congress from western New York area and the United States Senators from the State of New York.

Slack-Water Route From the Gulf of Mexico to the Great Lakes by Way of the Tennessee-Tombigbee

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Friday, May 20, 1949

Mr. RANKIN. Mr. Speaker, we have moved one step nearer to the development of a slack-water route from the Gulf of Mexico to the Great Lakes, and to all points on the Ohio, the Monongahela, the Allegheny, the upper Mississippi, the Missouri, and the Illinois, as well as the Tennessee, the Tombigbee, and the Cumberland Rivers.

The Senate, after a thorough investigation, and extensive hearings, included in the appropriation bill the small amount of $2,500,000 to begin work on the Tennessee-Tombigbee inland waterway which will supply the missing link in the greatest inland-waterway system in the world.

It will furnish a slack-water route from the Gulf of Mexico to the Tennessee River, at the mouth of Yellow Creek on the Mississippi State line, and a downstream route from that point 215 miles to Paducah, Ky., on the Ohio River, and then a downstream route on the Ohio 47 miles to Cairo on the Mississippi.

This will mean more to the people in the States of Ohio, Illinois, Indiana, Kentucky, Pennsylvania, West Virginia, Michigan, Minnesota, Wisconsin, Missouri, Kansas, Nebraska, Iowa, North and South Dakota, and all the other States of the great Northwest, as well as to the people of Arkansas, Louisiana, Mississippi, Alabama, Florida, Texas, Georgia, Tennessee, and Virginia, and many other States than any other project of its kind ever proposed.

It is the only possible way in which a slack-water route can be provided connecting the Ohio River, the upper Mississippi, the Missouri, the Illinois, and the Great Lakes with the Gulf of Mexico.

The Army engineers say that nowhere else on the face of the earth can the traffic be transferred from one major watershed to another with so much ease, so little expense, and such tremendous savings in transportation costs and distances.

This project has already been authorized by Congress. This is merely a small appropriation to begin the work on it.

I appeared before the Senate committee on this proposition, at which time I inserted four tables worked out by the Army engineers showing what this project would mean in savings to the people

along the Ohio, the Mississippi, the Missouri, the Illinois, the Cumberland, the Tennessee, the Monongahela, and the Allegheny, as well as the Tombigbee Rivers.

At the beginning of my testimony I was interrupted by the distinguished Senator from South Dakota, Senator GURNEY. Beginning at that point I am inserting the rest of my statement in the RECORD.

I hope every Member of the House will read it, and help us to hold this small item in the bill.

The matter referred to follows:

Senator GURNEY. Congressman RANKIN, let me say that I have been, since I have come to the Senate, always a supporter of the north-bound channel of the barge line there that takes in the Tombigbee. I feel that it is worth while.

Representative RANKIN. I know that and I am grateful, Senator. I remember your support of it all through the years, and I remember your statements for it on the floor of the Senate.

Now, let me say to you in the beginning that the Army engineers say they would like to have $5,000,000 to start this project now. I am not quoting anybody, individually, but that is what they say they would like to have to start with.

If this amendment is inserted in the Senate, I do not have the slightest doubt but that it will be retained in the House.

Let me show you where we are. I brought this map down to show you. You can see from those rivers there that it is almost a duplicate of this map except the lines are made heavier in order that you might more easily see what we have at stake.

Somebody said the other day that there is only a foot or two of water in this river. Where I am pointing is the confluence of Browns and Mackys Creeks, which join to form the Tombigbee about 25 miles from the Tennessee River. My father used to go to Walkers Bridge just below that point on steamboats that came all the way up from Mobile.

There is a slight sand ridge between those two rivers, the Tennessee and the Tombigbee, and for more than a hundred years the Army engineers refused to approve this project, because they said they would have to have lifts both ways, and there was no water supply at the summit.

PICKWICK DAM

But in 1938, the Tennessee Valley Authority built the Pickwick Dam on the Tennessee just below the mouth of the Yellow Creek, and raised the water level 55 feet. The Army engineers made a new survey and came back and said that would solve the problem. They could cut through that sand ridge and put the summit of the project in the Tennessee River.

That would give us a slack or still water route for returning or upstream traffic to the Tennessee River, and a downstream route from that point 215 miles to Paducah on the Ohio River or 262 miles to Cairo on the Mississippi.

Mr. Chairman, in order that the members may have these figures before them, I am inserting four tables here as part of my remarks, which show the savings this project will provide.

As I said, they have been worked out by the Army engineers, and can be thoroughly relied upon.

MULTIPLE PROJECT BENEFITS

Here is a table showing the cost per ton and the savings per ton this project will provide on the fuel bill alone, for upstream traffic:

TABLE 1.—*Comparison of costs per ton of upstream traffic*

From—	To—	Cost via Mississippi per ton	Cost via Tennessee-Tombigbee per ton	Average savings per ton
New Orleans, La.	Cairo	$2.02	$1.32	$0.70
	Paducah	2.10	1.26	.84
	Tennessee-Tombigbee junction	2.42	.99	1.43
Mobile, Ala.	Cairo	2.39	.95	1.44
	Paducah	2.47	.89	1.58
	Tennessee-Tombigbee junction	2.79	.62	2.17
Port Birmingham, Ala.	Cairo	2.96	.95	2.01
	Paducah	3.04	.89	2.15
	Tennessee-Tombigbee junction	3.36	.62	2.74
Demopolis, Ala.	Cairo	2.68	.67	2.01
	Paducah	2.76	.61	2.15
	Tennessee-Tombigbee junction	3.08	.34	2.74
Columbus, Miss.	Cairo	2.83	.51	2.32
	Paducah	2.91	.45	2.46
	Tennessee-Tombigbee junction	3.23	.17	3.06
Aberdeen, Miss.	Cairo	2.88	.46	2.42
	Paducah	2.96	.40	2.56
	Tennessee-Tombigbee junction	3.28	.13	3.15
Fulton, Miss.	Cairo	2.92	.41	2.52
	Paducah	3.01	.35	2.66
	Tennessee-Tombigbee junction	3.33	.08	3.25

Here is a table showing the cost, and the savings, on a barge load, or tow, of 3,500 tons.

I might say here, that except on the traffic from the larger cities such as Pittsburgh, Chicago, and Detroit, a majority of the traffic, at least until recently, was handled by these 3,500-ton tows.

TABLE 2.—*Table showing cost per tow of barges carrying 3,500 tons, and showing savings via Tennessee-Tombigbee*

From—	To—	Cost via Mississippi per tow of 3,500 tons	Cost via Tennessee-Tombigbee per tow of 3,500 tons	Average savings per tow of 3,500 tons
New Orleans, La.	Cairo	$7,070	$4,620	$2,450
	Paducah	7,350	4,410	2,945
	Tennessee-Tombigbee junction	8,470	3,465	5,000
Mobile, Ala.	Cairo	8,365	3,325	5,040
	Paducah	8,645	3,115	5,530
	Tennessee-Tombigbee junction	9,765	2,170	7,595
Port Birmingham, Ala.	Cairo	10,360	3,325	7,035
	Paducah	10,640	3,115	7,525
	Tennessee-Tombigbee junction	11,760	2,170	9,590
Demopolis, Ala.	Cairo	9,380	2,345	7,035
	Paducah	9,660	2,135	7,525
	Tennessee-Tombigbee junction	10,780	1,190	9,590
Columbus, Miss.	Cairo	9,905	1,785	8,120
	Paducah	10,185	1,575	8,610
	Tennessee-Tombigbee junction	11,305	595	10,710
Aberdeen, Miss.	Cairo	10,080	1,610	8,470
	Paducah	10,360	1,400	8,960
	Tennessee-Tombigbee junction	11,480	455	11,025
Fulton, Miss.	Cairo	10,255	1,435	8,820
	Paducah	10,535	1,225	9,310
	Tennessee-Tombigbee junction	11,655	280	11,375

Some of the operators I am told are now using 10,000 tons. So here is a table showing the cost and savings this project would provide on a tow of barges carrying 10,000 tons:

TABLE 3.—*Table showing cost per tow of barges carrying 10,000 tons and showing savings via Tennessee-Tombigbee*

From—	To—	Cost via Mississippi per tow of 10,000 tons	Cost via Tennessee-Tombigbee per tow of 10,000 tons	Average savings per tow of 10,000 tons
New Orleans, La.	Cairo	$20,200	$13,200	$7,000
	Paducah	21,000	12,600	8,400
	Tennessee-Tombigbee junction	24,200	9,900	14,300
Mobile, Ala.	Cairo	23,900	9,500	14,400
	Paducah	24,700	8,900	15,800
	Tennessee-Tombigbee junction	27,900	6,200	21,700
Port Birmingham, Ala.	Cairo	29,600	9,500	20,100
	Paducah	30,400	8,900	21,500
	Tennessee-Tombigbee junction	33,600	6,200	27,400
Demopolis, Ala.	Cairo	26,800	6,700	20,100
	Paducah	27,600	6,100	21,500
	Tennessee-Tombigbee junction	30,800	3,400	27,400
Columbus, Miss.	Cairo	28,300	5,100	23,200
	Paducah	29,100	4,500	24,600
	Tennessee-Tombigbee junction	32,300	1,700	30,600
Aberdeen, Miss.	Cairo	28,800	4,600	24,200
	Paducah	29,600	4,000	25,600
	Tennessee-Tombigbee junction	32,800	1,300	31,500
Fulton	Cairo	29,300	4,100	25,200
	Paducah	30,100	3,500	26,600
	Tennessee-Tombigbee junction	33,300	800	32,500

Here is another table which the Army engineers have worked out showing the cost per tow of barges carrying 14,000 tons, and also the savings which these barges would provide.

As I pointed out, these larger barges are being used more and more as time goes on.

TABLE 4.—*Table showing cost per tow of barges carrying 14,000 tons and showing the savings via the Tennessee-Tombigbee*

From—	To—	Cost via Mississippi per tow of 14,000 tons	Cost via Tennessee-Tombigbee per tow of 14,000 tons	Average savings per tow of 14,000 tons
New Orleans, La.	Cairo	$28,280	$18,480	$9,800
	Paducah	29,400	17,640	11,760
	Tennessee-Tombigbee junction	33,880	13,860	20,020
Mobile, Ala.	Cairo	33,460	13,300	20,160
	Paducah	34,580	12,460	22,120
	Tennessee-Tombigbee junction	39,060	8,680	30,380
Port Birmingham, Ala.	Cairo	41,440	13,300	28,140
	Paducah	42,560	12,460	30,100
	Tennessee-Tombigbee junction	47,040	8,680	38,360
Demopolis, Ala.	Cairo	37,520	9,380	28,140
	Paducah	38,640	8,540	30,100
	Tennessee-Tombigbee junction	43,120	4,760	38,360
Columbus, Miss.	Cairo	39,620	7,140	32,480
	Paducah	40,740	6,300	34,440
	Tennessee-Tombigbee junction	45,220	2,380	42,840
Aberdeen, Miss.	Cairo	40,320	6,440	33,880
	Paducah	41,440	5,600	35,840
	Tennessee-Tombigbee junction	45,920	1,820	44,100
Fulton, Miss.	Cairo	41,020	5,740	35,280
	Paducah	42,140	4,900	37,240
	Tennessee-Tombigbee junction	46,620	1,120	45,500

Now let me show what all this means.

Let us take the river systems that are affected above this project. Just forget us local people for the time being. As I said to a man the other day, this project would be worth more in dollars and cents to Detroit, Mich., than to the district I represent. It will be worth far more in dollars and cents to Pittsburgh, Pa., or Cincinnati, Ohio, than to the district I represent. It will be worth far more in dollars and cents to the city of St. Louis or Chicago or Kansas City or Minneapolis or St. Paul or to Memphis or New Orleans than it will to the district I represent.

This bottleneck of our whole internal waterway system just happens to be in my district.

LOCKS AND DAMS

Now, there are 47 locks and dams on the Ohio River between Cairo and Pittsburgh. Then there are 13 locks and dams on the Monongahela and 8 on the Allegheny. All that traffic is simply stymied behind the swift current of the Mississippi River, so far as their returning, or north-bound, traffic is concerned.

In addition to that, on the upper Mississippi we have 26 locks and dams providing a splendid navigation channel all the way up to Minneapolis and St. Paul, Minn.

On the Illinois River we have seven locks and dams, extending our inland waterway system into the Great Lakes.

All those locks and dams together cost more than $400,000,000, and yet they are virtually isolated for want of the very connection this project will provide.

On the Missouri River, a 9-foot channel is being developed up to Sioux City, Iowa. This project will be worth untold millions of dollars to the people of that area.

We get our grain from that section. The State of Mississippi, and I dare say the State of Alabama, raises no wheat. The same thing is true of Louisiana, Georgia, Tennessee, and all the other States in that part of the South.

They ship it down to us in barges. Those barges can come down the Mississippi flying, and so can these barges from Pittsburgh, Chicago, Minneapolis, and St. Paul; but when they start back here is the trouble. It is 869 miles from Cairo to New Orleans. That is the finest inland waterway in the world for downstream traffic, and the worst for upstream traffic.

You see, when that river is running 5½ or 6 miles an hour your barges cannot move against it. All they can do is stand still and burn up gasoline. A barge only moves about 5½ miles an hour in still water. We have an intercoastal waterway protected by a chain of islands here, extending all the way from Florida to the Mexican line. It is 156 miles from New Orleans to Mobile along this intercoastal waterway—which, of course, is in slack or still water.

This Tombigbee inland waterway is already completed up to Demopolis, Ala., at the mouth of the Warrior River, where I am pointing on the map. Eighteen locks and dams are to be provided between Demopolis and the Tennessee River.

It will be 481 miles from Mobile up this Tombigbee route to the Tennessee River. That will be in still water, just as this is still water up the Ohio River behind those 47 locks and dams between Cairo, Ill., and Pittsburgh, Pa. When you get to the Tennessee River, it is downstream 262 miles to Cairo, Ill., or 215 miles to Paducah on the Ohio River.

So the traffic will come down the Mississippi River to New Orleans and then go across to Mobile along this intercoastal waterway, then back up inland waterway to the Tennessee River, then downstream to Paducah, that is the traffic going up to the Ohio River, or downstream to Cairo for the traffic going to the upper Mississippi, the Missouri, the Illinois, or the Great Lakes.

This project was unhesitatingly approved by the Ohio Valley Improvement Association, of which Mr. Walter M. Larence, of Cincinnati, I believe, is the chairman. He was down here the other way. When the Rivers and Harbors Congress met here, Mr. Larence was on the committee, and they put at the end of the projects they recommended this Tennessee-Tombigbee inland waterway.

There is a firm in Pittsburgh that is engaged in the transportation business. They own a string of barges that come down the Ohio and the Mississippi Rivers bringing materials produced in Pittsburgh, such as steel, farm machinery, and other manufactured products. When they go back they take oil, bauxite, sulfur, salt, lumber, cottonseed meal, and other materials they need.

This firm is tremendously interested, because they realize what it would mean for their returning traffic.

I am going to give you the figures on that in just a moment, but first I want to say one other thing.

Nobody need kid themselves; if we ever have another war, it is going to be fought with airplanes and atomic bombs. The greatest defense project the world has ever known is the Oak Ridge project on the Tennessee River. This inland waterway will cut the water distance between Oak Ridge and New Orleans by 650 miles, and between Oak Ridge and Mobile by 806 miles, and at the same time give us two outlets to the sea instead of one.

In addition to that, it will give us slack-water route into the Tennessee River and cut the cost of transportation from the Gulf to the Tennessee by more than 75 percent or from $2.79 to 62 cents a ton.

Now, I am going to take some of the barges they handle here, the big ones, because they are drifting rapidly toward the use of 14,000-ton barges. However, I am going to insert some tables showing the savings on smaller loads also.

DISTANCES INVOLVED

Senator STENNIS. Before you leave that, will you retrace your route there from Cairo, Ill., to New Orleans and back to Cairo, and give us that mileage?

Representative RANKIN. Yes; let's take the traffic going downstream from Cairo, Ill. We will say a barge comes down the Missouri River, or down the upper Mississippi, or down the Illinois River, or down the Ohio River. They all come through Cairo.

Going from Cairo to New Orleans, you go downstream 869 miles. That is said to be the finest inland waterway on earth; and I think it is. I have never found one to equal it.

Then it is 156 miles across along the intercoastal waterway from New Orleans to Mobile. If I make a mistake, I want Colonel Jewett, the Army engineer who is sitting near me, to correct me. I do not want to mislead the committee.

It is 481 miles from Mobile to the Tennessee River, of which portion 221 is already developed up to the mouth of the Warrior River at Demopolis.

When you get to the Tennessee River it is 215 miles downstream to Paducah on the Ohio, and 47 miles from Paducah down the Ohio River to Cairo.

In other words, the round trip is 1,768 miles. Of that 1,768 miles, 1,131 or approximately two-thirds of it is downstream, and the rest of it is in slack water. The Army engineers tell me—and I am quoting every engineer that has studied this question from General Reybold, General Feringa, General Wheeler, to our distinguished company here today, Colonel Jewett—they tell there is not another place on the face of the earth, nor can they find a place on the face of the earth where a project of this kind can be constructed so that you can transfer the traffic from one major watershed to another with so much ease, so little expense, and such tremendous savings in transportation costs and distances.

Some fellow up in the House got up and said, "My God, JOHN RANKIN is the only man on earth that could have found a project that would be downstream both ways."

But I did not make this project. I did not build these rivers. De Soto discovered the upper Tennessee River more than 400 years ago. He came down it to where Guntersville now stands. He left it there and went down to Tuscaloosa, got into a fight with the Indians and came back across to the site of the present city of Memphis.

He thought it was the same stream. De Soto's map shows the Tennessee River curving southward and making the Mississippi. I have a copy of his map in my files now.

Now let us see what this project will mean. Let us take the 14,000-ton barges. Here is one [pointing to the picture on the map] coming down from Detroit, Mich. It is loaded with automobiles and accessories. It is evidently coming from Detroit. It is coming out of the Great Lakes down the Illinois River.

Here is one coming from Pittsburgh, Pa., loaded with the manufactured products of Pittsburgh.

Here is one over here that is coming, I believe, down the Missouri. I do not know what it is loaded with; probably with grain

or beef or other products that those people out in that area produce.

Suppose that 14,000-ton barge gets to New Orleans; what does it cost to go back? If it goes back by way of the Mississippi River to Cairo, it will cost $28,280, for its fuel bill alone.

Going back via Tombigbee and the Tennessee to Cairo the cost would be $18,480, or a saving of $9,800 on its fuel bill alone.

Senator GURNEY. That is about one-third.

Representative RANKIN. That is about right.

Suppose it is going back to Pittsburgh or to Cincinnati or Wheeling, or to any point on the Allegheny, or the Monongahela, it would cut the cost from $29,400 to $17,640, saving $11,760 on its fuel bill alone going back to any point on the Ohio River, or its tributaries.

Suppose it is going into the Tennessee, suppose we are in an emergency and it is going back to Oak Ridge, on the Tennessee River; it will cut the cost from $33,880 to $13,860, or a saving of $20,020, on the fuel bill alone. That is from New Orleans.

Every 14,000-ton barge that goes into the Tennessee River from New Orleans via this route would save $20,020 on its fuel bill alone, or two-thirds, as Senator Gurney said.

Suppose it is going from Mobile, carrying a load of that bauxite, we will say, that they are bringing in from South America, or salt, or lumber, or cottonseed meal, hulls, anything that they take back in those barges; going back from Mobile to Cairo, the cost would be reduced from $33,460 to $13,300 just on the fuel bill alone, a saving of $20,160.

Now, that means every barge that is going, not only to Cairo, but to Chicago, any point on the Great Lakes, or the upper Mississippi, all the way up to Minneapolis, St. Paul, anywhere up the Missouri River to Sioux City, Iowa.

Suppose it is going the other way. We will say that it is going to Pittsburgh, Pa.

The fuel bill would be cut from $34,580, to $12,460 or $22,120. That would be the saving on its fuel bill alone. That is a 14,000-ton barge going from Mobile all the way up to Pittsburgh, or to any other point on the Ohio or any of its tributaries.

Suppose it is going into the Tennessee River; your cost would be cut from $39,060 down to $8,680, or a saving of $30,380 on its fuel bill alone. That is for material, we will say, that is going to supply our defense plant at Oak Ridge or any other point on the Tennessee River.

Now, let us go a little further. We have this Tombigbee developed up to Demopolis. I want to say, too, that one of these things these barges take back is oil. A man from Pittsburgh, talking to me the other day, said, "We are hauling this machinery and other manufactured articles down. We are hauling oil back."

One of the biggest oil fields that has been discovered in recent years is just to the west of Demopolis, Ala. The biggest oil well ever brought in east of the Mississippi River was in Jasper County, Miss., about where I am pointing at this time. It produced a thousand barrels of oil a day, and I am told that no other well has ever been brought in east of the Mississippi that produced that amount.

By the way, this is the saving that the Birmingham traffic would enjoy, because every vessel from Birmingham has to come down the Warrior to Demopolis to go either way. These things I am referring to will apply to traffic going from Birmingham or Demopolis. Let us see what they amount to.

Going from Demopolis to Cairo, the cost will be cut from $37,520 on one of these 14,000-ton barges to $9,380, or a saving of $28,140 on its fuel bill alone.

In other words, that barge going back to Detroit, Mich., would save $28,140 on its fuel bill alone. That barge going to Pittsburgh would save $34,440, or have its fuel bill cut from $40,740 to $6,300, a saving, as I said, of $34,440.

These figures are worked out by the Army engineers; they are not my figures.

If it were going into the Tennessee, supplying oil, or other materials we will say to the Oak Ridge project, the cost would be cut from $43,120 to $4,760, or a saving of $38,360 on its fuel bill alone.

Now, you talk about water development, traffic transportation development, but nowhere else on earth can the same amount of money bring the same benefits to the people of this vast area, all the Missouri River Valley, all the way up the Mississippi River, all the way up the Illinois into the Great Lakes, and along the Great Lakes, all the way up the Ohio River to Cincinnati, Wheeling, Pittsburgh, and up the Monongahela or the Allegheny, and then along the Tennessee River all the way up to Oak Ridge or to Knoxville. There is not another project on earth and there cannot be one found or constructed that will produce such benefits. The nearest we have ever found was a connection between the Don and Volga in Russia, and it does not have the benefit of the downstream traffic both ways for two-thirds of the distance.

The Senator from South Dakota asked what would happen to it if it went back to the House. I do not have the slightest doubt but that the House will sustain it. I have talked to many Members since this bill was up before. They say that, if the Senate gives us an appropriation for this project, it will be sustained in the House.

All we are asking is that you give us a reasonable amount. I would like to see you provide 5 or 10 million dollars. I think we ought to have that amount. The Army engineers could start with a smaller amount.

But I think it is imperative that we construct this project now as rapidly as possible.

ESTIMATED TOTAL COST

Senator THOMAS. What will it cost, all told?

Representative RANKIN. The latest estimate I see is $116,000,000. Someone said that the advance in the cost of labor and also the advanced cost of materials would probably run it up to $136,000,000 all told.

By the way, they would employ 5,000 people, and we seem to be leading into unemployment in this country, in every section of it.

Senator ELLENDER. What size channel is that?

Representative RANKIN. Nine-foot channel with a 12-foot base, you understand, in the locks, so that if you want to increase it to 12, that could be done.

Senator ELLENDER. According to the figures you have just given us, I would assume that if goods are to be sent from Pittsburgh to Mobile, it would be more profitable to go by way of New Orleans.

Representative RANKIN. That is right.

Senator ELLENDER. Although there is about 200 miles difference.

Representative RANKIN. You can go from Pittsburgh to New Orleans without spending a nickel, if you go with the current, and that current is pretty fast after you reach the Mississippi. That stream sometimes runs 6 or 7 miles an hour. That traffic would go down the river, down the Mississippi River to New Orleans, and then it would go back through this slack-water route. In other words, the traffic would move counterclockwise.

Senator ELLENDER. You said there are several locks up there?

Representative RANKIN. Eighteen locks and dams between Demopolis and the Tennessee River.

PROPOSED CHANNEL WIDTH

Senator THOMAS. How wide would the channel be?

Representative RANKIN. I believe it is 170 feet.

Senator STENNIS. Is that large enough to take care of all normal traffic?

Representative RANKIN. Yes.

By the way, when this project was first before the Senate and the House, they recommended locks 75 feet long and 475 feet wide, and there was a good deal of complaint about it by people along the Ohio and the Illinois and the upper Mississippi for the simple reason that all the locks on those streams, and the locks at Pickwick and at Gilbertsville on the lower Tennessee, are 110 by 600 feet. So the Army engineers went back, made a new survey at the request of the Members of the House, and they have made these locks all 110 by 600 feet, so that they will carry all the traffic that can travel any of the rest of these streams.

Senator GURNEY. The only difference we would be short if we approved this $136,000,000 project would be the difference between the 9-foot and 12-foot channel. We would later have to deepen it to 12 feet probably.

Representative RANKIN. We might do it, but we could do it; there would be no trouble about that.

The project has already been approved. It was approved in the Senate by a vote of 44 to 21 and by the House by a good majority, in 1946.

It is already written into the law.

Senator GURNEY. For a 9-foot or 12-foot channel?

Representative RANKIN. Nine-foot, with 12 feet over the sills, so it can be deepened to 12 feet if necessary. That will put it as deep as the current stream along the Mississippi, the Ohio, the Illinois, and the intercoastal canal.

As I said, we people in my district will probably get less benefit out of it than St. Louis, Pittsburgh, Memphis, New Orleans, Chicago, Minneapolis, or St. Paul. It will not only benefit all these areas here along these streams that are now seeking an outlet; the people on the Ohio River during last year or 2 years ago had a mass meeting to figure out some way to get an outlet to the sea.

Well, this will provide exactly what they are seeking.

Senator STENNIS. Will this 9-foot channel take care of all these barges about which you are talking?

Representative RANKIN. Yes; it will take care of every one of them.

Then, in addition to that, it will take care of all this traffic along the Great Lakes from Detroit and Cleveland. In addition to that, it will take care of the traffic along the Gulf of Mexico from Florida clear around to the border of Mexico. We have that intracoastal waterway that is protected behind a string of submerged islands, and these barges can go down and go either way. It simply completes the missing link in the greatest inland-waterway system in the world.

I want to thank the committee for your kindness. I do not want to take up all your time. You have been very generous. We have some more gentlemen here who would like to be heard.

Senator ELLENDER. It has been most interesting.

Representative RANKIN. Thank you, Senator.

I do want to say this. The last time I discussed this project with the President, he said, "John, I am just as much interested in that project as you are."

Thank you.

Senator THOMAS. Thank you, Congressman RANKIN.

It Can Happen Here

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, May 23, 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "It Can Happen Here," published in the Oil City (Pa.) Derrick of May 17, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IT CAN HAPPEN HERE

Raids on the United States Treasury have become such a common pastime since the advent of the first New Deal that the public generally is apathetic to each new demand for funds.

Every time any organization starts a new raid for its own benefit, it starts with the argument that a few additional millions or billions will not break us.

And right they are.

For instance, Federal aid to education, by itself, will not break us.

Neither will free medical treatment, a socialistic housing program such as that now being railroaded through Congress, expanded social security, price supports for potatoes and other farm products, more aid to Europe, the most expensive armed forces in peacetime history, etc., etc.

Not one of these alone will break us. It's the whole load that threatens the financial stability of these United States.

This year the Federal Government is spending some 42 billions of dollars. Estimates for the coming year indicate an expenditure in excess of 50 billions. And the end is nowhere in sight, unless the public becomes fully aware of the danger and insists that Congress call a halt to the spending orgy by which the present administration is out-dealing the New Deal.

The theory that one more expense will not hurt is what put England, once the financial pillar of the world, behind the eight ball. Now Great Britain endures austerity taxes. Its lowest income-tax bracket is 45 percent on all incomes above $500.

In Britain, the sales tax on a box of matches equals the cost of the box. Similar 100 percent taxes are levied on telephones and many retail items in a poverty-stricken nation that followed the assumption "one more expense won't hurt."

Here, too, we can suffer austerity taxes—and quickly. Suppose our national income should decline. Already taxes take one-third of the national income. They would rise rapidly if incomes should fall.

It is true that millions of homes are needed. It is true that many of our schools are substandard, that many communities have deficient medical service, that many potato and other growers have low incomes.

These conditions have always been with us. Their correction undoubtedly is a worthwhile objective. But such corrective measures should cover a long-range program and should be handled at State and local levels where credit conditions, because less used, are better than that of the Federal Government.

In critical times like these, it is unthinkable that more burdens should be added to an already overloaded Federal Treasury.

Here in Oil City there are many families who would like in some manner to improve their homes and living facilities. These things are not done because the families in question cannot afford them.

It is high time that citizens take stock of the critical threat posed by continued raids on the United States Treasury and advise their Congressmen and Senators that they approve application on a national level of the old-fashioned economics being practiced by these families.

Address by Hon. J. Caleb Boggs, of Delaware, Before the Association of New York State Young Republican Clubs

EXTENSION OF REMARKS
OF
HON. JOHN J. WILLIAMS
OF DELAWARE
IN THE SENATE OF THE UNITED STATES
Monday, May 23, 1949

Mr. WILLIAMS. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD an address made by my colleague, Representative J. CALEB BOGGS before the seventeenth annual convention of the Association of the New York State Young Republican Clubs on Friday, May 20, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, distinguished guests, and friends, let me first express my thanks to you for the honor and privilege you have extended to me by enabling me to meet with you tonight. It has been a pleasure to come here and to meet and talk with so many of you.

The enthusiasm I have found here added to your sincere and businesslike approach to the important problems of government, encourage me greatly and speak most eloquently for the future of the Republican Party and the welfare of your great State of New York and of our Nation.

All New York Republicans should have great pride in the outstanding Republican Members of Congress from your State. I could start with your distinguished and able Senator IVES, whom I know well, and then mention each Republican Member to the youngest and most recent. That, however, would take a long time, because you have so many Members, and each is performing outstanding public service. I know each one personally, and I am proud of the privilege and opportunity to serve with such able and sincere Representatives. Do you realize that in the United States House of Representatives your State has 45 Members, while the State of Delaware, which it is my privilege and honor to represent, has only one Member? I mention this because I think it will impress upon you most forcefully the important responsibilities the citizens of your great State carry in the conduct of our national affairs. You have one or more Representatives on each committee in the House, while the State of Delaware is only represented on one committee. Very few important matters are decided by just one vote, but many important national policies are determined by less than a 45-vote margin. I mention this simply to let you, the Young Republicans of New York, realize that many of us from other parts of our Nation are watching and relying upon you as you carry out your important and potentially decisive responsibilities with respect to our national well-being.

Yes, the Republicans of New York State will depend greatly upon their young Republican leadership, enthusiasm, energy, and organization. I said they will depend, but I should say they are depending, because I know of the important assignments many of you carry in your State and party affairs. I know the young, able, and distinguished Congressman BILL PFEIFFER, who is the New York Republican State chairman. With BILL PFEIFFER the young and old should work in perfect harmony for real advancement in good government.

I know, too, that a splendid job is being done by the Young Republican National Federation. With my friend Ralph Becker as chairman, this Federation of Young Republicans is certain to achieve excellent results in New York State and throughout the Nation.

All of us, I feel sure, have reached the conclusion that it is necessary and essential for us to make an audit or take an inventory of our Republican Party. As in any other endeavor, we cannot seriously hope to achieve success and victory at the polls unless we ourselves know not only our assets but also our liabilities and our shortcomings.

In spite of what happened last November I am one of those who honestly believes that such a self-imposed audit will bring encouraging rather than discouraging results. Although we cannot hope to make a complete analysis here tonight, it is my thought that we might make a beginning and that we may raise some questions which can be answered here and others which collectively and individually we may continue to seek answers to.

We all know from the number of votes cast for Republican candidates last November, and I know from the large volume and content of the correspondence I have received since that election, that a vast number of thoughtful American citizens are deeply concerned about the trend which is taking place in our fundamental form of government. These millions of people are looking to Republican legislators with the hope that as a minority party they will actually constitute much more than merely the so-called loyal opposition. Paradoxically as it may sound, they are looking to Republicans for actual leadership. For my part I think they have a right to do so, and I think that we have not only the responsibility but the opportunity to provide leadership in defining and in actually charting the Nation's legislative course of action.

Such leadership will not be provided, however, if we as a party merely acquiesce or simply take a negative position. We will not be providing such leadership unless we formulate and then adhere to our own policy and program in the Nation's interest and the welfare of all the people. Such a program must not be based upon any philosophy of "me, too," but must be stated forthrightly at all points, so that the issues involved are clearly defined. Only then will we be giving our citizens a real choice between policies, programs, and objectives, and not merely a choice in which the difference is only a matter of degree.

To do that which I propose takes courage—deep, undeviating courage. As a matter of fact, it is partly because it takes such courage that I suggest it. I say this because it is my opinion that if there is any single thing above others which the American people respect and support, it is the unmistakable evidence of courage in others. This, I believe, has been ably demonstrated.

I suggest that we have the courage to formulate a program which is based on the sound principles upon which our Government was conducted for decade after decade—and not any fallacious, fanciful, or foreign philosophy under the guise of appealing names or titles.

I suggest that it be a program which has full cognizance of the changes which have

necessarily taken place by reason of world events and of industrial and economic growth—but which is within our constitutional framework and our concept of a Republican form of government by which that government serves the people, but does not seek surreptitiously to be their master. I suggest that we adhere undeviatingly to that program. We must not fear the reaction and the threats of political reprisals from any special interest groups. Instead, we must have an abiding faith and confidence in the fair-mindedness, good judgment and desire for justice to all, which I definitely believe exists in full measure in the vast majority of American citizens.

As a single individual, I do not presume to be capable of outlining in detail such a program as I have recommended. Nevertheless, I would like to pass on to you for what they may be worth, a few thoughts along this line.

I think that we Republicans might very well consider the advisability of reviewing our expressions of willingness to cooperate with the administration in certain fields in order to ascertain that such cooperation is really a two-way affair and not a mere deception and delusion. For example, we might find it desirable to declare that an end has come to the so-called bipartisan foreign policy. Simultaneously, we might state that henceforth our foreign policy will be either nonpartisan or strictly partisan.

I make this suggestion because I believe our foreign policy should be one in which there is freedom of expression as well as unity of thought and understanding in actual practice, and not in name only. I believe that the term "bipartisan foreign policy" has been used cleverly as a device to prevent Republicans from having a real part in formulating it, while at the same time causing them to share the blame for such failures as have taken place in foreign policy, of which the situation in China is merely a single example. I believe it is advantageous for us as a Nation to have full agreement and a united front on the principles and policies which constitute our foreign policy, for such a condition is important to our security and the maintenance of peace. But I believe that such agreement should be arrived at on a truly nonpartisan basis after full discussion in formulating the policy and not be thrust upon us as a result of any high-sounding terms which in actual practice are meaningless.

Another suggestion pertains to domestic affairs and policies. Almost everyone agrees that government costs are too high; that there is inefficiency, waste, and duplication. Yet year after year, and especially this year, demands are made for more and more Federal expenditures. And accompanying these expenditures are more Federal taxes and greater centralization of government.

It is my opinion, from correspondence I am receiving from day to day, that the American people are rapidly becoming more concerned about this state of affairs and the dangers inherent therein. An increasing number of citizens are seriously questioning the wide variety of free services and free benefits provided by the Federal Government. There is a growing realization that nothing is free and that government has nothing which it does not first take from the people.

My point is this: Now is the time for Republicans nationally, but principally on the local level, to draw attention constantly to examples of waste, extravagance, red tape, and bureaucracy, and to the effects and dangers of concentrating in Washington more and ever greater powers over the lives and freedom of action of the individual citizen. And such examples are not hard to find.

Now is the time to help our citizens analyze and scrutinize the gifts and benefits offered by a big, benevolent Federal Government. Take, for example, the euphonious social-security program for the expansion of which great pressure is now being applied.

Is it not time that the American people are told what actually happens to their social-security taxes, on the safekeeping of which they rely in all good faith for future benefit payments? Do they know that the social-security taxes which they and their employers pay are not kept in a trust fund carefully invested? Do they know that the United States Treasury spends that money for current expenses and that the trustees of the old-age and survivors trust fund hold only the Government's own I O U's? And do they know that they actually pay higher income taxes to pay interest on their money which isn't there?

We Republicans are for social security, but I consider it our responsibility to see that the people have real protection and security and not just a promise of it based on the Government's ability to raise for a second time the benefit payments.

I am sure that you can all find many other examples of benefits needing closer scrutiny and reappraisal.

A further suggestion is that we apply without fear this simple test to all legislative proposals. Is the matter under consideration in conformity with our traditional concept of government? Is the objective sought actually beneficial to the welfare and security of our Nation and our people, irrespective of whatever high sounding or appealing title may be given it? Is the proposal economically sound, and will it protect or contribute to our stability as a nation?

I have said before that such a program will take courage—deep, moral courage—and a conviction that it is fair and just and proper. Perhaps this could be said in another way. Can we Republicans take it and still adhere to our convictions and stand up and be counted? We know from experience that all kinds of charges will be hurled at us whenever we take a forthright stand on proposals which we do not accept and which in protecting our basic American principles we dare not accept. We can expect that these charges will be glib, witty, or vicious, and that they may be without foundation in fact, if not actually untrue. In that connection, I would further suggest that we refrain from replying in kind and that instead we present to the people constantly, consistently, concisely, and clearly, the plain truth.

I believe that the Republican Party has courage, that it can take it when necessary, that it can provide not only opposition but real leadership and that the Republican Party can and will profit from its past shortcomings and mistakes, and thus emerge victorious as the really representative party of the people and of American principles of government.

Poison of Presidential Politics Kills Employment Act of 1946

EXTENSION OF REMARKS

OF

HON. ROBERT A. TAFT

OF OHIO

IN THE SENATE OF THE UNITED STATES

Monday, May 23, 1949

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Poison of Presidential Politics Kills Employment Act of 1946," written by J. A. Livingston and published in the Washington Post of May 20, 1949.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

POISON OF PRESIDENTIAL POLITICS KILLS EMPLOYMENT ACT OF 1946

(By J. A. Livingston)

Not since 1929 has there been a greater need for economic understanding between Democrats and Republicans in Congress. Maybe we're not on the brink of another depression. Maybe we're on the brink of another expansion like that of the twenties (after a temporary readjustment). But we can't be sure. And we ought to be prepared for any economic eventuality.

But what do we get? Loggerheads. That, in spite of the fact that the Employment Act of 1946 was designed to get Democrats and Republicans to work in harmony on legislation affecting the Nation's economic health. Specifically, the law set up the Joint Committee on the President's Economic Report to guide congressional committees on economic legislation.

But to date, instead of taking economics out of politics, it has put politics squarely into economics. Last year the Democratic minority, headed by Senator O'MAHONEY, of Wyoming, put out its own report on the President's Economic Report. It was ready and leaked out to the press 2 weeks before the majority report was finished.

This year again there were two reports. The majority report, issued March 1, was an all-out endorsement of President Truman's legislative proposals. It even included a demand for a $4,000,000,000 tax boost, which one of the signers, Senator PAUL H. DOUGLAS, of Illinois, has subsequently declared inadvisable.

The report of the Republican minority not only rejected the President's report and the majority report, but went on to question the way the Employment Act has functioned, saying:

"When the joint committee was established it was the hope of many that it would not be a piece of machinery representing those temporarily in control of Congress, and functioning only to approve and praise the Economic Report of the President. In our opinion, the law requires the joint committee (relying on expert economic advisers) to make a complete study of the report and report its own independent findings and recommendations.

"One may search the present majority report in vain, however, for a single word of criticism, a single evidence of disagreement, or a single reservation, explicit or implied. This is an amazing result, when the report deals with matters on which economists themselves are so often in disagreement. The use of our report as a political forum by an uncritical majority threatens the long-run usefulness of the joint committee and of the Employment Act itself."

To carry out the intent of the act it isn't necessary for the Members of Congress to surrender their party loyalties or principles. But they could make an earnest effort, as trustees of both parties, to agree on the objective facts which determine the state of the economy.

In the latest report the majority of the joint committee glossed over the decline in the cost of living, the drop in carloadings, the lack of demand for nonferrous metals. They were intent on justifying anti-inflation controls promised in a political speech of President Truman 8 months earlier.

Ordinarily, this would be unimportant—something to be set down as politics. But in this case, Congress sought to supersede politics with economics. Congress wanted members of the joint committee to set aside party loyalties and individual quests for power. Congress wanted, in effect, a committee of the whole for the whole.

And so, to date, the Employment Act has failed, and largely because of President Truman, himself. The President's economic reports are hardly the type of documents which engender the self-negation of others. He, himself, has failed to rise above politics. The minority members of the joint committee are not engaging in partisan comment when they declare that the "present economic report reads in many respects like a political argument. We see no reason why it should not state the argument on both sides where economic issues are inextricably involved in politics."

Thus, practice has made the Employment Act far from perfect. Or was the concept of cooperative action too idealistic in the first place?

Facts Relevant to the Bendix Aviation Corp. Strike at South Bend, Ind.

REMARKS
OF

HON. THURMAN C. CROOK

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. CROOK. Mr. Speaker, recently, on the floor of the House, an erroneous conception relative to labor difficulties in the Bendix Aviation plant at South Bend, Ind., was set afloat. The motive behind said actior was obviously tempered in keeping with the continuous practice of special interests to undermine the foundation of organized labor.

I know of no controversial issue, debatable question or labor disturbance that is void of two sides and, if we desire to gain a comprehensive understanding of any perplexing question, it is deemed necessary that we study both sides of it with microscopic nicety. Neither a one man investigating committee nor a general one man observation, fired with prejudice, has ever been practical, reliable or conducive to intelligent compromise in controversial matters.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the facts relevant to the Bendix Aviation Corporation strike as exhibited in the Thursday evening, May 19, 1949, edition of the South Bend Tribune by the employees of Local No. 9, UAW-CIO, who, at all times, harbor the spirit of justice and fair play in labor-management relations.

THE PURPOSE OF THIS AD IS TO CLARIFY FOR THE PUBLIC THE ISSUES INVOLVED IN THE STRIKE OF BENDIX LOCAL NO. 9, UAW-CIO, AGAINST THE BENDIX CORP.

Today, in very plain words, we the affiliated local unions of the St. Joseph County Industrial Union Council, intend to tell you just how the Bendix Co. spokesmen and the columns of the local press are trying to pull a gigantic hoax. We know that the newspaper accounts of the dispute at Bendix are most bewildering to you. We can only assume that because they are very bewildering to us—and the St. Joseph County Industrial Union Council has been close to the heart of these problems for many months.

As you know, the main issue involved in the Bendix strike is the speed-up program that was put into effect by the Bendix management.

The Bendix Corp.'s adamant position has been: (1) Your arguments have no merit; (2) take it to arbitration; and (3) gentlemen, we've been damaged, and we will see you in court.

Now friends, the hoax involved is the newspaper's stress of the company's desire to go to arbitration. The company is very much aware of the fact that under the Bendix contract, the only issue that you can submit to arbitration is one that comes under the jurisdiction of the umpire. Under the Bendix contract, the arbiter would have no jurisdiction over this issue. Let us refer you to clause No. 42 of the master national agreement with the Bendix Corp.: (42) The umpire shall have no power to add to or subtract from or modify any of the terms of this agreement or any agreements made supplementary thereto, to establish or change any wage, or to pass on any matters arising under paragraphs 80—wages; 88, 89 and 90—production standards; and 91 and 92—new jobs of this present agreement or any paragraph in any of the local supplemental agreements dealing with wages, production standards, and new jobs.

What is there to arbitrate in that issue? Absolutely nothing. After being pushed around for a long time, the Bendix employees refused to any longer be hoodwinked by the company's stalling program. These employees had a right to take strike action under their contract, and they have taken it. The Bendix employees have followed not only the terms of their contract, but also the requirements of their own bylaws and international constitution.

THE SPEED-UP ISSUE MUST BE SETTLED—AND SETTLED NOW

The rate question in department 5-C was in dispute as far back as 1945 and the union files contain a complaint from that time showing company disposition and labeled unsatisfactory across the complaint by the union. Over the last several years, the phrase "The rate is fair and equitable" has become the company's famous last word.

The rates in this department were never satisfactorily adjusted but the company, apparently realizing the inadequacy of the rates, following a survey of some 3 months or more consisting of stationing a man in this department from the industrial relations office during this period, did grant sufficient downtime to the operators to bring their earnings up to the average of other incentive departments. This was done through direct management representatives, the department foremen. For the benefit of those of you who may not be familiar with the incentive system, downtime is time paid at the operator's guaranteed rate for periods during which the operator is unable to work through machine troubles, lack of stock, power failure or similar reasons. This downtime is not charged against the operator's production, and its purpose is to prevent his being penalized by loss of earnings for these times when he is unable to work. There can be no question of downtime having been used to supplement inadequate rates for the downtime was issued daily in a lump sum in the amount needed to supplement production earnings under the rates. Understand that this downtime is authorized on a form provided for that purpose, and must be approved and signed for by the foreman before being paid. These forms are then sent to the office of the superintendent, and in addition, daily and weekly records and break-downs of this expense are maintained by the company. The union has long contested this practice as it not only leads to an untrue evaluation of the rates, but past experience has shown that it is a common practice to attempt wage cuts and speed-ups by later removing such bonus downtime. This is exactly what has happened in this instance here. Precedent has been established with other firms where such procedure has been arbitrated and the rulings were that where such allowance has been made as an incentive or bonus it becomes a part of the incentive wage structure or rate and as such is a fully negotiable wage issue.

This arbitrary attitude has not been confined to this one department. The union has a stack of complaints marked with management's famous last words and labeled "unsatisfactory" by the union. And this one-way street also extends through the day work departments with attempts at speed-up being the order of the day. In fact, it has been an accumulation of these little evils affecting only a few people at a time that built up the general feeling among the people that resulted in strike action following this latest and most flagrant example of this policy.

The UAW-CIO and Bendix Local No. 9, as a part of that great organization, have always maintained a policy of a fair day's work for a fair day's pay and that policy is, and has always been wholeheartedly subscribed to by the membership. The point that too many firms, including Bendix, seem to have missed is that the person who is to do the work also has some idea of what a fair day's work amounts to and if any degree of harmonious relations are to be maintained, the fairness must be mutually agreeable to all concerned.

Here is what has transpired since the strike went into effect at 10 a. m. Wednesday, April 20, 1949. Orderly picket lines were established and have been maintained. In the beginning, an adequate force of electricians, plumbers, maintenance men, timekeepers, and powerhouse employees were sent into the plant as a convenience to the company, but following the rejection of, first the timekeepers and then the electricians and maintenance people by the company, the union then declined to supply power house workers after first taking the safety precaution of pulling the fires. On Saturday, April 23, an attempt was made to remove four boxcars which were supposed to contain brake dies. This was resisted and on Monday, April 25, Lincoln and Cadillac dies and a quantity of Lincoln backing plates were allowed to be removed by truck. This was in compliance with a court order and was advised by legal counsel. Since this first psychological move did not have the desired effect of sending the people rushing into the plant crying for peace at any price, the parade started: Thursday, April 28, Hudson attempted to remove their dies and material. This move was resisted and resulted in further legal maneuvers culminating in the issuance of a temporary restraining order by the Federal District Court in Fort Wayne, Ind., against the union. This restraining order was issued Friday afternoon, April 29, following a hearing which was attended by President Ladd and other officials of the union as well as by legal counsel for the union. President Ladd E. Styers, and V. Nick of the local 9 bargaining committee, met with the International Executive Board in Detroit on Thursday, April 28, and conferred with Emil Mazey and Walter Reuther relative to the then current situation and other matters relative to the strike. On Saturday, April 30, the Hudson Motor Car Co. sent trucks into Bendix to remove dies and material with no opposition from the picket line. The Kaiser-Frazer Corp., who had made no attempt to secure any of their dies or material and Kaiser-Frazer Local No. 142, UAW-CIO, whose bargaining committee visted South Bend to offer their help and to gain first-hand knowledge of local 9's situation, were notified that removal of any of their dies or material would not be opposed by the union, and as a result they removed

a quantity of material and one die on Saturday, April 30.

COMPANY FORCED K-F TO GET A WRIT

Naturally, a number of Bendix employes and their families are concerned about the removal of these dies and material and the company's claim of losing business is not entirely without foundation, but there are two important points to remember; first of these is the fact that a strike is an economic weapon and that its use to compel consideration and arbitration of disputed issues can only be effective if and when it reacts economically against the company to provide this compulsion. True this also has an effect against the workers, and that is one of the reasons why a strike is a last resort method. The second thing to remember is that wide publication of this loss of business and possible loss of job opportunities is used by the company as a psychological means of weakening the determination of the workers and of building up public sympathy against the strikers.

Another very important point to remember is that responsible officials of the Ford Motor Co., General Motors Corp., Hudson Motor Car Co., Kaiser-Frazer Corp., and the Nash Motor Car Co. have all assured the Union that all of the dies and work will be returned to this Bendix plant following settlement of the dispute and the resumption of work.

The Bendix local has filed unfair labor practices charges against the Bendix Co. and other automobile manufacturers. We feel sure that the National Labor Relations Board will smoke out this subtle but vicious attempt on the part of the automobile industry to help Bendix coerce the union into submission by removing and farming out manufacturing equipment and parts during the course of a legal strike.

At the request of the United States Mediation Service, the Bargaining Committee of Bendix Local No. 9 and officers and representatives of the International Union, UAW-CIO, have repeatedly attended meetings with the representatives of the Bendix Corp., but to no avail, as the representatives of the management immediately and flatly stated their position was unchangeable.

The representatives of the union have gladly attended all of these meetings, and they are more than willing to meet with management at any time that the company will meet in an honest effort to resolve the issues in dispute.

Tribute to American War Dead

EXTENSION OF REMARKS

OF

HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, May 23, 1949

Mr. MURRAY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most eloquent and impressive sermon and tribute to all our war dead, regardless of race, creed, or color, delivered by the Rt. Rev. Msgr. Maurice J. Sheehy, of the Catholic University of America, Captain, Chaplain Corps, U. S. Naval Reserve, at the Eleventh Annual Military Memorial Field Mass, celebrated at the amphitheater, Arlington National Cemetery, Washington, D. C., Sunday, May 22, 1949.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

SYMPHONY OF SILENCE

" 'But here an American soldier
Is lying dead.

" 'There is no blood in the hollow cheek,
There is no light in the darkened nerve,
Or in the head.

" 'Is there none in our midst who can speak?
None to say what there is to be said?
None to set forth what the dead deserve
Concerning the dead?

" 'Lest he lie forever, killed in vain,
Lost in the dust of the wasted land,
Dead as the shape of his hollow cheek'—
"I speak."

These words from Russell Davenport's poem of America give me courage to raise my voice in this hallowed ground. Today a symphony in silence rises heavenward from Arlington Cemetery, a symphony in which we first hear the tramp, tramp, tramp of shoeless feet at Valley Forge; the violin notes of lonely pioneers; the trumpet's blast warning us of doom when division enters our holy land and brother slays brother; then like rhythmic throbs come the voices of World War I; and like the echo of distant drums, drawing closer and closer, with a mighty roar, rises from freshly-sodded graves the dirge of the cavalcade of World War II—all joining in that majestic symphony which is an echo from hearts that are true and free and brave.

Are there not some voices missing? What of my young shipmate whose broken body, found on a mountain top in Espiritu Santos, now keeps its vigil beneath a homely cross? What of the young seaman whose final rest is in the bosom of the ocean? Many a time I prayed at the lonely burial of a lonely lad at Habana Cemetery in Pearl Harbor when you, my friends, were absent, and there was no one—no, not one—to shed a tear as a gallant hero was laid to rest. One day a beautiful rainbow seemed to rise from that spot and I thought, "Heaven is drawing up earth's tears." These men, too, must blend their voices with ours today.

I

"But here an American soldier
Is lying dead."

Let him speak. Let him speak for all our dead.

"We who were fearless in life have yielded to death. We learned its lesson at Gettysburg and on the *Maine;* we clasped its hand at Belleau Wood and Iwo Jima. Strange that some should learn the mystery of death too late to master life.

"We, the dead, know what the Saviour meant when He said, 'I am the resurrection and the life. * * * I am come that they may have life, and have it more abundantly.' Yes, too often when we were living, we did not know that our lives were like tapestries, revealing their design only when viewed from the underside. Now we know—and are glad.

"Once upon a time a thief, dying on a cross, stole heaven with his last gasp. We died because we, too, were thieves who had stolen from heaven a dream, a dream of a free land, and a holy land, in which all men were sons of God and brothers. Over our lives and above our crosses gleam these words: 'All men are created equal * * * They are endowed by their Creator with certain inalienable rights.'

"We, the dead, sought not the glory of dying well. Nor did we covet another's land. For us, death was a duty, and we heard its call. Over our bodies is a cross, symbol of Him who conquered death. For those who believe, death is no wasted land; for those who love, death is no bombed and blasted field.

"Today fresh tears may come from our mother's eyes. Let them be not for their sons, but for the evils we fought. Today our orphaned children may weep. Let them rejoice that our deaths are not in vain, that today the laughter of little children in our native land is a heaven-born song. Our crosses speak of Him who said, 'Greater love hath no man, than that he give his life for his friend'."

II

"But here an American soldier
Is lying dead."

Again let him speak.

"In God we trust. So sings out our symphony of the dead. How vain are those who say, 'Not in God, America, not in God, but place your trust in an atom bomb.'

"God will not be mocked. We, the dead, are the betrayed unless you, the living, dedicate your lives, your hearts—not to war, but to peace. Must we once again hear the cry, 'Give us men, more men. Throw them against the foe. Cast blood upon the beaches. Send planes and ships and more men into the flames.'

"Our country, brave and bold in war, must be brave and bold in pursuit of peace. The peace which the world cannot give comes from the wedding of the heart to Divine love. That peace which the world can give comes from the quest of teen-age boys and girls; of sunburned laborers on the farm; of grimy miners, and Broadway clerks; of professors and students; of black and white; of all those living who can assure the dead, 'You have not died in vain'. For the soldier lying dead there is only one success: Peace on earth.

"We died to the echo of murderous gunfire—or crashed in air or sea. Most of us died in the springtime of life. And our deathbeds were dimmed by hate, not cush-

ioned by love. In vain will our beloved country trust in pacts or United Nations unless the instruments of peace are sanctioned by the hearts of men.

"'For we who fought that the world be free
We are not easy in victory.
We have known each other too long, my brothers,
And fought each other—the world and we.'

"In our symphony of silence, victory is the prelude—a mere prelude—of peace, and we who are no longer actors upon an earthly scene ask all to join us in our constant prayer, 'God, give peace'."

III

"But here an American soldier
Is lying dead."

Let him speak. Speak, dead soldier, speak.

"Our creed is the creed of life. 'I believe in God the Father, Creator of Heaven and earth.' In a moment, a living choir will ring out those words. Until the world bends its knee to God, there will be no peace. Only upon the cornerstone of faith can we build our peace.

"Soon you, too, who hear our silent symphony will be the dead. We know that our Redeemer liveth. You are given a few hours, a few days, a few years to help Him redeem the world. You, too, can change the world. In our symphony there is naught of defeat or despair. You can do all things in Him who strengthened us to die.

"You can redeem the world by giving fair play to all in your own land, regardless of race or creed or color. You, the living, can redeem the world by setting first things first, by seeking the Kingdom of God and His justice. You can redeem the world by truth, that truth which can pierce any curtain, which can destroy ignorance and malice. Love, not atomic threats, will win the hearts of men. Men who will die for the faith in their hearts can speak—even from beyond the grave.

"We, the dead, pray that America's children, playing in dusty backyards or on village greens, need never look fearfully to the sky; and that those enjoying the gift of breezes of ocean or lake, need never fear the deep; that mothers, today cradling their infants to their breasts in their lullabies, will not dream of Arlington's scene. Let our country be strong in the depth of its faith, in the breadth of its love, in the heights of its prayer to God. Then we have not died in vain."

"For here an American soldier
Is lying dead."

One last echo from his symphony.

"Our Master's voice has led us on
The perfect bliss am I.
I made thee for Myself alone,
Naught else can satisfy."

His song is finished. Sleep, dead soldier, sleep.

Government Spending

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, May 23, 1949

Mr. REED. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on Government spending delivered by our former colleague, Senator Arthur Capper, on Sunday, May 15, broadcast from Station WIBW, Topeka, Kans.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I noted with interest last week that President Truman declared there were "too many Byrds" in the Congress of the United States. President Truman was alluding to Senator HARRY FLOOD BYRD, of Virginia. I believe he said what he wants in Congress are Members in favor of large plans, not small plans. I presume he means those who think in global terms, instead of in terms of the individuals in small communities who make up the bulk of the population of the United States.

I think it only fair to add that President Truman, in spite of all his homely virtues and his knack of hitting hard at those who oppose him, plus his skill in name calling, really has in mind that Congress should think in terms of larger and larger powers for the Executive.

Personally, I think most of us find a lot to like in the personality of Harry S. Truman, the man. I always have liked him, personally. He is a good husband and a kind father. The Trumans would be fine neighbors.

But we cannot always go along approving the public life and policies of a man, just because he would be a good neighbor and likeable companion.

In the matter of Senator BYRD, I would go along with President Truman in his wisecrack about too many Byrds in Congress—with two amendments.

First I would say that the President got it backward.

He should have said there are not enough Byrds in Congress, for the protection of the Treasury and the good of the country.

And then I would add a second amendment, in the nature of a proviso: Provided further, That there may be one too many Harrys in Washington. And I don't mean that the one too many is HARRY BYRD, either.

I want to say that I have, in addition to a genuine liking, a great respect for the intelligence and integrity and fiscal common sense of Senator BYRD.

HARRY FLOOD BYRD is a former Governor of Virginia, whose fiscal system and governmental structure he revamped to the great advantage of the citizens of Virginia. And for 16 years he has led a forlorn hope crusade in his own party in the Senate against extravagant spending and against the centralization of power in the hands of the New Deal crowd in Washington.

President Truman's jibe at Senator BYRD only confirms my impression that this Virginia Democrat is one of the most valuable servants the people of the whole United States have in public life today.

My guess is that President Truman will be unable to "purge" Senator BYRD. Anyway, Senator BYRD's present term does not expire until 1953—and by 1952 President Truman will have worries closer home than Senator BYRD in Virginia.

Senator BYRD is one of us who never has fallen for "The Great American Illusion" of this generation.

The great illusion to which I refer is the widely propagandized belief that money received from the Federal Treasury is "free money," that these Treasury checks and benefits and grants do not cost anybody anything. Or that if there are any costs in the Federal spending programs, they must and will be paid by the wealthy only.

The idea that there is an inexhaustible public purse certainly is an illusion.

The Europeans who are benefiting from the Treasury of the United States know better. So does Soviet Russia. They know that Uncle Sam is throwing away his inheritance in a grand manner, and that the end must come sometime. Meanwhile, those getting the benefits of course propose to make the most of it while the getting is good. And the Soviet lives in hopes that of the inevitable collapse that has wrecked all other peoples who have fallen for the same illusion in much lesser degree.

But there apparently are a great many Americans who believe in the illusion; and those who so believe are not confined to the lower income groups. The list includes nearly all chambers of commerce—where projects for their own community are concerned.

The list includes also many governors of States, and mayors of cities, and leaders in the fields of education, agriculture, labor, and business. In each instance, just as it is with the local chambers of commerce, those who suffer from the illusion believe that they themselves can derive some immediate benefit.

Included in the give-away programs are grants-in-aid from one governmental unit to another, such as Federal grants-in-aid to that State, and State grants to cities and counties and other municipalities.

Another form of giving away public money is the subsidy, which means the payments made to individuals, groups of individuals, and nongovernmental beneficiaries generally.

A recent report from Mr. Molden deals only with grants-in-aid. It is most illuminating, and very important, but so full of statistics and figures that I shall not attempt to give it to you over the radio.

He calls attention to the fact that the conference of mayors now has established a lobby in Washington to promote Federal grants to municipalities. This was done to some extent in the 1930's; now it is to be revived.

"The readiness of States and cities to accept Federal grants indicates a willingness to live in a world of illusion rather than reality," Mr. Holden declares in his analysis of the study.

"It implies that the Federal Government has resources outside those available to States and local governments, and that Federal money is free."

Hard-headed State and local officials really know better than this, of course. And many of them would prefer to meet their responsibilities without Federal aid.

"But any grant or hand-out program promptly demoralizes everyone, because of the urge for each to get a share of the hand-out for his community, since the money is available and will be spent anyway," Mr. Holden sagely observes.

"Actually, all governments, Federal, State, and local, must be supported by the wealth and income of the same people.

"The Federal Government has no resources other than these, and every dollar that it gives or offers to give must be taken from someone.

"All kinds of government can obtain funds by borrowing, but as long as we adhere to the principle that public debt shall be honored by repayment, the money from debt redemption must be taken from the pockets of the people."

Another phase of the great illusion is that somehow or other "the other fellow"—generally thought of as the well-to-do and rich—will pay all the taxes.

Britain is having an interesting experience along this line. The British have gone much farther than we in extending "free social services," with some aid, by the way, from our own Federal Treasury.

But, payday is coming for them, it is warned by no less a person than Sir Stafford Cripps, Chancellor of the Exchequer. In his recent budget message Sir Stafford put

it bluntly that just about all the wealth of Britain already has been redistributed.

But the cost of social services continues to rise, in Britain as in the United States.

"We must recognize the unpleasant fact that these services must be paid for, and they must be paid by taxation," says Sir Stafford Cripps.

"Total taxation, national and local, is now 40 percent of the national income, and at that level the redistribution of income entailed in the payment for social services already falls, to a considerable extent, upon those who are the recipients of such services."

Of course, the British Chancellor was speaking to the British people. But we in America, under the influence of the Great Illusion that Government money is free, and national resources inexhaustible, are going the same route with unprecedented speed.

The Record Debt Reduction of 1945–49

EXTENSION OF REMARKS
OF
HON. ROBERT A. TAFT
OF OHIO
IN THE SENATE OF THE UNITED STATES
Monday, May 23, 1949

Mr. TAFT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Record Debt Reduction of 1945–49," written by Edward H. Collins and published in the New York Times of May 16, 1949.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE RECORD DEBT REDUCTION OF 1945–49
(by Edward H. Collins)

Ignoring the protests of economy-minded Members of Congress—and even the friendly warnings of his own economic advisers—President Truman told newsmen last week that, business recession or no business recession, he would neither withdraw nor modify his demand of last January for $4,000,000,000 in new taxes for fiscal 1950.

This statement of White House policy was not, in itself, particularly surprising. But in the course of his interview with the press Mr. Truman made one statement that was so remarkable, and which created, however unintentionally, such a completely erroneous impression that it seems imperative to submit it to crtical analysis and clarification. That is the statement indirectly quoted in the following passage from the New York Times of May 13:

"Mr. Truman stressed that during his tenure the national debt had been reduced by some $26,000,000,000, a record held by no other President."

Now if this statement really meant what it seems to mean on the surface, it would be enormously important. A great debate is presently raging in Washington on the issue of economy. Some Members of Congress who are particularly well equipped to judge such matters—men such as Senators BYRD, GEORGE, and TAFT, and Representative DOUGHTON—are of the opinion that the 1949–50 budget can be substantially trimmed. A number of them believe it can be trimmed sufficiently to eliminate the necessity of new taxes entirely. If we accept the opinion of these men, then obviously the burden is squarely on the administration to show why it should not participate wholeheartedly in the economy effort, thereby heading off the threat of either an increase in taxes or a return to the budget deficits of 1931–46.

On the other hand, what is likely to be the reaction of the casual reader to the President's statement of Thursday, which seems to say that the present administration has been the most economy-minded in the Nation's history? The answer is obvious. He is going to say to himself: "Here is an administration which has not only lived within its income, but saved $26,000,000,000 in the short span of 4 years, and used it to pay off debt. If the head of an administration with such an astonishing record of financial efficiency says spending can't be reduced next year, that's good enough for me." In other words, if the President's remark meant what the average reader thinks it meant, the administration has a prima facie case for leaving the budget as it stands, and an almost unbearable burden of proof is placed upon those who demand a reduction of spending.

That is why it is important to point out the actual facts, regarding this achievement in debt reduction under the Truman administration.

First. If we take the entire 4 years of Mr. Truman's Presidency we find that there has not been a decline in the debt, but an increase. The figure was $235,100,000,000 on April 30, 1945, the month Mr. Truman took office; it stands today at $251,500,000,000. That is a rise $16,400,000,000.

Second. It is true that there has been a reduction in the debt from its peak of $279,200,000,000, reached February 29, 1946. But the debt was first raised to that unprecedented level under the Truman administration itself through the flotation of the Seventh War Loan of July 1945, and the Victory Loan of February 1946. The proceeds of these two borrowing operations were in round figures, $26,000,000,000 and $22,000,000,000, or some $48,000,000,000 all told.

Third. The fact that the debt today happens to be lower than it was at the extreme peak to which it was inflated in the first year of Mr. Truman's tenure of office is no more to be interpreted as evidence of sound fiscal housekeeping than would be the achievement of a balanced annual budget by any reader of this newspaper as a result of holding a winning ticket on the Irish sweepstakes. The reduction of the debt has been the result of two developments which the administration not only did not engineer, but plainly did not even foresee.

The first of these fortuitous occurrences came when the Government found that in the Victory Loan it had borrowed vastly more money than it could possibly find use for. The Treasury usually carries a working balance of $3,000,000,000 to $4,000,000,000. But at the end of February 1946, it found itself with the prodigious sum of $26,000,000,000 in its petty cash box. In applying $20,000,000,000 of this, as it did to debt reduction, it was simply acknowledging the obvious fact that it had overborrowed.

The second windfall that has helped make possible a reduction of the debt since February 1946, has stemmed, curiously enough from the administration's own amazing ineptitude in its budget forecasting.

In his budget message of January 1946, the President set up his estimates for 1946–47 on the assumption the receipts would amount to $31,500,000,000. Actually they came to $43,300,000,000, so that this was an underestimate of $11,800,000,000, or more than 27 percent. Insufficient allowance had been made for the upward spiral of the national income, which climbed from $179,300,000,000 in 1946 to $202,500,000,000 in 1947. The mistake was repeated the following year when the income figure soared to $224,400,000,000. When Mr. Truman anticipated receipts for 1947–48 of $37,700,000,000 (or $37,100,000,000 after the tax reduction of that year became effective) they actually totaled $44,700,000,000.

Probably no one was more surprised than the Mr. Truman of 1947 when he saw his predicted deficit of $3,600,000,000 blossom into a surplus of $754,000,000—no one, that is, unless it was the Mr. Truman of a year later when his estimate of a modest $202,000,000 surplus was swollen as a result of circumstances quite beyond his control to a record $8,400,000,000.

No Jail for Debt in Vermont

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Monday, May 23, 1949

Mr. AIKEN. Mr. President, inasmuch as erroneous stories have been widely circulated by the press services and certain columnists regarding imprisonment in Vermont for debt, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the Brattleboro (Vt.) Reformer of Friday, May 20, 1949, which sets forth the situation very clearly and shows that there simply is no provision in Vermont law for imprisonment for debt, except for absconding debtors and failure to pay taxes.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NO JAIL FOR DEBT IN VERMONT

There has been another rash of stories in the metropolitan papers to the effect that debtors are thrown into jail in Vermont. This rash, like those before it, apparently was started by the Rutland Herald and given wide currency by the Associated Press in spite of our attempts to set the AP straight on the procedure.

The stories likened Vermont debtor law to that of medieval England, which of course is utterly false. There is no jail for debt in Vermont except for absconding debtors and tax delinquents without property. However, we do have a process called close jail execution which can be used against defendants in actions of tort.

If you are sued in an action of tort—one in which it is claimed that you have wronged somebody else—you must post bond to guarantee your appearance when the case is tried. If you do not post the bond you can be confined in jail until the case is heard. If a judgment is returned against you and if you do not pay it the plaintiff can get a close jail execution, on which you are confined until you pay or satisfy the judges that you can't. Then you may take the poor debtor's oath and go free.

Anybody so confined could be freed immediately and a deserving case would be in this county, we are sure. Oftener than not the persons so confined are dead beats perfectly able to right their wrongs but unwilling to. It has been a practice to let them languish about six months.

Oftentimes it happens that a defendant lacks money to pay a judgment obtained against him but he is of honest intent and makes a satisfactory arrangement with the person he wronged. He may pay part of the verdict and be released by agreement. Or he may continue under bond and pay in installments. If he utterly refuses to satisfy the judgment the close jail execution can be

invoked and it has had a salutary effect in a great many cases.

Most States do not have the close jail execution. Thirty years ago it might have seemed archaic but today, in the absence of universal automobile liability insurance, it is a powerful weapon for justice. Without it, uninsured drivers from down country could kill and maim our people, then walk out without paying a cent. As a matter of fact there was a case in this county recently where, we are confident, only the close jail execution got a verdict into the hands of a girl horribly hurt by a wanton driver.

The close jail execution does not exist in actions of contract, which are suits to collect debts, and it would be barbarous if it did. Jail is provided only for those who do not right the wrongs they do to others and it is entirely compatible with the Vermont sense of responsibility and justice.

V. L. M.

What's Wrong With Mr. Brannan's Idea?

EXTENSION OF REMARKS

OF

HON. HUGH BUTLER

OF NEBRASKA

IN THE SENATE OF THE UNITED STATES

Monday, May 23, 1949

Mr. BUTLER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "What's Wrong With Mr. Brannan's Idea?" published in the June 1949 issue of the Farm Journal.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT'S WRONG WITH MR. BRANNAN'S IDEA?

If Congress follows the advice of the top farm leadership of the country, Secretary of Agriculture Charles Brannan's farm program is a dead duck.

Seldom, if ever, has an administration-endorsed farm plan been so roundly denounced as has this one.

Up to the time Farm Journal went to press, only one national voice had been raised in favor of the plan. That was the National Farmers Union's, and even that group had its criticism. It complained that the Brannan proposals did not go far enough, and the union offered the committee a draft of a bill of its own.

Main criticisms of the Brannan proposal were these:

1. It would regiment farmers to a far greater degree than ever before.

2. It would cost taxpayers too much, and they would soon rebel.

3. It would make farmers dependent upon Congress for a large part of their income, a highly dangerous spot for a minority group to be in.

4. It would substitute subsidized low prices for fair prices in the market place, and fix a low-price food policy on the country.

5. It is hazy on details.

6. It would be a big step toward the "welfare state," where the Government tries to take care of everybody and everything.

Here are typical comments taken from hearings of the House Agriculture Committee:

Wool growers: "Nothing in the Secretary's statement is definite enough to encourage livestock men to grow more sheep. There should be no controls of any kind until wool production in the United States arrives at the 360,000,000-pound yearly level."—Howard Vaughn, president, National Wool Growers Association.

Cattlemen: "Apparently the Secretary himself does not know how his program would work with beef cattle. Ranchmen have been able to supply the demand for beef without Government subsidies. They do not want this handout. They do not want to be forced to accept a subsidy instead of a fair market price. The Brannan plan is the beginning of complete, unqualified, and absolutely controlled economy."—Bryant Edwards, president, Texas and Southwestern Cattle Raisers' Association.

Dairymen: "The Secretary's proposals embody more rigid controls of farmers than have ever been experienced. The Hope-Aiken bill should be given a fair trial before it is abandoned. Dairy farmers generally wish to avoid the complete control of production and marketing by the Government. We do not desire to be placed in a position of pleading of subsidies continually."—Charles W. Holman, executive secretary, National Co-operative Milk Producers Federation.

National Grange: "We do not like the subsidy approach. Subsidies once accepted are very hard to abandon. Subsidies would throw agriculture directly into politics. The annual cost would run into the billions, and there would be the constant necessity to besiege Congress to make sure that funds were available for payment. Each year great uncertainty would rule until Congress acted."—Albert S. Goss, National Master.

Farm Bureau: "The proposal by the secretary repeals the philosophy of fair farm prices. It means Government-administered farm prices and farm income, with Government control of all land and livestock production. It seeks to establish the principle that taxpayers should pay a considerable portion of the grocery bill of consumers. The proposal would place a ceiling on opportunity in agriculture. The cost would be staggering. The income of American farmers should not be made dependent upon annual appropriations from the Federal treasury."—Allan B. Kline, president, Farm Bureau Federation.

Farmers Union: "The National Farmers Union is strongly back of the Secretary's proposals. It is sound, statesmanlike, and by far the best of the general alternatives before Congress. It is a milestone both in the struggle to maintain and preserve the family-type farm and in the effort to tie together the interests of producers and consumers. The proposal does not go as far as we had hoped, [but] it is an excellent beginning, and a long step in the right direction."—James G. Patton, president.

Potatoes: "We object to the treatment proposed for potatoes [by] the Secretary of Agriculture. These proposals would have the effect of taking away from potatoes any definite assurance of price support. We feel potatoes are entitled to the same consideration given any other commodity."—Harold E. Bryant, manager, Maine Potato Growers, Inc.

In addition, a number of farm leaders who did not testify in Washington gave their views directly to Farm Journal.

Said Marvin H. Walker, general manager of the Florida Citrus Commission: "Most citrus growers realize that the Government can never solve their marketing problems as well as they can themselves under cooperative marketing and marketing agreement programs. They don't like subsidies of any kind. But when they see other farmers getting free hand-outs in Washington they want some of the gravy, too."

Walter Meers, Illinois corn grower: "Instead of stabilizing a fair price level for farm products, [the Brannan program] would tend to stabilize poverty by subsidizing inefficiency and penalizing initiative."

Ole A. Flaat, North Dakota potato grower and dairyman: "Under this plan, the farmer will receive Government aid only on what the Government refers to as 1,800 units. This is far too low to permit operation of even an average size farm in many areas. That would mean ruin to the farmers of these average size farms."

Memorandum to Members of the Eighty-first Congress by Al Anderson and Frank Lilly

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, May 23, 1949

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a memorandum to Members of the Eighty-first Congress, prepared by Al Anderson, executive secretary of the Alaska Miners' Association, Seattle, Wash., and Frank Lilly, executive secretary, Prospectors' and Mine Owners' Association, Spokane, Wash., dated May 3, 1949.

There being no objection, the memorandum was ordered to be printed in the RECORD, as follows:

MEMORANDUM TO MEMBERS OF THE EIGHTY-FIRST CONGRESS

It is the consensus of this meeting of representatives of the Alaska Miners Association and the Prospectors and Mine Owners Association that every United States citizen is entitled to own gold because such ownership does not in any way infringe upon the rights of any other United States citizen or in any way impair the functioning or stability of this country's economy.

It follows from the foregoing that the miner who produces the gold should have the right to sell his gold to another United States citizen and/or to anyone anywhere in the world at whatever price the buyer is willing to pay.

We are sensible of the fact that because there was not enough gold to maintain the Nation's economy in 1930 et seq. it was necessary to nationalize gold then just as it became necessary to ration many things during both the first and second World Wars; but, although it may not be expedient to return to a gold standard immediately, there seems to us to be no valid reason why the sale of a comparatively small amount of newly mined gold should now continue to be restricted to the United States Treasury at an arbitrary price which has little relation to its real value either as a commodity or money.

In this connection, we call attention to the fact that the premium paid on gold by the public in the free market that existed during the Civil War period, except for about 2 weeks, was the incentive that lead Western miners to look for gold; and the country was rewarded by the opening up of the Comstock and other rich mining areas which, within a few years, made it possible for the United States to resume specie payment. Incidentally, most of the major base metal mining districts whose output enabled us to win two World Wars were originally discovered as a result of the early prospector's effort to find gold deposits.

We are mindful of the fact that under a Treasury ruling "natural gold" may be bought and sold within the United States, but in this connection we point out that

the Director of the Mint, in answering inquiries, throws cold water on such transactions with the warning that "The Gold Regulations may be revoked or modified at any time"; and the Assistant Secretary of the Treasury has, on at least one occasion, contended that the sale of such "natural gold" at above $35 an ounce "might contribute to a public loss in confidence in the dollar and aggravate inflationary pressures."

We are also mindful of, and greatly appreciate, the fact that several bills have been introduced in Congress providing for a free market in gold, and we trust that these bills will be given favorable action within the very near future because we believe that any unnecessary delay in their consideration will serve to accentuate the present trend toward what could become a disastrous depression.

AL ANDERSON,
Executive Secretary, Alaska Miners Association, Seattle, Wash.
FRANK LILLY,
Executive Secretary, Prospectors and Mine Owners Association, Spokane, Wash.

MAY 3, 1949

Budget Slash Needed To Halt Federal Pay Roll Rise

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, May 23, 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Budget Slash Needed To Halt Federal Pay Roll Rise," published in the Philadelphia Inquirer of May 20.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BUDGET SLASH NEEDED TO HALT FEDERAL PAY ROLL RISE

Senator HARRY F. BYRD'S latest report on Federal spending affords the strongest sort of argument for continuing the fight to reduce the appropriation bills now pending before Congress.

Every day for the past 15 months, Byrd reports, 322 persons on the average have been added to Government job lists within the United States. Every day an additional $750,000 is added to the annual pay roll. The total increase, in jobs and money, for the past year is stupendous.

If this process continues the Government will have constantly increasing budgets and constantly rising taxes or deficits. And it is obvious that it will continue unless Congress takes a firm, consistent stand against waste and extravagance in any part of the Government.

It is highly doubtful that many of these new jobs being filled daily have been proved necessary to the satisfaction of Congress. Authority for them is buried away in lump sum items in the appropriation bills which few Congressmen have the time to study in detail.

But once the positions have been authorized, or Congress has shown its willingness to pass deficiency bills to pay for them, no one familiar with the ways of Washington bureaucracy can expect the department heads to refrain from filling them.

The rise in the Federal pay roll to a point where there are now twice as many civilian employees as before the war clearly shows that the administration is not interested in halting this trend. If it is to be done Congress will have to do it.

In spite of set-backs, the fight to slice appropriation bills for next year should be pushed. If department heads are not given the money they will have a harder time building up pay rolls. And every Congressman knows there is plenty of room for reduction in any budget estimates submitted by the administration.

As a long-range economy measure the reforms urged by the Hoover Commission should be put into effect. But economy should not wait for this; it should start right now with vigorous moves to force retrenchments in all of the executive departments.

Awards to Communists

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, May 23, 1949

Mr. MARTIN. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial entitled "Awards to Communists," published in the Evening News of Harrisburg, Pa., of May 16.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

AWARDS TO COMMUNISTS

Patriotic Americans cannot escape becoming impatient or even suspicious about parts of its Federal Government when smack in their faces comes the news that an Atomic Energy Commission scholarship for study in nuclear physics has been awarded to a confessed Communist.

The Commission's explanation aggravates the matter by emphasizing that nothing must be done to interfere with "freedom of inquiry and education." It is time this nonsense stops. This is the front used so often in defense of academic freedom. Too often, one fears, there is used the mandate "and ye shall know the truth, and the truth shall make you free" as a cover for some purpose never intended.

It is scarcely credible that a Communist in pursuit of atomic knowledge would, upon finding it, give it to his own country alone rather than share it with nations which live under the Red formula he endorses. There is no warrant under any consideration for an agency of the Federal Government to be so careless in administration as this award to a Communist illustrates.

Members of Congress are acting for their fellow citizens in protest against such a transaction. It is bad enough to have America sold down the river consciously but if done unknowingly then it is even worse.

Will South Asia Go Red?

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, May 23, 1949

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the RECORD an article entitled "Will South Asia Go Red?—A Roving Correspondent Reports on How Communist Gains in China Stir Up Eight Countries."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Newsweek of May 9, 1949]

WILL SOUTH ASIA GO RED?—A POVING CORRESPONDENT REPORTS ON HOW COMMUNIST GAINS IN CHINA STIR UP EIGHT COUNTRIES

(By Harold Isaacs)

As China passes under Communist rule, a new question becomes acute for Americans: How about the rest of Asia? South of China there are eight countries with a total population of 500,000,000. Is it only a matter of time before they too are in the Communist orbit? Rarold Isaacs, Newsweek associate editor, who has just completed a tour of the area, reports on the repercussions of the Chinese events and on the present status of the various south Asian Communist movements:

Even before the Communists crossed the Yangtze River, all of south Asia was feeling the tremors shaking the good earth of China. As I traveled from India across little Burma and littler Siam, down through Malaya and across the islands of Indonesia and the Philippines, the readings were plain to see on the political seismographs everywhere.

They frequently showed up in local jitters. In Manila, newspaper scareheads reported unidentified submarines landing Chinese Communists and arms along the Luzon coast. In Malaya, the British police said the local Communist rebellion was being led by special operatives imported from China. The French reported from Indochina that a Chinese Communist army had crossed the frontier to join the Vietnamese Nationalists. In Siam, Marshal Phibun Songgram, the local pocket-edition generalissimo, arrested scores of Chinese on charges of Communist conspiracy.

But there was no need to look for bogeymen. The sober truth was overwhelming enough. The impact of Mao Tse-tung's victory was already enormous, psychologically and politically. Every thoughtful person to whom this reporter spoke, from New Delhi to central Java, seemed aware in some degree that his future was being shaped to a large extent by the Chinese Communist advance.

Most of them understood that these victories would be more fateful and of more lasting effect than the Japanese war of conquest. That war began in a corner of northeastern Asia in 1931 and in little more than a decade spilled across the entire continent and engulfed the whole Pacific world. Now it was becoming clear that Japan's drive was only a beginning. Asia, home of 1,000,000,000 people, was shedding its past and trying to acquire a new identity. Japan had attempted to dictate its shape. The West defeated Japan, but has failed, so far, to offer an alternative way out. Did the events in China now point the road that the rest of Asia would follow?

RUMBLINGS

To this question few people in south Asia could or would make a categorical answer. They could only try to clarify, first of all for themselves, the factors that will be operating from now on. The following is a cross-section of their views:

Communist China, no matter how great its internal difficulties, will soon be the most dynamic political fact in postwar Asia. To a continent that is undergoing great changes and is straining in all its parts to find the best way of emerging from its backwardness, China will now offer a compelling example and high-pressure leadership.

South Asia is in convulsive turmoil and is vulnerable to pressure. Lands which had

been colonies for generations are trying to become nations and in a world inhospitable to new nationhood. The whole economy has to be transformed if the standard of living is to begin improving. This means intense social struggle in each country. It means radical agrarian reforms and industrialization under difficult conditions. Any degree of Chinese Communist success along these lines will exert profound influence beyond China's borders.

Anti-imperialism is still a major factor in South Asian politics, largely because of the French and Dutch efforts to retain footholds in Indochina and Indonesia. It is the universal conviction that the United Nations, and the United States in particular, have in effect sided with the imperialists against the nationalists. Hence there is a profound mistrust of the West, even among those nationalists who are disposed, on social and ideological grounds, to be friendly toward the United States rather than toward Russia. Russia, on the other hand, has successfully created the impression that it is the only friend of colonial nationalism among the great powers.

The most basic fact of all is that the new nations of south Asia cannot get anywhere as nations. They need a regional—and ultimately a world—approach to their problems. If the West fails, as it has failed up to now, to provide the framework for such a partnership, internal pressures will drive south Asia toward coherence imposed in the Communist manner. The leadership will obviously come from China.

A secondary but important facet of the effect of the Chinese events has to do with the presence of large Chinese minorities in the major southeast Asian countries. Each of these has its local Communist segment which is winning influence as the star of the Kuomintang fades.

The Chinese are, after all, practical people. Besides, all Chinese who live outside China have always yearned for a strong government in China that would protect them from discrimination. These minority groups may well become, as a kind of Asian Volksdeutsche, the focal points of future Chinese national-Communist expansion.

The Communist Parties in south Asia have all risen in the last 3 years from comparative insignificance to considerable influence. Chinese Communist victories cannot fail to give them great impetus and win them many new adherents attracted by the magic of success. They can count on the indirect pressure of a strong Communist China. In some border states they may even receive direct military assistance if they should ever need it. For many strongly nationalist Communists in south Asia, in fact, there may be more help forthcoming than they want.

The Communist Parties in South Asia wield their greatest influence as apostles of an ideology which promises the end of western imperialism. Internally, social and political conditions favor their criticisms and their attacks. In international relations, thanks to the French and Dutch wars in southeast Asia, they can identify Russia's enemies as Asia's enemies. Many nationalists have arrived at this conclusion without Communist help. Even men like Nehru, of India, and Sjahrir, of Indonesia, are influenced by these facts.

RED ROSTER

On the other hand, as practical politicians, the Communists have been remarkably inept in exploiting the favorable climate. They are nowhere in a position to win early political power, except possibly in Viet Nam. Under external dictation at a conference in Calcutta, in March 1948, they switched from their earlier policy of cooperation within the nationalist movements and became independent agents of opposition and insurrection. Only the Viet-Namese Communists resisted this turn, and they alone have grown stronger. In Indonesia, Malaya, the Philippines, and Burma they are waging armed struggles without much gain to themselves. The present position can be summarized by country as follows:

INDONESIA

The Communists were, in the summer of 1948, in a strong position in various Indonesian nationalist mass organizations. The Republican government was faltering from its own mistakes and failures. In September that year Muso, newly returned from Moscow, led the Communists into a sudden insurrection against the Government. They were successfully crushed by Republican troops, many of their leaders killed, and their forces dispersed, in small bands, to the hills. Today Communist guerrilla bands form a separate but relatively small segment of the guerilla forces fighting the Dutch in Java. The mass organizations they had previously led collapsed and have not been reconstituted.

MALAYA

Between 1945 and 1948 the Communists organized a labor movement, largely through methods of intimidation and violence, with which they were paralyzing the Malayan economy. As the British authorities began to put on pressure, the Communists turned, in June 1948, to armed insurrection. Their labor movement collapsed. The Communists became a band of guerrillas fighting a bootless war in the jungles against the British. Their number is estimated at not more than 7,000. Theirs is a purely Chinese movement, with little or no contact with the majority Malay population. By retiring to fight in the jungles, they lost their ability to hinder tin and rubber output. With Communist-inspired strikes at an end, production is zooming.

SIAM

The Communist Party in Siam is largely a creature of official Siamese propaganda designed to serve two purposes: To provide an excuse for putting the screws on the Chinese community and to win sympathy and support (preferably in cash) from the United States. There are some Chinese Communists in Siam and a few Siamese, but no movement of any significant proportion has yet appeared.

BURMA

The Communists, in two bitterly divided factions, are in rebellion against the Burmese Government. They are reported to have a combined total of about 5,000 men under arms, with a limited following in a few rural districts. The government, which has been trying to apply a progressive land policy, is violently nationalist and leftist in orientation. The Communists' insurrection in this case, even more clearly than in the others, was a deliberate rule-or-ruin proposition.

PHILIPPINES

Main Communist strength is centered in the insurgent peasant movement known as the Hukbalahap, which grew out of the anti-Japanese resistance during the war. The Huks reputedly number 20,000 to 30,000, with a supporting periphery in the provinces of central Luzon of about 200,000 Filipino peasants. The government continues to wage an indecisive struggle against them, while its own inner corruption wins more and more popular sympathy for the Huks from people who do not in the least regard themselves as Communists or Communist sympathizers.

VIET NAM

Here, uniquely in the whole area, the Communists are still operating within a coalition of all parties and groups in the nationalist movement. They appear to be in a leading position without as yet enjoying complete control. Ho Chi-minh, leader of the Viet Nam Republic, is a man with a long Communist background but also an intense, almost religious nationalist preoccupation with his own country. The crumbling position of the French and the rise of Communist China on Viet Nam's northern frontier seem to dictate Ho's future orientation: To pass under the wing of Communist China without being swallowed up by it.

INDIA

In this largest of the countries of South Asia, the Communists control a minority labor federation and lead small peasant organizations in several scattered areas. They have come into conflict with Pandit Nehru's government and are under ban in various provinces. The party is still small and without early prospect of winning decisive influence. On the other hand, India's present government offers little promise of effective attack on Indian social and economic problems. Nehru's great personal prestige is out of all proportion to his real capacities as a leader. The grim social realities in divided India offer little support for the thesis that India is or could become a bulwark against communism.

Forrestal's Death Laid to Effects on Him of Political Intrigue

EXTENSION OF REMARKS

OF

HON. PAUL W. SHAFER

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. SHAFER. Mr. Speaker, under permission to extend my remarks I include an article by David Lawrence which appeared in today's issue of the Washington Star.

FORRESTAL'S DEATH LAID TO EFFECTS ON HIM OF POLITICAL INTRIGUE—WRITER SAYS HE BROKE WHEN HE SUSPECTED A LOSS OF CONFIDENCE

(By David Lawrence)

The vicious rules of present-day politics in America killed a great public servant—James Forrestal.

For here was a young man who had made a success in private business—investment banking—and who came to the Government anxious to give the best years of his life to the service of his country. As wartime Secretary of the Navy under President Roosevelt he performed his duties with truly heroic zeal. He coordinated the greatest naval organization in world history.

When James Forrestal became Secretary of Defense under President Truman, his appointment had been urged by all three armed services as the man who, if anybody could would make progress toward unification. It wasn't this task which killed him. He had a zest for the work and would gradually have achieved his goal. It was loss of confidence in him by the President which broke down Jim Forrestal's nerves and frustrated his whole career.

The inside story goes back to last summer when the political campaign was on. James Forrestal believed that as Secretary of Defense he should not participate in the Presidential campaign. He held this view as keenly as did General Marshall, who was then Secretary of State. No speeches, therefore, were made by either Secretary during the campaign that could in any way be related to politics.

During this summer and autumn period, Secretary Forrestal felt that, just as the Secretary of State had kept Governor Dewey informed about the bipartisan foreign policy through John Foster Dulles, so also

should the Republican nominee be kept informed about what was happening in the Department of Defense. At that time there was a theory prevalent that the Russians might take advantage of the period between election and inauguration to try a military move of expansion. Some military observers even thought of a possble sudden attack by Russia. Since it seemed certain to so many people that Governor Dewey would be elected, Mr. Forrestal's precautions were in the highest interest of his country.

GOSSIP INVOLVED

But, as it turned out, this was resented. It is not known whether President Truman made a point of it, but insiders on the Truman side immediately after election began to hand out gossip stories emphasizing the episode as an example of disloyalty to Mr. Truman. To this was added the canard that Mr. Forrestal had contributed to the Dewey campaign fund. When this was refuted, the gossip changed to charges that Mr. Forrestal had refused to contribute to the Truman campaign fund.

Coincidentally, the friends of Louis Johnson began to boom him for Secretary of Defense. In a public speech, Mr. Truman paid tribute to Mr. Johnson's services as a money raiser. The word was passed out that Mr. Johnson was in line to be chosen Secretary of Defense.

Mr. Forrestal was perturbed. He did not see why he was being attacked so bitterly unless it was the usual scheme of politicians to needle a man into resigning voluntarily so he wouldn't have to be asked to resign. He was quite willing to resign. He wanted, however, a clarification of his position and a graceful exit.

He waited for weeks but no word came from President Truman. Finally, unable to stand the strain any longer, Mr. Forrestal asked for a chance to talk with Mr. Truman at Key West. He flew down there expecting to have an opportunity to get his status clarified. But Mr. Truman didn't see him privately. He always had other people present. It was mentioned to the press pointedly afterward that Mr. Truman had not seen Mr. Forrestal alone. The idea seemed to be to make it clear that Mr. Forrestal was not in favor. It is a kind of humiliation not infrequently practiced in high places.

ASKED ABOUT CONTRIBUTION

This correspondent asked Mr. Forrestal last November if he had or had not helped on the financial side of the Truman campaign. He said he had done so indirectly and that it was not his custom to make direct contributions. He implied that he had, however, persuaded friends to contribute on the Truman side.

When this correspondent asked him also if failure to contribute or to match the financing work done by Louis Johnson had brought the Secretary into disfavor he was at first noncommittal. Then when it was explained to him that an article was in preparation on this very subject for one of these dispatches, he begged that nothing be said at that time as he had hoped to have a conference with the President.

Mr. Forrestal, however, added rather prophetically:

"You might want to return to that same theme a little later."

Among his close friends, it is known that he really wanted to leave the Government service. He had told this correnpondent in the summer of 1948 that if Governor Dewey were elected he certainly would not accept appointment. He felt that a new Preident should appoint his own Secretary of Defense.

WOULD HAVE QUIT

It goes without saying that Jimmy Forrestal would have gladly given up his job in the Truman administration, but he found that the initiative was not his. He was being needled out—forced out by a gossip campaign that was inspired either by people close to the President or by those who wanted to see Louis Johnson rewarded for his campaign financing.

Whatever the origin of the smear campaign, it hurt. Mr. Forrestal began to lose weight and to lose sleep. He was alone far too much. Close friends tried to counsel with him. It was they who flew him to Hobe Sound, Fla., where his break-down occurred, and then to the Bethesda Naval Hospital.

And now the sad story of his tragic end will be attributed wholly to overwork and exhaustion. It was, of course, due in part to this. It was doubtless due primarily to the crushing blow to his pride and to his spirit dealt him by an ungrateful administration in which ward politics and the amount of money a man contributes evidently determine who shall be appointed to or continued in high office.

When President Garfield was assassinated by a disappointed officeseeker, civil-service reform began in America. The assassination of Mr. Forrestal's character for failure to play politics in high office should institute a moral reform. If it does, his death will not have been in vain.

Controlled Agriculture

EXTENSION OF REMARKS
OF
HON. GLENN R. DAVIS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. DAVIS of Wisconsin. Mr. Speaker, under permission to extend my remarks in the RECORD, I would like to have this editorial reprinted from Hoard's Dairyman, of Fort Atkinson, Wis.:

SECRETARY BRANNAN AND FARM SURPLUSES

Since the days of Joseph the problem of caring for surpluses has been baffling. No nation has ever found a completely satisfactory method of carrying surpluses. It must be borne in mind that surplus is a great blessing to all the people. We must also remember that farmers who produce these surpluses have been severely penalized by prices going far below cost of production. When these periods take place not only the farmers suffer but the men in the shops also pay penalties, for the farming industry is one of the big purchasing powers of the Nation. When their products are selling at a low level, below cost of production, every other industry suffers.

This condition is generally recognized and has brought about price supports. During the war no one questioned but what Uncle Sam was wise in setting the price of farm products at a level that would stimulate production, but in times of peace this procedure causes deep concern.

In this Nation where we have had free enterprise we have prided ourselves on our accomplishments. We are 6 percent of the people living on 7 percent of the land and producing half the wealth of the world. The individual has had freedom of opportunity to very largely choose his own job. If we are to have parity prices or income, as many are demanding, it means governmental control. It means the farmer will not be in a position to plan his own method of doing things. Further, we might as well bear in mind that it will mean heavier taxes. Even today many people are saying "why put forth extra effort because Uncle Sam simply takes it away from you."

The Secretary of Agriculture, Charles F. Brannan, has just offered a new farm program—one that is popular with those who do not think, for it offers to give farmers good prices for their products and provide cheap food to the consumer. This is an ideal condition but somebody has to bear the expense. This, as the Secretary has said in a straightforward way, will be very costly.

The principal thing that we can commend in Secretary Brannan's presentation of a new plan is his straightforward, frank statement. There didn't seem to be any hedging as there has been in the past when presenting ways and means to maintain farm prices on a level with other commodities. In his program Secretary Brannan also suggests better prices so that meat and milk production will be increased. He recognizes that the land needs the cow and that the people need more dairy products.

The problem, however, is a most difficult one and, unless properly handled, trying to support farm prices may bankrupt the Nation. Let us give an example. This winter we asked a cotton farmer in the South why he did not milk cows. The section where he lives produces only 45 percent of the milk that is consumed. Milk is shipped in a distance of 1,500 miles and a freight rate of $1.98 a hundred is paid to bring in the milk. In answering the question this cotton farmer said, "Why should I milk cows when I can get $100 an acre net for cotton and I only have to work 4 months in the year, whereas the cow ties me up 12 months in the year?" Of course, the Federal Government cannot and will not continue to pay parity prices if farmers grow all the cotton, wheat, and corn that they desire.

We might as well face the fact that Secretary Brannan's plan means a controlled agriculture. If it is successfully done, free enterprise has been destroyed. Isn't it better for us to pay a little penalty rather than to destroy an economy that has permitted such liberty for the individual and has led to such high production as this Nation enjoys?

The Hope-Aiken law that becomes effective in 1950 will support farm prices from 60 to 90 percent of parity. This will protect the farmer against ruinously low prices and give him an opportunity to modify his system of farming in keeping with the demands of the consumer.

Rather than have the Government take over the control of our farms, would it not be better for farm and dairy organizations to form institutions for taking care of surpluses? This would keep the farmer master of his own enterprise and lead him to see that he must produce what the consumer demands.

The Unemployment Picture in One Connecticut Area

EXTENSION OF REMARKS
OF
HON. JAMES T. PATTERSON
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. PATTERSON. Mr. Speaker, it might be of interest to the Members of Congress to peruse the facts and figures contained in the Waterbury Labor Market Letter for April, with complementary

statistics gleaned from this communication.

In the Waterbury area, which has a total population approximating 150,000, there are now 9,400 unemployed; 5,200 of this number are men—2,100 of them veterans. An additional 4,200 women are without jobs. Of the 12 communities in this area, 7 are principally, and almost totally, farming areas. As agricultural employment is not computed in the 9,400 figure, it may be realized that almost 10 percent of the total area population is without employment. It is safe to say that an additional 5 percent are employed on a part-time basis.

The seriousness of this problem cannot be overemphasized when we find that a decrease of 3.7 percent in employment has occurred in the last month.

The action of Congress adopting the amendment of my distinguished colleague, Mr. SADLAK, appropriating $14,000,000 in the first deficiency appropriation bill from which the Connecticut Unemployment Compensation Service also receives funds, is further evidence of the need which exists for a program for the future. The original amount contemplated to be appropriated was less than $5,000,000, and it would have been insufficient to pay for the necessary personnel to expedite unemployment claims.

The people are awaiting the decision of the Congress and the administration in supplying the remedy for this problem.

The Labor Market Letter follows:

WATERBURY LABOR MARKET LETTER, APRIL 1949

MANUFACTURING EMPLOYMENT TAKES SHARP DROP

Manufacturing employment in the Waterbury area took its sharpest drop since the end of the war. Employment in April was 36,990, a decline of 2,320 from the 39,310 employed in manufacturing in mid-March. The decline was concentrated in the metallic groups, with the brass industry alone accounting for 1,250 of the drop. Substantial lay-offs were also reported in machinery and metal fabricating plants. The chemical and rubber group had the largest reduction, 300, among the nonmetallic manufacturing group. In addition to lay-offs, a number of plants continued to reduce their workweeks, and some went on a week-on, week-off basis.

TEXTILE EMPLOYMENT RISES

The only sizable gain reported was in the textile and apparel group which employed 1,460 workers in April, a rise of 70 over March. The measuring and controlling instrument and food groups reported slight gains, while printing remained stationary. The recent reduction in the price of copper has encouraged the brass industry and, toward the end of April, one plant rehired some workers in its castings department. A slight upturn was reported in orders by the chemical and rubber industry. These developments, however, were not sufficient to affect the general trend in the area and, at the end of April, employment continued downward.

CONSTRUCTION HAS SEASONAL RISE

Nonmanufacturing employment reported a gain in April due mainly to seasonal factors but moderated by the drop in general business activity in the area. Construction employment rose by 240 workers to a total of $1,760 in April. Home construction picked up during April but is lagging behind the level of a year ago, while commercial building activity is about the same as a year ago. Public-housing construction comprises a substantial part of home-building activity in the area and will continue so at least for the remainder of the year. Construction on the superhighway through Waterbury is again underway and should employ a substantial number of workers during the summer. Construction labor is in good supply and a surplus of most skills was available in April to meet expected rises in activity. Little change was reported in other nonmanufacturing groups with trade taking a moderate increase and service a moderate decline.

UNEMPLOYMENT INCREASE

Unemployment continued to climb, reaching 9,400 in mid-April as industrial layoffs mounted. Men predominated the ranks of the unemployed, accounting for 55 percent of the total in April as compared with 44 percent last February. Veterans unemployed totaled 2,100 and women unemployed totaled 4,200.

Tables of employment and unemployment follow:

Private nonagricultural employment, Waterbury area, April 1949

Industry	April 1949	March 1949	Percent change April over March	April 1948
Total	53,360	55,430	−3.7	61,500
Manufacturing	36,900	39,310	−6.9	45,420
Food	1,140	1,130	+.9	1,310
Textiles and apparel	1,460	1,390	+5.0	1,290
Printing	660	660	0	660
Chemicals and rubber	5,880	6,180	−4.9	6,410
Brass	12,990	14,240	−8.8	15,520
Metal foundries	650	710	−8.5	80
Metal fabricating	4,360	4,560	−4.4	5,150
Machinery	1,870	2,110	−11.4	2,200
Clocks and watches	3,030	3,150	−3.8	6,420
Measuring and controlling instruments	1,130	1,120	+.9	940
Other manufacturing [1]	3,820	4,060	−5.9	4,730
Nonmanufacturing	16,370	16,120	+1.6	16,140
Construction	1,760	1,520	+15.8	1,780
Transportation	1,510	1,500	+.7	1,520
Communication and utilities	1,090	1,100	−.9	1,070
Trade	8,530	8,480	+.6	8,410
Wholesale	1,490	1,480	+.7	1,450
Retail	7,040	7,000	+.6	6,960
Finance, insurance, and real estate	1,170	1,160	+.8	1,140
Service	2,310	2,360	−2.1	2,220

[1] Other manufacturing includes clothing accessories, plastics, paper, stone, clay, and glass, and other minor groups.

Unemployment in the Waterbury area

Mid-month	Total	Men		Women
		All	Veterans	
April 1949	9,400	5,200	2,100	4,200
March 1949	7,500	3,900	1,700	3,600
February 1949	6,300	2,800	1,200	3,500
October 1948	2,000	1,100	500	900
April 1948	2,200	1,300	600	900

Federal Aid Highway Act

REMARKS

OF

HON. TOM PICKETT

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. PICKETT. Mr. Speaker, I have just introduced a bill to supplement the Federal Highway Aid Act, as amended. The bill lays emphasis on an authorization to augment the construction of rural roads. As a part of my remarks I am inserting in the RECORD a statement of the purposes of the bill and a table showing the apportionment of the funds authorized to be appropriated.

The matter referred to follows:

The original Federal Aid Highway Act was passed in July 1916. Since that date the Federal Government has been engaged in a program of assistance to the States in various types of road construction.

The Federal Aid Highway Act of 1944 extended Federal financial assistance to secondary rural roads and to urban arterial highways, in addition to the primary Federal-aid highway system that was previously the recipient of the major portion of Federal assistance funds.

The Federal Aid Act of 1948 authorized the continuance of this program at the annual rate of $450,000,000 for a 2-year period.

The purpose of the bill is to authorize regular appropriations for a 2-year period for the construction of rural roads. The bill authorizes the appropriation of the sum of $150,000,000 for the fiscal year ending June 30, 1950, and a like sum for the fiscal year ending June 30, 1951, to carry out the provisions of the act for the construction of rural or farm-to-market roads.

The appropriations provided under this act will be apportioned among the States in the same manner as provided in past Federal-aid road legislation. The assistance to the States will be on the basis of the same participating percentage as has heretofore been prevalent in Federal road legislation, namely, 50 percent assistance by the Federal Government, except in public-land States.

The bill provides for administration of the act on the Federal level by the Public Roads Administration, which agency has administered the road aid to the States from the Federal level since the inception of the Federal-aid principle. The success of this agency in building a great system of roads for this country has been in no small part due to its guiding principle of the recognition of State's sovereignty. This is essential in the efficient and sound administration of our form of government. The bill establishes definite lines of authority all of the way down to the local level in administering the provisions of the act.

The bill provides a national policy for rural or farm-to-market roads and establishes the objectives to be accomplished under the provisions of the act. The bill specifically avoids the details of accomplishing such objectives, since such details must be worked out by the administrative agencies defined in the act in order to best adapt the program to the varying needs of the several States. It should be borne in mind that the problem on rural roads is different in almost each and every State, varying from the State of Massachusetts, which has no area that is not included within the limits of a town or city, to the strictly rural States such as Texas, Alabama and Mississippi.

The need for the improvement of rural roads in every part of the Nation in order to bring our rural areas out of the mud and dust is a well known fact. Some progress has been made in the improvement of feeder roads, farm-to-market roads, school bus routes, rural mail routes, milk routes, etc., especially since the close of World War II, but it is felt that additional impetus must be given to this type of road improvement if we are to prevent our national economy from suffering a severe setback due to the lack of proper transportation facilities into our rural areas. This fact is particularly accentuated by the expansion and improvement of our school system. It is needless to further our improvement of school facilities unless we provide all-weather roads in these rural areas to permit the movement of these students to and from such schools.

Attached is the apportionment of the annual authorization for rural roads under this bill in accordance with the allocation among the States. This contemplates the Federal allocation for 1 year of the proposed 2-year act and generally it should be multiplied by two when matched by the State or local authorities, in order to indicate the annual program on rural roads within a State that would be provided under the provisions of this act.

APPENDIX I

Apportionment of annual authorization for rural roads

Alabama	$3,768,209
Arizona	2,244,783
Arkansas	3,113,136
California	5,172,012
Colorado	2,714,529
Connecticut	766,521
Delaware	731,250
Florida	2,182,180
Georgia	4,316,106
Idaho	1,950,789
Illinois	4,725,882
Indiana	3,594,321
Iowa	3,957,708
Kansas	3,931,898
Kentucky	3,428,272
Louisiana	2,555,084
Maine	1,396,276
Maryland	1,175,030
Massachusetts	786,555
Michigan	4,123,910
Minnesota	4,153,797
Mississippi	3,377,898
Missouri	4,556,370
Montana	3,113,380
Nebraska	3,142,506
Nevada	1,934,474
New Hampshire	731,250
New Jersey	1,043,434
New Mexico	2,519,910
New York	4,264,211
North Carolina	4,483,563
North Dakota	2,394,972
Ohio	4,615,927
Oklahoma	3,708,468
Oregon	2,557,667
Pennsylvania	5,267,292
Rhode Island	731,250
South Carolina	2,528,434
South Dakota	2,496,096
Tennessee	3,690,330
Texas	10,052,085
Utah	1,693,449
Vermont	731,250
Virginia	3,193,007
Washington	2,396,971
West Virginia	2,090,327
Wisconsin	3,661,695
Wyoming	1,889,857
Hawaii	731,250
District of Columbia	731,250
Puerto Rico	1,133,032
Total	[1] 146,250,000

[1] This figure excludes the administrative allowance (2½ percent) from the annual authorization. It is not the exact total of all the State items due to rounding.

The Pope's War on Communism

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Francis Cardinal Spellman, from Look magazine for May 24, 1949:

THE POPE'S WAR ON COMMUNISM—IN DEFENSE OF ALL PERSECUTED PEOPLE—PROTESTANTS, JEWS, AND CATHOLICS—THE POPE HAS EMBARKED ON A SPIRITUAL CRUSADE AGAINST THE ATHEISTIC PHILOSOPHIES OF COMMUNIST RUSSIA

(By Francis Cardinal Spellman)

In his war against atheistic communism Pope Pius XII has neither military armies nor armaments, for his is a spiritual crusade; his armaments the weapons of wisdom and justice and truth, his armies the God-loving peoples of the earth. Armed only with God's grace and a martyr's will, the Holy Father stands ready in the shedding of his heart's blood to become seed for the redemption and rebirth of those nations now enslaved.

The pontiff's fears and sorrows are for all persecuted peoples—Protestants, Jews, and Catholics alike—who, weakened by starvation, sickness, and fear, have become victims of the Marxist cult of atheistic communism.

Pope Pius urges us to raise our voices against the enslavement of peoples everywhere; for one tactic of Communists, fatal to freedom, is to make men fear publicly to proclaim the truth and to protest against cruelty, tyranny, and injustice.

What has happened to the hearts of freemen that they can be so soon unmindful of the sacrifices made by Cardinal Mindszenty, Archbishop Stepinac, Bishop Ordass, and countless hosts of other innocents?

For weeks now, the name of Cardinal Mindszenty has almost completely disappeared from the news. The thought has somehow come to me that Hungary's great priest and patriot might come to accidental death or might already be dead. Is he, with other unnamed, unhonored victims of communism, rotting away forgotten, abused—awaiting only the mercy of death?

When Cardinal Mindszenty was received into the Sacred College of Cardinals only three years ago with 31 other priests and myself, he arrived in Rome one week late. Communists had delayed his coming. Placing the Cardinal's hat on each of the prelates, the Holy Father spoke an ancient formula with a prophetic message:

"Receive this red hat, the sign of the unequaled dignity of the Cardinalate, by which it is declared that thou shouldst show thyself intrepid even to death by the shedding of thy blood for the exaltation of the blessed faith."

In but a brief span of time, Cardinal Mindszenty was brought to mock-trial for his life and condemned by the lords of communism—men among whom there is no honor, love, or trust either for one another for their neighbor, or their God. Thus the symbolic red of his Cardinal's robes literally became the blood red of martyrdom, just as the Holy Father predicted it might well be when he whispered to him these words: "You may be the first to see these blood red colors turn red blood!"

The Church of Hungary stands out today in the midst of a world torn and divided, an example unto nations, as Pius said, "that without God there cannot be any true unity or just peace."

Throughout the war and postwar years, the Pope has worked and prayed for peace with justice, warning and beseeching the victors not to offend God by sinning against His mercy. But men have locked their hearts against God, resisting, profaning, and denying Him. And today we have no peace. We have only a war-wrecked, sickened, weakened, forlorn world still tragically "talking peace" while the madness called atheistic communism storms the earth, endangering peace-loving, God-revering humankind in every corner of the globe.

THE EVILS HAVE INCREASED

We were told that the war was fought for certain principles, one of which was freedom from fear. The war was fought and blood was spilled and bitter years are passing; but is it not a fact that each evil from which these freedoms were to liberate mankind has but become intensified? Religious persecution, like the octopus, spreads its tentacles wider and digs them deeper. And as those of the Jewish or Catholic faith were the special prey of Nazism, so now are all men who follow God viciously victimized by communism.

Denouncing religious persecutors and all tyrants, Pope Pius proclaimed to the world that the church is now and forever, as always it has been, the implacable enemy of communism.

The aim of atheistic Communists is not merely the liquidation of the church or of any earthly power. They seek the destruction of man's faith in God, determined that their atheism shall prevail throughout the world. They are contemptuous of the belief that "unless the Lord build the house they labor in vain that build it."

But no paganism or atheism is too formidable for the Pope to try to overcome. He knows not the meaning of the word despair. His profound piety, kindliness, and humility dwell in men's memories as they recall their audiences with him. The Pope listens to his many daily morning visitors with deep interest and patience, and sympathetic understanding finds reflection in his smile and dark, soul-searching eyes.

HE FOLLOWS THE VOICE OF THE LORD

The dominant quality of the Pope's character is his intense spirituality. To be privileged to see him pontificate in St. Peter's is an unforgettable experience. His mind and heart are enrapt in the divine sacrifice. Even when the ceremony is over, he seems to be entirely alone with his Lord God, as he offers his prayers of thanksgiving, kneeling before the altar. Within the privacy of his own quiet chapel, within his own holy heart and cloistered soul, the simple priest, Father Pacelli, hearkens to and follows the voice and the teachings of the Lord. Constantly he prays that Almighty God will once again come to the world's salvation; quicken men with charity and faith, inspire them to truth and justice, that hatreds shall forge no more the chains of nations and sickles shall reap only the fruits of peace.

It was on March 2, 1939, the day of Cardinal Pacelli's sixty-third birthday, that St. Peter's big bell pealed its joyous news that Cardinal Pacelli had become Pope Pius XII. And as I write, the clock of history is again marking off the passage of other spiritually significant events in the life of the gentle, simple Roman priest who, all the years of his long and fruitful life, has fought atheistic communism, the fatal plague which insinuates itself into the very marrow of human society, only to bring about its ruin.

Now it is the year of the Pope's seventy-third birthday, the fiftieth year of his ordination to the priesthood, and the tenth anniversary of his succession to the Chair of Peter. His heart's one wish is that this golden jubilee year of his ordination be observed only by redoubled daily devotions and prayers. He pleads that lovers of the Lord from earth's end to end join their prayers with his own for the resurrection of the world, and that God's enemies be forgiven their crime of recrucifying Him. He implores the godless to recognize, repent, and mend the evil of their warring ways that soon may come the peace for which multitudes have sacrificed and died, for which other sick and suffering multitudes still yearn and pray.

HISTORY REPEATS ITSELF

In this same month, time ticked off three-score years and ten of another man's

life, a great man of science, a man who claims to be an agnostic—Albert Einstein. When Hitler threatened to dominate the world, Einstein is quoted to have said: "Only the church stood squarely across the path of Hitler's campaign for suppressing truth. I never had any interest in the church before, but now I feel a great affection and admiration, because the church alone has had the courage and persistence to stand for intellectual truth and moral freedom. I am forced thus to confess that what I once despised I now praise unreservedly."

History repeats itself, and the godless tyranny and brutality of Hitler has given way to the godless tyranny and unmatched brutality of Stalin. Pius XII has warned, waited, faced, and resisted them both.

These are his words of counsel today:

"The hour of Christian conscience has struck, calling mankind to waken. In our conscience there can be no room for blind credulity toward those who at first proclaimed their respect for religion, only later to show their true colors as deniers of all that you hold most sacred. In our conscience there can be no room for the weakness, complacence, or indecision among those who in this crucial hour believe they can serve two masters.

"You must realize that social justice and peace among nations can never be effected and assured if men close their eyes to the light of the Lord and instead open their ears to false prophets.

"Therefore we pray you—awaken—lest civilization perish in violence and iniquity while mankind, wavering in its spiritual framework, poisoned by the plague of militant atheism, continues to defy and scorn the laws of a just God and the just laws of man. And may God forbid that men become so enslaved to tyranny and godlessness as to have no longer any will or power to resist.

"Humanity's hope and world peace rest in the Lord who alone is civilization's salvation, for no society can long endure when God is driven into exile."

Until the very eve of the Second World War, Pius XII attempted to make belligerent nations realize what well he knew and repeatedly begged them to believe, that "nothing is lost through peace, everything can be lost through war."

The wisdom of that warning was challenged. But relentless years of war's blood, agony, and death, followed by more embittered years of playing at peace, have proven its truth.

Against the Pope's pleas for peace rang out the Marxist battle cry: "Religion is the opium of the people."

THE ECHO GREW

The cry bellowed throughout the hills and plains, towns and villages of Europe, finding its echo upon the lips of weak or willful men, uprooting faith from hearts, paralyzing hopes for peace. The echo became a trumpet call blaring out the death agony of men and nations whose blind following of atheist tyrants sealed their own doom.

And all this while the Pope continued to beseech the leaders of nations and the faithful of the world to counteract the peril of this doctrine by concerted, constant prayer, and action as the Marxist religion, taught to Nazi-enshackled youth, spread like a malignant disease, capturing hearts and minds, uprooting Christianity, kindling a war against religion and the very souls of men."

During the First World War, Archbishop Pacelli was Papal Ambassador in Munich. Revolution broke out, hungry, fear-stricken mobs milled through the streets. Spartacist gangs plundered the city as the hammer and sickle flew over Munich, and Embassy Row was deserted except for one priest, Eugenio Pacelli. Machine-gun bullets sprayed the lower floor of his residence and Archbishop Pacelli was warned to leave Munich at once. But the Archbishop remained to console and help a terrorized people, to feed and protect hungry, helpless children. Wild-eyed men of madness, bent upon murder, screaming and waving daggers, invaded his residence. Wearing his episcopal robes and clasping his pectoral cross, Archbishop Pacelli met them face to face. "Why have you come armed?" he asked. "There is no one here to attack or harm you. This is a house of peace, not a den of murderers. * * * Please leave at once."

CARDINAL MINDSZENTY WAS NOT AFRAID

This is one of a hundred examples and is the design from which was cut the pattern of another priest to whom death for God's sake is dearer than life—Joseph Cardinal Mindszenty.

Only a year ago, on his way to a church function in central Hungary, Cardinal Mindszenty passed through the Communist-dominated suburb of an industrial town. His car was surrounded by threatening, shouting men who stoned his automobile. Bidding the chauffeur stop, the Cardinal stepped out, and holding his cross in his hand, addressed the hostile mob:

"Men, please do not stone my faithful chauffeur. He is a good man, a good husband, the loving father of five children. And a father cannot be replaced. Do not stone and wreck my miserable little auto, for you know these days parts are near as precious as gold and cannot be replaced.

"If stones you must throw, I beg you to stone me, for—I can be replaced."

These simple words shamed the crowd to silence and it dispersed.

"GOD HAS ORDAINED MY FAITH"

Before his arrest by the Communists, Cardinal Mindszenty told a visitor: "The lamb has more security in the forest than an honest Christian in the Hungarian Communist state today. In 4 months, I shall probably be waiting my turn in a hangman's cell. But I shall never change my policy or take back any of the things I said against the Communist government. God has ordained my fate and I give myself into His hands."

Cardinal Mindszenty would not wish us to grieve at the thought of his death, for he knows that man is not completely born until he dies to live in God. Love of the Lord that is Cardinal Mindszenty's will never forsake him, for it is love that sustains the spirit, pressing its way upward, passing through all dangers to salvation in God. No harm upon this soul can any atheist inflict, no matter how merciless the torturings to his body and mind. Thus will Cardinal Mindszenty defeat his God-hating enemies.

Little wonder is it then that Communists fear such shepherds as Cardinal Mindszenty and Pius XII, for theirs are voices speaking not only for persecuted Catholics but for all believers in God. "The enemies of religion have this time smitten a Prince of the Church, a priest venerated by the overwhelming majority of his people," said the Pope. "This is not an isolated case. It is one of the links of the long chain of persecutions which some dictatorial states are pursuing against Christian doctrine and life. The modern persecutors show themselves docile pupils of the inglorious school of the foes of humankind under Nero. They copy their masters and models, and even surpass them in cruelty, skillful in the art of employing the most recent advances of science to the end of dominating and enslaving whole peoples, which would have been inconceivable in past times.

"It is well known what the totalitarian and antireligious state demands and expects of the church as the price of its tolerance. It would like a church silent when it should speak; a church that would dim the light of God, adapting it to the desires of human wills when she should loudly proclaim it and defend it; a church that does not resist oppression of the conscience and does not guard the legitimate rights and the just liberties of the people; a church that, with servility, remains a church only within the four walls of the temple.

"The Church of Christ follows the path marked out by the Divine Redeemer. She knows herself eternal. She does not beg favors. The threats and the injuries of terrestrial powers do not intimidate her. She does not meddle in problems purely political and economic. She gives to Caesar that which is rightfully Caesar's but she cannot betray or abandon that which is God's."

HIS STRENGTH COMES FROM GOD

Shield to the imperiled, poor and persecuted, the Pope of Peace fearlessly, unsparingly spends himself for the welfare of his children and brethren, and the inspiration and source of his strength comes from kinship with God Himself, to Whom all men are brothers.

And when the Supreme Pontiff today reproaches dictators for their crimes against humanity, he is but following in the footsteps of the Master; for Pope Pius XII is the heir of a long and venerable tradition that had its origin in Saint Peter, the first Pope. Threatened by a perverted, imperial power, Pope Peter cried to his people, "Resist, be strong in your faith," as he too warned the rules of his time: "Our Master is God, not man!"

Michigan Legislature Requests 5-Year Extension of Servicemen's Readjustment Act

---

EXTENSION OF REMARKS

OF

HON. GEORGE G. SADOWSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks, I wish to include a resolution adopted by the Michigan Legislature, requesting that veterans' readjustment allowances may be extended for at least five additional years.

House Concurrent Resolution 20

Concurrent resolution memorializing the Congress of the United States to amend the Servicemen's Readjustment Act so that veterans' readjustment allowances may be extended for at least five additional years after July 25, 1949, as proposed in H. R. 1374 of the Eighty-first Congress

Whereas section 700 of the Servicemen's Readjustment Act of 1944 provides for the payment of unemployment allowances to the veterans of World War II, and such allowances have been of immeasurable importance in protecting the economic security and welfare of veterans in Michigan and other States; and

Whereas the Servicemen's Readjustment Act at present provides that such allowances shall be payable for no more than 2 years after the termination of the war, which has been set by Congress for this purpose as July 25, 1947, so that such rights expire on July 25, 1949; and

Whereas 700,000 Michigan veterans are at present eligible for such allowances, but only 400,000 of these veterans are in employment which qualifies them for unemployment compensation under existing State law; and

Whereas less than 3 percent of Michigan's veterans have exhausted their entitlement to allowances under the Servicemen's Readjustment Act; and

Whereas the number of veterans currently receiving such allowances is more than 40,000, representing the highest volume of claims from veterans in the past 2 years, and the number of veterans needing such benefits is expected to increase because of increasing unemployment and completion of school by 42,000 veterans now attending college under Federal legislation; and

Whereas termination of the servicemen's readjustment allowance program in July 1949 would impose an additional burden of an estimated $20,000,000 per year upon the Michigan unemployment compensation fund, and would at the same time involve an additional loss of some $10,000,000 per year to Michigan veterans not protected by the State unemployment compensation fund; and

Whereas this situation would create a serious additional burden upon State welfare funds and facilities and upon the veterans' trust fund, and would impair the living standards of veterans entitled to recognition for their services to their country: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the members of the Michigan Legislature do hereby urge and recommend that the Congress of the United States amend the Servicemen's Readjustment Act so that veterans' readjustment allowances may be extended for at least five additional years after July 25, 1949, as proposed in H. R. 1374 of the Eighty-first Congress; and be it further

Resolved, That copies of this resolution be transmitted to the President of the United States, President of the Senate, Speaker of the House of Representatives, and to the Michigan Members in the Senate and House of Representatives of Congress.

Adopted by the house March 4, 1949.

Adopted by the Senate May 4, 1949.

NORMAN C. PHILLEO,
Clerk of the House of Representatives.

FRED I. CHASE,
Secretary of the Senate.

Compulsory Health Insurance

EXTENSION OF REMARKS
OF
HON. WILLIAM S. HILL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. HILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

Be it resolved, That the Board of County Commissioners and Board of Health of the County of Larimer and State of Colorado, as the local agency of county government charged with the duty of administering health laws, managing the county hospital, and exercising general supervision over the activities of the county welfare department and county physician, in their relation to public medical care and hospitalization, is diametrically opposed to the plan of compulsory health insurance now advocated by the President of the United States, and now being urged upon the Eighty-first Congress of the United States, for the reasons that—

(1) Such plan, if enacted, would not make available in this county additional medical or hospital services that are not now available to those unable to pay therefor;

(2) Would not improve the medical or hospital services now offered;

(3) Would stultify the relation between the doctor and his patient;

(4) Would encourage the unnecessary use of hospital and medical services;

(5) Would tremendously increase the cost of medical and hospital services without corresponding benefits, largely at the expense of those in less than moderate circumstances;

(6) Would take away from the local branches of government and give to a national agency the management and control of a function of government regarded since the foundation of the Republic as local in character; and be it further

Resolved, That copies of this resolution be sent to all the representatives of the people of the State of Colorado, and the Congress of the United States, and to the President of the United States.

I hereby certify that the foregoing is a copy of the resolution adopted by the Board of County Commissioners and Board of Health of the County of Larimer at its meeting held May 18, 1949, as appears from the minutes of said board.

GERALD SOLT,
Clerk of the Board.

Japan Will Be Lost if China Goes Communist

EXTENSION OF REMARKS
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. MERROW. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial which appeared in the New Hampshire Morning Union, published in Manchester, N. H., under date of May 22, 1949, entitled "Japan Will Be Lost If China Goes Communist":

JAPAN WILL BE LOST IF CHINA GOES COMMUNIST

With attention focused on developments in Europe, many people may be startled by the statement of former Under Secretary of State Will Clayton that "on balance, Russia is winning the cold war." The truth of this statement, however, becomes apparent if we consider some of the results of our stupid policy in China.

For if Stalin is allowed to control China, he will eventually control Japan as well. This is not conjecture. It is the logic of cold fact. Japan depends economically on the continent of Asia for its existence—that is, on China, Korea, and Southeast Asia. This dependence, as Stewart Alsop has pointed out from Tokio in his syndicated New York Herald Tribune article, is even greater today than it was before World War II for two important reasons:

1. Before the war the United States took about one-quarter of Japan's exports, the bulk of which was in raw silk. Since then nylon and other silk substitutes have supplanted raw silk which is now piling up in Japanese warehouses.

2. Japan's population, now 80,000,000, is increasing at an alarming rate. It is conceded that Japan proper cannot feed more than two-thirds of the 80,000,000. This means that Japan must get food for its people, raw materials for its industries, and a market for its finished products—all of which must logically be found in China and southeast Asia. This is her logical trading area.

Without such a trading area, there is only one alternative—that Japan remain an economic colony of the United States, supported by United States subsidies, which is unthinkable both from the American and Japanese viewpoints.

Thus the force of Alsop's reasoning becomes apparent, that if China and southeast Asia is allowed to succumb to Soviet Communist domination, an economic dagger will then be permanently pointed at Japan's throat. It is nonsense to suppose that a non-Communist Japan could hold out indefinitely alone in a Communist Far East.

This means that somewhere, somehow, the Communist drive in China must be halted if Soviet Russia is not to win the whole Far East. And yet the State Department continues its disastrous policy of "wait and see." Only this week Secretary Acheson dismissed the idea of a security pact for Asia as not ripe for his attention. Whom the gods would destroy, they first make mad. Does he not see that if Japan adds her vital industrial potential to Stalin's vast far eastern empire, we shall then have thrown away our victory in World War II in the Pacific, and that we will be confronted with a menace far greater than we fought that war to overcome. It is time the American people made themselves heard and demand that the march toward this tragedy for our Nation be stopped.

Florida State Senate Memorial 37

EXTENSION OF REMARKS
OF
HON. DWIGHT L. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. ROGERS of Florida. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I desire to include therein a resolution adopted by the Senate of the State of Florida known as Senate Memorial 37:

Senate Memorial 37

Memorial to the Congress of the United States against the passage of any legislation providing for socialized medicine and compulsory health insurance

Whereas strong pressure and propaganda is being used to urge the passage of socialized medicine and compulsory health insurance; and

Whereas such legislation would seriously impair and practically destroy American enterprise and free initiative: Now, therefore, be it

Resolved by the Legislature of the State of Florida:

(1) That the President and the Congress of the United States are hereby petitioned to vigorously oppose all legislation for the enactment of socialized medicine and compulsory health insurance.

(2) That copies of this memorial be transmitted to the President of the United States, to the Speaker of the House of Representatives, and the President of the Senate in Congress, and to each of Florida's Representatives in both the House and Senate in Congress.

(3) That a copy of this memorial be spread upon the journal of both the senate and house of representatives of the State of Florida and sufficient copies thereof be furnished to the press.

Became a law without the Governor's approval.

Filed in office secretary of state May 9, 1949.

The Leftist Slant of American Journalism

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following portion of a recent issue of the biweekly newsletter, American World Intelligence, edited by D. C. S. Norborg:

First, we must call your attention to new evidence of the leftist slant of American journalism.

How can we hope to defend and enrich our American tradition of Christian liberty and positive democracy when a dangerously strong group of American newspaper people openly favor and elect officers in the guild who are leaning to the left, if they are not outright Communists?

Intelligence analysis of the recent election in the New York Guild give food for thought and reason to worry over the surprising strength which the leftist groups showed in this newspaper election in New York City.

We build our statement upon a most revealing tabulation which appeared in the January issue of Frontpage, the guild's official house organ.

Red thunder in the skies of American journalism: Taking our cue from the votes cast by the workers of the Daily Worker, we find that the leftist candidates for a guild office were accepted by the red journalists of the Daily Worker, New York, in typical Moscow vote fashion. The votes were 57 to 0. The zero vote fell on any and all candidates who stood for American principles.

The Daily Worker vote surprises nobody. That's the way the Communists interpret the freedom to vote.

The shock comes, however, when we turn our analysis to other newspapers, magazines, and news services. If you ever wondered why it is so difficult to get unslated news in your newspapers, you will not be so surprised any longer when you realize how deeply penetrated our American journalism and newspaper world have become by leftist forces, and that this is so even as late as January 1949.

The fact is that the leftist-Communist group, which was perfectly acceptable to the Daily Worker's personnel (by a 59 to 0 vote), showed a frightening strength even in what we generally accepted as honest-to-goodness American newspapers. American World Intelligence has always called the attention of its readers to the inroads of Red Moscow in Asia, Europe, Africa, and South America. It is our painful duty to give you the accurate situation in the newspaper world of New York's guild as shown by the guild's own tabulation of leftist votes.

One discovers how unbelievably strong the leftist infiltration today is even in such newspaper undertakings as Look, Newsweek, Associated Press, Time, and New York Times. The votes cast and tabulated indicate that in some of these offices the leftist fellow travelers won a majority vote and that they in the cases here named did at least pull 40 or 50 percent of the vote, the other votes falling to the non-Communist American candidates.

Had a few more votes fallen to the leftist office seekers, American citizens could have told their own unbelieving eyes that fellow travelers who were perfectly acceptable to the Communist Daily Worker's personnel (party members), in a free and secret election, also were accepted by the personnel of the leading magazines, newspapers, and press services mentioned above. The reds did not take over the guild, but the pinks are everywhere in New York journalism.

No wonder that America gets her news slanted.

No wonder that anyone who distrusts such pink journalists as potential traitors to democracy and truth and American Christendom is labeled a "Fascist," a "reactionary," or a "tool of monopoly."

In fact, if the American people had been as cynical and pro-Communist as the pinkos of the New York newspaper world, the United States would soon have become another Czechoslovakia, sold down the river by men who chose Gottwald rather than martyrdom.

Knowing the continuing influence which a myopic and provincial but very vocal New York has upon our State Department, we begin to understand the tragedy which overtook us in China.

Michigan Legislature Requests Elimination of the 15-Percent Transportation Tax

EXTENSION OF REMARKS
OF
HON. GEORGE G. SADOWSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. SADOWSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution that was adopted by the Michigan Legislature, requesting the repeal of the 15-percent transportation tax on rail, air, and bus tickets.

For my part, I am strongly in favor of the repeal of this tax, and likewise, of the special taxes on jewelry, fur coats, perfumes, luggage, ladies' handbags, etc. These special taxes are unfair and discriminatory against business. Today we should be expanding and promoting the production and sale of merchandise in every line. I voted against all of these special taxes, and I am still opposed to them on the same grounds, that they are unfair and discriminatory.

The resolution follows:

House Concurrent Resolution 34

Concurrent resolution making application to the Congress of the United States for the elimination of the 15-percent Federal transportation tax on rail, air, and bus transportation

Whereas the Dominion of Canada has repealed the 15-percent transportation tax on rail, air, and bus transportation in that country and it is now possible for a resident of the United States in the border cities of Detroit, Port Huron, and Sault Ste. Marie, Mich., to cross the border into Canada and purchase, tax free, rail, air, or bus tickets between two points wholly within the United States; and

Whereas numerous Michigan residents engaged in the sale of rail, air, and bus tickets in the border cities of Detroit, Port Huron, and Sault Ste. Marie are now faced with the loss of employment as a result; and

Whereas the high tax on transportation which in most cases is a necessity, bracketing it with jewelry, fur coats, perfumes, and other luxuries is not equitable; and

Whereas the transportation tax was enacted largely for the purpose of discouraging travel on the country's overburdened transportation system during the war years and as this condition no longer exists: Now, therefore, be it

Resolved by the house of representatives (the senate concurring), That the members of the Michigan Legislature request the Congress of the United States to repeal the transportation tax on rail, air, and bus tickets; and be it further

Resolved, That copies of this resolution shall be transmitted to the President of the United States, to the President of the Senate and Speaker of the House of Representatives of Congress, and to the Michigan Members in the Senate and House of Representatives of Congress.

Adopted by the house April 29, 1949.
Adopted by the senate May 4, 1949.

FRED I. CHASE,
Secretary of the Senate.
NORMAN E. PHILLES,
Clerk of the House of Representatives.

Housing for Chicago—Now

EXTENSION OF REMARKS
OF
HON. SIDNEY R. YATES
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. YATES. Mr. Speaker, under leave granted me to extend my remarks, I wish to insert the following speech which I delivered in Chicago, Ill., on May 21, 1949, before the Public Housing Association:

Mr. Chairman, ladies, and gentlemen, I'm deeply grateful and honored for the opportunity of being with you again tonight. I say again, because I've encountered most of the organizations which are sponsoring this housing conference before. I met you last October when I was a candidate for Congress and had to cope with the questionnaires which your organizations sent out to every candidate. Among the questions which were asked was: "Are you in favor of the principles of the Wagner-Ellender-Taft bill?"

I had no difficulty with the question because, of course, I was wholeheartedly in favor of the principles of the W-E-T bill. And I am more than ever today in favor of the principles of that bill.

But I am disturbed about one thing. At the time that you were sending me the questionnaires, the Ninth Congressional District was adorned by billboards which cried "Down with prices. Up with houses. Send YATES to Congress."

YATES was sent to Congress and apparently, with respect to the first part of the phrase, I've already been much too successful. I keep getting letters from businessmen to stop whatever I've been doing; I've reduced prices too much. I assume, however, that if houses go up you will not be nearly so critical of my efforts.

But I do want to pay tribute to the Public Housing Association for calling this conference. Action is still neded. Only partial progress has been made and this conference will be a great impelling force for good. The organizations which have made this conference an outstanding success have been recognized for their interest in the community, for the promotion of the democratic ideals and traditions we hold most dear. It is a distinct pleasure to participate with you in your work.

Two years ago, just about this time, I attended the meeting of the National Public Housing Conference at the Palmer House. I remember very well the speeches made by

two veterans who had recently returned from service and had been elected to the Congress—Representative JOHN CARROLL, of Colorado, and Representative JOHN KENNEDY, of Massachusetts, two of the most able and hard-working men I've ever known. I remember very well their hopes and aspirations for passage of a realistic housing program by the Congress and their expectation that it would be passed immediately. The need was so obvious—so overwhelming, it was unthinkable that no action should be taken.

Tonight I stand before you as a Member of Congress to report to you as did they 2 years ago—with the same high hopes and the same aspirations which characterized them—and with a knowledge of the operations of the insidious forces which frustrated them and the people of this country—because I have seen them in action—and I say to you that victory is in sight. The selfish, grasping, reactionary lobbies which successfully stymied the hope of America will be beaten and there will be a Housing Act—a realistic Housing Act passed by this Congress, and soon.

The Senate has already approved S. 1070—and in this respect, thank God for Senator PAUL DOUGLAS. He did a job and fought a fight in the Senate rarely undertaken by a newcomer and was one of the true champions who won the victory. And while speaking of PAUL, I can't pass the opportunity of paying tribute to the man whom he has described as his conscience and his good right arm—Frank McCulloch.

The House Banking and Currency Committee has already approved its housing bill and is awaiting the issuance of a rule to calendar it for the floor.

And 2 nights ago, at the final banquet of the National Public Housing Conference, I heard majority leader JOHN MCCORMACK state unequivocally that as soon as a rule is issued, the first thing he will program for immediate consideration, will be the housing bill—and that it would be passed.

Thus we stand at the threshold of our first major victory. We have a bill which contains for the first time as a congressional declaration, a new policy—a precedent making policy. It is stated specifically that the resources of the Federal Government will be utilized to provide the aids necessary to achieve a decent home and suitable living environment for all American families. No more do we subscribe to the trickle-down theory that those least fortunate in our society shall take the left-overs in homes after they shall have ceased to be fit for human habitation, like the outgrown suit which has been handed down, with patches, from the first child in the family to the tenth. Congress is now on record that all American families are entitled to a decent home and decent living conditions.

Secondly, the bill provides for a 5-year slum-clearance program under which $1,000,000,000 in Federal loans and $500,000,000 in grants is authorized. This is the clause which should do much to lift the face of Chicago.

The Ninth District which I represent has been the subject of many comparisons, few, however, as picturesque as this one: the lake front and the Gold Coast along Lake Shore Drive has been referred to as the beautiful skirt of Miss Chicago, while the area half a mile inward from the lake has been called her dirty petticoat. This provision of the bill now gives us the soap to launder the petticoat.

Thirdly, we have a realistic contribution by the Federal Government for construction of low-rent housing for low-income families. The Senate bill provides for Federal gifts of $308,000,000 a year to build 810,000 housing units over a period of 6 years. The House version, which I shall support, goes much further and increases Federal contributions to $400,000,000 a year to finance the construction of 1,050,000 units.

Under the Housing Act of 1937, which was the basic legislation for the development of low-cost housing throughout the country, there were only 172,000 units constructed. Chicago built only about 8,000 such units under the act. But now, with the impetus of this provision—if Chicago goes to work, it should have between 40,000 and 50,000 units within the next 6 years.

Here again is soap for the dirty petticoat. The Mother Cabrini housing project lies in my district in the heart of one of the worst slum areas in the country. It stands as the shining symbol of what may be done under such a program by offering comparison of the progress made under the act, to the filthy, broken-down, overcrowded firetraps which lie on the other side of the street. The families who live in Cabrini come from the same economic level as those living in the slums and but for the creation of the project, the families now enjoying decent living conditions would be doomed to the despair and bondage which is now the lot of their next door neighbors.

I have been informed that clearance of the slums surrounding Cabrini is one of the first which will be undertaken under the new program—and I am very pleased. I truly have an incentive to work for passage of this bill.

Fourthly, the new bill provides for Federal aid in the form of construction loans to low income farm families. Two hundred million dollars is allocated for this program to permit owners of farms who now cannot finance adequate homes from the earnings reaped from their toil, to obtain decent accommodations. While this, of course, is not of primary interest to city dwellers, its necessity cannot be overestimated. Many of you have seen the pictures of Margaret Bourke White taken of the farm homes in the South. This act offers hope to such people.

Lastly, and very important, the new bill contains provision for Federal research into the possibility of new design of mass production homes, of improvement of the archaic methods still utilized in home construction. This clause was written into the law because study after study revealed that a major obstacle to housing progress is the high cost of production. The results of research undertaken now will benefit the home builders, the mortgage investors, the leaders of our communities and the Federal Government. There is no earthly reason why the formula of progressively higher production and lower unit costs which has been exploited so successfully in all other American industry, should not work comparably in the field of home building. A short time ago Walter Reuther suggested that the empty war plants which had been devoted to turning out the tools for war, be converted to the construction of low-cost homes on a mass production basis. Many people gasped when the suggestion was made but I, for one, would not be willing to dismiss his hope as being purely visionary. The mere fact that it goes against traditional methods of producing living units is not sufficient reason to cast it aside. The research clause of this new bill could very well be used to test theories such as his.

This bill is a good bill. It gives promise, at long last, of providing the base for housing for Chicago and for the Nation if we can successfully prevent the crippling amendments which will be offered.

That is the job of those of us who are on the congressional firing line because amendments will be offered to gut the bill. Many of you have heard and sensed in a vague, disturbing manner about the operations of the real estate lobby. Those of you who are here tonight and who have attempted to give implementation to the housing program have felt its influence—but none of you until you sit in a legislator's chair will ever feel the full impact of the bruising power of this pressure group.

I received my first battle scars in the fight to continue rent control. I was deluged—literally flooded—with tons of letters and pamphlets from those who would kill the act. Landlords visited my office in droves to convince me that the need for rent control no longer existed. They packed the galleries during the debates so that the Congressmen were aware of their presence during the deliberations on the floor. There is no doubt in my mind that this was a concerted drive organized and executed under a program initiated by the real estate interests. And I remember Representative COLE, who sits with JESSE WOLCOTT on the House Banking and Currency Committee, challenging us on the Democratic side from the floor during the debate, to show him one tenant who had sufficient interest in the result of the legislation to come to Washington. "No," he said, "the only ones who are suffering are those who are here, whom you have seen and whom you have spoken to. They are here because they are the only ones who are interested and they are being crushed by the monster of rent control." Shortly after that Representative Wolcott's amendment to extend rent controls for only 90 days, which to all intents and purposes would have killed the rent control bill, came up for a vote and it was defeated by only three votes.

That was the voice of the real estate interests and you may be assured that in the debates in the House on the Housing Act it will speak again. Their representatives will offer arguments and amendments to cripple the act.

Perhaps the principal amendment which will be offered will be to limit the cost for construction of public housing units to unrealistic levels. This argument will be predicated upon the so-called economy house which has been peddled in tremendous quantities through the mail, if not through the real estate market. Here we have a cracker box, built in Texas, Florida, or California, roughly the size of a three-car garage and constructed of the cheapest material. This is exhibit A to prove that private industry can, in fact, built desirable living units at a low cost. And the argument will be made that public housing units should be in turn proscribed by the cost of constructing the economy house—no matter where the construction is undertaken, whether it be in New York, Minneapolis, or in Chicago.

Here, indeed, is the amendment which would convert the program from one of home building to slum building. A tinder box will be presented as the shining example to deprive the public of permanence and livability in the construction under the act.

Perhaps the best answer to this argument was made by my friend, HUGH MITCHELL, Congressman from Washington, and a truly able Representative. He dug up an article printed in the Doane Agricultural Digest for April 1949, which laid down the minimum standards for housing accommodations for cows. It pointed out that 75 to 100 square feet of stabling, plus another 75 to 100 feet for hay and bedding storage, was absolutely essential. The model plan showed 180 square feet of building per cow. For four cows, 720 square feet would be needed. And this, my friends, is almost 50 percent more than the space allotment for a family of four in an economy house.

One thing is certain, if this amendment goes through we will be shackled with shacks to the shame of the entire country. No, even

in this period of high building costs and severe housing shortage the pressure for lower standards must be resisted, and under no circumstances can we accept any reduction in the ideals and living standards we have set for the future. We must not do away with slums in one section to transplant them to another section of the city.

There will be other amendments offered to cripple the program such as the one which requires that for every new house built, an old one shall be repaired or demolished, or another amendment which would do nothing more really, than delay the program by requiring a referendum of local voters. But these will be defeated.

I have the greatest faith in our Chicago Democratic Congressmen. They fought ably and well on your behalf when the rent-control bill was up for consideration and I am certain that they will be steadfast in support of the housing bill. And here I want to give special commendation to Congressman BARRATT O'HARA, of the Second District, who, as a member of the Banking and Currency Committee, has done a brilliant job on the housing bill.

You can be most helpful to us in our fight in Washington. You may be sure that we will be surrounded by the paid representatives of those who are opposed to housing progress. We want to know that we have your encouragement and your assistance. Only the extremely brave or foolhardy person disregards aid. You have no idea of your power over Congressmen. You are a tremendous force. You are the voice of the people, and Congressmen will pay attention to your letters.

But with the passage of this bill we are taking only a step in the direction of achieving housing for Chicago now. Slum clearance and low-cost housing are a good base for progress but under no stretch of the imagination can it be stated that these are the sum total of what must be done. And here I think it should be pointed out that many people suffer from the delusion that the entire answer lies in slum clearance. Nothing is further from the truth, because a well-planned housing program for a municipality does not rest entirely with such a project. Slum clearance brings with it tremendous problems of relocation of the families and an incident long passage of time before completion of a housing replacement. More than that, the slums are so overcrowded that the number of families living in a slum area cannot possibly be housed within the same area in decent new construction.

No, for housing now, we must use the vast areas of vacant land in the city—land that is blighted and tax-delinquent and which must be reclaimed and cleared, because it is one of the short routes to immediate relief. The clearing up of tax-delinquent land by foreclosure for nonpayment of taxes should have been undertaken years ago and perhaps it is not too late, but the slow processes of foreclosure law require the expiration of a period of redemption before any action can be taken.

It seems to me that a much better approach is afforded in legislation now being used to clear title for construction of the Congress Street and other arterial highways. Municipal corporations are given the power to condemn land by eminent domain and the decision of the court is final, even though there should be disagreement as to price and a resultant appeal. Title to the property is acquired quickly.

The same power to condemn land and obtain clear title quickly should be granted to public agencies engaged in promoting housing for the public. In this manner vacant land within the city can be used almost immediately.

Other municipalities have broken the grip of the paralysis which has seized our city. VJ-day was August 15, 1945. In November of that year, 3 months after the end of hostilities, New York City advertised for bids for its first housing project and went to work. Since that time it has completed and will have completed by the end of this year 67,000 housing units. It is thrilling—it is breathtaking to view the new homes which have gone up, with nurseries and playgrounds for the children.

And recently New York City has appropriated over $200,000,000 of its own funds, unsubsidized by State or Federal funds, for the construction of middle-income housing, to rent for $12.50 to $15 per room per month.

This is progress. This is dynamic democracy. This is true acknowledgment of the principle that every American family is entitled to a decent home in decent surroundings—not only for the limited-wage earner, but for another group which requires assistance desperately.

In this picture we must not disregard the forgotten families of housing, the periphery people who dwell in the twilight on the edge of the darkness of the slums and on the edge of the sunshine of good living conditions, who are wealthy enough to disqualify themselves for low-cost housing residence and too poor to scrape together funds needed to purchase homes on the market today.

It has become increasingly apparent under our economy that only the very poor and the very rich are provided for, almost to the complete neglect of the great middle class. These groups which constitute 42 percent of our population, have incomes between $2,500 and $4,000, and they have been priced right out of the housing market.

With the other Chicago Congressman, I have introduced a bill to provide Federal assistance for the middle-income groups. It will make possible direct Federal loans to cooperatives and other nonprofit corporations, in order to provide privately owned housing for purchase and rental.

Perhaps the salient feature of the bill is its proposal to reduce financing costs. Financing costs will be reduced by direct Federal loans at the going Federal rate of interest. It will be claimed that this idea will destroy private enterprise, but there is no truth in such assertion. We propose only to permit the Government to enter financing territory into which private agencies cannot and will not tread. If they have no desire to finance such construction because other types of building are more profitable, they can have no legitimate objection to Government assistance to meet this real need.

The bill will create a new agency to administer the program—the Cooperative Housing Administration. I, for one, feel that it is about time the public got a break in the administration of the programs which Congress sets up. Congress passes legislation presumably to meet public need. But Congress may pass the most perfect bill to take care of every conceivable circumstance and yet the purposes of the bill can be sabotaged by faulty administration.

The Federal Housing Administration, when originally created, performed a necessary function in a most creditable manner. Mortgage financing was paralyzed. Banks and credit institutions refused to take risks and construction was at a standstill. The FHA assumed the risks which the financial companies were unwilling to assume and gave momentum to the home construction which was undertaken in the prewar years.

But, like a great many other governmental agencies which retreat into conservative ruts after a noble and liberal start, the FHA has refused to continue to pioneer in the housing field. It now, in many instances, refuses to guarantee loans which private agencies have approved, because it disapproves of modern architectural design, or the risk may be a little too great, or because a scheme may not fit its regulations.

The FHA was created to help build houses. That is its purpose today. It is not in the banking business as a private institution to make a profit; it is a governmental institution which can afford to take marginal risks and possibly lose money in the process, because it must spark the building of homes.

Veterans, who have attempted to obtain FHA approval for cooperatives have given up in despair. Their stories remind one of the magnificent statue of Laocoon and his two sons, struggling within the coils of the serpents.

That is why we propose to create a new agency—a Cooperative Housing Agency—to help build cooperatives, with veterans getting preference—and I hope it remembers that its purpose is housing—not hindrance.

Housing for Chicago—now, depends more than anything else on polishing up the shield of Chicago—of giving life to its motto—"I will." I am impressed by the lack of integration between the governmental agencies—Federal, State, and municipal, and their essential partners—industry and labor. The construction trade-unions in Chicago have received an enormous amount of criticism for being the stumbling block in the picture. I don't believe the criticism is entirely warranted, because I know the labor unions are interested in building homes for their members and the public. Why not appoint a progressive labor official from the building trades to a position of leadership, and assign to him a portion of the responsibility for making progress?

Why not appoint a liberal builder to work with labor and the governmental representatives? Therefore, I would propose immediately the creation of a commission—officially or nonofficially, upon a voluntary basis—comprised of representatives of public housing agencies, trade unions, and private builders, to integrate a program for progress in housing.

This commission, like all active groups, will depend upon the people who comprise its membership, and I hope that people comparable to Elizabeth Wood will be appointed—people who have the public interest at heart.

The time for frustration is over. We must have action from the Land Clearance Commission and the Chicago Dwellings Association. We must have concerted action by strong-willed liberal men of labor, of construction and Government forcing progress or telling us why progress is not being made. And to head this commission we must have a strong leader, like General Farrell, of New York City.

The programs we espouse will be denounced as socialism. The cry of socialism is always raised whenever an attempt is made to find reasonable solutions for public problems with governmental help. But in answer I want to cite the invocation of Rev. James Meyers, which he uttered in 1943:

"Give us, we pray Thee, a vivid sense of little children condemned to live in crowded quarters and to play amidst the traffic of the streets, deprived of the simplest elements of human health and happiness, robbed even of the common heritage of pure air and sunshine. Make us conscious of the preventable disease which breeds in the narrow alleys, and in the dark inner rooms where sunlight never comes.

"By our hope of Thy mercy as we sit concerned by the sickbeds of our own little ones, may we be willing in love to share the anxiety, the anguish, and the grief of the parents of the poor as they watch by their sick or mourn the death of those who need not have sick-

ened or died but for the conditions in which they are obliged to live."

It is not socialistic to be conscious of these things and to try to alleviate them. On the contrary, it is maturity of the great American democratic ideal.

We in Washington will do our job, but again let me urge you to remember that you are our partners. This is a job for all of us. It is a campaign as vital as any election campaign. You must help us in the fight. You must tell your friends and neighbors to get into the fight, by ringing door bells, by writing letters, by building an irresistible force which can bring us victory. Only in this way can we have housing for Chicago—now.

Minimum-Wage Bill

EXTENSION OF REMARKS
OF
HON. JOHN W. HESELTON
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. HESELTON. Mr. Speaker, in accordance with instructions of the Republican delegation in the House of Representatives from Massachusetts to insert in the Appendix of the RECORD copies of resolutions, petitions, and memorials, which may be sent to the entire membership of that delegation, and, under leave granted me to extend my remarks in the RECORD, I now insert resolutions of the General Court of Massachusetts memorializing Congress to enact the 75-cent minimum-wage bill:

Resolutions memorializing Congress to enact the 75-cent minimum-wage bill

Whereas a large number of persons engaged in industry are receiving compensation much lower than 75 cents an hour; and

Whereas the high cost of living makes such compensation inadequate for adequate support of such workers and their families: Now, therefore, be it

Resolved, That the General Court of Massachusetts respectfully memorializes the Congress of the United States to enact speedily a law providing that the minimum rate of compensation shall be 75 cents per hour; and be it further

Resolved, That copies of these resolutions be sent forthwith by the State secretary to the President of the United States, to the Presiding Officer of each branch of Congress, and to the Members thereof from this Commonwealth.

In senate, adopted, May 12, 1949.

IRVING N. HAYDEN, *Clerk.*

In house of representatives, adopted, in concurrence, May 17, 1949.

LAWRENCE R. GROVE, *Clerk.*

A true copy. Attest:

EDWARD J. CRONIN,
Secretary of the Commonwealth.

Labor Unions "Catching On"

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 16, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, from the February-March 1949 issue of Associated Farmer comes the following news story from California:

STRIKE AGITATION FAILS THIS YEAR IN ASPARAGUS

Attempts to agitate a strike in the asparagus fields this season have failed as growers prepared to cut the grass for canneries. Most of the asparagus activity centers in the delta regions in San Joaquin and Sacramento Counties.

Refusing to recognize or support a strike of asparagus cutters, in case of strife, the Sacramento Cannery Workers and Warehousemen Union announced last month through their spokesman that attempts to call a strike by outsiders is not a legitimate labor dispute.

"Instead of this being a legitimate labor dispute, it is a Communist-led agitation of a minority group, which will result in no benefits to the workers," the spokesman for the AFL unit said. "It will result only in disruption of the agricultural economy of the State, an aim which is pleasing to the Moscow Communists," he added.

The labor spokesman said the agitation was being led by a small group of CIO leftwing union of some 600 workers who belong to the Food, Tobacco, and Agriculture-CIO fish canners union in Seattle and are linked to Bridges' longshoremen on the San Francisco waterfront.

In the meantime, growers have provided extra housing for their workers and are planning to progress with the work when the season opens. At the same time, Filipino leaders asserted they would likewise repulse any trouble in the fields.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

RESOLUTION OPPOSING FEDERAL AID TO EDUCATION

Whereas the board of directors of the Minneapolis Chamber of Commerce has consistently for many years supported all sound efforts to obtain adequate funds for the Minneapolis schools from local and State revenue sources; and

Whereas it is our belief that in order to preserve and strengthen our democracy the local community cannot pass its problems to the Federal Government but must find ways and means within available resources to solve them; and

Whereas the board of directors of the Minneapolis Chamber of Commerce, after careful consideration of the report of its committee dealing with the subject, has arrived at the conclusion that the bill pending in Congress for the purpose of providing Federal aid for education in the several States is unsound in principle, and would almost certainly lead to serious and grave abuses; and

Whereas we believe that the primary responsibility for education, as between the Federal Government and the States, is upon the States, as indicated by provisions in the constitutions of all, or practically all, of the States of the Union, in recognition of the principle that a republican form of government can be maintained only if education is adequately provided for through public funds; and

Whereas it has been asserted that some States are not now, or may hereafter be unable, although willing so to do, to provide adequately for education in such States: Now, therefore, be it

Resolved by the board of directors of the Minneapolis Chamber of Commerce:

A. That it opposes pending legislation in Congress establishing a program of Federal aid to education in all States.

B. That we recognize the desirability of Federal aid to education by grants-in-aid to such States as may now or hereafter be unable to adequately support education in such States.

C. That if such a situation exists now or hereafter to warrant such Federal aid in such States, the same should be granted only insofar as it may be determined, with reasonable certainty, that such lack of adequate education in such States is due to inability, rather than unwillingness, on the part of the government in such States to furnish such adequate education.

D. That we have grave doubt as to whether Congress can or will formulate a basis on which to determine, with reasonable certainty, the inability of States to adequately support education; and, unless a technique can be developed to determine need and inability with reasonable certainty, we would oppose the entire program.

Adopted by the board of directors, Minneapolis Chamber of Commerce, May 10, 1949.

Why, With Your Tax Money, Educate One Whose Loyalty Is Questioned?

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, a high administration official has described the Communist Party as a conspiracy organization which advocates the overthrow of your Government and mine by force. For several years, the administration has given Communists and Communist Party sympathizers important jobs in policy-making positions in the Federal Government.

The Army has been forced to discharge individuals who were Communists—the State Department has been forced by Congress to kick out some of the Communists and Communist sympathizers on its pay roll.

Ever since the creation of the Dies committee, which was created by the House of Representatives to expose and oust Communists, there has been a bitter fight between the administration and the House of Representatives—the administration consistently opposing the efforts of the committee to expose and discharge Communists holding public jobs.

At one time, a resident of the White House appeared publicly with Communists before the Dies committee, and by so doing gave them support, encouraged them, entertained some of those Communists at the White House.

Yet, since the November election, President Truman charged that the House committee, which was then exposing Communists and their spies, was merely drawing a red herring across the trail of campaign issues.

At the same time he demanded appropriations calling for the expenditure of

billions of dollars of the taxpayers' money on the theory that it was necessary to spend that money in foreign lands to fight communism abroad. This administration spent billions to, as it said, contain Communists in Russia, but watered, fed, cultivated, and nurtured them here in Washington.

Those developing the atomic bomb were given billions of taxpayers' dollars to prepare for world war III and prevent Russian aggression. So necessary to our national security was the secrecy of the Atomic Energy Commission's work considered by the Congress that few, if any, restrictions were imposed upon the spending of those billions.

On the other hand citizens, newspaper reporters, and Members of Congress are not permitted to learn what goes on inside the Atomic Energy Commission's development plants. That Commission was made the sole custodian of our terrific death-dealing bomb.

David Lilienthal was appointed Chairman of that Commission. His fitness for the position was questioned and his leftist leanings discussed. Nevertheless, he was confirmed and now we find that an avowed Communist Party member is receiving $1,600 a year of your money to be given special training in advanced studies of nuclear physics.

The morning press charges that Lilienthal insisted on awarding an Atomic Energy Commission fellowship costing the Government $3,750 a year, to another scientist, Isador S. Edelman, even though he had been refused an atomic job on security grounds.

Mr. Lilienthal attempts to justify the administration's expenditure of your money to educate the avowed Communist, Hans Freistadt, on the ground that he is not now engaged in secret research. Mr. Lilienthal seems to feel that we need trained men—even Communists?—to provide a pool of knowledge and skill from which will be chosen the men to engage in secret atomic-energy work. It seems to be admitted, however, that this man, Hans Freistadt, would not, because he is a Communist, be chosen for such a job. Why, then, should you educate him?

My simple thinking tells me that it is folly to spend good, hard-earned American dollars to educate a Communist who advocates the overthrow of our Government by force; to put him anywhere near our means of defense.

College and university training and degrees are wonderful and desirable, but common sense and good judgment are sometimes more valuable.

Alcohol Fuel for Gasoline Motors

EXTENSION OF REMARKS

OF

HON. JAMES C. AUCHINCLOSS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. AUCHINCLOSS. Mr. Speaker, under permission to extend my remarks and include a statement made by Dr. Armand Hammer, president of the United States Distillers of America, Inc., before a subcommittee of the Senate Committee on Agriculture and Forestry, I would like to call the attention of my colleagues to the progress being made in the manufacture of a new alcohol fuel for gasoline motors. Dr. Hammer points out in his statement that if surplus wheat were made available for the manufacture of alcohol, there would be an ample supply for the manufacture of this new fuel. It is now in commercial use in Cuba, and our Department of Agriculture might well devote some attention to the consideration of this proposal. By using a substitute fuel we could build up our oil and gasoline reserves, which are so necessary in our industrial life.

Dr. Hammer, who is an old friend, has a brilliant mind, and I can testify that his statement should be treated with the highest respect. His statement follows:

STATEMENT OF DR. ARMAND HAMMER, PRESIDENT OF THE UNITED DISTILLERS OF AMERICA, INC., BEFORE THE SUBCOMMITTEE OF THE SENATE AGRICULTURE AND FORESTRY COMMITTEE

My company, of which I am president and the principal stockholder, is privately owned and is the largest independent distilling company in this country, owning nine distilleries in the States of New Hampshire, New York, Pennsylvania, Kentucky, Louisiana, Maryland, and Missouri.

The total daily grain mashing capacity of our plants is 47,673 bushels of grain—or a total of 1,240,000 bushels of grain per month. We also distill alcohol from potatoes when same are available and from molasses.

Our company was the first company in this country to distill alcohol from surplus potatoes on a substantial commercial basis. This was in the summer of 1944. Since that time we have used annually millions of bushels of surplus potatoes for making alcohol whenever same were available.

I am appearing here at the kind invitation of Senator GILLETTE. I understand from newspaper dispatches that your Senate subcommittee has begun an investigation to find new uses for surplus farm crops. It has also been brought to my attention that one phase of your investigation will be to determine whether Government alcohol plants can be more fully used in this direction. In this connection I hope that your subcommittee will investigate the possibility of making alcohol out of surplus grain. This alcohol when mixed with gasoline will make an excellent motor fuel. This has been done successfully in Europe and Asia.

I personally investigated this matter in Cuba where I found that when properly made the mixed motor fuel was more efficient that the type of gasoline generally used. I talked to the owners and chemists of the Arechabala Distilling Co., of Cardenas, Cuba. They produce a motor fuel made of a mixture of gasoline and alcohol called Mufoco. This is not in an experimental stage but is actually in commercial use. The cost was higher than gasoline but the company was able to get more for this product because gasoline was rationed in Cuba at that time. They showed me the results of extensive tests which were convincing that this new motor fuel of gasoline and alcohol is more efficient and economical than gasoline alone. Their customers obtained more mileage per gallon from the mixture and had no trouble with carbon in their motors. At one time when the shortage of gasoline was most acute I understand that the Cuban Government made it mandatory that alcohol be mixed with gasoline in the proportion of 20 percent alcohol to 80 percent gasoline. The quality of the alcohol produced by some of the small Cuban distilleries was of an inferior grade and this caused some difficulty at first. However, I was convinced from the experience of the Arechabala company that when properly made there is no difficulty whatsoever in using this mixture. This is especially true in this country where the distillers have excellent equipment and fine types of stills, and are able to produce alcohol of very high quality. This was proved during the war when all the distilleries in the country were making alcohol for Government use in war industries.

The grain-distilling industry can use approximately 200,000,000 bushels of grain a year which could be turned over for making alcohol for motor fuel. This would produce about 500,000,000 wine gallons of alcohol. The total gasoline consumption in this country per year is about 40,000,000,000 gallons. If alcohol were added to gasoline in the ratio of 1¼ percent, a surplus of 200,000,000 bushels of grain could be disposed of in this form. If the grain were delivered to distillers at the support price of $1.25 per bushel the total cost to produce a gallon of alcohol would be about 70 cents a wine gallon. Using this alcohol in the amount of 1¼ percent in gasoline would raise the cost of a gallon of gasoline by about one-half cent. This does not mean that the consumer would necessarily have to pay one-half cent more per gallon since the increase could be offset by a decrease in the Federal tax on gasoline. However, what the Government might lose in taxes would be more than made up by avoiding the losses which are sure to be incurred in the grain support program. If the surplus of grain should prove to be greater the production of alcohol could be stepped up by increasing present plant capacity at an approximate cost of $15 per bushel per day. In other words if the surplus of grain were to be 1,000,000,000 bushels instead of 200,000,000 bushels it would require additional plant capacity of approximately 2,000,000 bushels per day or a total capital outlay of $30,000,000.

Considering all the benefits to be obtained this is a comparatively small item against millions for increased grain storage which does not in itself solve the problem.

Long storage of grain which is under Government loan is not a sound practice economically or technologically. Storage space for grain is now insufficient to handle the production and there is talk of a $200,000,000 subsidy program so that more storage space can be built and the farmers can get Government loans on their grains. If the grain were converted to alcohol the resulting alcohol would occupy only one-quarter of the volume of the original grain, and the storage space for this alcohol already exists. Likewise, it is a matter of common talk that unredeemed grain which has been stored has become infested with weevils or has been consumed by rats, and is in large measure, lost as a useful commodity.

Assurance to the farmer that there is an immediate and continuing outlet for his grain surpluses will lend stability to farm operations and help prevent violent fluctuations between periods of great prosperity and periods of loss.

It seems to me that, with ever dwindling reserves of natural oil, it is folly to use these previous reserves more than we have to. On the other hand farm surpluses such as grain are beginning to pile up and as long as there is a possibility that this surplus may become a burden to our economy some legislation ought to be introduced in Congress to make it mandatory for the use of a certain percentage of alcohol in motor fuel. This would not only solve the problem of the full utilization of Government alcohol plants but would relieve the present grain situation which may upset the economy of this country.

The Thousand-Dollar Car

EXTENSION OF REMARKS
OF
HON. THOMAS H. BURKE
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. BURKE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following talk delivered by James D. Mooney, president and chairman of the board, Willys-Overland Motors, Toledo, Ohio, at the seventh annual luncheon of the Metropolitan Council, Automobile Old Timers, New York City, April 28, 1949:

THE $1,000 CAR

Mr. Chairman, distinguished guests, automobile old timers, ladies and gentlemen, it is a great pleasure to be here today with the men who have played such an important part in the making of modern history. Here of all places there is no need for me to review the tremendous accomplishments of the automobile during the past fifty-odd years. We have seen it alter the face of the Nation. We have witnessed the profound changes it has caused in our economic and social life. And we have seen it raise the standards of living of the American people to new heights.

We who have been a part of the automobile industry from its early days, share many happy memories. Not the least of these is the memory of the day when you could get a good standard-sized car for $1,000 or less. A large segment of the motoring public remembers that day, too. Today's automobile manufacturer is reminded of it constantly by letters which demand to know "When are we going to get that $1,000 car we heard so much about during the war?"

I have the answer to that one. We are going to get the $1,000 car when we get a 5-cent glass of beer again. And when I say a 5-cent glass of beer I don't mean a thimbleful of watery brew. I mean a man-sized glass of real draught beer.

By the same token, when we talk about the $1,000 car we don't mean motor scooters. We mean full-sized standard vehicles required by this country's vast distances and varying road and climatic conditions.

$1,000 CAR POSSIBLE

My thesis is that we can have the $1,000 car in this country again. Nothing would please the automobile manufacturer more than to be able to deliver a full-scale well-styled product of American automotive know-how to your door for less than $1,000.

It is my firm belief that the American people can have a $1,000 car if they want it badly enough. Sitting around and wishing for it isn't enough. If they really want it, they are going to have to do something about the factors that are depriving them of low-priced standard-sized cars.

GREAT TECHNOLOGICAL ADVANCES

Since it's an old timer's special prerogative to look back at the record, let's take a look at the automobile industry's record of the past 20 years. In 1929, after a steady and rapid growth from its early beginnings, the American automobile industry sold more than 4,600,000 cars and trucks in the domestic market. We sold another 750,000 cars and trucks to the export market.

In the 20-year period that has elapsed since that time American industry has made amazing technological advances. We have learned how to make our products better. We have developed greatly, improved productive equipment, and have learned how to operate our plants and machinery far more efficiently.

The production miracles of 1940 to 1945 are testimony enough to the extent of the advance of our technical skills.

Yet, with all this remarkable progress that the automotive industry has made in the past 20 years, one startling fact stands out. The industry has not yet been able to equal its 1929 record of production and sales. Twenty years after reaching that high level of 1929, we are still thinking in terms of a maximum of 5,000,000 cars a year.

THE 10,000,000-CAR YEAR

That limit has not been set by our ability to produce. It hasn't been set by our population growth or our normal increase in standards of living. On the basis of transportation needs and the previous history of automotive development, we should today be thinking in terms of the 10,000,000-car year.

There is a potential market and need for 8,000,000 cars and trucks a year in the United States. There is certainly the need for 2,000,000 more American-made cars and trucks a year for the rest of the world.

Why, then, are we scratching along trying to equal a goal we reached easily 20 years ago instead of striving to meet today's needs?

PLANNERS MOVE IN

To anyone who has kept watch on the course of business affairs for the past few years, the answer is obvious. It is not hard to find the forces which are pressing us into an economy of scarcity, as exemplified by our inability to build the thousand-dollar car or reach for the 10,000,000-car year.

For 20 years commerce and industry have been hobbled with economic experiments and bureaucratic controls.

The free interplay of the basic forces of supply and demand in the market place have been tampered with by all sorts of restraints and inane planning. Management has been denied the right to make the decisions necessary for the proper functioning of its business.

And to complete the confusion, even the monetary system has not escaped the meddlers. We've been subjected to a so-called managed currency that manages to do nothing but keep us in utter darkness concerning the true value of our savings and investments.

THE TAX BITE

As if this weren't enough, we've got to pay for it, too. What is left of our competitive economy is in a fair way to be taxed right out of business. The bite of Federal corporate taxes today amounts to 38 percent before the residual earnings can be made available to the people who put up their savings for the business as a return for their investment and the risks involved.

In addition, the investor is taxed so heavily on his dividends that it is becoming more and more difficult for industry to find the risk capital in needs for healthy growth. This difficulty of obtaining new capital is reflected in the ridiculously low prices of stocks on the New York Stock Exchange.

SHORTAGE OF RISK CAPITAL

When corporations had to go to the market for new security issues, they were able to raise less than one-fifth of their funds through the sale of stocks in 1948. The other four-fifths had to be raised through the sale of bonds.

In other words, corporations in 1948 were able to raise only 19 percent of their outside capital funds out of equity or risk capital compared to the already low 30 percent of 1947.

This is a pretty clear picture of what high tax rates are doing to the business structure of the Nation. The sources of new capital, so necessary for the healthy growth of industry, are being dried up.

Of course, it's rather difficult to get the man in the street concerned about the tax woes of corporations. But let's see what tax rates are doing to the standards of living of all our people.

TAX RATES AND SELLING PRICE

Anyone who is even slightly dry behind the ears in economic matters knows that in the end all taxes must come out of the pocket of the consumer. When the Government slaps a heavy tax on a corporation it is really taxing the man who buys the corporation's product. This is because of the simple economic fact of life that all costs that enter into the manufacture of a product must be covered by its selling price.

The man who buys a car usually knows that he is paying a Federal excise tax of about $90 or more. He knows that he is paying a State or city sales tax that usually runs about 3 percent of the price of the car.

But what he doesn't usually think about is that there are a lot of other taxes he is paying, too. The income and withholding taxes paid by the men who make and sell the vehicle are also a part of the car's selling price. So are the corporation taxes, the property taxes, and all other taxes that are imposed upon the manufacturing and distribution organization. Today's average car in the lower price brackets contains about $450 worth of direct and indirect taxes.

Four hundred and fifty dollars in taxes. Is it any wonder that the world market cannot buy the 10,000,000 cars annually that it needs?

Unrealistic tax rates are seriously cutting back our standards of living. And other unrealistic economic meddling is curtailing industry's ability to produce, prosper, and offer stable employment.

RESULTS OF "PLANNING"

For the past 20-odd years, assorted groups of stargazers and bureaucrats in Washington have attempted to direct the course of this Nation's economic affairs. Their ingenuity in finding ways to spend our money has been truly amazing. They have succeeded in running the public debt to astronomical heights. They have watered our currency and nurtured the philosophy that the way to get more is to work less. They have driven investment capital to cover. And they have completely disrupted the orderly conduct of our day-to-day business.

THE DEPRESSION

Now, nearly everybody in the country seems to know that there's a depression moving in on us. Everybody, that is, except a few of these long-haired bureaucrats in Washington.

What are we going to do about it?

I have spent 50 years of my life in industry and by now have been through several wars, revolutions, panics, depressions, inflations, and recessions. In the meantime, during the past 20 years, the professional managers, the economic group to which I have the honor of belonging, have been pushed aside in the discussions of economic problems by left-wingers and Pied Piper politicians.

In spite of this, I am going to make a few suggestions today for arresting further movement into depression. There are still some things that we can do to give us the $1,000 car and a $5,000 6-room house of decent enough quality for a young American GI and his wife to raise their kids in.

WHAT WE MUST DO

Here are five steps which we can take to get our economy on an even keel again:

1. We've got to quit yammering, yapping, and griping about how badly off we are. This country possesses the best industrial facilities ever known. We are rich in natural resources, skilled workers, and experienced managers. All we need is a little common sense in making full use of these advantages.

2. We must repudiate, once and for all, the philosophy of the hand-out that has grown

up in the past 20 years. Let's think and talk more about what we can give and less about what we want to demand from the other fellow.

HARD WORK NEEDED

3. We must all take off our coats and go to work again. No economy has ever yet been able to survive on a take-all and give-nothing basis. The Romans learned that to their sorrow several centuries ago, and later on, so did the Spanish conquistadores.

During recent years we have seen various pressure groups organize raids on the United States Treasury under the guise of subsidies, stabilization payments, bonuses, or just plain relief. These groups have not been looting conquered races, as did the Romans and Spaniards. They have been looting themselves and all of us. But the result will be the same that befell the earlier looters—political and economic chaos and collapse.

It is certainly high time that we, who have spent years of hard labor to build this great industry of ours, raise our voices in protest to the "gimmie" boys. We know that this country was made great by hard work and honest sweat. And we know that that is the only way it can stay great.

I repeat, it is time that we all take off our coats and go to work again—the guys in blue jeans and the guys in white collars. Cost of goods and services cannot be brought down with a 40-hour week and a short measure of work for high hourly rates. The only way we can build the $1,000 car is with an honest day's work at an honest day's wage.

DEMAND LOWER TAX RATES

4. We must demand lower tax rates. We are not going to get the $1,000 car and $5,000 home with tax rates at their present level. Sure, we have to pay off the public debt. But I am quite convinced that the way to get more money for servicing the debt and paying for essential government services is through lower tax rates.

Every successful merchant is familiar with the technique of lowering the rate of his return to get a higher return in total dollars. The same principle applies to tax rates. At present rates, taxes are killing the goose that lays the golden eggs.

Last year's investment figures tell the story. If industry is to attract the capital necessary for it to grow and perpetuate itself, we've got to lower the tax rates that are discouraging new investment.

And if consumer purchases are to stay at a level that will maintain and improve our standards of living, we've got to lower the tax rates that are inflating the prices of goods.

CONTROLS AND LAWS OF ECONOMICS

5. We've also got to rid our economy of other meddling by the planners. After 20 years of experimentation, we should by now have learned that you can't control the laws of economics by legislation any more than you can legislate away the law of gravity.

We must demand that the Government quit pegging interest rates and generally monkeying around with the credit structure. Let's challenge the Government to release American business, banking, and industry from the bedlam of controls. American business must get out of this snakepit of interference with the daily processes of production, distribution, and the use of money and credit in the production of goods and their flow to the American consumer.

Let's demand that the Government start moving back to the use of gold in our monetary affairs. You just can't have a stable economy built on a paper base of unstable money.

SUMMARY

To sum up, in the past 20 years we have imported a lot of crackpot methods of running our economy. We have seen where these methods have led our neighbors abroad, and we can see pretty clearly where they are leading us.

There is still a way for us to duck the depression that threatens to move in on us and to obtain the things we have come to expect from our American system, as symbolized by the $1,000 car and the $5,000 home.

Let's try that way this time.

It means hard work and honest sweat for all of us. It means chucking out the economic star-gazers and meddling planners. It means sound money and interest rates established in free money markets. It means a reasonable tax structure and common-sense public expenditures.

In short, let's go back to the American way of running our country.

A Churchman Opposes "Do Nothing" Policy on China

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 23, 1949

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter sent by Bishop Fred Pierce Corson, of the Methodist Church, to the chairmen of the House Committee on Foreign Affairs and the Senate Committee on Foreign Relations. Bishop Corson has been in China recently and knows how great and how unnecessary is the disaster to which our lack of effective policy of resistance to Communist subjugation is inevitably leading:

THE METHODIST CHURCH,
Philadelphia, Pa., May 9, 1949.

Hon. JOHN KEE,
Chairman, Foreign Affairs Committee,
House of Representatives,
Washington, D. C.

MY DEAR MR. KEE: In view of the statements coming to your committee from certain churchmen, in regard to the Government's present policy toward China, I feel compelled to inform you that there are many Protestant churchmen who have never endorsed the Government's "do nothing" policy in regard to China and who look upon it as one of the major blunders in our foreign policy, a betrayal of the only democratic hope for China, the defalcation upon a debt incurred to the Chinese Government for its splendid resistance to the Japanese at a time when the release of those Japanese troops to fight us would have jeopardized and prolonged the outcome of the war, and the endorsement of the deepest tragedies which could have come to the cause of democracy in Asia.

It has been well known that clever propaganda has slanted much of the news which has come out of China. We have been told that the Chinese Reds were not like the Russians—that they were only concerned in an agrarian movement, that as soon as they took over, corruption would cease and freedom as we know it would be established. Every reliable report coming out of China indicates that none of these claims for the Chinese Reds are true. Step by step they are following the occupation pattern of their colleagues in Europe. They have failed to solve the land problem where they have gained control. Their civil administration has also followed the pattern of the European Reds by being both cruel, inefficient, and corrupt. They have suspended the guaranties of real freedom and liberty and have again followed the European communistic pattern by taking away from the people they rule any right to protest or the assertion of democratic choices.

The church is not concerned with the politics involved. Its chief concern is its witness to the Christian truth about man and God, and the necessity of maintaining it if human freedom is to continue to exist anywhere. An emasculated church subservient in every respect to a godless government which denies to man the right of private judgment and free choice, while it seeks to destroy the Christian ethic, is a travesty which deceives no sincere and intelligent churchman, and its far-reaching implications for all life should be evident to all who are in a position to know what has happened to religious freedom in Communist-controlled countries.

I have recently returned from China. While there I had opportunity to consult with all classes of people. In connection with this tour of duty to China, I spent time in Japan and the Philippines. I know with what deep concern the leaders of Japan and the Philippines looked on the Communist domination of China. What they said is becoming more evident every day, namely, that if the Communists took China, then Japan and the Philippines must rearm at terrific expense to the United States of America and that in the Far East all that would be left to democracy would be the islands.

Never in the whole consideration of help for China has the necessity for sending American troops to China been recommended nor predicted by the ablest and soundest advisers. The Chinese Government still has plenty of manpower. They needed the moral support of their war ally, the United States of America, and when it was withheld our action had the effect of giving support to the Comumnists. While in the Orient I heard many of the top leaders, Nationalists and Americans in China, Japan, and the Philippines, say that less than $500,000,000 given in the right type of supplies, and administered efficiently by our Government, would have insured the stabilization of the Chinese Government in China, maintained the basis of a free constitutional government, which is to be totally abrogated in the peace demands of the Reds and saved the United States billions of dollars in the rearmament of Japan and the Philippines. The Chinese Government had also accepted the principle of supervision by the United States of these needed supplies. All of the United States demands upon China seemed to have been met except the impossible one of coalition with the Communists.

It is not too late to save the Orient from complete Red domination which is bound to happen if the Chinese Communists gain control of all China. Do not underestimate the ability nor the patriotism of Generalissimo Chiang Kai-shek, nor the response of the Chinese people if given any hope or encouragement. A democratic foothold in China can still be maintained.

Also do not blind yourselves by wishful and unrealistic thinking, nor by the testimony of those who seek an alibi for past blunders, nor by a refusal to see clearly the pattern of the Reds developing in China so analogous to the European Communist program, to the ultimate price of Red domination of China.

Trade rights, mining rights, transit and landing rights will favor Russia. Billions for rearming Japan and the Philippines will be required. There will be no more chance of democracy reasserting itself in China than in Russia or the satellite countries of Europe. The Christian church will be denied its opportunity to witness to its Christ and to serve the people in His name. The communistic pressure on India and her neighbors will grow stronger. The discouragement of

groups holding out against communism in the Far East, because of the present do-nothing attitude of the United States, will be inevitable. The reduction of the economic opportunities of the United States upon which our property and the ability of the United States to help the world depend, will weaken world democracy and strengthen world totalitarianism.

The hour is late. Help should be granted the Chinese Government at once. Honor and sound sense should be given precedence over an expediency which if heeded now will prove, as it did in Europe, a costly and tragic compromise.

Yours sincerely.

Missoula Girl Awarded State Honors for Singing

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. MANSFIELD. Mr. Speaker, a very good friend of mine has been signally honored by the Montana State Music Festival. Donna Nooney, though only 15 years old, is an old friend and a real artist. Her parents are to be commended for the interest and responsibility they have shown; the Sacred Heart Academy is to be commended for the fine training she has received; and Donna herself is to be congratulated for the ability and aptitude she has shown.

Donna, we are all proud of you and we expect great things in the future. Good luck and Godspeed.

The articles below are from the Missoulian of Missoula, Mont., and the Western Montana Register.

[From the Daily Missoulian, Missoula, Mont., of May 9, 1949]

HIGH HONOR FOR DONNA NOONEY

A 15-year-old Missoula girl, Donna Nooney of Sacred Heart Academy, was chosen from among about 200 soloist contestants to sing at the public concert which ended the State music festival at Great Falls, it was learned Sunday.

Miss Nooney received a superior A rating, highest awarded, and sang a grand opera selection in French before approximately 4,000 persons in the concluding event of the festival Saturday night. She sang "Ah Je Veux Vivre" from Gounod's Romeo and Juliet.

She is a sophomore student at the academy, Catholic girls' high school, and is a daughter of Mr. and Mrs. William F. Nooney, 326 LaVasseur Street.

Miss Nooney, who also received a superior A rating at the 1948 State music festival, when she was 14 years of age, has been chosen to represent the academy in little theater and declamation events in the Montana interscholastic meet this week.

She placed high in two talent contests sponsored commercially in Missoula recently. Her ambition is to become a star in grand opera.

[From the Western Mountain Register of May 22, 1949]

MISSOULA GIRL AWARDED STATE HONORS FOR SINGING

MISSOULA.—A 15-year-old Missoula girl, Donna Nooney of Sacred Heart Academy, was chosen from among about 200 soloist contestants to sing at the public concert which ended the State music festival at Great Falls.

Miss Nooney received a superior A rating, highest awarded, and sang a grand opera selection in French before approximately 4,000 persons in the concluding event of the festival Saturday night. She sang Ah Je Veux Vivre from Gounod's Romeo and Juliet.

She is a sophomore student at the academy, Catholic girls' high school, and is a daughter of Mr. and Mrs. William F. Nooney, 326 LaVasseur Street.

Miss Nooney, who also received a superior A rating at the 1948 State music festival, when she was 14, has been chosen to represent the academy in little theater and declamation events in the Montana interscholastic meet this week.

She placed high in two talent contests sponsored commercially in Missoula recently. Her ambition is to become a star in grand opera.

Northern Ireland

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. ROONEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Hon. Sean Noonan, Irish Minister to the United States:

IRISH LEGATION,
Washington, D. C., May 12, 1949.

Hon. JOHN J. ROONEY,
House of Representatives of the United States, Washington, D. C.

MY DEAR MR. ROONEY: I am sure that you will have seen from newspaper reports that the British Government have introduced a bill entitled "Ireland Bill" which, inter alia, "declares and affirms the constitutional position and territorial integrity of Northern Ireland" and provides that "Northern Ireland or any part thereof will in no event cease to be part of the United Kingdom without the consent of the Parliament of Northern Ireland," and inasmuch as Ireland's attitude toward this measure is likely to be played down in dispatches emanating from London, I thought it well to let you know how the Government and people of Ireland regard this utter negation of democratic principles on the part of the British Government.

As Mr. Macbride, Minister for External Affairs, stated in London on Thursday last, the Irish people and government view this new attempt by Britain to legislate concerning a portion of Ireland, as a clear usurpation of the fundamental right of the Irish people to determine their own affairs without outside interferences—which right is the very essence of democratic rule. This action of the British Government in seeking to impose its will regarding the partition of Ireland is comparable with the action of Germany before the war and of Russia since the war in seeking to impose their systems of government in central Europe.

The gratuitous guarantee by the British Government of the territorial integrity of a portion of Ireland can only be taken as an attempt to reinforce the unjust partition of Ireland which was imposed against the will of the overwhelming majority of the Irish people, and to encourage the Belfast Government to persevere in its intransigeance.

The territorial integrity which this bill proposes to guarantee even includes areas in the Six Counties, such as County Tyrone and County Fermanagh, where there is an overwhelming majority in favor of unity with the rest of Ireland, and precludes the population of those areas from exercising their undoubted democratic right to vote for unity.

Apart from its obvious denial of the fundamental democratic right to national self-determination the bill can only be damaging to Anglo-Irish relationship which had improved tremendously in recent years, and is likely to inflame an already highly dangerous situation.

So far as Ireland is concerned there is a real desire to end for all time the age-long struggle which has marred Anglo-Irish relationship and it is therefore, most unfortunate that at this time, when unity among the democratic nations is so imperative, a more constructive approach should not have been adopted by the British Government. Even in the short time since the introduction of the bill there has been a marked deterioration in Irish sentiment toward Britain which is spreading not alone in Ireland, but in other countries having people of Irish descent among their citizens. This is an attitude which is to be deplored, but it is an understandable one in view of the proposed intention of the British Government.

The Irish people are fast coming to believe that the high sounding statements regarding the principles of democracy heard from many sources are but lip service and are not intended to apply to Ireland.

It seems to me that true believers in democracy should take note of a denial of democratic rights—not only when such are denied by Russia—but also when denied by any other nation.

Very sincerely yours,
SEAN NOONAN, *Irish Minister.*

Peace Business

EXTENSION OF REMARKS
OF
HON. CHARLES E. POTTER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. POTTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, entitled "Peace Business," by Col. Hugh A. Kelly, of Jersey City, who attended the first Peace Conference in London as security officer to then Secretary of State Byrnes. I believe the thoughts set forth in this article should be read by everyone interested in peace.

PEACE BUSINESS

Wars and rumors of war fill the earth. We live in an atmosphere of suspicion and hate. The conflict of ideas, of cultures, of philosophy we see going on in the world, and of which we are a part, leads only in one direction—open, bitter conflict—perhaps a war of annihiliation. Men may cry "Peace, peace," but there is no peace. In our generation there have been more war, more slaughter of the innocents, and more destruction through war than in all recorded history to our time. Three years after V-Day in Europe and Japan, when the world should be at peace and absorbed in the works of peace, conquest, war, famine, and death tower over the defeated peoples of both the eastern and western world, cowering amid the ruins of war's havoc. The Four Horsemen are galloping on, and the children of men are hungry and afraid. No wonder some question our faith in ourselves, our institutions, our capacity for survival,

and our progress. No wonder we ask, "Whence our vaunted civilization and whither are we bound?"

Yes, the world is in a fearful state, but it is not the world, it is the peoples of the world. We have advanced far in material things from the cave and club to the comforts of the American home, but we have failed tragically in our moral, ethical, and spiritual progress. It is these failures that account for the miseries of the world, and it is greater progress in these things that we must seek for. Failure here means almost certain extinction.

Some time ago I stood in the great Redwood forest in California. I felt as though I was in a cathedral. As I looked at those majestic trees, my mind ran back over the centuries of man's struggle toward the light. There was the forest primeval. There the enduring things of earth. Centuries before the white man set foot on this continent the Redwoods were there. When Christ was born in Bethlehem these trees spread their branches in majesty over this valley. The surrounding mountains are timeless. In flying over a large portion of the world I have been impressed with this same feeling. The puny efforts of man have changed the world very little after all. We have made great improvements by digging canals here, tunneling mountains there, connecting great areas by highways and railroads, but comparatively we have done little. It is a sobering thought when we consider the little progress, after all, compared with the ends we might obtain in this business of living together peaceably and unafraid as nations in one world.

Stalin has said in effect that the government which first accomplishes satisfactory feeding, clothing, and housing of people will be the kind of government which will survive. There is more to this observation than mere propaganda. It is close to basic truth. Much of the distress of mankind grows out of too little food, clothing, and shelter. There are 2,000,000,000 people on this planet who seek food, clothing, and shelter. The struggles growing out of this seeking are the basis of rivalry and war. The urge for power springs, perhaps, from these struggles. We in America have found the solution of our problems in these vital elements. Can we not and must we not devote more of our thought and our energies to seeking similar solutions, at least in part, for other peoples, not as an altruistic undertaking but as insurance of our own existence.

In 1917 many of us marched away amid cheers and tears bound on the mighty mission to make the world safe for democracy. We came back, those of us who did come back, with the thought that our problems of enduring peace were settled. As our own boys reached the threshold of manhood we were obliged to join in the cheers and tears as they marched off again to finish the job we had done a generation before. This time we were to establish the four freedoms, ancient as the aspirations of man, but dressed in twentieth-century garb and presented as something new. As a veteran of both these wars, as a father and citizen of this greatest Nation of them all, I am concerned about the endurance of the American way of life, and I am convinced that this depends upon international good will and understanding. In his great speech before the House of Delegates at Richmond, Va., on March 23, 1775, Patrick Henry said, "I have but one lamp by which my feet are guided, and that is the lamp of experience." We have no guide to the future but our experiences of the past. History tells us on every page that these are not sure guides. It tells us too of the tragic consequences of the failure of each succeeding generation to chart and pursue the right course. In retrospect we can see how these disasters could have been avoided. Our literature and State papers are full of such material.

In 1918 the old Tiger of France pled with Woodrow Wilson and Lloyd George to declare that both Governments would defend France if she were attacked by Germany. He predicted if there was no such declaration Germany would again make such an attack. There was no such declaration and there has been a Second World War.

Winston Churchill says in his World Memoirs, "that as early as January 1938, President Roosevelt was deeply anxious at the deterioration of the international situation and proposed to take the initiative by inviting the representatives of certain governments to Washington to discuss the underlying causes of present differences." He adds, "No event could have been more likely to stave off, or even prevent, war than the arrival of the United States in the circle of European hates and fears," and that no one would have been so rash as, "to wave away the proffered hand stretched out across the Atlantic." The meeting was arranged. We lost sight of the lamp.

We cannot undo the things of the past, of course. I am pleading for the future. We shall not always have another chance—not in the next war, perhaps, if it must come. For me, my anxiety is lightened by a great hope. We in America have accomplished so much, I believe that we need not fail if we will only set our hearts and mind to the tasks of peace. The people of America, from all lands and from the common folk of the world, who in 300 years have built this Nation, need not now despair because the way is long and the task difficult. Here we have gathered the hopes and longings of all peoples for home and food and safety, for freedom in thought and action, and from the tyrant's lash, and made them real for the first time in human history. We have lighted and carried aloft the torch of freedom far along the pathway to a better world. It is our task, for there is none other to undertake it, to lead the way so that all the sons of men may hope for the same opportunities that we have secured for ourselves. The Pilgrims' way in which we must do this job is beset by dangers and difficulties greater than those of other days, for we must fight against the evil and selfishness in man and not merely against material and natural foes.

Writing in Harper's magazine for May, Jerome Feiner reminds us that when one dozen eggs can generate enough psittacosis virus to provide an infective dose for every man, woman, and child on earth, and that a thousand times as much can be produced by one saboteur in a small laboratory, the threat to our civilization becomes apparent. The threat is not lightened when our high-ranking Army officers tell us, as they hinted recently, that 10,000,000 people and hundreds of square miles of land can be destroyed overnight by weapons already in hand or in the making. International good will and cooperation are the only weapons against these things. We have hardly begun to forge these weapons, and the outlook for success is dim indeed.

When then must we do? Men and women more brilliant than I have speculated on these problems. They have sensed the basis for peace. They have warned us of the alternatives, but we have not been moved. I am not willing to leave it there. I agree with great numbers of our thinking citizens when I say that the time is here—it is growing late—when something must be done. I propose a new, a strong, and a never-ending crusade for peace and understanding that will eventually encompass all people, and that drive must start in America because there is no other place or nation where it can be nurtured. It will be difficult, but I dare not think that it is impossible. I do not mean by this that we shall strip ourselves of our own defenses and plead in weakness with other nations for good will. I am for a strong America, strong in peace and invincible in power to compel peace when such action is required. I propose that we work for peace in season and out, as we work for victory in time of war.

On the flyleaf of my copy of Speaking Frankly is inscribed, "To Hughie Kelly, who accompanied me on many of the trips in search of peace."

Leaving London in the fall of 1945, our big plane roared down the runway, then through the mist that clung to the English countryside. Suddenly we were above the cloudbank; brilliant sunshine filled the world, but my companion sat slumped beside a window and saw, it seemed nothing in the sunlight. With a hand over his eyelids he seemed burdened with great weariness. As I looked at Secretary Byrnes, I thought again what a difficult, shortsighted thing is this whole business of making peace. We were on our way home after the first meeting of the council of foreign ministers. Failure almost complete was the only obvious result of that meeting, and there was no peace. The same men who had labored shoulder to shoulder to wage a mighty and successful war could find no meeting of minds in the business of peace.

As I had watched the proceedings at that meeting I was impressed again and again with what seemed to me to be unpracticed and ineffective efforts in planning the peace. Peace, not war, is the sublime task, yet these giants in war became dwarfs in the pursuit of peace.

It was with a great hope that we set out for this first meeting. My experiences in two world wars had shown me the futility of fighting for permanent accord and the necessity for evolving a pattern for making peace before the world destroys itself upon the weapons of its own creation. Here was an opportunity, I thought, though my part was to be small. Maybe the awful waste of two terrible wars was not all waste after all. The tragic truth of the failure of this first conference, and the repeated failures of those that have followed, is that we know better how to make war than we know how to make peace. We fought and built the tools with which to fight at the same time, and our accomplishments in both wars have been marvels of history. We lost the peace in World War I and we are doing no better in World War II. We have not built the tools with which to make effective peace. We do not have now the equipment required.

These things and others traveled with us on that fighting plane homeward bound. Our failure was not the blame of our representatives. Secretary Byrnes brought unquestioned ability, unflagging zeal, and complete devotion to the job. Those who have represented us in subsequent meetings have labored with the same devotion, yet we have made no appreciable progress. Indeed, our prospects for real peace in the world grow steadily less. The results of eventual failure are frightening. Yet the man who continues to race toward the precipice does come to the brink and goes over.

I know something of the causes that made peace difficult at our first try, and yet make it so. Suspicion, inability to understand the other person's point of view, and the unceasing drive for food and shelter and security are ever present though unwelcome guests at the peace table where earnest men seek a just and lasting peace. But added to these must be the acknowledged failure of the peacemakers, our failure, too, to see the need for unity in peace as in war, and to prepare in times of peace the way for that unity. It was that lack of a definite policy, that riding-in-all-directions-at-once policy, which emboldened first the Kaiser and then Hitler and Mussolini to plunge the world into war. It is the same lack of forehanded thinking

and planning which weakens our position now and which inspired the New York Herald Tribune to say editorially, April 1, 1947, 2 years after the close of recent hostilities, and at the convening of the second Moscow conference:

It has been suggested here more than once that the United States was going to the Moscow Conference without a considered, concrete and agreed policy on the future of Germany." And to add:

"On the eve of yesterday's meeting of the Big Four to take up directly the economic organization of Germany it was apparent that France, Britain, and Russia would present views mutually irreconcilable and irreconcilable with those of the United States."

Many Americans, I am afraid, missed the shocking significance of these statements, and miss them yet today. Yet the editorial writer expressed a significant truth and a deep warning. Nations whose leaders are convinced that there is no common ground give lip service only to peace while preparing new plans for the war they see as inevitable. We Americans have been brought to see that we must have preparedness to wage a successful war. We have not yet learned, or at least we will not seem to see that preparedness is equally essential in waging a successful peace.

"As early as the middle of September 1944, the President was contemplating a second conference with Stalin and Churchill. * * *

"By this time we had agreed upon our full-out and final assault on the German citadel and yet there were no firm agreements as to what was to be done with Germany once she was defeated. * * *

"On the political side there was no agreement as to reparations against Germany * * * there was no agreement as to zones; nothing as to whether or not we were going to encourage or discourage a central German government or, indeed in what way the Allies were going to utilize German machinery. * * * The earmarks of trouble in Poland were already obvious. * * * Our whole policy toward the Far East needed a thoroughgoing understanding, particularly so far as the Soviet Union was concerned. * * * France wanted to have a full part in world affairs and the decision on this point, if not made at an early date, would cause endless troubles.

"Furthermore, there was the hangover of the Dumbarton Oaks United Nations Conference. The voting procedure had not been settled. * * * I told the President * * * that there was not a chance of getting Stalin out of Russia * * * in the light of the military situation on Germany's eastern front and that if he did not look out we would wind up with a lot of * * * irritating cables back and forth, getting exactly nowhere and that we might as well make up our minds first as last to go to some convenient point in Russia—preferably in the Crimea." (From the Hopkins' papers.)

We have established a Secretary of National Defense, which means of course, a Secretary for war. The end product and purpose of all military training is success in war.

We have established schools for war preparation, armed forces, national guards, and other agencies, and we provide the billions of dollars we consider to be required for success in battle. We have no schools, no established departments, no specific agencies whose purpose for being is success in peace. In our system it is no one's official business to maintain peace.

When Lincoln went to a martyr's tomb his plans for peace went with him. In the place of the amnesty and patience and understanding which he would have certainly contrived, the carpetbaggers and despoilers marched in. The chasm of hate and suspicion between the North and the South has not been bridged to this day. Something of the same nature occurred when President Roosevelt died. His thinking and planning for peace went with him to the grave in Hyde Park. We were obliged to make a new start when new hands took the reins. We had no definite plans or policy.

"We pondered over the effect the President's death might have upon the future peace. We were certain that there would be no interference with the tempo of the war because we already knew something of the great measures afoot in the Pacific to accomplish the smashing of the Japanese. We were of course ignorant of any special or specific arrangements that President Roosevelt had made affecting the later peace. But we were doubtful that there was any other individual in America as experienced as he in the business of dealing with the other Allied political leaders. None of us had known the President very well; I had, through various conferences, seen more of him than the others, but it seemed to us, from the international viewpoint, to be a most critical time to be forced to change national leaders. We went to bed depressed and sad." (From Eisenhower's Crusade in Europe.)

And, we have no definite plans or policy today.

I am sorry that I have to say this. I regret it very much more, however, because it is true. We must find the way to peace. Is it not time that we acknowledge the obvious truths—that it is easier to start a fight than it is to settle the differences that caused it. Is it not time that we learn that the making of peace must be taken out of the sphere of dreamy altruistic idealism and brought down to the same realistic, practical basis upon which we make war? Are we not yet ready to see that we must prepare for the making of peace with the same industry and effort and foresight that we use in bringing about victory?

It must be somebody's business to prepare for peace. Somebody must be trained in the history of peace making, in the negotiations that have been successful in peace undertakings as the centuries have run, and in dealing with all of the scheming, machinations, and indirections that crowd the peace table. Peacemaking is not an amateur's job. It is not to be entrusted to untrained men, however high their purposes or complete their devotion. It is not something to be dealt with on rare occasions by statesmen, however wise, whose thought and energy have been devoted to war and the successful prosecution of war. It is as important to win the peace as it is to win the war.

If these things are true, and I offer you the history of war and peace in their support, then preparedness for peace must take its place in our philosophy of government, in our Government itself, and in the minds and hearts of all our people beside the other great divisions of our national administration.

Peace as a policy must be made as fixed and as well defined as war. Peace as the end of our hopes and actions must dwell in the hearts of our people.

We have never had the courage, or at least the forethought, to write the word "Peace" in our governmental hierarchy. We had a Secretary of War, and now of defense. Why not a Secretary of Peace? General Marshall says that the United Nations was designed to keep the peace, but is it not clear that peace must be made before it can be kept? Surely, we of this country and Russia would not be as far apart if we had had a Secretary of Peace. We would have had, in that case, a policy toward peace, a formula for seeking it. That policy and the plans made thereunder would have run beyond the lives of men and administrations. I am confident that under such a policy for peace the conferences in London, and Moscow, and New York, and now in Paris, would have produced results looking toward peace instead of disclosing merely new reasons why peace is impossible.

I was an observer in the London, Moscow, and New York conferences, and what I saw and heard convinces me that failure would not have been inevitable had we been prepared. I insist that there is a place in our Government for a peace portfolio, under whatever name it may be called. I insist too that this is not an unworkable vision of a confused mind, but that it is a practical, possible, and necessary agency.

Anyone who had opportunity to observe the efforts of the allied governments to bring order out of destruction immediately following the fighting war, as I have, will know what I am talking about. It is more difficult to train men to operate in the field of peace than it is in the field of war.

I take nothing from our military authorities. I have the greatest devotion to and respect for our military forces and our military leaders, but these men trained in the arts of war are not skilled in handling the implements of peace. If we had had a Secretary of Peace with adequate personnel trained for the task of restoration and administration, this group would have been sent as civil administrators instead of our military governors. I believe that the results would have been widely different, and would have contributed mightily to peaceful settlement.

"First, I urged that civilian authority take over military government of our portion of Germany at the earliest possible date. I pointed out to the President and the Secretary that, while the Army would obviously have to stay in control until order was assured, the government of individuals in their normal daily lives was not a part of military responsibility.

"When I returned to the United States in late 1945 as Chief of Staff of the Army, I continued to urge the wisdom of this move upon Secretary Byrnes, but learned that he had undergone a change of heart. Though always agreed in principle, he would not agree to implement the idea because of the administrative and financial burdens that would thus be placed upon the State Department." (From Eisenhower's Crusade in Europe.)

I recognize that these suggestions, were they accepted now, could not apply to our present situation. We must finish the job now before us with the tools which we have at hand, and with courage, conviction, and good will. We cannot and must not fail. But I am thinking of the years ahead. I am unwilling to risk the same dangers which we now face at the end of another war. The burden of my plea is that we waste no time in providing forces skilled in peace, as we are providing and must provide forces strong and unconquerable in war.

History has been taught to the beat of the drum and the sound of marching feet. We must add something more to that, because history is made in the field, in the factory, in the home, and in the quiet places as surely as it is made in the military maneuvers and on the field of battle. The children must be taught that the peacemakers follow the war makers; that war comes in the trail of peacemakers who have failed, and that peace is as honorable and essential as war.

We owe this obligation and this effort to minimize, if not abolish war, and to raise the standard of peace to all our heroes who fought to make our country safe—those who died at Valley Forge, at Gettysburg, in Flanders Field, at Bastogne, Corregidor, and Okinawa. We owe this obligation and this responsibility to the generations of Americans yet unborn, and to all the peoples of the earth who long for release from the tyrant's heel.

It is my hope, my unending prayer, that God may grant to us in this generation the

determination and the common sense to dedicate our lives, our fortunes, and our sacred honor to wage successful peace, as we waged successful war, against all the foes of God and humanity.

I plead for preparation for war if it must come again, and it will sometime. I plead also with equal earnestness for preparation for peace. I believe that we must be prepared to make peace our business, when the fighting is ended, that we must recognize this officially and that this can be done most effectively through a Secretary for Peace. We shall always honor our heroes whose deeds inspire us to love our country and protect it in times of peril. We will honor them best if we recognize that after war comes peace. We should now strive for peace with all our might All honor to our warriors, but make no mistake about my own position in this matter. My own training and experience is in our military and not in our diplomatic forces. I urge preparedness for any emergency. I know all too well that strength at the peace table is the only argument that will now prevail. But I am thinking beyond today, I am thinking of tomorrow and the long future. "Blessed are the peacemakers for they shall inherit the earth."

David Dubinsky Honored for Distinguished Service

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. MANSFIELD. Mr. Speaker, under unanimous consent, I am inserting in the RECORD an article from the American Federation of Labor Weekly News Service. Mr. Dubinsky has had a long and honored career in the labor movement and has been a recognized leader in that field. This added recognition is not only timely but is a real tribute to a man who has contributed so much to the welfare of the working men and women of this country.

David Dubinsky has always been an implacable foe of racial and religious discrimination, racketeering, totalitarianism, and all other undemocratic practices and theories. Because of all these factors he has been honored by his colleagues. He is indeed a great and good American.

DAVID DUBINSKY HONORED FOR DISTINGUISHED SERVICE

(By Arnold Beichman)

NEW YORK.—The 20 years of David Dubinsky as an executive officer of the International Ladies' Garment Workers' Union was celebrated here by his friends, associates in the labor movement, distinguished public servants, and liberal spokesmen.

It was an occasion which not only was a personal triumph for President Dubinsky, but also during which speaker after speaker stressed the need for democratic planning in order to achieve security with freedom and thereby halt the march of Communist totalitarianism.

The climatic moment of the celebration came with the presentation of a scroll by President William Green to the ILG executive. Before presenting the scroll, President Green said:

"I am now participating in one of the most pleasant experiences in all my life. I am moved deeply by the significance of this wonderful occasion." And then President Green read the scroll's citation, prepared by the League for Industrial Democracy, which sponsored the celebration:

"During the last 20 years you have served as secretary-treasurer and for most of that period, president of the ILGWU. You have given the union the best of your great ability, rare common sense, constructive imagination, and unflinching devotion.

"Under the inspiration of your leadership, and with the cooperation of its host of loyal officers and members, the ILGWU has become one of the Nation's most powerful and socially visioned labor unions in the country. It has raised to a remarkable degree the living standards of its members. It has helped to bring increasing order and efficiency into the industry. It has developed a sound and constructive machinery for the settlement of disputes. It has been the implacable foe of racketeering, racial and religious discrimination, and totalitarianism of every type.

"While playing a monumental part in the above achievements of your union, you have contributed much outside the union to countless causes for the public good."

A major tribute was paid by President Harry S. Truman, who, in a letter to Prof. John Dewey, distinguished philosopher and honorary head of the League for Industrial Democracy, declared that in "honoring Mr. David Dubinsky * * * I feel that you do more than felicitate one man. David Dubinsky is a man of vision, integrity, and courage. I feel that he, too, will value the testimonial to him as recognition of the valiant work of many thousands of workingmen and women of this country who, while seeking to advance their mutual interests, have served the democratic well-being of their country. His career is a living witness of the forward progress of collective bargaining through a score of years."

Speeches by Premier T. C. Douglas of Saskatchewan, Canada, Gordon R. Clapp, head of the Tennessee Valley Authority, and Francis Williams, British journalist, on the theme of Democratic Planning for Security With Freedom, were followed by the day's major address by President Dubinsky, who called for the reinstitution of a "quarantine the aggressor" policy against the Soviet Union as once it was suggested by President Roosevelt against Nazi Germany.

"Communism, like fascism, is a fatal disease," said Mr. Dubinsky. "But it is also, like fascism, a highly contagious disease. It is injected into other states by spies and saboteurs. Its germs are carried by dozens of organizations with sweet-sounding titles. It strikes with the quiet of slander or with the thunder of the Red Army. Because this totalitarian regime, like all others, insists upon infecting all the world with its peculiar sickness, communism is not a Russian problem; it is a world problem.

"To maintain our health and freedom, we must put communism in quarantine. And that means more than just placing geographic limits on the expansion of Russia's empire. We must deny the Communists in our midst the cloak of respectability and the stamp of approval. We must take positive steps to defend and to strengthen democracy. We must give democracy economic strength. That is the meaning of the ECA. We must give democracy spiritual strength. That is the meaning of our aid, financial and moral, to the free trade-unions of Europe; and that is why we must permit the free growth of democratic socialism where the people of Europe so desire.

"We must give democracy material and military strength to defend itself against a Soviet offensive or to discourage such an offensive from ever being undertaken. And that is the meaning of the Atlantic Pact. Finally, we must strengthen world democracy by setting a worthy example. We must get rid of our own black sheep. And that's why we must repeal the Taft-Hartley law. We must end degradation and discrimination. We must provide means to educate all our youth, to care for all our sick, to give work to all who want to labor."

Spain—Inconsistent Mr. Acheson and a State Department Policy That Lacks Sense

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 12, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, on May 11, 1949, at a called press conference, the Secretary of State made an attempt to clarify State Department policy toward Spain. His verbatim remarks were inserted in the Appendix of the CONGRESSIONAL RECORD, page A3010. The United Nations Assembly recently rejected Spain's application for membership and our delegates abstained from voting by direction of Mr. Acheson as Secretary of State.

I hold no brief, Mr. Speaker, for the Spanish Government, but I am surprised at the argument that was made by the Secretary in support of his position. If consistently followed, many countries in Europe and South America would not be recognized by this Government.

Now what was Mr. Acheson's argument? He said:

First:

The Franco Government was one which was established with the active support of Hitler and Mussolini, and that is a Fascist government and a dictatorship.

Second:

The first on the list of essentials for individual liberty is the writ of habeas corpus and an independent judiciary.

Third:

A second fundamental right is that if you are tried and convicted of a crime, you are not tried by employees of the State but by your own fellow citizens. That is the right of trial by jury.

Fourth:

Then there is the question of religious liberty, which is fundamental to a free exercise of the human personality. That right does not exist in Spain.

Fifth:

Then there is the right of association—association in political activities, association in trade-union activities, association in benevolent activities. That right does not exist in Spain.

There, Mr. Speaker, is the list of objections made by the Secretary of State against the admission of Spain to membership in the United Nations and our recognition of the Franco government.

Now let us assume that all the charges made by Mr. Acheson are true. Is it fair

or consistent to charge that Spain is the only nation that is guilty of the charge of fascism or dictatorship? What about Russia, Poland, Portugal, Yugoslavia, and other European countries behind the iron curtain? What about the military dictatorship in Venezuela, Peru, and Argentina? Do any of these countries honor or provide for a writ of habeas corpus under a free and independent judiciary? Do any of them have a free trial by a jury system such as our own? In these nations is there the right of free organization by groups of people for any purpose mentioned by the Secretary of State? Is there religious freedom in these countries, as we know it? The answer is, emphatically, "No," and Mr. Acheson is aware of it.

Yet, Mr. Speaker, we are doing business with all the countries I have named. Less than a year ago we recognized a military regime in Peru which overthrew an elected government and then dissolved the parliament. It did not take many days to give our blessings to those who got power by force. In Venezuela also, the regular government was forced to abdicate by a military clique. We recognized it in a hurry, too.

And now, Mr. Speaker, let us get a little closer to Spain and take a look at Portugal, that sister state in the Iberian Peninsula.

Olive Holmes, writing in Foreign Policy Reports, May 1, 1949, makes this significant statement about Spain and Portugal:

> That strategic neck of land is ruled by the last two formally organized Fascist regimes.

Continuing she states:

> The intensification of the cold war coincided with the economic crisis in Spain and emboldened the Franco regime to demand American aid. In the same period, Portugal, being in the greater good graces of the Western Powers, asked for financial help under the European recovery program.

And she got what she wanted and is the recipient of American dollars.

But what kind of a government does Portugal have? Olive Holmes, in the article referred to, says, and I quote:

> In order to have a government which really functions in the national interest, according to Salazar, it has been necessary, in practice, to limit civil liberties, although these are theoretically guaranteed by the constitution.
>
> Censorship is exercised with considerable rigidity by the Ministry of the Interior. It also administers the regular police force and the secret police which some believe is linked up with the Spanish security police. Arrests without specific charges are authorized when offenses against the safety of the State are in question. Without due process of law, imprisonment, sentence and deportation to concentration camps in the colonies for revolutionary activities are visited upon members of the clandestine opposition.

Mr. Speaker, Olive Holmes has made the indictment of Portugal and obviously there is little difference between that country and Spain. Yet the inconsistency of Secretary Acheson's statement is very apparent. Why this double standard and hokum?

Last week when the Secretary appeared before a Senate committee preceding his departure for the conference in Paris, he is reported to have stressed the importance of steadiness and consistency in American foreign policy, unswayed by Russian maneuvers.

Mr. Speaker, I do not speak in a manner antagonistic toward the Secretary, but the time has come when there must be consistency in our foreign policy. There has been a total lack of it for the past 10 years. Mr. Acheson's statement about Spain does not sound like steadiness and consistency in our policy.

We have talked loud about containing communism. Then we look at the situation in China where we have suffered the most devastating diplomatic defeat in all our history. The Secretary of State has said we will let the dust settle there for a while. And in the next breath admits that if a Communist government brings order out of chaos in China, that we might do business with it. What a record of discordant diplomacy: Tehran, Yalta, and Potsdam.

Labor Extension Service

EXTENSION OF REMARKS
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. ZABLOCKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to including the following resolution, adopted by the Wisconsin State Industrial Union Council, relevant to the Labor Extension Service legislation as embodied in the Senate bill 110, and its House companion measure, H. R. 1339, introduced by the Honorable ANDREW J. BIEMILLER, Representative from Wisconsin.

Inasmuch as there is a need for, and lack of, public facilities for labor education, I sincerely urge this Congress to heed the resolution and give prompt consideration to legislation necessary to make possible the educational services.

RESOLUTION ON LABOR EXTENSION SERVICE

Whereas the United States Congress enacted the Morrill Act on July 2, 1862, donating public lands to the several States and Territories to provide colleges for the benefit of those engaged in agriculture and mechanical arts; and

Whereas American workers suffer a gross inequity due to the almost total lack of public facilities for labor education, while American farmers have long enjoyed millions of dollars' worth of educational benefits through the Federal Agricultural Extension Service, and business and management representatives receive training and services through publicly supported universities and other institutions; and

Whereas a labor extension service bill has now been introduced in both Houses of Congress making specific provisions for research, information, and educational services for workers through our universities, colleges, and research agencies: Now, therefore, be it

Resolved, That this organization support the immediate establishment of a labor extension service, to be administered by the Department of Labor to provide research, information, and education services to organized workers throughout the Nation.

New Farm Plan

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. POLK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and editorial:

BREEDER'S GAZETTE,
Stockyards, Louisville, Ky., May 11, 1949.
Hon. JAMES G. POLK,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN: Not all livestock men, not all farm leaders, and not all farm paper editors are against the Brannan plan.

I would be gratified if you would read the enclosed editorial from the May issue of Breeder's Gazette which goes into 210,000 of the best farm homes in America.

Your friend,

SAMUEL R. GUARD.

SAM GUARD'S ROUNDUP

NEW FARM PLAN

What would you say if you had a new Federal law that would support the price you will receive for beef cattle, whole milk, hogs, lambs, eggs, and farm chickens, as well as corn, wheat, cotton, and tobacco? The support prices in 1950 would be based on the purchasing power of your cash receipts from 1939 through 1948, and then each year the base would move along to the first 10 years of the last 12. If you and your family do the bulk of the work on your modern, mechanized, efficiently operated farm, with some hired labor of course, during peak periods, you could produce up to 1,800 units and be eligible to get your production payments whenever the market sagged below the income standard floor.

THREE HUNDRED AND TWENTY ACRES, MORE OR LESS

Now a unit is reckoned as 10 bushels of corn, 76 pounds of hogs, 86 pounds of beef cattle, 346 pounds of whole milk, 21.82 pounds of butterfat, 79 pounds of lambs, 29.32 pounds of wool, 31.88 dozen eggs, 50.34 pounds of chickens. Or 17.7 bushels of oats, 7.77 bushels of wheat, 5.75 bushels of soybeans. If you want to figure out a balanced livestock farm, you can think in terms of a place capable of producing 18,000 bushels of corn, or keeping 75 good milk cows, saying that is all you did. It happens to be just about the typical Breeder's Gazette farm.

FAMILY-FARM BASE

This is the essence of the administration's mighty new farm plan. It would, in our opinion, put the emphasis where it belongs—on the production of livestock instead of cereals, on animal agriculture instead of agronomic soil mining. It would put the ever-normal granary on four feet, as we have long advocated. It would stabilize farm prices and give you about what your stuff is really worth. It would tremendously stimulate consumption—3 percent milk, at 15 cents a quart retail. It would let all Americans be on a diet of meat and milk rather than rice and soybean souffle. It would conserve the soil, improve our national herd, make farm life very much worth living, and it would help stabilize the economy, prevent depression, build markets for industrial goods, keep labor highly employed, and make our Nation secure in peace or war as to food to eat and clothes to wear. Or so we honestly believe.

WHAT BRANNAN SAID

Now I want to quote some things that I think Secretary Brannan meant specially for you in his historic statement: "It should be clearly understood that the support price standard is not a ceiling. * * * When it is necessary to apply support to any of these nonstorable commodities I recommend that we rely mainly upon production payments. The term means exactly what it says—a payment to the farmer to go on producing to meet genuine consumer need rather than restricting output short of that need. Under this system, the farmer would be paid in cash the difference between the support standard for commodities which he produced and the average selling price for those commodities in the market place. * * * Farmers consider themselves to be partners with each other and with other people in operating a program for the benefit of all. I believe they expect to and should accept responsibility. I do not believe that full benefits, if any, should be extended to producers who operate without regard to the welfare of the general public or of their fellow farmers."

WE VOTE "AYE"—AND YOU?

We endorse the Truman-Brannan farm plan wholeheartedly. How could any sincere livestock farmer do otherwise? Not that it is perfect. Not that it will not be hard to swallow some of the controls, quotas, and directives from Washington. But those items of regimentation we accepted with the first benefit checks on the United States Treasury. It seems now better to accept some discipline with progress than to be entirely free to reject all sulfur and molasses and stay young and wormy. More practically, the livestock producer will wonder: Why support the price of corn at all? Wouldn't it be better to support the price of feed grain after it is converted into meat and milk?

Petition for Redress of Grievances

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. RANKIN. Mr. Speaker, never in the history of America has there been so much insidious subversive propaganda as is now being disseminated in a hundred different ways, from school textbooks down to crossword puzzles, to poison the minds of the youth of America.

One of the most patriotic organizations in this country, the Sons of the American Revolution, is making a drive against the circulation of these subversive materials.

Under permission granted me to extend my remarks in the RECORD, I am inserting a petition adopted by the Sons of the American Revolution at their national convention at Jacksonville, Fla., and ratified by the board of directors and executive committee of the Sons of the American Revolution of the State of Mississippi.

The matter referred to follows:

PETITION FOR REDRESS OF GRIEVANCES

To the Senate and House of Representatives of the Congress of the United States:

We hereby petition for an independent and impartial investigation of the interstate traffic in subversive textbooks and teaching materials as requested in the petitions now on file presented by the national society and the California society of the Sons of the American Revolution, and we do hereby join in and make ourselves a party to those proceedings.

We request the Congress to grant us all relief possible in this matter by determining the facts and giving them to the people with appropriate recommendations.

Dated this 20th day of May 1949, in the city of Greenwood, State of Mississippi.

MISSISSIPPI SOCIETY OF THE SONS OF THE AMERICAN REVOLUTION,
By H. T. KITCHELL, *President.*
W. GUY HUMPHREY, *Secretary.*

National Maritime Day

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. BLAND. Mr. Speaker, on May 22, 1949, the American merchant marine had a birthday. One hundred and thirty years ago, in 1819, America staked its rightful claim as a leader on the seas when the *Savannah* started on its history-making voyage as the first ship to use steam to cross the Atlantic.

By Presidential proclamation, based on congressional resolution, May 22 honors that date as National Maritime Day to pay tribute to the contributions the American merchant marine has made in both peace and war.

In these 130 years the American merchant marine has enjoyed success, decline, and uncertainty. The 1850's witnessed the golden age of the American clipper ship, with the stars and stripes flying in every major world port. American ships then carried nearly all the Nation's foreign trade. By World War I, however, the American merchant marine had almost disappeared from the high seas and foreign ships were carrying about 90 percent of the Nation's foreign trade.

In 1936 the Congress of the United States enacted a fundamental law, the Merchant Marine Act, which has since been hailed as the Magna Carta of the American merchant marine. By means of this act, American shipping has constantly grown and expanded.

Today's merchant fleet, despite serious shortcomings, is more modern, efficient, and speedy than ever before. It provides unexcelled services to American industry and agriculture. Since the end of World War II private capital has invested nearly $1,000,000,000 in ships and maritime facilities. American steamship companies have contracted for or are building at present six large passenger liners and a number of tanker vessels.

As important as these facts are, the American merchant marine still has grave deficiencies. There is an urgent need for passenger ships to provide adequate facilities for both travel and national security. According to testimony by the armed forces, we have today only one-half the troop-lift capacity necessary to meet a major emergency.

Before World War II our coastwise and intercoastal services employed more than 400 privately owned dry cargo ships. Today less than 100 such vessels are engaged in these trades. These are the vessels that ply our home waters which can be pressed into immediate service in event of emergency.

To help overcome these and other detrimental factors, the House Merchant Marine and Fisheries Committee has before it now a long-range program designed largely to bring up-to-date the 1936 Merchant Marine Act, necessitated by the changes which have occurred in shipping during the last 13 years. This program is one designed to create a healthy atmosphere for the development on an American merchant marine adequate to meet this Nation's responsibilities as a world leader. I am hopeful that when our committee has concluded hearings on this important program the legislation we recommend will have the support of the Congress.

Since the beginning of our history Presidents, Congresses, and our most important military leaders have stressed the essentiality of keeping the United States strong on the high seas. Fortunately, today, all segments of the Nation's maritime industry are aware of and are working toward that objective. Congress itself in the legislation it has enacted during the last few years has shown its understanding of the need of an American merchant marine adequate for trade, travel, and defense. On this forthcoming observance of National Maritime Day, we should rededicate ourselves to keeping America strong upon the seas.

There is imperative need that those of our people who live at a distance from our coast lines and waterways shall study and know the importance of the American merchant marine and do all that is in their power to preserve and promote it. They can be of immense help.

The New York Times had an editorial in its Sunday, May 22, issue, entitled "Maritime Day." It is so sound, comprehensive, and complete that I wish every one would read it. There would be a better approach to the solution of our problems which means more than I can say to the permanence, prosperity, and safety of our country. Emphasis is usually made upon its importance for our national defense. All that is said is true, but its importance to trade promotion and leadership is not generally recognized as much as it should be. The interior of our country must recognize that the merchant marine is as necessary to their welfare as it is to our national security.

I insert at this point the editorial which appeared in the New York Times:

MARITIME DAY

This is the week when the Nation looks at its merchant marine. Today is National Maritime Day. It offers a good occasion to remind ourselves that in years of peace as well as in emergency periods we need a strong merchant fleet to carry our goods, to maintain high standards of shipper services and in the larger sense to symbolize, in the farthest reaches where the sea lanes lead, the ideals of free exchange in which we ardently believe. That reminder carries the ever-present implication that the emergency and the peaceful needs are inextricably bound together. We have to be ready; we cannot

create the skills for an emergency unless we have sustained them up to the point of crisis.

Despite the several studies that have been devoted to the merchant marine since the war, the definitive survey of its role remains to be achieved. We have a particular place in the world maritime picture. We built the greatest merchant fleet in history in the course of the war years. That fleet is now dwindling under the erosions of those familiar elements; supply and demand. Yet we cannot permit supply and demand to be the only determiners. Shipping is not exclusively a business in the usual sense but an instrument of national policy. The majority of American-flag lines cannot compete without substantial Government aid, and postwar cost increases have emphasized that need.

Contrary to popular misapprehensions on the subject the shipping subsidy is not heavy. The initiative and courage of the operators have contributed tremendously to this country's development; they have plumbed and created new markets; they have developed the highest skill in the handling of vessels and cargoes, a skill that paid dividends in the war. To them and to the ships and seamen the Nation this week accords a deserved "well done."

Safety in Coal Mines

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Washington Daily News of May 23, 1949:

TO SAVE MINERS' LIVES

For the fourth time in 6 years Congress is studying proposal to give the Federal Bureau of Mines more authority to promote coal-mining safety.

This time, Congress should do more than study. It should act.

The bill now under consideration was introduced by Senator M. M. NEELY, of West Virginia, and Representative MELVIN PRICE, of Illinois, and the United Mine Workers—John L. Lewis' union—is urging its passage.

Present law gives Bureau of Mines inspectors authority to go into coal mines and, when they find dangerous conditions, to recommend safety measures. But it gives them no power to close unsafe mines or enforce their recommendations. Enforcement is left up to the States. And in too many instances—notably the 1947 Centralia, Ill., blast, which killed 111 miners—State enforcement has proved deplorably lax.

The Neely-Price bill would authorize Federal inspectors to order immediate withdrawal of all miners from mine areas in which they find "imminent danger." Mine operators or managers could be penalized for refusal to obey such orders.

This proposal would not increase Government costs, since the Bureau of Mines inspectors already are on the job. The fact that they are on the job gives them a responsibility for mine safety—a responsibility which, under the present law, they are handicapped in discharging because their recommendations can be ignored with impunity.

The Neely-Price bill would do much to correct this condition. Congress should enact it.

Press Takes Dim View of Newsmen in State Jobs

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Sunday Star of May 22, 1949:

PRESS TAKES DIM VIEW OF NEWSMEN IN STATE JOBS—ILLINOIS EXPOSÉ OF 51 CARRIED ON PAY ROLL STARTS ROUND OF CENSURE REGARDLESS OF ETHICAL DEFENSES

CHICAGO, May 21.—A series of newspaper reports that some Illinois newspapermen have been on the State's pay roll has stirred up widespread interest, criticism, and controversy.

The pay-roll stories were first carried April 14 by the St. Louis Post-Dispatch and the Chicago Daily News. They have been printed by many newspapers across the Nation.

The stories were written by Roy Harris, of the Post-Dispatch, and George Thiem, of the Daily News.

They reported that 51 editors, executives, or other employees of 14 daily and 33 weekly newspapers received State pay checks totaling nearly $480,000 between 1943 and 1949, while they were directly or indirectly associated with their newspapers. (There are 90 daily and 687 weekly newspapers in Illinois.)

Some newspapers editorially have called the "revelations" a disgrace to journalism and a newspaper "family scandal." Some comments criticized newspapers and news services which failed to carry the reports or delayed carrying them.

On the other hand, comments from State officials and newspapermen involved stated that there was nothing disgraceful, that the newsmen earned their State salaries and had no apologies to make, or that the reports were distorted.

ALLEGES POLITICS

Dwight H. Green, the Republican ex-Governor whose 1940–48 administration hired the newsmen, called the reports politically inspired. He lost to Democrat Adlai E. Stevenson last November 3 in his bid for reelection, after a campaign in which the Post-Dispatch and the Daily News editorially opposed him.

While some newspapers differed editorially on whether earning of the State salaries was pertinent, many deplored the two-job practice by some newsmen as a serious breach of professional ethics and as damaging to the integrity of newspapers and of journalism as a whole.

Editor and Publisher, newspaper trade magazine, said the reports are "a stink as unhealthy and corrupt as any that has ever soiled the reputation of American journalism." It added:

"No man can serve two masters."

Some of the newsmen held major State jobs, put in full time, or were generally known to the Illinois public as having newspaper affiliations. Some of those named said they were no longer with newspapers.

Some were listed on the pay roll as clerks, messengers, or investigators. Some worked part time, and some were not generally known to be State employees. All contended they earned the State salary they got.

Most of the newsmen named still are working for their newspapers. Three on one paper have resigned. They were the executive editor, the sports editor, and the advertising manager of the Danville (Ill.) Commercial News.

Most of those named in the reports no longer work for the State.

Mr. Green denied that any of them were hired to further his political interests. He referred to the various editorial charges and to the Post-Dispatch and Daily News stories that many newsmen rode "the gravy train" and printed editorials and news stories "from the Green publicity mill * * * to keep the Green machine oiled."

Mr. Green said: "The charges are untrue and unfair to Illinois newspapermen. They earned their money. They were not paid to write canned editorials in favor of my administration. They were paid to perform certain jobs. I am proud of what they did."

Some newspaper editorial comments declared that whether the newsmen earned their State salaries was beside the point.

But the Daily News said editorially: "To us it seems to make a great deal of difference. Moreover, it seems to us that one ethical factor in the situation is whether the employment was open and public, as in the case of several well-known officials, while it was going on."

RANGE IN PAYMENTS

The reported pay-roll payments for the varying periods ranged from $50.50 to $21,399, exclusive of a $41,281 total reported paid to one State worker who said his only connection with a newspaper was as a minority stockholder and as an uncle of the publisher.

Some of the newspapermen were reported to have State jobs classified as field investigators for a State department, such as highways, revenue, labor, or public safety.

Some said they did various kinds of writing or reporting in the State work. Some said they did messenger or clerical or public relations work. One said he worked five and one-half days a week in a State oil laboratory while his son put out the paper.

Several editors or publishers of weeklies held major jobs. Their State appointments were well-known and publicized within the State from the time they entered service.

Among these were the director of the State department of agriculture, the superintendent of printing, and the superintendent of multigraphing. The fact that the sports editor of a large down-State daily was a salaried member of the State athletic commission also had been officially announced and reported.

The Republican State auditor, who supervises the pay roll records and who recently retired, told a reporter he saw nothing unusual in the practice of having newspapermen on the State pay roll.

The ex-auditor, Arthur C. Lueder, said: "It is my personal opinion that the practice of hiring newspapermen to work for the State always has been done, although I never was in office under any other governor."

Several members of the legislature, which has not taken formal cognizance of the reports, also said the practice was not uncommon under previous administrations.

Mr. Lueder was asked why some newsmen were listed as highway messenger clerks on the pay-roll records under his supervision, although some said they did other types of work.

He said the practice is similar to one "in the post office, for instance. Lots of times there were no openings in one classification, under which they were hired, so they were put in another department." He added:

"The work didn't correspond to the title, therefore. But it made no difference as long as they did the work for which they were assigned."

The State's attorney general and chief law-enforcement officer, Ivan Elliott, a Democrat who took office in January, said after the

reports were published that he had "the matter under consideration." He added:

"I am making a study of the list, but no one has approached me to do anything about specific cases." Later, on May 13, he said:

"I still have the matter under consideration. If the time comes when I am convinced I should take some action, I will act."

The Post-Dispatch and Daily News reports of April 14 were carried by the Associated Press on its national news wires on April 27, after newspapers outside Illinois asked the Associated Press for the story. Later stories, including one which named three Albany newspapermen as being on the New York State pay roll, were also carried by the Associated Press. In all cases, the reports included comment from the newspapermen who were named.

The United Press said the first story it carried was the announcement of the resignation of the Danville men by Gannett newspaper headquarters in Rochester, May 10.

The International News Service said it had made no exhaustive check of its files, but one of its responsible editors said the first story he could recall was also the Rochester announcement, May 10.

CRITICISM IN EDITORIALS

The delay in transmission of the reports by the wire services, and the further delay or failure by some newspapers to publish the reports after they were received, resulted in criticism.

The Washington Post said that "at best this looks like crass indifference to a particularly juicy bit of news; at worst it looks like a cover-up of scandal within the family."

The Post-Dispatch said that with the blow caused by this Washington Post editorial "the conspiracy of silence cracked wide open." It added: "This is a shameful chapter in American journalism, and the failure of the press nationally to take it up is a second blot."

The Daily News said: "We deplore the initial hesitation of the major news service to put the story of the editorial pay-rollers on the wire. We deplore the failure of some papers to print the story when the news services belatedly did get around to it." The Daily News has its own wire service to other United States newspapers and it carried the pay-roll story for the first time on May 21.

The Evening Star said editorially that "whether planned or not [referring to the absence of immediate publicity] the performance was one for the press to be ashamed of." The Star continued, in reference to the practice of newspapermen holding State jobs, that "it is a practice * * * that ought to be stamped out wherever it exists, and the newspaper ought to take the lead in seeing to it that the practice is exposed and eradicated."

The California Newspaper Publishers' Association said in a resolution that "neither the majority of the newspapers nor the major wire services in the area gave adequate coverage to the incidents following the disclosure" and that the association "condemns the withholding of such information from the public."

PREELECTION STORY

The Milwaukee Journal said in a May 1 news story: "One reason the people of Illinois have been so little aroused by the stench is that most of them haven't even heard about it. Whether it's a case of glass houses or sour grapes, or something else, the press of the State has been strangely slow and indifferent about telling its people just what has been going on."

Aside from the Daily News, none of the major Chicago dailies carried the pay-roll stories about the newsmen. The Sun-Times mentioned the case in an editorial commenting on the State budget.

The Post-Dispatch carried a story last fall, a few days before the election, saying that the managing editor and a reporter on one Springfield daily were on the State pay roll as clerks. Harris said he dropped the matter then because of the press of other stories.

Months later, one of his Springfield news sources, whom he did not identify for publication, asked him why he didn't write about other editors known by some State-house people and others to be on the pay roll.

Working with them, Harris said, he began the investigation.

Christian Principles, Not FEPC, Will Achieve Justice for Minorities

EXTENSION OF REMARKS
OF
HON. BROOKS HAYS
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. HAYS of Arkansas. Mr. Speaker, as everyone knows, one of America's great newspapers is the Christian Science Monitor. On May 16 the Monitor carried an editorial entitled "Southern Liberalism." It does not mention the FEPC, but it contains one of the best short arguments against that proposal I have seen. The editorial contains this sentence: "When the Christian spirit, rather than a doctrinaire radicalism brings about changes in long-established customs, then the good gained is not swallowed up in the bitterness generated." Proponents of FEPC should ponder this comment. Under leave to extend my remarks, I include the entire statement, as follows:

The belief that there is a fixed pattern for race relations in the South is a misconception held by many long-distance northern critics and fostered by some backward-looking southern apologists.

Actually, the vitality of southern liberalism becomes constantly more apparent, modifying and changing old patterns not by doctrinaire fiat but by organic growth. A recent report of the committee on Christian relations of the Presbyterian Church of the United States (South) accents this with its assertion that "the present-day claims of American minorities to full civil rights have a moral and historical basis," as well as constitutional guaranties.

Written by southerners for southerners, it urges a fuller knowledge of the Negro, including the talented teachers, artists, poets, scholars, and statesmen of that race now hidden behind the "curtain of segregation." This—and the comparable positions taken by other church groups and Christian leaders throughout the South—is a far cry from the period in American history when the churches of both North and South hotly defended the institution of slavery.

A Negro pastor in Chattanooga, commenting on the opening of the public library in that city to Negro adults, declared recently:

"Some day, every closed door against the black man will swing wide open, not by pressure of law but through the spirit of Christianity, which is on the march."

When the Christian spirit, rather than a doctrinaire radicalism, brings about changes in long-established custom, then the good gained is not swallowed up in the bitterness generated.

West Holds Upper Hand at Paris

EXTENSION OF REMARKS
OF
HON. HALE BOGGS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. BOGGS of Louisiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from New Orleans States of May 21, 1949:

WEST HOLDS UPPER HAND AT PARIS

The western states of Germany yesterday ratified the constitution which ties them into a federal republican government, assuring basic guaranties of human rights. With that ratification the western allies have won a race against time which will prove valuable at Monday's opening of the Paris foreign ministers' conference.

Russia's sudden overtures on lifting the Berlin blockade found the Western Powers off balance. Drafting of the Bonn constitution had been allowed to drag and the Atlantic Pact had not shaped up as rapidly as desired. Now intense work has achieved results before the Monday deadline.

The question of Germany's future at the Paris meeting is subordinate. Both west and east are thinking of their own futures. With which side will the German people take their stand?

Four years ago this month Germany surrendered. Today, by the whim of global power politics, it is being courted by rival ideological camps. Former enemy is sought as ally; former ally is now enemy.

So Germany will have a commanding voice at council sessions and that voice will call for a unified Reich.

In this bidding for German support the west has considerably the better of it. Western Germany has staged a come-back under the Marshall plan in sharp contrast to the miserable showing, economically and politically, in the Soviet zone. Western Powers have moved to unify the western zones and set up self-government. Moreover, the west has the advantage of the traditional German distrust for Russians and all Slavs.

Stalin would have the world naively believe that Russia is the champion of German unity. What happened in the polling places of eastern Germany earlier in the week punctured that boast with a bang that will echo loudly in conference halls.

The scene for the dismal London conference nearly a year and a half ago was cluttered with distractions about reparations. After 3 weeks of disagreement it came to a weary halt. Russia's hand was strong then but the cards are now on the other side of the table.

At the London meeting Foreign Minister Ernest Bevin made this observation: "We want a genuine agreement among the four powers, and we do not want a sham agreement. We want a unity of Germany, we do not want a pretense of unity in a country still divided by zonal barriers. We want a democratic Germany, but we do not want a bogus democracy where a few men exercise tyrannical powers and bend the people to their own needs.

"We want a central government, but we do not want a centralized German government in the sense that it can become a dictatorship again. Above all, we do not want a puppet government incapable of governing except as the strings are jerked by the occupying powers."

The summary is still consistent with the west's position at Paris. Firm in the conviction that what it wants is right and just, the west is ready for a show-down. Of the outcome of that show-down, Secretary of State Dean Acheson spoke wisely when he cautioned fellow countrymen against "the luxury of either undue pessimism or premature optimism."

Judicial Review of Decisions of the Board of Veterans' Appeals Should Be Provided

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. EVINS. Mr. Speaker, there is pending before the Committee on Veterans' Affairs a bill known as H. R. 2690, which I have introduced, providing for judicial review of certain decisions of the Board of Veterans' Appeal. The decisions and actions of all Federal administrators, boards, bureaus, and commissions of our Government are subject to review by the Federal courts except the decisions of the Administrator of Veterans' Affairs in certain compensation cases—in such instances the Administrator has delegated adjudication of compensation decisions to boards of veteran appeals.

A judicial review of the decisions of such boards, in many instances, is greatly needed. A number of our veterans' organizations and the veterans themselves of our country recognize the need and necessity for providing a system of an impartial judicial review and the bill which I have introduced in this connection, if enacted into law, will provide for appellate review in specified instances by our Federal courts.

In this connection, Mr. Speaker, I was pleased to note that the National Tribune and Stars and Stripes has recently published an editorial calling attention to the merits of this proposed legislation and urging that the same be enacted into law.

Under unanimous consent, Mr. Speaker, I include this editorial, together with a copy of this bill—H. R. 2690—in the Appendix of the RECORD.

The editorial and bill are as follows:

MERITORIOUS LEGISLATION

Pending in the House Committee on Veterans' Affairs is a proposal by World War II veteran JOE L. EVINS, of Tennessee, to set up a council which would have the authority to review decisions of the VA Board of Veterans' Appeals. Composed of six members, the council would be made up of an outstanding physician, a crack lawyer, and representatives of the American Legion, Veterans of Foreign Wars, Disabled American Veterans, and the AMVETS. It would, on application, rehash cases that the Board of Appeals has denied, make whatever recommendations it deems proper, and, if the Veterans' Administrator does not see eye to eye with the council, claimants would be granted the right of court action.

Anybody who has followed our thoughts on such matters as this must agree that this measure, H. R. 2960, is worthy legislation. We have time and again pointed out that the Board of Veterans' Appeals is the most arbitrary in its methods of any section in the veterans' agency. Many is the case that can be recited where veterans have suffered injustice at its hands. In brief, it is not worth the powder to blow it up. Even in those few cases of appeal in which the existing Board finds merit, so-called consultants, who are VA hirelings, may take the folders into a back room, look over the evidence, decide against the judgment of the Board, and make their findings stick. Actually, and regardless of how they first found, the Appeals Board members usually sign without question whatever the consultants place before them.

We know of no greater service the Congress can perform than to enact the Evins bill. However, we would offer the author a suggestion and we would seek to press it. No group of veterans has ever suffered more at the hands of the Board of Veterans' Appeals than veterans of the Spanish-American War. Let them take an appeal for service-connection, and it is denied before it is reviewed. No representative of a major veterans' organization knows much about the conditions of service back in 1898–1902. Set up a council, if the Congress will, and it can perform an outstanding service, but, by all means make it representative. Include in the membership a man who knows Spanish War cases. There are still living many able men who saw service in that conflict and who are associated with the United Spanish War Veterans. * * * Let us get this bill out on the floors of the Congress, but let us round it out so it can best perform the service intended.

H. R. 2690

A bill to provide for the review of certain decisions of the Board of Veterans' Appeals

Be it enacted, etc., That part II of Veterans Regulation Numbered 2 (a), as amended, is hereby amended by adding at the end thereof the following new paragraph:

"XII. (a) There is hereby created in the Veterans' Administration an Administrator's Advisory Council (hereinafter referred to in act as the 'Council'), to be composed of a chairman and five other members appointed by the Administrator with the approval of the President. Of the six members, one shall be appointed from among the outstanding practicing physicians of the United States, one shall be appointed from among the outstanding practicing attorneys of the United States, and, of the remaining four, one shall be appointed from among persons recommended by each of the following organizations: The American Legion, the American Veterans of World War II (AMVETS), the Disabled American Veterans, and the Veterans of Foreign Wars of the United States. No person who has at any time served as a member of the Board of Veterans' Appeals, or who has served at any time during the preceding 12-month period as an officer or employee of the Veterans' Administration, shall be eligible for appointment as a member of the Council. The Administrator shall fix the compensation of the members of the Council in accordance with the provisions of the Classification Act of 1923, as amended, but in no event shall any such member be compensated at a rate lower than the highest rate paid to any member of the Board of Veterans' Appeals.

"(b) The Administrator shall furnish such personnel, office space, equipment, and supplies as may be necessary to carry out the functions of the Council.

"(c) Upon application by any person whose claim for any benefit under the laws and regulations administered by the Veterans' Administration has been disallowed, in whole or in part, by a decision of the Board of Veterans' Appeals, the Council shall have the functions of (1) reviewing such decisions, and (2) advising the Administrator as to what action he should take with respect to such decision. In performing such functions, the Council shall apply the most equitable and liberal provisions of the laws and regulations administered by the Veterans' Administration; and, in cases relating to the service connection of disease or injury, the Council shall give especial consideration to the provisions of Public Law 361 of the Seventy-seventh Congress.

"(d) Notwithstanding any other provision of law with respect to the finality of decisions of the Board of Veterans' Appeals, the Administrator may confirm, reverse, or modify any decision, or part thereof, of the Board of Veterans' Appeals which has been reviewed by the Council.

"(e) Application for review by the Council of any decision of the Board of Veterans' Appeals shall be filed within 1 year from (1) the date of mailing of notice of such decision, or (2) the date of enactment of this act, whichever is the later."

SEC. 2. (a) If the action taken by the Administration of Veterans' Affairs with respect to any claim for benefits under the laws and regulations administered by the Veterans' Administration is contrary to the advice of a majority of the members of the Council created by the first section of this act, a suit on the claim may be commenced against the United States in the district court for the district wherein the plaintiff is resident; and jurisdiction is hereby conferred upon any such court, sitting without a jury, to hear and determine such suit. The liability of the United States with respect to any such claim shall be determined on the basis of the facts and evidence of record presented to the Council. The judgment or decree of any such court shall be final and shall not be subject to any administrative or judicial review.

(b) No suit shall be allowed under this section unless the same shall have been commenced within 1 year after the date of the mailing of notice of the action taken by the Administrator contrary to the advice of a majority of the members of the Council. No other statute of limitations shall be applicable to suits commenced under this section.

(c) Those provisions of section 500 of the World War Veterans' Act of 1924, as amended (38 U. S. C., sec. 551), which relate to attorney's fees, and the penalties prescribed in such section for violations of such provisions, shall be applicable with respect to suits commenced under this section.

Socializing the Merchant

EXTENSION OF REMARKS
OF
HON. EARL C. MICHENER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. MICHENER. Mr. Speaker, pursuant to unanimous consent of the House, I include herewith an editorial from the Michigan Tradesman. The editorial follows:

SOCIALIZING THE MERCHANT

What is to become of the corner grocery, the drug store in the middle of the block, the repair shop in the side street, the doctor who has brought most of the neighborhood babies into the world, when the American community goes socialistic? The trend is in that direction.

Much of the advance guard of socialism is already with us, rent control, regimentation

of labor by unions, and there has been no serious outcry by the public against President Truman's suggestion that the Government enter the steel manufacturing business.

But here we are concerned with the merchant, the storekeeper, large and small, whose gigantic arm has preserved our way of life because he has had the freedom and will to supply us with our needs.

In the free enterprise state the storekeeper is also to a large extent the keeper of American enterprise, free enterprise. He has been the life of the community's march toward progress. He is a man of ideas and, next to the farmer, the most chance-taking gambler in the world. He believes in his country and in himself. To him country and enterprise and chance-taking are inseparable.

In the socialite state this same storekeeper becomes more a mechanical automaton than a pulsating, energetic, hard-hitting man of affairs. He will then be called upon only to carry out the orders of his Government.

Socialism does not reckon with personality or with ideas. Its primary allegiance is to the socialistic state as the Communist allegiance is to a single party. Both rob the individual of initiative because he has nothing to plan and work for but the state into whose service he is automatically pledged. No longer is there in his life that incentive which during 173 years made his country strong and self-reliant, eager and unafraid. No longer has he an individual aim, a personal goal, because the first thing that is crucified in the socialistic and communistic state is individuality in dealing one citizen with another.

National Health Program

EXTENSION OF REMARKS
OF

HON. ANDREW J. BIEMILLER

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Friday, May 20, 1949

Mr. BIEMILLER. Mr. Speaker, the distinguished gentleman from Michigan [Mr. DINGELL] gave valuable testimony before the Interstate and Foreign Commerce Committee Subcommittee on Health this morning which sheds valuable light on the propaganda campaign being carried on by the American Medical Association against the President's health program. So that all Members may have an opportunity to read his very enlightening statement, I am including it and the memorandum on the AMA educational program, to which Mr. DINGELL refers, with my remarks:

TESTIMONY BY REPRESENTATIVE JOHN DINGELL BEFORE THE HOUSE COMMITTEE ON INTERSTATE AND FOREIGN COMMERCE, MAY 20, 1949

Mr. Chairman and members of the committee, I am delighted to have this opportunity to appear before you on the bills Representative BIEMILLER and I have introduced proposing a national health program including a Nation-wide system of health insurance. I have had bills of this kind pending in Congress for many years, but this is the first time hearings have been held in the House for their consideration. These hearings, therefore, mark a long step forward in the march toward enactment of health insurance legislation. I believe we are on the way—and the road ahead will be much shorter than the road we have already traversed—particularly in view of President Truman's strong personal support for this legislation.

Most of you have heard my speeches on the subject of national health insurance and so I will not take up your time now by making another one. A representative of the Federal Security Administration will follow me and go into some detail on the bill and the need for it. Instead, I want to talk about something else in connection with this bill—the tremendous, multi-million-dollar campaign of propaganda and misrepresentation—as well as high pressure lobbying—being conducted against it by the American Medical Association. It is important for you to consider this in order to weigh the testimony you will receive in these hearings.

I believe you all know the background. The AMA, along with many others, was surprised and shocked when President Truman won the election last fall. In view of the fact that he had campaigned at least partly on the issue of national health insurance it became panicky and decided that the legislation was sure to be enacted. So the ruling element within the AMA set out deliberately to thwart the will of the people.

In order to do that, it levied arbitrarily an assessment of $25 against each of its 140,000 members, in an effort to raise the biggest slush fund in American history—a lobby and propaganda fund of $3,500,000 that would make even Mark Hanna a little ashamed. Raising that money was not easy. Many doctors resented the assessment and the secret way in which it was levied. But the AMA brought terrific pressure on doctors individually, and on recalcitrant local societies, to force them into line. Senator WAYNE MORSE, of Oregon, has described in the Senate how one doctor, who protested the assessment, was punished, and along with him, many mothers and babies whose lives might have been saved by his skill and knowledge were punished.

But the reason I am going into this now is that the AMA millions are being spent for one of the shrewdest, one of the most calculating, and one of the most cold-blooded lobbying operations in American history—and a lobby which I cannot deny might have an effect on Congress if not exposed. So I want to do what I can now to expose it and to show Members of Congress how it is operating to make it appear as though the country is opposed to this legislation.

I can speak authoritatively on this subject because I have in my hand, and I will pass around to all of you, copies of the lobby program worked out by the high-pressure public-relations firm hired by the AMA to do this job. It shows just how this lobby is operating to try to make it appear to Members of Congress that there is a grass-roots revolt against the President's health program.

When I called this one of the shrewdest, one of the most calculating, and one of the most cold-blooded lobbying operations in American history, I was not exaggerating. I was basing that statement on the evidence. This evidence, from the files of the American Medical Association itself, shows that the doctors of this country are being asked to take advantage of their special, confidential relationship with their patients—including particularly Members of Congress—to lobby against what President Truman and many Members of Congress feel is a health program in the interests of the Nation.

Doctors enjoy a closer relationship with the average man than anyone else with the possible exception of the spiritual ministry. The average citizen in America looks to his doctors for guidance in the most important thing in his life—his health—not only because of his skill in medicine, but because he has learned that in most cases the doctor is a man of high character, integrity, and intellect. So this is a very close, intimate relationship—a very confidential relationship—that usually exists between doctor and patient. But I have evidence here indicating that the doctors are being asked by the AMA to capitalize on that relationship for the political purpose of defeating the President's health program and to retain the monopoly the AMA and the local medical societies hold over the economics of medicine.

This document here is the outline of the lobby and propaganda campaign presented to the conference of State medical societies in Chicago by the AMA's high-powered public relations firm of Whitaker & Baxter. Let me read to you, as a starter, a single paragraph of that lobby blueprint:

"We need to locate the personal physician of every Congressman and every United States Senator (the county society secretary probably should take on that job) and have him (the Congressman's doctor) send a personal letter to his patient, the Congressman, telling him of the danger of socialized medicine, and asking for his help in defeating any compulsory health-insurance program which may be submitted."

Let me add that the words "personal physician of every Congressman and every United States Senator" in that sentence I have just read were printed in italics. But here is the pay-off on the way this confidential relationship between doctor and patient is being exploited by this propaganda and lobby machine. The paragraph continues:

"We will provide form letters, but the society secretary should help the doctor, if necessary, in rewriting and personalizing the letter in each instance. This letter also should ask for a reply—and again, the information in the replies should be sent to the national campaign office and the AMA Washington office." That shows how this close personal relationship between doctor and patient is being exploited by an outside firm of commercial lobbyists and propagandists.

Now this is the campaign, may I remind you, that the AMA has insisted in its alibis to rebellious members, was not a lobby campaign but an educational campaign. If that is so, then why is the Washington office to be kept informed of the correspondence with Members of Congress—the confidential correspondence between Members of Congress and their doctors?

This idea of using the doctors to influence their patients prevails throughout the AMA's lobby program. Each doctor is to be furnished with a color reproduction of the famous Fildes painting "The Doctor" to be posted in his office with several paragraphs of straight political propaganda and misrepresentation typed under this touching picture.

Now the AMA is not even kidding the doctors into thinking they are making this a great crusade for the benefit of the American people and for better medicine. In their proposal to post these pictures in doctors' offices they outline it as "the first step in making doctors campaigners in their own behalf." I might add that those words "in their own behalf" are also in italics. In other words, the doctors are being asked to use their personal, confidential relationships with patients to make a selfish political battle for their own benefit. Suppose the ministers of this Nation undertook such a campaign? What would be the public reaction?

The whole AMA campaign, as I have said, is based on using selfishly this trusting and confidential relationship existing between doctors and patients. Pamphlets are being printed, this campaign outline states, in lots of at least 7,500,000 each so that each doctor can have 50 copies for distribution to his patients. A "small, sparked-up human interest folder" is being furnished "to satisfy the need among doctors for a simple piece that can be given to patients, mailed with statements or placed in waiting rooms."

To be sure that this propaganda gets to all doctors and through them to their patients, machinery has been set up in every

State to see, as this document says, "that shipments of materials from the national headquarters offices actually get into doctors' offices and finally into the hands of doctors' patients."

Some of the material is not designed for distribution to the public. It is aimed at the doctors, to key them up to fight for the cause, and to show them confidentially how to do it. It contains "simple instructions on how to practice on the body politic," as this campaign outline expresses it. This means, in actual practice, the use of the "scare technique" popularized in Germany by Hitler. Patients are being told by their doctors to whom they feel they owe their lives that "if this socialized medicine legislation goes through I will quit my practice." A man who has relied on a certain doctor to carry him through a tough medical crisis is likely, after a hint of that kind, to rush to the mailbox with a letter to his Congressman opposing what the doctor has described as "socialized medicine." But the chances are that neither the doctor, nor the patient, could give even a rough approximation of the terms of the legislation.

In that connection I would like to make it perfectly clear to the committee at this time that I am opposed to socialized medicine as much as I am opposed to the strangling effect of commercial medicine. Both are corrosive and detrimental to the peoples' welfare. On the other hand, health insurance, in the form which I am advocating, is wholesome and desirable in leveling the hazards of health.

Some doctors are passing out cards to their patients to be signed and sent to Members of Congress protesting against this legislation. I have in my hand here, for example, a copy of a letter received recently by our colleague Representative DWIGHT L. ROGERS of Florida. Mr. ROGERS had sent to one of his constituents an acknowledgment of a protest against this health legislation. In reply the constituent wrote:

"I wish to state that this card was signed by me on what you might call 'pressure.' At the time I signed this card my wife was in the hospital for an operation, and while at the doctor's office I was handed this card to sign, under the circumstances I felt that I was compelled to sign even though I am 100-percent for compulsory health insurance.

"It is my belief that thousands of other persons are handed these cards to sign under similar circumstances, and is very unfair to all parties concerned.

"It is requested that this card signed by me be stricken from your records or returned to me."

I hope the next time you members of the committee go through a batch of letters and cards opposing this legislation you will remember this incident I have just described to you. I am delighted to note that the Rules Committee has approved an investigation of lobbies. One of its first tasks should be an investigation of these high pressure tactics by the doctors—tactics which I believe are a disgrace to the medical profession.

The high-powered personal approach of doctors to patients, which I have been describing to you, is just one of the tactics of organized medicine under the leadership of this public relations firm which has taken the campaign out of the hands of the doctors, and turned the AMA into a professional political lobby instead of a scientific organization committed only to the public welfare.

This personal approach is retail lobbying. But the AMA lobby directors have worked out a scheme also for lobbying on a wholesale basis—to make it appear to Congress that whole communities are opposed to this legislation. This is done by railroading through every conceivable organization—whether of a political nature or not—resolutions opposing "socialized medicine."

Usually this is done by doctors or their wives who are members of such groups—and usually members of considerable standing. They arrange for a speaker to tell the club or civic organization, or professional group, without any regard for truth that "socialized medicine" as they label health insurance, would erect a huge bureaucracy, create new taxes, and break down the practice of medicine. Rarely is an opportunity provided for the organization to hear a speaker favoring the legislation. On the basis of this one-sided presentation endorsed by their respected colleague, Dr. So-and-so, the organization rushes through a resolution opposing "socialized medicine" and sends it on to Members of Congress.

Specific directions are provided for getting resolutions adopted by organizations of all kinds, even those which have a "policy of not taking action on public issues" or which "profess 'no interest'" in the issue. In order to get action out of such groups, form speeches "geared to different types of audiences" are prepared by the propaganda machine in Chicago. Detailed directions also are provided for getting these resolutions forwarded to Washington with "covering letters asking for a reply, in order to keep advised, if possible, of the position of your legislative representatives." Once more, I remind you of the claim that this is an educational and not a lobbying campaign.

This lobby campaign plan, which I hold in my hand, outlines the detailed machinery for the operation of this false-front lobby for the doctors. It virtually dictates to every county medical society orders to adopt strong resolutions and even suggests what these resolutions should say. The presidents of these local societies are told to ask their Congressmen for replies, so that "his position can be made known to the doctors of his district." This document tells the doctors that the "combined political strength of all the doctors in a congressional district is impressive—and we need to put every Congressman on notice of the position taken by his doctor constituents." To counter this, I hope the millions of average people will give their expression which will be even more impressive.

Now, mind you, this is all part of the "educational campaign" not lobbying campaign—as the AMA has described it to its members.

Speakers, committees are being organized in every county society to propagandize on this issue and in some areas the doctors are even taking courses in public speaking so that they can spellbind their audiences with the propaganda written for them in the "emotional fighting prose" which the press agents themselves said they would use. Form speeches are provided from the campaign headquarters in Chicago, but the publicity directors have urged the speakers to localize them to meet local conditions.

One of the most interesting angles of this so-called educational campaign is that it is aimed at presenting to the public only one side of the issue—the discussion is staged behind an iron curtain just as the Journal of the American Medical Association has done for many years. No medical journal has ever presented to the doctors a fair article by an advocate of the President's health program—quite contrary to the record of British and Canadian doctors. In line with that policy, this document warns the doctors against engaging in debates because they make a forum for the opposition. Obviously this is an issue on which the propaganda machine does not want both sides presented.

Campaign committees have been created in each State and in most counties to conduct this campaign. The instructions for the formation of these committees say that laymen may be added but warns that committees should be kept close-knit and controlled by the profession's own chairman. Apparently organized medicine wants to control this campaign just as tightly as it controls the organization of medical practice.

Another interesting angle of this educational campaign is the approach to the press. The campaign directors have ordered that their words of emotional, fighting prose shall reach the people through normal newspaper and magazine channels, rather than through direct publicity releases. They propose to work with the great newspapers and the national magazines to get them to do special jobs, with real reader interest and assert that this work already is well started. Judging from the tone of some of the articles I have noted recently in the popular magazines I am afraid it is correctly stated—they have started.

What Whitaker and Baxter mean by reaching the press through normal newspaper and magazine channels, rather than through direct publicity releases I can only guess. But my guessing is influenced to some extent by what happened in a similar campaign conducted by this firm in California against Gov. Earl Warren's proposal for a State health-insurance program. After that campaign was started the California doctors reported to the AMA that the newspapers had been cool and unreceptive to them at first but this attitude was changed by taking advertisements in every newspaper in the State. They reported naively that after the advertisements were inserted "we found that the response from editors in publicity has been far beyond anything we expected."

Their success in that campaign was what won for Whitaker and Baxter their present juicy contract with the AMA. We can assume that they will put their experience in California to good use in the national campaign, and any day now we may expect to see advertisements in the newspapers and magazines on the issue of national health insurance. In fact it was recently reported that the advertising is to be paid for by the local societies quite outside of the $3,500,000 campaign fund being raised by the AMA. So unless there is a thorough lobby investigation by Congress, we may never know how many millions of dollars are being thrown into this special-interest fight by organized medicine.

On the other hand, most newspapers and magazines already are so friendly to the doctors' cause in their campaign against the Fair Deal program that organized medicine may decide the expenditure of money for advertising is unnecessary.

Mr. Chairman, before closing, I would like to say a word or two of explanation about this story I have been telling. No one has a higher regard than I have for most of the doctors who constitute the great medical profession. They have shown through the years their devotion to the public welfare by their widespread practice of charity medicine, by their research in the public interest, and by their high professional standards. But I want to distinguish between the doctors and what I called organized medicine—as represented by the hard core now in control of the AMA and many of the local medical societies. Organized medicine is controlled by political doctors. A study has shown that the house of delegates of the AMA is composed chiefly of specialists and high-salaried urban physicians who are in no way representative of the bulk of hard-working doctors in the United States.

These political doctors are of a different character. They are engaging today in tactics which I am sure most doctors do not approve, and about which I am sure many doctors are deeply ashamed. The most dangerous part of this situation is that the political doctors are in complete control of the machinery of organized medicine. They are dictating its policies, and are using pressure as well as direct disciplinary action to enforce their will on the practicing physicians of this country. I know many doctors who favor national health insurance but are

unwilling to risk retaliation from their medical societies by speaking out for it.

Few doctors are in a position to buck their medical societies. In order to retain access to the hospitals of their community, they must belong to the medical societies—and many of them are dependent for their run of patients upon other doctors. There is no way to tell how large a proportion of the medical profession would be in favor of this legislation if free thinking and free speech prevailed in medical circles today—but I am sure, after years of talking with doctors on the subject individually, that the number would be large.

This is a dangerous situation in a democracy, and I want every member of the committee to be fully cognizant of the situation. Here is a close-knit group of political doctors which borders upon a dictatorship in control of a vast propaganda machine and using every possible pressure to enforce their will on a great and humanitarian profession. The propaganda machine even writes the speeches and the letters for the doctors. I hope you will recognize when the so-called spokesmen for the AMA appear here that the statements they deliver are probably not their own—but statements written by the highly paid publicity firm of Whitaker and Baxter. The doctors are merely serving in this campaign as Charlie McCarthy's for Whitaker and Baxter. The evidence I have presented proves this charge.

How many practicing physicians they really speak for, no one can know. I cite again the case described by Senator MORSE in the Senate—of a doctor on the faculty of Louisiana State University who dared to protest the AMA assessment along with almost 200 of the leading doctors in America. Soon after his protest was published he received the following letter from the State health officer of Arkansas relating to some lectures he had been asked to deliver in that State:

"This letter is being written to you as a result of a special request made by the Arkansas State Medical Society and the Pulaski County Medical Society, with reference to your appointment as special consultant in pediatrics for the Arkansas State Board of Health for the postgraduate pediatrics course to be conducted at the University of Arkansas School of Medicine in Little Rock during the period from March 10 to 12, inclusive, 1949.

"The Arkansas State Medical Society and the Pulaski Medical Society have been advised through authoritative sources that you were one of the 136 (later nearly 200) signers of certain papers and documents severely criticizing the American Medical Society. Through this action on your part the Arkansas State Medical Society and the Pulaski County Medical Society request that you not appear on the postgraduate pediatric course to be conducted on the above-referred-to dates.

"This department sincerely regrets that this most embarrassing situation has arisen and further regrets that it is necessary to cancel your appointment as special consultant for the Arkansas State Board of Health."

The doctor who received that letter—Dr. Myron E. Wegman—wrote to a friend as follows:

"While I am, of course, shocked that an expression of opinion on a controversial question before the profession and the public should be carried over to education and scientific work, I am afraid that it is not unexpected."

Mr. Chairman, that is a shocking commentary on the atmosphere prevailing today in the medical profession of this great democracy. But I am afraid the criticism is fully justified. May I add, Mr. Chairman, in closing that the punishment in that case was not administered to Dr. Wegman so much as to the people of Arkansas, who need his advice on the saving of babies' lives—and to the people of America, who, because of this incident, are less likely to get the real sentiment of the medical profession on this pending legislation. I hope you will remember that fact in assessing the testimony in these hearings.

[From the Dallas Medical Journal of April 1949]

WHAT WILL WE DO WITH THE DOCTOR'S $25?—THE NATIONAL CAMPAIGN PLAN OF PROCEDURE

(Presented by Clem Whitaker and Leone Baxter, directors of the national education campaign of the American Medical Association for the Conference of State Medical Societies, Chicago, February 12, 1949)

Mr. Chairman and ladies and gentlemen, every minister preaches from a text—and every campaign, if it is a successful campaign, has to have a theme.

The theme, if it is geared to reach more than 100,000,000 people, as we must in this campaign, should have simplicity and clarity.

Most of all, it must high-point the major issues of the campaign with great brevity—in language that paints a picture understandable to people in all circumstances.

EVERY DOCTOR A CAMPAIGNER

That's one of the reasons we have a large, blown-up color reproduction of the famous Fildes painting, the Doctor, on exhibit here today, with the simple caption under it: "Keep politics out of this picture."

The picture and the caption, even without elaboration, focus attention on one of the most important arguments against government-controlled medicine.

Smaller color reproductions of this famous painting soon will go up in doctors' offices all over America as one of the first steps in dramatizing our case to the American people—and more important—as the first step in making doctors campaigners in their own behalf. For this purpose we have added a hundred words of text which help to establish the theme of this campaign.

I'm going to read you that text, because it stresses, in simple language, the essential points of the case which we believe will turn the tide against compulsion and in favor of voluntary health insurance.

The text is as follows:

KEEP POLITICS OUT OF THIS PICTURE

"When the life—or health—of a loved one is at stake, hope lies in the devoted service of your doctor.

"Would you change this picture?

"Compulsory health insurance is political medicine.

"It would bring a third party—a politician—between you and your doctor. It would bind up your family's health in red tape. It would result in heavy pay-roll taxes—and inferior medical care for you and your family. Don't let that happen here.

"You have a right to prepaid medical care—of your own choice. Ask your doctor, or your insurance man, about budget-basis health protection."

This is signed: American Medical Association.

These smaller posters will be sent under the signature of the AMA to show medical men throughout the country that the association is resolutely behind the national campaign. They will be sent to doctors only at their own request. Return postal cards will be in the mail shortly.

The dimensions of the posters are approximately 18 x 20 inches. They are dignified—but carry a strong message—stronger, we are aware, than most doctors are accustomed to display in their waiting rooms. Their final cost, including the right to reprint the famous picture, art work, stock, printing, and mailing comes to about 30 cents each. If we can light the crusading fires, and tie into the campaign the majority of the doctors of this country, for the cost of 30 cents each, the results will be well worth the price.

For the information of some of you who are wondering just when these will begin to show up in doctors' offices—here is the production schedule: This poster has been in the works for 3 weeks. It was out of our hands on February 7. The press proofs will be submitted to us on March 3. The schedule calls for delivery to the bindery on March 15; cut and drill sheets, March 21; production completed March 25; inserting, addressing, and mailing completed on April 4.

That's a lot of time—60 days; a lot of effort; a lot of money. And we look for real results.

THE REAL AMMUNITION

The major portion of the campaign budget will be spent for production of materials—the campaign ammunition. We are not going to waste any campaign funds on faulty ammunition. Any general pamphlet produced will have to be printed in minimum lots of 7,500,000—just to put 50 copies into each doctor's hands alone. To make the smallest trickle beyond that outlet to the public, we shall have to print a minimum of 10,000,000 copies of any piece produced. That means simply that we can't afford to experiment. We can't afford to throw our next-best or divided efforts into print and hope it will suffice. What we produce must be brief enough to read—dramatic enough to create sentiment—and sound enough to produce action from the thinking people of this Nation.

Some very excellent basic material has been produced by men of medicine and mean close to the profession, long before the National Education Campaign was initiated—and that will give the production of the new material the most helpful impetus.

One of the pamphlets in the planning and production stage is a small, sparked-up human-interest folder to satisfy the need among doctors for a simple piece that can be given to patients, mailed with statements or placed in waiting rooms. It will be suitable as well for general use by allied professions and industries. This will be a special appeal, illustrated public pamphlet, geared to the interests of the average citizen—the veteran, farmer, mother, businessman, wage-earner, etc.

The doctors will receive their first copy of that pamphlet direct from AMA headquarters, with a brief letter telling some of the high lights of the proposed campaign and advising the doctors that they can get the pamphlet in quantity through their State or county medical societies.

A question-and-answer pamphlet, which actually will serve as the doctor's campaign handbook, also is in process. The handbook should give every doctor not only the facts he needs to argue his case effectively but also simple instructions on how to practice on the body politic.

The small leaflet will be a general public piece and can be distributed through many channels. The handbook, while beamed to doctors, also will be used for distribution among members of our lay committees. We believe that the dentists' associations, the druggists' organizations, the hospital associations, the medical auxiliaries, and various other closely related groups should be urged to turn out smilar material, or use ours under their own imprints.

We also plan to assist many cooperating national organizations—veterans' groups, for example—to produce pamphlets slanted to their own memberships and emphasizing the arguments which will have special appeal to them.

A third pamphlet is in preparation, whose title will be "Calling Every Doctor—This Is an Emergency." This, too, will go directly to physicians, with a letter from the American Medical Association. It will be a briefly presented statement of the issue, the objectives, and the procedure to accomplish those objectives. Its purpose will be similar to

that of the poster—to get every doctor who believes in the private practice of medicine working enthusiastically with his local campaign committee.

A PAMPHLET CAMPAIGN

Actually, this issue is made to order for pamphlet presentation, and we plan heavy use of pamphlets, running into many millions of copies, to tell medicine's story dramatically and effectively to both leaders of public opinion and rank-and-file citizens throughout the country.

With new developments and changing conditions in the campaign, there likely will be need for frequent revision of the text of early pamphlets, or the production of entirely new material. As a consequence, a heavy load will fall on our writing and production department and one of the first problems of course is to produce copy fast enough to satisfy the press, AMA members, State and county societies, and the literally hundreds of business and civic groups which all require special servicing.

Above all, the written material in this campaign must be emotional, fighting prose. We cannot win an audience with dry, statistical copy. We have to give the people facts, but in very readable form. The surest way to break down apathy and public disinterest is to turn out copy that stirs the emotions—and in doing so, opens closed minds.

It is vital, too, that much of this flow of words should reach the people through normal newspaper and magazine channels, rather than through direct publicity releases. We intend to work with the great newspapers and the national magazines to get them to do special jobs, with real reader interest, and that work already is well started. The story of British medical practice today, as an example, is actually one of the most important stories of this era. AMA already has started the wheels moving to get the truth and publicize it before this campaign began. It is a story which must be told and retold by staff writers of American magazines and newspapers.

Once it has been printed in a magazine or newspaper of national importance, reprints of the article will be placed in the hands of key people throughout the country.

ORGANIZATION PHASES OF THE CAMPAIGN

There are two distinct phases of organization activity planned.

First is the plan of organization and operation for medical groups, which involves the relationship of the State and county societies to the AMA in the conduct of the campaign. This calls for a definite division of work, with fixed responsibility in each area, so that a vigorous grass-roots campaign can be developed.

Second is the plan for mobilizing the strength of the major public organizations, local, State, and national—groups like the farm organizations, the more powerful business and civic associations, fraternal, religious and veterans' organizations.

The program with respect to the medical organization structure, has been discussed carefully with the campaign coordinating committee members in order to reach practical and intelligent decisions. The job must be done with as little friction as possible, so that doctors in the field will be directing their energies to winning converts, and their fire to the opposition. It is usually difficult to get 150,000 individualists (and most doctors are individualists) to agree an anything, but if ever the members of the medical profession needed to pull together, this is the time.

STATE MEETINGS

A number of States have reported that within the next 30 to 60 days after the national meeting of State representatives (February 12, in Chicago), they are calling meetings of county society representatives in their own States, for the purpose of passing along to them the national plan of compaign, and determining on their own procedures in relation to it.

Accordingly, for their help and guidance at this time, we will chart some of the important work which needs to be done within the States.

COUNTY SOCIETY ACTION

1. Every county medical society in the United States should adopt a strong resolution against compulsory health insurance within the next 60 days—and should then direct the president of the society to communicate its action, by letter or telegram, to the Congressman (or Congressmen) representing the district; also to the State's two United States Senators. The society's resolution should emphasize the inevitable deterioration of medical care and the danger to the public health, once Government medicine is in operation, and should stress the tremendous growth of the voluntary systems and that the American people are taking care of the problem in the American way. The President's letter to the Congressman or Senator should ask for a reply, so that his position can be made known to the doctors of his district. Copies of all replies should be forwarded to the national campaign offices and to the Washington office of AMA as rapidly as they are received. We will provide several form resolutions as a guide to the societies.

The combined political strength of all the doctors in a congressional district is impressive—and we need to put every Congressman on notice of the position taken by his doctor constituents.

LAWMAKER'S DOCTORS

2. We need to locate the personal physician of every Congressman and every United States Senator (the county society secretary probably should take on that job) and have him send a personal letter to his patient, the Congressman, telling him of the danger of socialized medicine, and asking for his help in defeating any compulsory health insurance program which may be submitted. We will provide form letters, but the society secretary should help the doctor, if necessary, in rewriting and personalizing the letter in each instance. This letter also should ask for a reply—and again, the information in the replies should be sent to the national campaign office and the AMA Washington office.

SPEAKERS' BUREAUS

3. We need an active speakers' committee in every county society to cover local meetings. The executive secretary of each of the State societies should aid in organizing this work. We will provide form speeches, but in many cases they will need to be localized to meet local conditions.

One of the very great requirements is for every State to develop top-bracket speakers both in the profession and apart from it, who can be called on for important meetings, both State and national.

DEBATES

We do not believe it a sound campaign practice to sponsor too many debates. They make a forum for the opposition which would be difficult for them to secure otherwise, and they are too easily stacked. This is particularly true of broadcasts of debates open to the public. Our speakers will stick to the facts. But already in this campaign the opposition has begun to use the facts very loosely. Their claques in the audience are briefed to applaud wildly every trick phrase their speaker utters. And the public has no way of knowing which is fact and which is fancy. If our case were so poor that we had to stack meetings, it would not be worth the effort we shall all put into this campaign.

PRESS COMMITTEE

4. We need a press committee in every county society to make personal calls on the editors of all newspapers in the county and urge their support of medicine's position. This work, again, should be coordinated by the State society.

ENDORSEMENT DRIVE

5. Since our first objective is making the position of the people on this issue known and recognized by our representatives in Congress, much of our first campaign effort must continue to be devoted to getting organizations on record in opposition to compulsory health insurance.

In this connection, one of the first mailings from the National Campaign Headquarters to the States, will be a list of conventions scheduled in each State during 1949. This should reach you during the coming week. This is not to be considered a complete list, but we sincerely hope it will be helpful in beginning the drive for resolutions in your area. It will include all conventions reported at this early time; you will need to add to it as others are scheduled. The list will contain the following information:

Name of organization.
Town where convention is scheduled.
Estimated attendance.
Person to contact, to our best knowledge.
Whether convention is national, State or local.

Some organizations on the list may have a policy of not taking action on public issues, or will profess "no interest." When an issue is of fundamental importance, as ours is, however, and when somebody takes the time to explain the honest facts and drive for a resolution, virtually all the important organizations do take action.

As fast as they are produced, form speeches geared to different types of audiences will come along to you; also suggested form resolutions which can be localized or particularized as you see fit; also the question-and-answer pamphlets, providing brief, factual answers to the most commonly asked questions concerning the issue of compulsory health insurance. Armed with this material, a good speaker will have little trouble making a splendid, positive case before even a difficult group.

ENDORSEMENTS—PROCEDURE

Since the value of formal action from any group is in exact proportion to the work done to capitalize on it, these are some of the things which must be done, once a good resolution is in your hands:

If it is from a strong, State-wide organization you should send copies of the resolution first thing to:

Your two United States Senators.
Your Congressmen.
Your State legislators.
The AMA office at 1302 Eighteenth Street NW., Washington, D. C.
The national campaign headquarters, 1 North La Salle, Chicago.

Every county medical society, immediately it has acted, should send copies of its resolution to:

Its two United States Senators.
Congressmen from its own district.
State legislators from its own district.
Its State campaign chairmen at the State medical association office.
The AMA office at 1302 Eighteenth Street NW., Washington, D. C.
The national campaign headquarters, 1 North La Salle, Chicago.

Action of other county or city organizations should be reported to United States Senators only when deemed of sufficient importance to merit such handling, but should be reported at once to all others listed above.

Resolutions sent to all Congressmen should be accompanied by covering letters asking for a reply, in order to keep advised, if possible, of the position of your legislative representatives.

Originals of all resolutions should be kept in the originating office, unless otherwise requested.

Copies of resolutions should reach the press and radio on the same day action is taken if possible, through your State or county publicity channels, as determined by your campaign chairman.

When an organization has acted it should really be asked to go to work in the campaign—

(a) Getting literature to its membership, either through meetings or by use of its mailing lists, or both.

(b) Using its house organ or news letter for both news and editorials on the issue of compulsory health insurance.

(c) Offering its talented members as volunteer speakers on the issue of compulsory health insurance.

(d) (Members on record in one organization can help, too, in presenting resolutions to other organizations of which they are members, and helping to steer them to favorable conclusions.)

Most of the State medical associations have working organizations long in existence and thoroughly ready and able to handle their part in the campaign.

6. Machinery will have to be set up in the few States where it is not already operating, probably under the direction of the State society office, to see that shipments of materials from the national headquarters actually get into doctors' offices and finally into the hands of doctors' patients.

NAME YOUR STATE CONTACT WITH NATIONAL HEADQUARTERS

It is important to name the person, presumably in your State association office, to whom the national headquarters will channel supplies of literature and other materials for fast distribution in your State. His name, address, and telephone number should be sent at once to the national campaign headquarters.

In some States it may be desired that supplies go directly to the county society offices. However, it is the feeling of the national campaign directors that campaign materials in general should channel through the State medical association machinery and down to the county societies under the directives of the State itself. That, we believe, should be determined within each State.

AUXILIARIES ARE EFFECTIVE

Obviously the women's auxiliaries of the medical societies will be able to carry a big share of the load. As some of the California representatives will tell you in that State's campaign on the issue of compulsory health insurance, the women accomplished some of the most effective work done in speaking before women's organizations, in literature distribution, in securing endorsements, and in keeping the club and women's editors enthusiastic on the issue.

COMMITTEES

It is important within the States, to organize committees of doctors, both on the State and the county basis, who are able to give their time to the campaign objectives, to handling speaking engagements and to working on endorsements.

Laymen may be added to committees as time goes along, as the work gets heavier and as laymen become more interested in the issues. (Committees should be kept close-knit, however, and controlled by the profession's own chairman.) In any case, help from leaders outside the medical profession should be sought and welcomed. Not only will such aid lighten the load on doctors, but it will help build the broad public picture of the danger of socialized medicine, to every other element of our national life.

CONCLUSION

We recognize that AMA's permanent staff, headed by Dr. Lull, has a full load of work in just maintaining its normal activities. We will need a tremendous amount of help from them, however, and we have had many warm assurances of their desire to be in the front lines of the battle, as they have been for years past.

We visualize that they will serve in many capacities, giving the national campaign the aid of their counsel and guidance, as required, providing the background material and the knowledge of the vast medical organization which we so badly need, flying into key States to carry the message to Garcia, maintaining lines of communication with all the State and county societies, opening doors everywhere that are vital to the success of medicine's campaign.

The public-relations department of the AMA, under the very capable hands of Larry Rember and his staff, is going to have a tremendous task to perform. Its work will be vastly heavier as a direct result of the campaign. The States, incidentally, probably will see more of Mr. Rember, Mr. Bach, and Mr. Doscher than ever in the past, for part of their work will be trouble shooting in areas where the campaign at one time or another may bog down and require a jet-propulsion assist.

Their work will coordinate closely with the national campaign and in many respects will overlap it.

They will make an intensified, affirmative campaign to drive home to the public the vital part the medical profession plays in the lives and the health of Americans. They will intensify their efforts to interpret factually—and dramatically—the work of the departments of the AMA—work that daily reflects highest credit on the profession and which has made the entire world deeply respectful of the AMA.

We are confident, gentlemen, that the campaign which has been laid out is a practical, workable, effective campaign, and will produce the results we must have. We are confident that working together, the fight against Government-controlled medicine can be won—and that when it is over, medicine will have pointed the way for the whole Nation, at a time when the Nation might easily travel either road—toward a controlled economy or toward a free economy.

We sincerely believe that the individual doctors throughout the Nation, who have paid $25 each to tell their story to America, will feel proud, as the story unfolds toward its conclusion—proud of their part in writing one of the greatest and most significant sagas of American history.

Slum Clearance and Public Housing

EXTENSION OF REMARKS

OF

HON. GEORGE D. O'BRIEN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. O'BRIEN of Michigan. Mr. Speaker, under leave to extend my remarks, I herewith include the following editorial from the Detroit Free Press, a traditionally conservative Republican paper, in which they favor the pending bill, H. R. 4009:

PUBLIC HOUSING THREATENED

Government has no business invading fields commonly served by private enterprise. It is essential to the welfare of this Republic, even its very life as we know it, that Government expenditure be curtailed.

These things we have always maintained, still do, and always will.

But where the need for action is vital and private enterprise does not show itself able to do the job, we believe it is the Government's business to step in. And we do not believe that in such sectors Government parsimony is a virtue. There are plenty of other places and ways in which public funds may be conserved.

These things we cite in connection with the report the House Republican leaders are preparing to kill the public-housing bill. This city and every city is scarred with fetid slums. Americans by the thousands live in an environment which breeds crime, hopelessness, and whole-hearted willingness to try the political panacea of any charlatan who comes along with a promise.

This is no new condition. It isn't an emergency situation which has caught private enterprise and civic conscience by surprise. We have turned our backs on it and pretended it wasn't there. It is there, and it underlies a great deal of the very manifestations which the men who want to kill public housing decry and view with such alarm.

If there were any prospect that this very real danger to America could be eliminated in any other way, we would side with the men who want none of public housing. But they do not and never have shown us that other way.

I Am an American

EXTENSION OF REMARKS

OF

HON. CARL ELLIOTT

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. ELLIOTT. Mr. Speaker, we all feel a deep sense of pride in being able to state, "I am an American."

I include as a part of my remarks a most excellent editorial from the May 12, 1949, edition of the Stars and Stripes, entitled "I am an American":

Just prior to World War II, when the rights of human beings almost the world over were being subjugated to the will of dictatorships, a few public-spirited American citizens fell upon the idea that there should be set apart a day in this land when special attention could be directed to the rights and duties of citizenship. It was thought appropriate that those who had earned the privilege of full suffrage, either by becoming of age or through attaining naturalization during the preceding year, should be honored, and, at the same time, should be cautioned about their national responsibilities. So, on May 15, we shall observe I Am an American Day. The President has called upon the Governors of all States to proclaim it "because the strength of our Nation lies in the unity of all of our people, of whatever race, creed, culture or national origin—a unity that can be built only upon a full realization of the worth and meaning of American citizenship."

Certainly the war veterans of this country have as full an awareness as anybody of the meaning of Americanism. They have lived their loyalty by service to the Nation in times of stress. With few exceptions, they have continued their devotion to the national service, yet they are disturbed greatly in these days of uncertainty to see so many demonstrations of disloyalty, so much disagreement over the fundamentals of our own security and so much of a tendency to water

down the very essentials that have drawn to our shores the oppressed of the world. In a land where all people know we are free to agree or free to differ with one another, and free to express our differences and dissent, it is shocking to find persons who cannot be loyal to the very institutions that preserve and guarantee those freedoms.

In New York, and in the National Capital itself, American citizens are undergoing court trial for betraying their country. In Paris, recently, an American Negro and others who have had all of the privileges a freedom-loving people could offer had the audacity to pronounce in the name of millions of their races that none of them would fight for the country that afforded them the opportunity to be fully emancipated and free men. There have been some who have renounced citizenship in favor of a foreign power whose ideals are the very opposite of our own. Our Government continues to employ persons of doubtful loyalty and who continue ceaselessly to strive to alter our form of life by any means at hand.

Estimates are that fully a million persons, who live in the United States, have given their allegiance to alien masters, and that more millions could be depended upon to help overthrow the country by force and violence if opportunity offered. With discord rife in Europe and in Asia, with the Soviet seeking openly to spread the doctrine of Red revolution throughout the world, and with pressures being brought to bear on the ignorant in our homeland, some of them in the name of civil rights, it is no wonder that the Chief Executive warns that on this May 15 "it is necessary for each citizen, native born and foreign born alike, to meet his responsibilities of citizenship with intelligence, courage, and unselfish devotion to the principles upon which this Nation was founded" and, we may add, which have sustained it in abundance for the 175 years since its birth.

Whenever it becomes necessary in a so-called free country such as this to prepare legislation to test the loyalty of citizens, when it is deemed essential legally to protect its flag from defilement and mutilation, it appears that a point has been reached when loyalty cannot be taken for granted. There was a time when both native and adopted sons loved this land. Now, it is evident that some constitute a vicious and dangerous fifth column that serves a foreign leader. It is a constant peril, and only an informed and loyal public opinion, supported by law, can save what it has taken generations to build. In the face of a tyranny that is creeping over the world, there must be a rallying cry of freedom, and expedited action should be taken on legislation to strengthen enforcement officers. We have been too easy on those who plot our destruction. The time has arrived to outlaw those who seek to destroy us. This thing is too real to permit our temporizing with it longer.

Perhaps the people of America should devote this year to a moral and religious awakening. One prominent educator recently demanded as much from our school systems that have stressed individualism to the point of national decay. He said that any child who has completed his penny catechism knows more about this atom-studded, jet-propelled, televised and United Nations-riddled universe than the assembled faculties of some of our modern universities. That might be an exaggeration of the pressing problem before us, but it is clearly evident that the people of America, if safety of our institutions is to be assured, must unite on a solution of our political ills which prejudice and unconcern are combining to make for complete destruction.

A nightmare of uncertainty has been manufactured abroad and loosed stealthily upon this country. It has to be obliterated. We must devote ourselves to the reconstruction of a kindliness that we knew before we were encompassed by international intrigue. Just human relations and the association of man and man as individuals, as somebody wiser than we put it, are needed rather than congregations looking to the prolongation of distorted attitudes. We are too preoccupied with being against something instead of being for an objective that has proved its soundness. If we were now to unite ourselves for the preservation of civilization and improve on it, perhaps our faults and weaknesses and our prejudices would be lost with all others of our failings.

Americanism means many things, but it is most a link that ties together upward of 140,000,000 of our people. It is a way of life that can be found nowhere else on the universe. It is something in which we as a people have believed devoutly ever since we were a nation born of sacrifice for an ideal. Men have died for it in costly conflicts regardless of creed or color. Lest it be cast aside for want of champions, unless it be adulterated by enemy infiltration, let there be on this day of observance of the priceless heritage of citizenship a voluntary and spontaneous outpouring of declarations of loyalty by all of our people. All of everything that has made of this country a haven for the down-trodden and all of the hope for a future of continued freedom are symbolized in those words—I am an American.

Cooperation In Armed Forces Needed—Service Bickering Deplored

EXTENSION OF REMARKS
OF
HON. JOE L. EVINS
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. EVINS. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I desire to include an editorial from the Nashville Tennessean, dated May 20, 1949, concerning the proposed air flight contest between the air arms of the Air Force and Navy. This editorial is well written and I commend it to the reading of the Members of the Congress as well as officers of our Defense Establishment.

The editorial is as follows:

CALL IT OFF

The proposed mock battle between the Air Force's B–36 bomber and Navy jet interceptor planes should be called off immediately.

Representative VINSON, of Georgia has long rated as one of the sharpest military experts in Congress. For years he was the Navy's best friend in the Nation's legislature. In recent years he has apparently switched his allegiance to the Air Force.

But whatever his ties and predispositions, he should know better than to propose such a contest with Congress and the public looking on.

In the first place, the imponderables of air combat are so great that the tests might not prove anything, no matter how exhaustively conducted.

In the second place, we should ask ourselves what we are trying to prove, and to whom. We certainly do not wish to advertise to the world that our mightiest air weapon cannot defend itself against fighter planes. On the other hand, we should be equally reluctant to broadcast the secret that our vaunted jet fighters are so inefficient that they cannot attend to the B–36. Either way, we would lose.

The whole matter should be kept secret. Undoubtedly, in due time during Air Force war games and fleet battle maneuvers, the matter can be investigated properly. But it certainly has no place in the current Navy-Air Force squabble over which arm of the services is to have which weapon.

The Army and Air Force Chiefs of Staff stepped far beyond their province when they outvoted the Navy's plan to build a giant carrier. The Navy should be allowed to spend whatever funds it is allocated in the best way it knows to do its share of defending the country.

The Air Force and Army should have equal independence with their funds. If these tests are held in connection with the contest and the Navy proves it can take the B–36 into camp, would the Navy and Army leaders then be justified in telling the Air Force it must junk its B–36's and spend its money for something else?

The contest between the big bomber and the navy jets is beside the point anyway. Navy fighter planes presumably are designed to defend the fleet against attacks by quite different type planes. They might dispose of the B–36 and still not be adequate for their regular job.

On the other hand, the B–36 might well prove incapable of sinking a capital ship. Certainly none was sunk during the war by horizontal bombing at high levels, which is what the bomber is designed to do against strategic land targets.

The ludicrous enormity of the proposed contest ought to teach all branches of the service to quit running each other down and fighting over which branch of the service is to have monopoly rights on which function of the defense mission.

Their responsibility is to complement each other.

References, the Hulbert Flag

EXTENSION OF REMARKS
OF
HON. W. KINGSLAND MACY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. MACY. Mr. Speaker, under leave to extend my remarks, I include a list of documents supplying original authentic material anent the Hulbert Flag, supplementing and verifying the historical piece that I introduced into the Appendix of the CONGRESSIONAL RECORD of May 2.

The documents that appear below are available in the Long Island collection at East Hampton. Still others may be found in the Suffolk County Historical Society building at Riverhead. Mr. Morton Pennypacker, who lives at East Hampton, is the historian of that township as well as historian of Suffolk County. East Hampton is the easternmost town of the 10 townships comprising Suffolk County, Long Island, N. Y.

John Hulbert Document Book

Capt. John Hulbert and his flag of 1775.
Long Island Revolutionary War news from contemporary Philadelphia newspapers 3–7
Battles of Chambly and Ticonderoga, newspapers 7–9
Philip Schuyler's original letter to John Hulbert about Chambly prisoners 9
Maj. Joseph Stopford's list of names of Chambly prisoners, 1775 11
Chambly prisoners at Philadelphia, 1775 13

Silas Cooper's note to John Hulbert, 1775 17
Appraisement of guns in Hulbert's company, 1775 17
Alexander McDougall's letter to John Hulbert, 1775 21
Pay roll of Hulbert's company, 1775 23
Return of missing in Hulbert's company, Aug. 31, 1775 23
Col. Van Schaick's order to John Hulbert 25
John Hulbert's muster roll, October 1775 27
Petition for pay of Captain Hulbert's company, 1775 29
Fort Ticonderoga 31
Disbursements of Hulbert's company on march from Fort Constitution, Jan. 8, 1776 39
Account of money paid to Hulbert's company, 1776 41
Pay roll of Hulbert's company, 1776 43
Journal of the Provincial Congress Records of 1775 47
Hulbert's letters, 1777–89 (originals) 49
Hulbert letters, 1785–1806 53
Nathaniel Woodhull's original letter to Col. Josiah Smith, 1776 61
Hulbert's letters of 1779 63

Address by Hon. John J. Sparkman, of Alabama, Before National Public Housing Conference

EXTENSION OF REMARKS
OF

HON. LISTER HILL

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24 (legislative day of Monday, May 23), 1949

Mr. HILL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by my colleague [Mr. SPARKMAN] before the eighteenth annual meeting of the National Public Housing Conference, at Washington, D. C., on May 17, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, and members of the National Public Housing Conference, let me say to you people from all over America that I am glad to be here this morning and to participate in the opening session of your eighteenth annual meeting.

At the very beginning, I want to give due credit to your able and loyal executive vice president, Lee Johnson. I can tell you that he and his office staff have spent many long hours in championing the cause of better housing in America. I say sincerely that his contribution has been exceedingly helpful.

Frankly, I feel very much at home with this group. As one citizen who has been working long hours with you in our common effort to convince the Congress that the General Housing Act of 1949 should become law promptly, I find it stimulating to review with you just where we stand in housing today.

Since I was first elected to the Congress in 1936, I have taken a keen interest in the development of a national housing policy that aimed to achieve a decent home in a suitable living environment for every American family. I realize that many of you in the audience this morning are old-timers in housing. That does not necessarily make you old in years. Personally, I feel very young as a houser, yet it was my privilege to vote for the Wagner-Stegall act in 1937—the basic legislation under which all of us here today have operated, and on which the Housing Act of 1949 is built.

The United States Housing Act of 1937 was, in my opinion, a great piece of legislation. I believe that it has been well administered. Of course, the war years presented obstacles that impeded the administration of the law and caused criticism as to how the law worked.

You know what these criticisms have been. To be quite frank, it is such criticism with which you are familiar that has made the task more difficult for your friends in Congress, and has heretofore helped to defeat public housing and slum clearance legislation in the House of Representatives.

Personally, I understand both the source of the most extreme criticism and the handicaps under which you have worked. One of the most prominent charges with which we all are familiar is that some public housing homes have been occupied by high income families. We know that when these families moved into the projects they were of necessity earning wages that qualified them for the projects.

It is common knowledge that during the war the average earning capacity of the American family was increased. The tenants of public housing were no exception. We know, too, that many projects which were in the construction stage at the beginning of the war were converted into war-housing projects wherein the limitations of the United States Housing Act of 1937 were not incumbent on you administrators in the admittance of tenants.

Further, we know that at the end of hostilities the United States Congress prohibited you by specific statute from evicting high-income tenants. It was only last year that the Congress gave its blessings to moving those families elsewhere, and then only if private enterprise could provide them housing of equal quality.

All these things were known to us, but the foes of public housing either did not understand them or they knowingly helped to confuse the picture.

Now that more normal times are returning, I realize that you are taking steps to remove these causes for complaints about your program. It will be better for all of us when you have completed the job. In the meantime, there is a challenge to private industry to provide homes at prices those who are forced out of public-housing projects can pay.

I know what the Housing Act of 1937 has meant down South, the part of the country from which I come. I know what it has meant to thousands of families who had never known anything but shot-gun houses, jammed together into filthy wallows of human misery, degrading both the body and the spirit.

To be sure, since 1936, it has not been possible to hurry along the job of cleaning up slums, because in recent years the House of Representatives has refused to act on basic legislation which had passed the Senate. No one knows, however, what chapter might have been written had the war not intervened. I honestly believe, that had we been given the opportunity to carry on the fight for social gains without interruption, we would not be here today on the threshold of one of the finest housing programs ever attempted by any nation in history. We would have crossed that threshold long ago. Our program would have been well along toward completion.

But the fact remains—we were interrupted. We went through the bloodiest and most costly war in history. We emerged victorious, but with deep scars on our national being. You and I know that when men and women returned to pick up their life threads where they had been forced to drop them, there would be varied and difficult adjustments. You and I knew, long before VJ-day, that this Nation was certain to face a housing problem that might well jeopardize our best laid plans for readjustment.

We were aware of the vast increase of the number of families in America. We were thoroughly conscious of the fact that for several years no new homes were produced, except for those that were essential to care for the needs of a shifting wartime population.

May I say here to those of you who represent local housing authorities, and local management of war housing projects, that had it not been for your valiant efforts in cooperation with Federal officials, we could not have accomplished the staggering job of providing shelter to house the workers who manned our great industrial war machine. I know that there were no medals for your efforts. I am well aware of your heartaches through those trying years, under scorching criticism from every side. I know also that because of your untiring work and your faith in America the time of the war was reduced immeasurably, and no doubt many lives were saved.

You may not have been thanked for that splendid job—probably you do not want thanks. But I say sincerely that millions of your fellow citizens are grateful, and I join with them in expressing appreciation to you.

Yes, those of us who lived close to the housing problem anticipated the troubled years through which we have passed since April 1945. I know that the National Public Housing Conference was recommending a legislative program 5 years ago that was identical in its objective, and similar as to machinery, to S. 1070 which passed the Senate overwhelmingly less than 4 weeks ago.

Your disappointments have been many, because in your position you are so deeply conscious of America's housing needs, and because you have been continuously frustrated in your efforts to meet those needs.

Now, it is my firm belief that your disappointments will soon be alleviated. You have been thwarted again and again and you refused to give up. Now you are about to be called upon to carry out a job of staggering proportions. You face a challenge to which all America thrills. The tools to provide homes for those families in America who need them most are about to be placed in your hands. Congress soon will, I trust, have done its basic job. It will be just as effective as you make it.

It must give you pause to realize that you are about to receive the responsibility for which you have asked so often. You know that you can do the job, or you would not have had the temerity to request it. Those of us who have worked with you share your confidence in your ability to produce.

When we have been through difficult times together it is only human to reminisce, and to check up on our own reactions to a given set of experiences. For example, nothing has so sharpened my interest in the subject of housing nor given me the insight into the individuals and groups endorsing—and attacking—housing legislation as has my appointment to the chairmanship of the Senate Banking and Currency Committee's Subcommittee on Housing and Rents. For a period of 13 days in February of this year our committee held hearings on housing bills.

No one who examines the more than 1,000 printed pages of transcript can help but be impressed with the thoroughness and fairness of those hearings. A substantial majority of the members of the subcommittee as well as the full committee are proud of the bill which we reported and at the speed and overwhelming vote with which the Senate acted when, on April 21, it passed S. 1070 and sent it on to the House. As you know,

the Banking and Currency Committee of the House approved the bill last Thursday.

You at this conference are, of course, familiar with the provisions of S. 1070. You know that it would establish a national housing policy, and that it would build on the United States Housing Act of 1937 in continuing and expanding public housing and slum clearance.

Of interest to you also, I am sure, are the strengthened housing research aids which would be provided in title III. This part of the bill aims to bring about an increase in housing construction at better quality and at lower costs than we now enjoy. Low-cost quality housing is one major requirement in our economy that continues to lag behind the progress made in filling other vital needs.

You are not administratively concerned with another part of the bill—farm housing in title IV—but I know you agree that it would fill an important need among our farm people. For some time, I have been giving consideration to trying to do for the rural farm people what our housing legislation has done and is now aiming to do for urban population. With this in mind, I introduced in the early days of the present Congress the farm housing bill that would help farm owners to provide decent housing and buildings essential to a complete farm unit for themselves and their tenants. When S. 1070 was reported from our committee, the farm bill which I introduced was incorporated in it as title IV.

Under the terms of this title, long-term loans at 4 percent interest rates would be loaned to farm owners for their housing and their tenants' housing needs. A total of $250,000,000 for loans and $25,000,000 for grants is provided over a 4-year period. I believe that this part of the housing bill would be a great step forward in filling the housing requirement of our long neglected farm families.

It is an interesting commentary on the legislative process that opponents of certain legislation are inclined to shift the emphasis of their attack from time to time. In one session, although all the usual arguments are advanced against public housing, one detects a slightly greater emphasis on the cost of the program. In another session, it might be the familiar where-will-you-draw-the-line? In another session (or before a different body) it might be the competitive nature of public housing with private enterprise. Sometimes it is the construction cost, etc., etc. This year, it seems to me, the underlying argument is that a public housing program is socialism. Perhaps this is the year when public housing opponents think that argument will meet with its greatest receptiveness.

I do not intend to impugn their motives. Some of my closest friends disagree with me on the issue, and by and large I believe those who oppose public housing do so with sincerity. I submit that their fears are unfounded and that they have not given full consideration to certain basic factors which instead of promoting socialism serve as security against it.

While on the subject, I want to say a few more words about public housing and socialism.

I do not profess to be an authority on socialism, but I suspect that I am just as qualified to speak on the subject as are those who oppose public housing. I like to think that it is a fortunate strength in our system that our Government, responsive to an admitted need for shelter by a large segment of its citizenry—a need not being fully met by private enterprise operating in a profit economy—should, can and will step in to help meet that need. I conceive of this not as socialism but as Americanism.

The truth is that the housing bill specifically guarantees that private enterprise is to do just as much of the job as it can and will do. More than one private builder testified before our committee that private industry could not do the job alone. It is only in cases where this is true that Government is to help.

For the Federal Government to assist in providing decent housing for the Nation's citizens is no different in principle than to grant huge subsidies to the air lines carrying mail; to insure lenders against loss on home loans; to appropriate funds to builders of merchant ships; to make crop loans; and to participate in a public-roads-building program. When we engage in so many of these and other activities, I submit that we are responding to a need.

It is for the duly elected Congress, provided for in a democratic Constitution, and acting as a democratic assembly, to assess the demands for governmental assistance against the object of that assistance. If the result is to strengthen the economic or moral fiber of the citizens; if it protects American industry; if it does any of these things, then if the Congress authorizes it, it is merely additional evidence of American democracy in action.

When we come to public housing I should say it is as socialistic as the 24 Republican and 33 Democratic Senators who voted for it; as socialistic as the New York Herald Tribune; as socialistic as the veterans' organizations; as socialistic as the American Municipal Association or the United States Conference of Mayors; as socialistic as organized labor; as socialistic as the National Conference of Catholic Charities or the Congregational Christian Churches. Yes; it is just as socialistic as the women's, educational, farm and civic organizations, as well as the industrial leaders who endorsed the bill.

Of course, there have been many other arguments leveled against S. 1070 by its opponents. It is significant, however, that in 1949 not one new thought has been presented to frighten the American people away from the housing bill. The arguments have been the same as when public housing was first mentioned out loud more than a decade ago.

Once again, the Senate has refused to retreat from its stanch support of public housing, and I have every confidence that the measure will pass the House in substantially the same form it was approved by the Senate. May I caution, however, that none of us go to sleep at the switch before we have pulled in at the last stop.

Now, I wish to revert to my original observations and once more stress the fact that the American people are counting heavily on you, those of you employed as housing administrators, and those who legitimately speak in the public interest, to make the housing program work.

It may be trite to say that laws are not self-operative; that they do not plan; condemn land; design; let contracts; operate and maintain projects. Laws authorize; enable; prescribe conditions; set forth limitations; describe penalties; and declare policy. We have all worked long and hard to develop a housing law that will enable you to achieve our joint objective.

Of course, there has never been a perfect law, but insofar as possible we have endeavored from the very first to supply you with the best tools possible, forged in the "give and take" of a legislative body. Where there have been questions of intent we have endeavored through legislative history written in committee and on the floor of the Senate to provide guides so that housing administrators will know precisely what Congress had in mind in writing the Housing Act of 1949.

Let me say to you, in conclusion, that throughout my many years in Congress I have never enjoyed a more satisfying relationship with all parties concerned with the development of a single piece of legislation. Our own committee staff has worked in harmony with your representatives; we have had the advantage of counsel from technicians in the Administration; we have worked with all of those who offered their assistance. I do not wish to indicate that we enjoyed just one long love feast. Many times we had healthful differences of opinion, but always we were able to reach conclusions as adults. Our singleness of purpose has been a great factor.

You will understand me, I know, if I offer a warning not a lecture. The housing program will be on trial from the hour the Congress completes action. On every level of administration effort may be made to discredit your work. We have attempted to make the Housing Act one piece of legislation that by its very nature demands the maximum degree of local autonomy. There must be a locally administered program which will be characterized by soundness, integrity, and speed. There must be a Federal administration that is marked by vision and statesmanlike leadership. If our efforts to meet the housing problem should fail, and they cannot be permitted to fail, you and I may not be afforded another chance.

In my remarks today I have not wished to indicate that America's housing problems have been met completely when S. 1070 becomes law. We will then have taken our first great step. This session of the Congress still has to deal with the urgent question of providing aids to families of middle income in order that they also may have an opportunity to secure decent homes at monthly costs they can afford.

Our Senate committee is wrestling with the problem of the middle-income family at this time. Before many days have passed we hope to report from committee a broad measure, with bipartisan support, that will attack this problem. I am assured also that the House Committee on Banking and Currency will commence hearings promptly on legislation proposed to meet the housing problem for middle-income families.

The National Public Housing Conference has been consulting with our committee, and we are now considering your specific recommendations which you have made jointly with veterans, labor, religious, and other citizen groups. We in the Congress invite your continuing counsel. We depend on you to help us interpret to the Nation what is meant by the legislation that comes before us.

We are presently on the verge of one victory, but more important we are on the threshold of assuming the responsibility of playing a major role in making democracy work. Stated in one sentence: Our job is just beginning. When we meet again we must be able to report great progress—we shall talk of homes completed—our report will be one of housing progress to the Nation. Please know that when legislation is finally law your many friends in Congress will not desert you. Our partnership continues until our objective is a reality. We shall be your friendly, constructive critics.

Let me say again that I am pleased for this opportunity to participate in your opening session. I wish for you all a pleasant and productive annual meeting.

A Very Great Tragedy of Our Times

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24 (legislative day of Monday, May 23), 1949

Mr. BYRD. Mr. President, I ask unanimous consent to insert in the Ap-

pendix of the RECORD a very brilliant and eloquent column in the New York Times of today, by Mr. Arthur Krock, entitled "A Very Great Tragedy of Our Times."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A VERY GREAT TRAGEDY OF OUR TIMES

(By Arthur Krock)

WASHINGTON, May 23—"The testimony of statesmen of all parties to Castlereagh's gifts and charm is in strong contrast with the flood of calumny poured out by those who knew him not."

This is the concluding paragraph of the biography in the Encyclopedia Britannica of the great Minister of the United Kingdom at the Congress of Vienna, the architect of unity among the three European powers which overthrew Napoleon. Today it could be said of the first Secretary of Defense of the United States, who, like Castlereagh, took his own life.

Like Castlereagh, James Forrestal shattered a muscular body and weakened the props of a noble mind through overwork in the service of his country, and died with a sense of failure that the shining record controverts. Disloyalty, malevolence, and withdrawal of high favor proved too heavy a burden for his sensitive nature to surmount when the support of physical strength was demolished by 9 years of unbelievable labor, and by the incessant weight of grave problems which had to be decided day and night. On some of these decisions may have rested the fate of the Nation.

The parallel with Castlereagh is startling. In 1821 that statesman, after exhausting struggles in Parliament and overwhelmed with work at the Foreign Office, was importuned by his assistants to have a care for his health. Though Tsar Alexander's course filled him with forebodings that the three-power unity he had achieved was nearing its end, Castlereagh planned to attend at Verona in August a final conference designed to maintain it and went to his country house for a rest. His clear handwriting had become distorted; increasing irritability replaced his usual calmness; he suspected spies and plots against his life, and complained to a passer-by of the torment of public life where his own colleagues proved ungrateful or treacherous. In the Congress of Vienna (Harcourt Brace & Co., 1946) Harold Nicolson completes the tragic story:

THE HISTORICAL PARALLEL

"On * * * August 9 * * * he went up to London [where] His Majesty [George IV] was so much alarmed by the disordered nature of Castlereagh's conversation that he scribbled a hurried line to [Lord] Liverpool. Castlereagh then drove to Apsley House and found the Duke of Wellington in a library on the first floor. * * * Wellington was so apprehensive that he at once sent a note to Dr. Bankhead. * * * Castlereagh returned to North Cray Farm, where he was rejoined by his wife and Dr. Bankhead. * * * He was given sedatives and bled. * * * Dr. Bankhead was unaware of a small penknife which Castlereagh had concealed in the drawer of his washstand.

"Early in the morning of August 12 he sent a message asking Dr. Bankhead to come to his dressingroom immediately. On entering the room Dr. Bankhead saw him standing by the window looking out, with his hands above his head and his throat cut. * * * 'Bankhead,' he gasped, 'let me fall on your arm; I have opened my neck; it is all over.'"

The surface rapidity and character of this decline could not have been a greater shock to the generation. If his contemporaries, a year before, had been asked who among them would suffer such a fate they would have mentioned almost any other name but Castlereagh's, and there the historical parallel recurs and ends between two great patriots of amazing achievement.

UNANSWERED QUESTIONS

In the realm of theory will remain the answers to these questions which are being asked on every hand in the shocked and anguished capital: "What part in bringing the tragic climax was played by those who, in the press and on the air, steadily aspersed Forrestal's official record, his courage, his character, and his motives while he was Secretary of Defense and followed him to the sick-room with every fragment of gossip that could nullify the treatment his doctors hoped would restore him? What part was played by those around the President who, from the moment the election was won, inspired the stories that he would be the first Cabinet member to be dismissed for disloyalty and administrative weakness? What part was played by his own agonized soul-searching into whether, in his zeal for the national interest, he allowed delay and indecision toward the Air Force program to supplant the firm, clear judgment that had always distinguished him?"

None can answer any of these questions with finality or in exact degree. The most that can be said with confidence by those who knew Forrestal well from the years of his private occupations is that ceaseless abuse of his physical and mental powers left an opening for any of the influences to bring him to collapse and suicide. When, a few days after his retirement from office, a friend persuaded the wasted, distracted man to go to Hobe Sound for a rest, Forrestal informed him that for months he had not known unbroken sleep and for weeks his body had not functioned normally. And words that before would have evoked the quick, gay laugh that was so familiar in him he heard unsmilingly.

The iron had entered deep into his heart and mind, and both the will and the strength to pluck it out were lacking when science lent its most enlightened and skillful aid. The end was the final scene of a Greek tragedy, such as he was pondering when it came.

The President's Welfare Budget and Elimination of Subsidies

EXTENSION OF REMARKS

OF

HON. CLYDE M. REED

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24 (legislative day of Monday, May 23), 1949

Mr. REED. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a most unusual and common-sense letter from Warren E. Walker, of Wichita, Kans.

Mr. Walker discusses a number of very important subjects in which he is interested. He also expresses an attitude that, I regret to say, is not generally found on the part of a large number of our people. Mr. Walker urges elimination of subsidies of all kinds and opposes some of the most-talked-of subjects in the President's so-called welfare budget.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WICHITA, KANS., *April 27, 1949.*

Hon. CLYDE M. REED,
Senate Office Building,
Washington, D. C.

DEAR SIR: I suppose that I am a rather rare individual. I am not looking to the Government for a handout.

I am a veteran, but I am opposed to a veteran's bonus and a veteran's pension. I do not own any real property, but I am opposed to rent controls. I am not wealthy and I do not have a large income, but I am opposed to the "soak the rich" confiscatory tax structure. I pay my doctor bills, and I do not want the Government to assume this function for me. In short, I am just a common, garden-variety taxpayer, and I am opposed to the above practices because I am selfish. I am selfish enough to see that these extensions of Government power will not be in my best interests or in the best interests of the country in general. If my opinions are worth anything and will in any way assuage the influence of the pleas of the special interests who want special privileges at the expense of me and others like me, I will feel highly gratified.

The farm legislation now under consideration is an excellent example of special interest legislation. Being from a predominantly agricultural State, you will doubtless be subjected to numerous pressures to vote for the Brannan subsidy bill. While this bill is undoubtedly a masterpiece of political subterfuge which will make both farmers and consumers happy until they pay their income tax, it is the basest form of pandering to voters. Anyone who is just half-bright can see that if the farmers get a high price for their products and the consumers pay a low price for the same products, the difference is going to have to come from somewhere; namely, the seemingly inexhaustible United States Treasury. The potential cost of this chicanery is immense, and even the Secretary of Agriculture is either unable or unwilling, or both, to estimate the probable cost. I hope in the interests of us plain old taxpayers you will vote against the socialization of the farm industry in this country. This proposition in addition to being a costly experiment, will take the management of farms away from the farmers and place it in Washington, thousands of miles away.

The proposed International Trade Organization is another monstrosity. The precepts of this organization as set forth in the charter, are supposed to stimulate free trade among the nations. Instead of that, it would seem to me to have the opposite effect. While giving lip service to the removal of trade barriers, the exceptions given to participating nations would seem to include all of those ever used to justify high tariffs; i. e., national defense, protection of infant industries, and 13 others. If there are any advantages at all to this organization, they certainly would not accrue to the United States, because our tariffs are now much lower than those of other countries and this charter would serve to justify the raising of trade barriers by other countries, even higher than they are now.

The administration-sponsored health insurance bill now being considered meets with my disapproval and the bill sponsored by Senator TAFT would seem to be little better. The difficulty in our health problem if we have one, can be traced to the number of doctors in the country. This in turn can be traced to the desire of the medical profession to maintain high standards for their membership. Neither an expenditure of $6,000,000,000 a year by the Federal Government or the lowering of educational standards for doctors will enhance the health of the Nation.

Personally, if I were seriously ill, I would much rather be able to get a doctor immediately and pay the bill myself, as it is now, than stand in line waiting for 100 neurotic women to get free sugar-coated pills while I expire.

I hope Congress will scrutinize the Hoover report and notice how the Federal Government has wasted millions of dollars by duplicating hospital facilities and operating them inefficiently, before endowing the Government with more billions to dispense in the same way.

I am grateful for the opposition which the Republican Party is providing in Congress. I wish sometimes that the Republican leadership and influence were a little stronger and that the reins on public spending were drawn tighter. I am concerned about the prospect of expanding Government power and the prospect of a continued policy of deficit financing. An individual cannot for a sustained period of time, spend more than his income, and history demonstrates that nations cannot either. It seems too bad that we may be following England down the path toward economic disaster.

Yours very truly,

WARREN E. WALKER.

Speak Up for Democracy

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, May 24 (legislative day of Monday, May 23), 1949

Mr. YOUNG. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech entitled "Speak Up for Democracy," delivered by Mr. Ulric M. Gwynn, Jr., vice president of the North Dakota Junior Chamber of Commerce.

Mr. Gwynn's speech won first-place honors in the State contest sponsored by the United States Junior Chamber of Commerce.

In these days of international unrest, it is refreshing to find our young people further examining and speaking out for our great democratic form of government.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

My fellow Americans, we, as young men of America and as members of the United States Junior Chamber of Commerce, are, through this contest, trying to build a larger army of our people to further the cause of democracy. You have heard from the toastmaster and my fellow speakers that we are trying to instill into the minds of the people of this great Nation of ours that this thing called democracy is not something to be taken for granted but instead is something that we, as Americans, have to fight to uphold just as our forefathers fought to get and uphold it for us.

In the little town of West Branch, Iowa, one of our elder statesmen and one of the greatest men ever to sit in the White House, Herbert Hoover, recently remarked: "At the time our ancestors were proclaiming that the Creator had endowed all mankind with rights of freedom as a child of God, with a free will, there was being proclaimed by one Karl Marx a satanic philosophy of agnosticism that the rights of man came from the state. The greatness of America comes from the one philosophy and the despair of Europe from the other."

The principles of Government of the United States are the most effective yet devised by mankind. By any form of measurement, this Government has returned the greatest amount to the largest number—yet how few of us as individuals who have profited by this system recognize the reasons for its success. How many of us are convinced that we have no reason to fear that some day this form of government could disappear and in its place come the form of government and the principles advocated by Karl Marx? It is true that those people who believe in these doctrines of socialism and communism are few in number, but they are tightly and efficiently organized. They are ruthless, subtle, and unprincipled, and once in power, they brook no interference and they tolerate no criticism. It is both tragic and surprising that people who enjoy the sacred privilege of moral and spiritual freedom are willing to trade that hard-won heritage for the wicked concepts of communism and socialism. But there are some—yes, even here in this great country of ours—who are willing to make the trade. As we stand here this beautiful May evening, I can recall another May evening when one of those self-proclaimed Communists stood on a corner in Times Square and gave a speech degrading our loved American flag. This symbol of our freedom was run down in its meaning as we know it. This man very brazenly remarked that the red, white, and blue stood for something that we do not recognize. The red was supposed to stand for the revolutions to come and the blood to be shed to throw out our democratic form of government; the white for the cowardice and surrender of our leaders, and the blue for despair of our people in the hour in which they see the light. You and I as Americans know here tonight that these theories are false and instead, we believe the red in our flag stands for the blood of those great American forefathers and for the blood of our fallen comrades who have given the supreme sacrifice to uphold our democracy; the blue stands for the sky above, with the great Creator giving us courage to uphold our heritage, and the white for the purity of all that we know to be right in this freedom-loving land of ours.

I would like to tell you a story that has its beginning in a northern province of Czechoslovakia and concerns two brothers. Two small boys were sprawled on the banks of the Elbe River. This afternoon was not unlike many others, for often they sat by the river and talked, sometimes until sundown.

"I'm going to be rich when I grow up," Karel would vow. "I'll own much land and everyone will point to me and say, 'There is Karel Mahousek. He is the richest man in all Czechoslovakia.'" But brother Jan Mahousek had dreams, too—dreams that he dare not even tell Karel because he would surely think them strange. He just sat there and looked out into the horizon. Somewhere beyond the Elbe there was an ocean, and beyond that? Well, one day he would know.

Old Eduard Mahousek considered his sons and what the future held for them. He even prophesied it many times, "Jan is a dreamer. He is one with imagination, but he is not as ambitious as Karel." Yes; even at an early age, Karel was marked for success. As for Jan, well, maybe it was an accident that he happened to be on the village dock when a river boat stopped for cargo. Maybe it was fate when, on an impulse, he took a job on the boat and found his way to the sea—to a different way of life—for Jan came to America.

It wasn't easy at first, this new world. He used to write home about the strange American ways. Yet, there was always something wonderful to tell. He was making progress. He had a good job, with good pay. As for Karel, his letters were different; filled with uncertainty. He couldn't save to buy the land he had promised himself he'd one day own.

What does the story of these two brothers mean, and why are their lives so different today? The answer is simple, for both are symbols of America and Europe. Actually, there is no difference in the people here and there. We are all brothers under the skin. Like Jan and Karel, we are Czechs, or we're English, French, German, Norwegian, Spanish, or any of many other nationalities. We are the same people, with the same blood, the same native ability, but there is one essential difference. Here in America we have the opportunity and the privilege to use to the fullest extent our native ability. Yes; here in America all have been free to express themselves and to use and develop talent and ability.

This freedom to grow and build for the future isn't something to be considered lightly. It is something all of us must guard, even with life itself. Yet, in the abundance that surrounds us, we sometimes forget. We forget that with all this comes an obligation—an obligation to work. For if we do not work to preserve it, we do not deserve it. This great power that we have in America was gained and grew because of work. It became the great thing it is because men bent to the task to accomplish an end.

Remember this one bit of philosophy before I close: "It's not what you have but what you want that makes you what you are. Whether your heart is down to earth or riding on a star; whether your dreams have all come true or still remain afar. It's not what you have but what you want that makes you what you are. No task is too large and none too small to receive exacting care in all."

Let us all want a great America; great for its freedoms in all that we do; for ourselves, for our children, and for all mankind. Let us all be salesmen; let us all speak up for democracy and trust in the great God that in the words of the emancipator, Abraham Lincoln: "That this government of the people, by the people, and for the people shall not perish from the earth." That this government of you and I, for you and I, and by you and I shall endure forever for all mankind.

Is Drew Pearson Happy?

EXTENSION OF REMARKS
OF
HON. CLARE E. HOFFMAN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, a man who gratuitously smears innocent, defenseless individuals in order to sell his wares, advance his own financial interests, no doubt derives pleasure from the squirming and the suffering of his victims.

Drew Pearson, who seldom misses an occasion to throw out a falsehood and insinuation or by innuendo to injure some innocent victim, if he runs true to form, must be chagrined by the death of James V. Forrestal, whom he so vigorously and meanly attacked, because Forrestal is dead and no longer will be humiliated or suffer because of Pearson's slanderous, libelous statements.

Like the little boy who tortures a fly on a pin, then casts him away because the fly is dead and can no longer squirm, Forrestal's death deprives Pearson of the pleasure which he otherwise might have had by continued vilification. Pearson will have to seek another victim. James V. Forrestal is beyond his reach.

Yesterday the gentleman from Michigan [Mr. SHAFER] placed in the RECORD the comment of David Lawrence concerning Forrestal's passing.

Printed herewith and from the morning paper is an article on Pearson by Westbrook Pegler.

When will the Congress enact the legislation proposed by me several years ago making these cowardly radio commentators subject to suit in the United States district court in the district where the victim lives and the broadcast is heard or the publication circulated? There are several of these commentators and columnists who make it a business to benefit out of other people's misery, who should be brought to task.

Moreover, the law should make liable to similar legal action, men like Frank Lee, of Danbury, Conn., who is Pearson's present sponsor.

The radio station where the broadcast originates and the publisher of the paper who prints these libelous articles should also be brought within the terms of such a law.

If some of these character assassins were made to answer in court, they would be less free with their false accusations.

The Pegler article follows:

FAIR ENOUGH

(By Westbrook Pegler)

James V. Forrestal, a loyal, brave and self-sacrificing servant of this republic, certainly was, as President Truman said on hearing of his sudden death, a casualty of the Second World War. He was also a victim of the wanton black-guardism and mandacity of the radio which has been a professional specialty of Drew Pearson.

Pearson has become a man of great power and special privilege because other decent men like Forrestal go in fear of fantastic lies to be spread over the Nation by radio, all to stimulate the sale of a brand of hats or laxative.

Pearson's current sponsor, Frank Lee, of Danbury, Conn., cannot escape a share of the responsibility for his false statements blackening the character of good men or implicating innocent citizens in discreditable or merely embarrassing episodes.

The American Broadcasting Co., which leans to this kind of radio material, most of it motivated propaganda thinly disguised as news, once tried to disown responsibility and frankly advised a citizen who was the victim of a fictitious incident not to demand a retraction or an apology.

Ed Noble, the chief owner of the company, a professional New Dealer who prospered greatly by his political adherence in radio, said the amend, if it were made, would be made in such manner as to aggravate the original falsehood and make the victim wish that he had taken it lying down.

Pearson's motives are seldom apparent. But, whether ulterior or, possibly, aboveboard, the fact is nevertheless that he has habitually "got on the wheel" of this or that defenseless personality in public life and inflicted such personal hurt as to deter decent men from entering public service.

In the case of Forrestal, Pearson made a false charge of disgraceful cowardice. Forrestal, in the role of Under Secretary of the Navy, a civilian job, made four landings with the marines, behind the assault waves, on Pacific islands held by the Japanese.

Franklin D. Roosevelt held a similar position during the First World War. It is no disparagement of him to point out that Roosevelt's only experience anywhere near the front in France consisted of tours of inspection amid considerable panoply and privilege, not personal intimacy with danger.

The contrast does favor Forrestal nevertheless.

On January 16, 1949, over Station WJZ of the American Broadcasting Co.'s network, Pearson purported to read a dispatch direct from the White House vilifying Forrestal.

At least his voice said, "The White House: Well, President Truman was about to accept the resignation of Secretary Forrestal when, last Sunday, he heard Walter Winchell's broadcast about Forrestal's income-tax finagling in the 1930's."

In newspaper and press association language, that term "the White House" at the start of an item is called the date line.

The date line is the source or the ostensible source of the facts or falsehoods which then ensue, and, in this case, clearly implied to the p blic that he was reading a dispatch direct from the White House. As to whether this was a truthful representation, the individual citizen may draw his own conclusions.

"Whereupon," Pearson continued, "Truman sent for a transcript of the Winchell broadcast and literally hit the ceiling. 'I'm not going to let that little so-and-so,' he stormed, 'tell me who I'm going to keep in my Cabinet.' And a day later he told Forrestal he could stay on, at least for the time being."

There ensued a paragraph of artful smear concerning Forrestal's income tax based on Pearson's own independent charge which for its credibility relies on Pearson's own record of erroneous, not to say false, statements.

Then Pearson said: "For my part, I personally think Mr. Forrestal is a very nice and charming gentleman. But I agree with Walter Winchell that a man who avoids taxes by concealing his money in a foreign country cannot command the respect of boys who are drafted into the Army."

You are invited here to note that Pearson does not charge that Forrestal was guilty of any wrong but does a job of logrolling for another equally mendacious, ulterior, and malicious radio terrorist whose high, moralistical posture is fantastic.

No facts ever were presented to prove that Forrestal had been guilty of any act which was not accepted practice in complicated international tax matters. And the fact is glaringly apparent that Winchell, the source of this smear, was a professional idolator of F. D. Roosevelt, who overlooked no chance to refer to himself as commander in chief of the boys who are drafted into the Army.

It will be remembered that Roosevelt was guilty of a flagrant swindle in beguiling John Hartford to surrender $200,000 of his son, Elliott's notes and $200,000 worth of stock to him, President Roosevelt, on the deliberately false representation that the stock was practically worthless. This was felonious fraud without question so the sanctimonious subterfuge about the respect of the boys who are drafted into the Army was merely a sly approach to an oblique insinuation against Forrestal's moral character.

Now, finally, Pearson came to the foulest smear of his evil text.

"And I would go further," he said, "and state that a man who runs out the back door of his house into the alley, leaving his wife to cope with a jewel robbery alone, would not appear to have the courage or chivalry to be the best Secretary of National Defense."

I have personal knowledge of the Forrestal jewel robbery of July 2, 1937, because Mike Lomars, the mastermind of the hold-up, was a union racketeer with AFL charter controlling many workers in the tobacco trade in New York.

The case was broken by detectives Tom Tunney and Ruddy McLaughlin through a confession by a thief whom they arrested in another case. Not that he need rely on his brother's fame, Tom Tunney is a brother of Gene.

Not trusting my memory or even my old notes, when Pearson charged Forrestal with deserting his wife in the hands of gunmen, I called on Herman Stichman, the chairman of the New York State housing authority, who had handled the prosecution in November 1940.

Mr. Stichman said there was absolutely no excuse to impugn Forrestal's conduct because he was asleep inside the house at 27 Beekman Place when the stick-up took place on the street outside at about 2 o'clock in the morning.

Mrs. Forrestal had spent the evening at the Persian room at the Hotel Plaza with several friends. About 1:45 she and her escort, Richard B. W. Hall, got into Mr. Hall's car, driven by his chauffeur, and drove to Beekman Place. When they pulled up at the curb, Mrs. Forrestal said:

"Instead of the chauffeur opening the door, a man jumped in the car in back with us. He said, 'This is no joke; it's a stick-up.' I told him it was a silly way to make a living.

"He had a gun. The gun was pushed up at Mr. Hall. There was another man with the chauffeur. At one point there were two men in the back of the car. Both had guns."

After they got Mrs. Forrestal's jewelry, valued at more than $50,000, the men ran to a car that was parked just ahead, leaped in, and got away. Mrs. Forrestal saw four men altogether. When they had left she rushed into the house, notified her husband, and called the police.

Mrs. Forrestal had been "fingered" by a woman named Dorothy Stirrat, alias Dolly Turner, a criminal known as "The Lady Finger." With her own escort, a member of the gang, "The Lady Finger" left the Plaza when Mrs. Forrestal and Mr. Hall left, followed the Hall car in her car, pointed it out to the gunmen who were waiting in another car close by, and wished them luck as they took out after the quarry.

The stick-up was so quiet that, far from awakening Jim Forrestal, it escaped the notice of a special watchman for the block who, for the moment, chanced to be conversing with a taximan out of sight around the corner.

"The Lady Finger" got 10 to 20 years, Lomars 10 to 20 years, and Joseph Weiss, alias Morris Seitchick, 30 to 60 years. Lomars held a union meeting and passed a resolution appropriating $5,000 for his defense on the ground that he was a labor spokesman and a victim of a Wall Street plot.

The Forrestal house is on the east side of Beekman Place. There is no alley through or behind the block through which Forrestal could have fled if he had been the coward that Pearson said he was.

North Atlantic Pact

EXTENSION OF REMARKS

OF

HON. CLEVELAND M. BAILEY

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. BAILEY. Mr. Speaker, under leave to extend my remarks, I wish to include a statement made May 18, 1949, by Donald R. Wilson, department commander of the American Legion for the State of West Virginia, on the Legion's stand on the North Atlantic Pact.

Mr. Wilson, a veteran of World War II, is one of the outstanding citizens of my district and has done much to promote the American Legion in our State. I am

genuinely proud to claim him as my constituent. His statement follows:

Mr. Chairman and members of the Senate Foreign Relations Committee, the American Legion has eagerly accepted this opportunity to appear before this committee for the purpose of expressing its views on the North Atlantic Treaty.

In the light of some of the charges which have been made to the effect that the treaty is a prelude to war, it may be interesting and helpful to this committee to have an expression from the largest veteran's organization in the world, with over 3,000,000 members, giving its considered view that, far from being an instrument of war, the treaty in fact does much toward the accomplishment of its announced objectives of obtaining peace and security for the world.

There is no organization of individuals more devoutly interested in the cause of peace and security than an organization of veterans who have had the experience that can only come from participation in a global armed conflict. They have seen and felt the destruction that comes with war; they have observed at first-hand the dislocations which result; they have seen the suffering not only of their comrades in arms but of all peoples.

As a result of their experiences in the first great world conflict, the organizers, leaders, and members of the American Legion during the year 1919 to 1941 urged time after time that the United States of America keep itself militarily strong and cooperate with the peoples of other peace loving and democratic nations, to present a united front against the aggressive designs of nations whose leaders were mad with a lust for conquest and power.

It was with a sense of impending doom during those years that the members of the American Legion, veterans of World War I, watched the United States destroy its military effectiveness, encourage aggressors by displaying only weakness, place its confidence in high-sounding but meaningless and nonimplemented declarations of policy, sit idly by while Japan plunged the dagger of conquest into a prostrate China, refuse to be alarmed and effectively cooperate to deal with Mussolini's blatant aggression against Ethiopia, and fail to see the significance of Hitler's relentless measures of conquest against Austria and Czechoslovakia. Perhaps the attitude of mind of the American people during those tragic years was best expressed by our announced policy of neutrality, which amounted to a complete abandonment of our sense of obligation toward peace, freedom, democracy, and the human dignity of man.

Partially as a result of our abandonment of the responsibility in international affairs, another generation of Americans was called upon to secure in bloody conflict the peace that had been so carelessly thrown away. Another generation of Americans was called upon to participate in the destruction of a malignant way of life. Upon the conclusion of hostilities, there were then two generations of American veterans, members of the American Legion, who possessed an overwhelming desire to secure to future generations what had been denied to them, namely, a peaceful and secure world. They had seen and understood that war, even when conducted in a righteous cause, left behind it untold misery. Particularly after the Second World War was it apparent that the peoples in many nations in the world were disheartened, exhausted, and practically devoid even of a will to live.

It is out of that background of experience that the American Legion sees adherence to the North Atlantic Treaty not only as a desirable step, but as an imperative step for the United States to take if we are to be consistent and progressive in our endeavors to build an edifice of peace. The participation of the United States in the North Atlantic Treaty is not an isolated step; it cannot be considered alone; it must be considered only as one further advance along the road upon which we are now marching.

I have spoken of the peoples of some of the nations of the world losing their will to exist. In our opinion, that will was partially recreated by the hope that was held out to them when the United States joined in the proclamation of the Atlantic Charter. That served to sustain them during the difficult years of war.

At the conclusion of the struggle, with the promulgation of the Charter of the United Nations there was recreated in the hearts of the peoples all over the world a desire not only to live, but to struggle upward toward a goal which for so many years had seemed completely beyond reach and was now within the realm of the possibility of attainment. It was significant that so many nations which had gone through the experience of war could unite and struggle together for enduring peace through the framework of a world organization.

After the first enthusiastic acceptance of the United Nations it became apparent that there were defects in the structure, defects which would be difficult to remedy. Because of those defects the Soviet Union has been able to expand its power and influence over practically half of Europe and much of Asia. It has been possible for the Soviet Union to contemplate the enslavement of the remaining portions of the world. Her obstructionist and aggressive designs brought about a situation which too closely parallels that which existed in 1939.

To meet Russian encroachments, and to fortify ourselves against enslavement from whatever source it might come, we came to believe that it was not enough for the people of the world merely to have the will to live and an ideal goal to struggle toward, but it was necessary for us to build within them the desire to prosper, to build up their businesses, their trade, and their economic security. To that end the United States announced what might be called the most unselfish act in the history of nations. We proclaimed the Marshall plan. We have been enthusiastic in our participation in it. We are proud to know that it is accomplishing its purpose, and we delight in the evidences of the increasing domestic strength of our friends.

After thus acting to do our part in creating the will to prosper, we observed with warm approbation the rebirth of the will on the part of these nations to protect what they and we were building; to resist all further efforts to deprive them of the progress they were making. It was for that reason that we so strongly approved of the Brussels Pact, which announced on behalf of five nations in western Europe that they would protect and preserve themselves and their way of life against all aggression.

Upon this background of history, we come to the North Atlantic Treaty. It is not only an expression of the will to resist, but it is an expression of the desire to work with others in maintaining that which is noble, good, and desirable.

As I previously indicated, therefore, the American Legion does not view the North Atlantic Treaty as an isolated step. It is merely one further imperative step along the road we have been traveling since we were brought to a realization that we have an obligation to shoulder our responsibilities in international affairs.

It indicates our community of interest with other peoples having the same heritage of freedom and democracy that we possess. It indicates our desire to be helpful to them and likewise to expect them to discharge their obligations to us, to all other signatories of the Treaty, and to the other peace and freedom-loving nations of the world. It reaffirms our belief in the ultimate success of the United Nations. Created within the framework of the United Nations, it strengthens that organization by strengthening the members in it. It places us on record as having learned the lessons of two wars, namely, that aggression against our friends so endangers our own security that we cannot permit that aggression to go unchallenged. Our participation in the Treaty will proclaim to the world that the United States of America is not this time withdrawing from its international responsibilities.

We do not view the North Atlantic Treaty as a mere play on words. The pledges we will have given should be considered as solemn ones, so solemn as a matter of fact that we are willing to work with others in building up strength against aggression, strength in the diplomatic as well as in the military spheres. We do not recoil from the use of strength if strength should become necessary. The treaty leaves it open to us to ascertain what strength we must begin to build now and what strength we should call into play if our cooperation with our friends or their cooperation with us is ever challenged.

It is our sincere hope and belief that the participation of the United States in the North Atlantic Treaty will help us to build a stronger and more peaceful and a more secure world for ourselves and all generations to come. It is for that reason that the American Legion, through its national executive committee, in session on May 4–6, 1949, unanimously and enthusiastically passed the following resolution:

"Whereas the treaty known as the North Atlantic Pact is now before the United States Senate for ratification; and

"Whereas this pact was formulated under articles 51 and 52 of the United Nations Charter for the peace and security of the member nations to his pact: Now, therefore, be it

"*Resolved*, That we urge early ratification and implementation as provided in the articles of the pact."

I have the honor to transmit this resolution to you in the hope that its terms will be met and in the hope that by taking the step recommended we will have built peace, security, and prosperity, and will have advanced considerably toward our goal of a strong and effective United Nations as the enduring foundation of world peace.

The Present Crime Picture

EXTENSION OF REMARKS

OF

HON. ESTES KEFAUVER

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24 (legislative day of Monday, May 23), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD an address on the subject of the present crime picture, delivered to the student body at chapel, Central High School, Chattanooga, Tenn., by Mr. J. Pope Dyer, head of the social science department, on April 28, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I am honored to be invited to speak before this tremendous student body on the subject, "The Present Crime Picture." The late William Allen White, of Emporia, Kans., attended a Democratic convention on one oc-

casion as a reporter. The chairman called the convention to order and immediately asked Dr. White to pronounce the invocation, which request he instantly declined with the following explanation: "I won't pray here for two reasons, first, I am not trained in the fine art of public prayer and secondly, I don't want the Lord to know I am here." I am pleased to be here.

I would insult your intelligence if I were to state that crime is a new problem, suddenly showing its ugly head for the first time. Historians tell us of the great number of notorious criminals of a century ago. In our own area the dangerous murderers Murrell, Hare, and the Harps brothers are too well known to require any emphasis. It is said that the Harps brothers were so insanely criminal that they killed all whom they met.

In our Nation the crime picture today is serious. Last year there were over 1,600,000 major offenses perpetrated. Each day 36 persons were slain, 150 were robbed, over 1,000 places were burglarized and over 450 automobiles were stolen. Rural crime increased in 1948 over 1947, whereas urban crime made no appreciable change.

Crime is an expensive luxury. It costs our Nation, according to Mr. J. Edgar Hoover, fifteen billions annually or each person in the Nation $10 a month. It costs on an average, in our Nation, $600 a year to institutionalize a criminal.

A few years ago I was asked by the chaplain of our State prison to go with him to the death house to make the farewell preparations for electrocution of two young men who had committed a heinous crime. Our visit preceded the execution only a few hours. The boys were ready, physically, for the experience. Their heads had been shaved. Their final meal had been given them. The singers had tried to comfort them and now the minister was about ready to read the Bible and give the last prayer. I asked for permission to briefly interview them. I found three things that characterized them.

They were about the same size, physically, as average persons outside the walls would be. They were several grades lower educationally than the average citizen of our State. They were weak emotionally and they admittedly had had relatively no moral or religious training as children. One of the prisoners expressed the regret that his father had not disciplined him as a youth and criticized his parents for not indoctrinating him in the principles of right living.

There are many causes of crime. One of the chief causes is poor educational training. I have a friend in prison who is very keen mentally but had little opportunity as a youth to attend school, who claims that the lack of education is indirectly the main cause of crime. It has been my good fortune to study the educational status of thousands of criminals and I find that they rank, on the average, from five to six grades lower than the average person who is not in prison.

Another important cause of crime is the poor economic conditions of the criminal. It is an admitted fact that this is a complex age and that our wants are many. Poverty drives the weak in the wrong direction. A well known criminologist has aptly said that the average criminal is underprivileged, underclothed, underfed, undereducated and under-understood by parents and society. I have interviewed numbers of prisoners who explain that their downfall was due to an inward urge for the better things of life without the willingness to earn them. A few years ago, I visited Sing Sing Prison in New York. The warden at that time was Lewis E. Lawes. I visited the small prison within the prison where the condemned are housed awaiting execution. The guard told me that Mr. Lawes had stated that a prisoner by the name of "Two Gun" Crowley was the only prisoner who ever ate the last meal shortly before execution. Crowley is reported to have said, "When I was a child, we were too poor for me to eat a decent meal. As a youth I was too busy evading officers to eat one but now that I am going to die, I'm going to eat at least one decent meal." If it were possible to interview the thousands of prisoners within the gray walls of our prisons we would find a disproportionately large percentage who would be classified in poor economic circumstances before they entered prison.

One of the main causes of crime today is the increasing number of undiscovered psychopathic and insane people in our population. Our age is full of tensions and frustrations. Many persons have been turned out of the military service because of mental and emotional incompetence. Many of these men are dangerous and will perpetrate many of the robberies, rapes, and murders in the future.

The chief cause of crime is poor home training. This is an age when it is dangerous for a large percentage of children to be born. One great writer has said that many children are damned into the world and not born into it. Many parents are eager today to be educationally alert, civicly active, politically progressive, socially prominent. Some are just plain incompetent. The multitude of activities of our society lends itself admirably to a neglected home and children and later a large number of criminals.

I have listed some of the conditions and causes of crime. What are some of the cures? I will briefly list a few.

Mr. J. Edgar Hoover and the late Father E. J. Flannagan have been voices like the prophets in the wilderness warning the parents of our Nation the dangers that face us if parents go on neglecting their God-given responsibilities of rearing children who know how to pray as well as play, who put Sunday school and church attendance above dancing and drinking. I repeat an old statement that the time to train a child is in the high chair and not in the electric chair. Mr. Hoover has said, "Parents are not enough, they must be Christian parents."

Our society must recognize early the mentally ill and provide treatment for them before some atrocious crime is committed by those who will be legally declared mentally incapable of distinguishing between right and wrong. We must be willing to do early that which we will be compelled to do later.

Our school attendance laws must be more strictly enforced. The parents who are careless about permitting their children to attend school must be dealt with more swiftly and severely. An illiterate person in this age is in as much danger of violating the laws as a blind person would be in getting injured if he attempted to cross Broadway in New York without assistance. Our society may neglect adults and their needs but no child must be denied the advantage of an education in this age. It is not only dangerous, it is near disastrous.

The first offender must be sent to prison only if it is an absolute necessity. There are certain major crimes which are so serious that some first offenders must be sent to prison or even be executed but many young offenders are sent to the prisons prematurely. Few prisoners are ever reformed or rehabilitated in prisons. The first offender must be given the second chance, unless the offense is so serious that it calls for the complete wrecking of a life. We should be absolutely certain that a prison term is best for the person before he is sent. Seventy-five percent of the prisoners will be out in 3 years and about 80 to 90 percent will return to prison after they have served a term. We may be ready for a new day in prison administration.

The present crime problem is not pleasant to view. It is a problem of giant proportions. It cannot be reduced by talk or criticism. It is our mutual responsibility. I dare you to reduce it.

The American Way of Life

EXTENSION OF REMARKS
OF
HON. ZALES N. ECTON
OF MONTANA

IN THE SENATE OF THE UNITED STATES

Tuesday, May 24 (legislative day of Monday, May 23), 1949

Mr. ECTON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "An Old and Evil Scheme Seeks To End Our Liberty," written by E. T. Leech, editor of the Pittsburgh Press, and published in the Pittsburgh Press of April 17, 1949.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AN OLD AND EVIL SCHEME SEEKS TO END OUR LIBERTY

(By E. T. Leech, editor, the Pittsburgh Press)

Those who love and want to keep our way of life forever are making a bad error. They talk about getting back to the American system, or returning to the American way, or similar phrases. They mean well; but such talk is harmful and inaccurate.

It carries the idea of retracing our steps, of returning to something which is past. Actually just the opposite is meant. For the American kind of government has involved constant change—always going ahead and making progress. Never going backward.

It is the strong central state—the one which runs people's affairs and upon which they must depend for benefits and decisions—which represents going backward. The American scheme is the easiest in the world under which to go forward.

No other government ever has changed so rapidly or so much as ours has under the Constitution. Immense alterations have been carried out. Only once—in abolishing slavery—did these reforms come through violence. No other nation can show such a record.

OLDEST FRAUD

But now we are beset by what is called a new philosophy. It calls for a powerful central state to do our planning, run our affairs and dole out our benefits—the latter by collecting and spending our money. This scheme, which has swept much of the world, is pictured as something new and progressive. It is nothing of the kind. It is the oldest fraud in history.

From the time when man emerged from savagery he was under the rule of the state. The whole story of civilization has been one of individuals struggling to free themselves from the tyranny of government. Not until the American Constitution was established did this ever happen on any large or long-time scale.

Under this system of free individuals, America out distanced the whole world. Yet now we are asked to give it up—to go back to the ancient plan of the all-powerful state; to let government run our affairs and assume responsibility for our security.

NEW FRILLS

The scheme is dolled up with new frills and fancy phrases. Tempting bait is used

to attract public support. Government, we are told, will give us security through law. It will pay our doctor bills, give us bounties and bonuses, guarantee our jobs, care for our old age, and grant special favors to special groups.

To do all this, government has to run things. It must take more and more of our income through taxes to pay for what it thinks we should have. The price of this system is surrender of personal freedom.

Most of the world never had freedom, or has surrendered it. Much of it looks to us—who still have the strength which only freedom can give—for help and support. It is our rugged, free economy which today bears the burden of keeping liberty alive.

Yet even at home we are under great pressure to kill the goose that laid the golden eggs—to go far backward to the old curse of the all-powerful state. Loud voices cry for us to adopt some form of the old plan which has done, and is doing, such a miserable job elsewhere.

IT ALWAYS FAILS

The biggest problem in combatting this scheme is to get Americans to realize that it isn't either new or liberal. It has been tried under every variety of names and trimmings. But basically it's always the same—State control. And it always has failed in the end.

America's first radicals and liberals knew this. They feared government. They wanted the bare minimum of it. Jefferson, Paine, Jackson, and Lincoln were of that school. Liberalism in this country was founded on supremacy of individuals over the state.

Young people in particular are tempted by change. The swing to an all-planning, all-bestowing state is in truth a vast change. But not a liberal one. It means going back—far back—to the sort of thing which this Government was created to prevent.

Preservation of our basic way of living, of our personal freedom and our sense of individual self-reliance and responsibility, is a great cause. It is a noble and progressive cause. For it means defending the dignity of man and his personal freedom to improve and go forward.

Yet this cause of late has lacked strong leadership. No party has upheld it. Politicians have been flirting with State controls as a lure to get votes. But there are many signs that millions of Americans yearn for leadership in a struggle to save our free life from a plunge into the old morass of state domination.

Skyrocketing Federal Funds Pose Problems for Schools

EXTENSION OF REMARKS

OF

HON. FREDERIC R. COUDERT, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. COUDERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article from the New York Times of May 23. This appeared under the by-line of Benjamin Fine, the Times education editor, a gentleman of the highest ability and intellectual integrity. Mr. Fine's startling analysis of the Federal Government's existing commitments in the field of education should be most helpful in guiding members through the heretofore obscure maze of Federal activities in this field. Perhaps an almost inevitable conclusion from the facts here assembled is that before embarking upon any new education programs involving the expenditures of additional hundreds of millions of dollars, Congress should review with care the enormous existing commitments for education, and their repercussions upon the national budget and upon the educational activities of the several States and communities.

SKYROCKETING FEDERAL FUNDS POSE PROBLEMS FOR SCHOOLS—EDUCATORS, WITH $3,400,000,000 UNITED STATES AID FOR '49, SEE VAST WASTE IN DUPLICATION BY BUREAUS—FEAR FOR INDEPENDENCE

(By Benjamin Fine)

Federal funds for education have skyrocketed to the record sum of $3,400,000,000 this year, jumping from $100,000,000 in 1940. Two hundred separate educational programs are sponsored by more than a score of Federal departments and agencies.

Millions of dollars a year have been lost meanwhile through duplication of effort, inefficiency, overlapping of programs, and maintenance of unnecessary administrative staffs. Many responsible educators and laymen are alarmed at the threat to the independence of the Nation's schools and colleges as a result of this unprecedented outpouring of Federal money into education.

A survey by the New York Times indicates that the funds are provided on a piecemeal basis, with no coordinated pattern. Few educators or even top Government officials know how much money is spent on education or in what ways it is utilized. Like Topsy, the educational projects simply have grown, until the design is a crazy-quilt pattern of confused, overlapping, and frequently weird school programs.

Paradoxically enough, virtually none of the Federal funds goes for the development of an over-all general education program. The United States Office of Education, ostensibly the clearinghouse for educational activities, has been almost completely bypassed. Whenever a new educational program is advanced by a governmental department, whether it be Labor, Agriculture, Commerce or the Military Services, the school project remains under the jurisdiction and direction of that agency.

Many colleges and universities are uncomfortable at this growing trend toward governmental support. They do not object to the money that they get, but they do feel concerned at the large number of agencies with which they have to deal. One midwestern university, typical of many others, is operating federally sponsored programs from 25 Federal agencies and subagencies. It is not unusual for a university to get 50 percent or more of its income from Federal sources. A few years ago the Federal support was negligible.

Federal funds are going today to support various activities on every educational level. The major item, however, deals with the scholarships and maintenance grants provided to the veterans. Of the total sum, about $2,500,000,000 is handled through the Veterans' Administration.

Scholarships and fellowships for college and university students also represent a major financial item in the total education budget. During 1949 the Government will spend $160,000,000 for research to be conducted on the Nation's campuses; for the most part the studies will be in technical, scientific, and military fields. This sum has almost doubled in 2 years, and may even go higher within the next year or two.

All these programs are connected with a special Federal interest or cause. Actually, nine Federal departments or independent agencies, dealing through numerous other subagencies, are sponsoring research programs among the colleges and universities. For example, the National Military Establishment has $53,000,000 available for research and development in 1949, the Atomic Energy Commission has $81,400,000, and the Department of Agriculture has $18,600,000.

It is difficult to trace the various ramifications of the Federal program in America's schools and colleges. A study of the relationships of the Government to education indicates that frequently the term "education" is loosely used. For example, the Agricultural Extension Service, working through institutions of higher learning, has increased its funds from $19,000,000 to $31,500,000. Public health fellowships, teaching grants and construction increased from $70,000 to $10,579,000 between 1940 and 1949.

MILLIONS FOR FEDERAL TRAINING

For in-service training of Government personnel through colleges and universities the Federal Government has earmarked $33,700,000. Several departments and agencies conduct activities of an international interest that operate through colleges and universities; funds for this purpose average $1,000,000 annually. Hundreds of millions of dollars worth of surplus property have been donated or sold at a fraction of the original cost to schools and colleges.

Nineteen Federal departments and independent agencies operate educational programs in the colleges and universities. In addition, scores of subagencies deal independently with the institutions. A list of the major departments includes the following: State, Army, Navy, Air Force, Justice, Commerce, Treasury, Agriculture, Interior, United States Maritime Commission, Federal Works Agency, Veterans' Administration, Federal Security Agency, Tennessee Valley Authority, Housing and Home Finance Agency, National Advisory Committee for Aeronautics, Atomic Energy Commission, War Assets Administration, and the Institute of Inter-American Affairs.

The effect of this mushrooming of governmental aid for specialized branches of education on the total educational scene is analyzed by Dr. Hollis P. Allen of the Graduate School of Education, Claremont College, in California. He prepared a task force study on education for the Hoover Commission on Organization of the Executive Branch of the Government.

With few exceptions, Dr. Allen notes, the Federal interest in education centers on special groups of individuals, special programs, or on research and training to promote some Federal concern such as national defense. The vast majority of these programs are administered by noneducational Federal agencies interested in the promotion of their own points of view. They frequently permit their method of direct operations to undermine State educational authority.

This is particularly true in respect to elementary and secondary education. Sixteen executive departments and independent agencies of the Government, through dozens of subagencies, conduct programs dealing with elementary and secondary education. The bypassing of State departments of education has meant an overlapping of functions on the State or local level.

OVER-ALL POLICY IS LACKING

According to Dr. Allen, the Federal funds are not in themselves dangerous to the independence of educational systems and institutions. The major complaint is that the Government has not adopted an over-all policy in regard to its educational activities; legislation has been piecemeal and educational programs have not been coordinated.

"A substantial saving would be possible if the educational activities of the scores of departments and agencies could be coordinated," Dr. Allen told this writer. "We could

avoid duplication of effort and eliminate outmoded services. I'm not too greatly concerned with direct Federal control of education. But I am concerned with the more subtle control that will take place in the long run if the Government provides support for special programs."

Dr. Allen and other responsible educators emphasized that the huge sum now spent by the Government for educational activities does not in any way help solve the serious school problems that exist. None of the billions appropriated in various departments goes for general education. The Federal aid bill, recently passed by the Senate, calls for a $300,000,000 grant to the public schools, through the States. This would be the first allocation designated for general school purposes.

Although the greatest interest has been centered around the research and scholarship programs sponsored in colleges and universities, the Government has entered the elementary and secondary field of education. It sponsors the promotion of four special curricular fields, which call for an expenditure of $28,000,000 in 1949. These include: Citizenship education, under the Immigration and Naturalization Service of the Department of Justice; aviation education, under the Civil Aeronautics Administration of the Department of Commerce; school savings, under the Savings Bonds Division, Treasury Department; and vocational education, under the United States Office of Education.

"We have overlapping and independent curricular promotion on the Federal level," the Hoover task force report notes. "It has no semblance of the over-all curricular coordination considered essential at State and local educational levels. As other agencies of the Government realize the potency of the public schools of the country in promoting their individual causes, this situation could easily become chaotic."

Through the Production and Marketing Administration of the Department of Agriculture, the Government will spend about $90,000,000 for the school-lunch program during 1949—compared with $12,000,000 in 1940. The program operates in public, private, and parochial schools, with the United States Office of Education effectively bypassed. It is evident that needless overlapping exists.

Taking note of the hit-and-miss method by which educational programs have been developed in this country, the Hoover Commission's report dealing with education, said:

"With respect to elementary and secondary educational activities there has been overlapping and independent promotion of curricula in highly specialized fields, while the general curricular needs of the country have been neglected. Direct aid to local schools, with respect to curriculum development and the school-lunch program, has circumvented State departments of education."

During 1949 the Government will give the States $27,000,000 for vocational education, an increase of $7,000,000 since 1940. For many years the Government has stressed the importance of vocational education, while almost completely neglecting other aspects of education. This year, for example, the United States Office of Education has received $363,000 for the elementary and secondary education divisions—in contrast to the more than $27,000,000 for vocational education.

Because of this emphasis, the State divisions of vocational education have been built into powerful agencies. In 14 States the number of employees devoting full time to vocational education in State departments of education either equals or exceeds the number of full-time employees in all other phases of education within these departments. In 19 other States more than half as many employees of State departments of education are in the vocational field as in the other fields combined.

TENDENCY BRINGS WARNING

The confused patchwork system of Federal participation in education is particularly noticeable on the higher level, where an almost startling increase in Federal funds has taken place since the war. A warning that this growing tendency to look to the Government for more and more funds may spell the doom of the independent college and university was voiced by Dr. Henry M. Wriston, president of Brown University.

As president of the Association of American Universities, Dr. Wriston has taken a leading role in warning against the controls that may come with Federal aid to schools and colleges. At present, he asserted, Government exercises little control over the educational system. But if the present rate of assistance continues, the Government will gradually assume more and more control, even if it is done indirectly at first, he believes.

Decrying this multiplicity of contracts, Dr. Francis J. Brown, consultant for the American Council on Education, warned that the dangers of Federal control increased as the various independent agencies received funds for their own educational activities. As long as special legislation is endorsed for special purposes, it will be difficult to get a program of general Federal aid to higher education.

The vastly expanding program of the Department of State in the exchange of students and technical pensonnel is a matter of deep concern to colleges and universities, Dr. Brown declared. The Army, Economic Cooperation Administration, and other Federal agencies are now entering the field of higher education, each with its own specific program geared to its own needs.

ILLUSTRATIONS ARE PROVIDED

The task force report cites two illustrations, typical of what is happening elsewhere, to show how the various Federal programs now have become embedded in the colleges and universities of the land.

A midwest land-grant university estimates in 1947–48 receipts from the Government to be $211,000 for the agricultural experiment station; $611,000 for its agricultural extension service; $157,000 for training of vocational teachers and general support, and more than $500,000 for contract research and development from nine Federal agencies or subagencies. The Veterans' Administration pays tuition and fees for 8,500 veterans.

Added contracts for student instruction included fees for 3 officers from Army Corps of Engineers, 2 officers from Army Service Forces, 5 officers from the United States Military Academy, 1 officer from Army Quartermaster Corps, 23 officers from Air Corps Air Matériel Command, 150 naval officer students under NROTC and NACP (through Navy Bureau of Supplies and Accounts), 14 postgraduate officers from the United States Naval Academy, and 2 students under United States Public Health Service.

In respect to equipment, the institution dealt with the Air Corps, Navy, Army (Ordnance, Signal Corps, and Engineers), War Assets Administration, United States Office of Education, and the Federal Works Agency. Miscellaneous contracts were obtained from various Federal agencies.

A Great Lakes area State university in addition to ROTC and NROTC, reports:

Vocational education	$31,310
Veterans' Administration rent for consultation service	2,250
United States Public Health Service grants	232,151
Instructional contracts	94,252
Veterans' Administration GI benefits to students	4,456,700
Sixty-two research contracts, largely science	6,099,159
Total Federal funds	10,916,159

Added activities include: United States Forest Service makes forest lands available for experimental work; Bureau of Entomology and Plant Quarantine makes a truck available for work in forest entomology; a professor collaborates with the Bureau of Plant Industry; Federal funds for crippled children come directly to the university hospital; a staff member is consultant in medical matters to the Navy which pays $1,000 annually to the Serological Service; the rapid-treatment center of the hospital, directed by the State's Department of Health, is financed by the United States Public Health Service; the Fish and Wildlife Service has quarters for five individuals; departmental members who manage the weather station are unpaid observers of the United States Weather Bureau.

EVERY INSTITUTION AFFECTED

According to Emery C. Wine, fiscal analyst of the Bureau of the Budget, the present programs and policies of the Government directly affect every institution of higher learning. Hundreds of institutions are participating in educational, research, and training programs financed by the Federal Government. Exclusive of the Atomic Energy Commission projects, a dozen agencies and departments will in the current year finance research activities to the sum of $100,000,000 in 175 institutions of higher learning.

The academic fields most affected by Federal research programs are the physical, biological, medical, and engineering sciences. Hundreds of graduate students are assisted in continuing their education by being employed as assistants on these projects. However, a preponderance of this research is far removed from the traditional educational and cultural objectives of American colleges and universities.

Despite the record amount now spent by the Government on educational activities, the outlook for the future is that the unprecedented sum will go up instead of down. Even though the bulk of the Federal funds now go for veteran education, plans are being advanced to provide huge sums for other aspects of education. A score of bills now before Congress call for the expenditure of $5,000,000,000 or more annually.

The bill commonly known as the Federal aid to education measure, sponsored by Senator THOMAS of Utah, calling for $300,000,000 to the public schools, has passed the Senate and now awaits House action. Another bill, introduced by Representative LESINSKI for the American Federation of Labor, would cost the Government $2,000,000,000 annually by 1956. A health education bill for schools comes to $35,000,000 a year. The bill calling for a National Science Foundation would run into millions. A bill on labor extension education, another on aid to medical health fields and one on Federal help for school building construction would add many more millions.

What is the answer to the issues raised through Federal support of education? Is there any way to eliminate the overlapping of agencies and the resulting confusion? The Task Force recommends the creation of a National Board of Education to advise the Commissioner of Education, review Federal policy in education, safeguard State and national educational interests and bring better balance into the Federal educational activities as they affect the schools.

COORDINATION IS ADVISED

All Federal activities that concern elementary or secondary schools in the States should be the responsibility of the Federal educational agency unless the evidence is clear-cut to the contrary, the Task Force study concludes. This should include matters involved with instruction and educational services. Similarly, the recommendation is made that wherever feasible the agencies dealing with colleges and universities should be coordinated.

Federal control of education is not the paramount issue, the Times survey indicates. Rather, the danger to education is shown to lie in the vast, sprawling, uncontrolled programs springing up in scores of governmental departments and agencies. Only 1 percent of the Federal funds to be spent for education in 1949 is available to the United States Office of Education—yet this office presumably is responsible for the general educational leadership in this country. It is apparent that the Federal Government does not have a coordinated approach to the general problems of education.

A proposal that the United States Office of Education be established as an independent agency headed by a national board of education has been made by the National Council of Chief State School Officers, the American Association of School Administrators and the National Education Association. These groups, representing the majority of public school teachers and administrators, urged Congress to make the education office an adequately financed, independent agency.

Although education must remain largely under the control of local groups, it is equally essential that there be some degree of coordination among our schools to achieve certain goals, the three associations held, saying that the great need today is for planning, and, in turn for expert advice and leadership.

There is divided opinion as to the best way to coordinate the various educational programs. In its report to Congress, the Hoover Commission, after noting the vast spread of education agencies, concluded, "This Commission believes, however, that these educational programs must be administered by the agencies whose functions the particular programs serve to promote."

On the other hand, Dr. Allen, who headed the task force study upon which the Hoover recommendations were based, urged that a National Board of Education be established to help coordinate the various projects.

A bill has been introduced in the Senate by WAYNE MORSE, of Oregon, to coordinate the educational functions of the Federal Government in a single agency. The bill observes that "educational functions are widely scattered through many agencies in the Federal Government with resultant confusion and duplication of effort, and that because of this diffused organization State education authorities and other officials find it necessary to work with and through numerous Federal agencies and officials with respect to education programs authorized under a number of unrelated Federal statutes."

This is the conclusion reached by many responsible persons both in and out of the educational profession.

INVENTORY OF UNITED STATES AID TO SCHOOLS

The diverse nature of the various Federal activities and programs in the field of education and the extent of their diffusion throughout the Government is noted from the following table. It is taken from the task force report prepared for the Hoover Commission under the direction of Dr. Hollis P. Allen, of Claremont College, Calif.

	1940	1949
DEPARTMENT OF AGRICULTURE		
Production and Marketing Administration: School-lunch program	$12,646,000	$92,000,000
Agricultural Research Administration	3,719,000	5,168,000
Extension Service: Cooperative extension work in agriculture and home economics	19,143,000	31,498,000
Research and Marketing Act	----------	4,211,000
Production and Marketing Administration: For salaries of Federal employees with extension services at land-grant colleges	94,000	256,000
DEPARTMENT OF AGRICULTURE—continued		
Office of Foreign Agricultural Relations: Training Latin-American agriculturists	----------	$132,000
ATOMIC ENERGY COMMISSION		
Operation of public schools in Federal communities	----------	4,399,000
Construction of such schools	----------	11,107,000
Research contract with universities, on campus	----------	28,342,000
Research, groups of universities off campus	----------	10,421,000
Construction of research facilities for university groups	----------	3,400,000
Fellowships to increase supply of trained scientists	----------	36,322,000
DEPARTMENT OF COMMERCE		
Civil Aeronautics Administration: Promotion of aviation education	----------	127,000
Philippine Rehabilitation Act: Technical training in Philippines	----------	404,000
Inter-American exchange of persons program	----------	222,000
FEDERAL SECURITY AGENCY		
Office of Education: Vocational education	$20,297,000	27,128,000
Cooperation with American Republics: Smith-Mundt and Fulbright Act	----------	403,000
Public Health Service: Research grants to educational institutions and fellowships in medical and related sciences	162,000	17,481,000
Division of Nursing: Training professional nurses	----------	350,000
Mental Hygiene Division: Grants for training in psychiatry and related work	----------	2,500,000
Mental Hygiene Division: Demonstrations in professional education	----------	108,000
Bureau of State Services: Training to Federal, State, local, and foreign health department personnel	----------	495,000
Office of Vocational Rehabilitation	882,000	2,207,000
FEDERAL WORKS AGENCY		
Bureau of Community Facilities: Lanham Act aid to public schools where financing was adversely affected by the war	----------	3,000,000
INSTITUTE OF INTER-AMERICAN AFFAIRS		
Cooperative education programs with other American republics	----------	1,100,000
DEPARTMENT OF THE INTERIOR		
Bureau of Mines Safety Branch: Training for accident prevention	----------	250,000
DEPARTMENT OF JUSTICE		
Federal prison industries: Vocational training and education of prisoners	20,000	380,000
DEPARTMENT OF LABOR		
Apprentice training service: To promote labor-management agreements on apprentices	85,000	2,444,000
American Republics program: Intern training	----------	153,000
NATIONAL MILITARY ESTABLISHMENT		
Adjutant General's Office, Reserve Officers Training Corps	4,868,000	21,175,000
Military Academy: Training of cadets	3,349,000	7,575,000
Special staff: Troop information and education	----------	4,025,000
Civil Affairs Division: Re-education in liberated and occupied areas	----------	14,064,000
Navy: Research and development	----------	26,311,000
NATIONAL MILITARY ESTABLISHMENT—continued		
Bureau of Naval Personnel: Naval Reserve Officers' Training Corps	----------	$7,638,000
[illegible]ational services to per[illegible]el	----------	663,000
[illegible]aduate school in tech[illegible]l and professional sub[illegible]s	$218,000	937,000
DEPARTMENT OF STATE		
Foreign Service Institute: Special training of Foreign Service officers	----------	71,000
International exchange of persons: Fulbright program	----------	231,000
UNESCO	----------	3,636,000
DEPARTMENT OF THE TREASURY		
Savings Bonds Division: School savings program	----------	251,000
Coast Guard Academy: Cadet training	606,000	1,666,000
VETERANS' ADMINISTRATION		
Department of Medicine and Survey: Residency training in VA hospitals	----------	3,613,000
Office of Assistant Administrator for Vocational Rehabilitation and Education	----------	2,509,880,000
Vocational rehabilitation benefits for disabled veterans	----------	297,098,000
Administration of programs of Public Law 346 and Public Law 16	----------	77,516,000
EXECUTIVE OFFICE OF THE PRESIDENT		
Bureau of the Budget: American Republics interchange in field of public administration	----------	30,000
NATIONAL ADVISORY COMMITTEE FOR AERONAUTICS		
Research in universities	----------	500,000
NATIONAL ARCHIVES		
American Republics program: Training of foreign internes in archival technique	----------	6,000
PANAMA CANAL		
Operation of schools	483,000	1,327,000
SMITHSONIAN INSTITUTION		
American Republics program: Research in anthropology	----------	114,000

Texas Potatoes for Langlade

REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. MURRAY of Wisconsin. Mr. Speaker, the following article appeared in the Wausau Daily Record-Herald on May 17, 1949:

TEXAS POTATOES FOR LANGLADE

Langlade County has been sending certified potato seed stock to southern potato-growing areas. Now the process is being reversed.

Langlade County is now receiving potatoes from Texas, which State has sent 16 carloads each containing 30,000 pounds of sacked potatoes, into Wisconsin for distribution for the school lunch program.

The consignment was from Brownsville, Tex., and the potatoes are turned over to the school-lunch authorities without charge.

Part of a carload is being parceled out in the Milwaukee-Racine-Kenosha area, while others are going to Antigo, Stevens Point, and Waupaca.

EXPLAINS REASON

Gordon Gunderson, Madison, in charge of the State's school lunch program, said the reason for bringing in Texas potatoes is that there are no more surplus potatoes available in Wisconsin, and that all attempts to fill the order from Wisconsin-grown stock failed to bring an offer from Wisconsin growers. "Their stock, eligible for support prices, was depleted," he explained.

Records in the Federal Production and Marketing Administration office at Madison show that last year a total of 3,089 carloads of so-called surplus Wisconsin potatoes were purchased by that Federal agency and that much of these surplus potatoes went to feed livestock.

The support price paid growers was $2.05 per hundredweight in September and advanced to $3.05 in March. Out of the tonnage purchased by the PMA in Wisconsin, 316 cars were allotted for school lunches. The rest went for livestock feed and for manufacture into potato flour. Potatoes purchased by farmers for livestock feed cost the farmers 25 cents per hundredweight in sacks, the new sacks each costing 23 cents.

Now this supply of surplus potatoes is exhausted and Texas potatoes are being imported, Gunderson stated. The freight rate from Texas, according to traffic agents of the Milwaukee road, is about $465 per car. It helps the railroad and the Texas growers are being paid the support price for their potatoes. Samples of the potatoes shipped are said to be of good grade, but there have been some who contended that there is a "bit of smell" when potatoes have to be shipped into Langlade and Portage Counties from the oil State of Texas.

This assuredly is an example of "carrying coals to Newcastle," if there ever was one. Langlade County, Wis., is one of the leading potato-growing counties in the United States. Think of the unnecessary expense involved, including the $465 freight per car.

It appears to me that there must be a desire to see just exactly how much public money can be wasted by such performances. How can one explain that Judge Marvin Jones disposed of 458,000,000 bushels of potatoes in 1943 at a cost of $21,000,000, when Secretary Brannan spends $200,000,000 to dispose of the 445,000,000-bushel 1948 crop?

This potato program has been administered without economic sense.

The three requisites for "a Fairy Deal" program are (1) Is there a chance to buy votes? (2) Will it increase the Federal pay roll? (3) Will it waste public funds? The potato program, as administered, fulfills all requirements.

The Dodgers and Their Fans

EXTENSION OF REMARKS

OF

HON. LOUIS B. HELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. HELLER. Mr. Speaker, for years the word "Bum" has been a term of endearment in Brooklyn for "Dodger" fan and player alike, whereas in all other baseball centers it constitutes the nadir of mediocrity and the zenith of opprobrium. Defiantly cognizant of the scorn held for them and their borough by "Giant" Manhattanites—and citizens the country over—the Brooklyn fans glory in their eccentricity. Just so long as their fellow "Bums," the Dodgers, stay at or near the top in the league, they are utterly indifferent as to what the rest of the world thinks of them.

The frenetic enthusiasm of the Brooklyn supporters is not confined to the male of the species. An American soldier who had just survived a Banzai charge on Leyte described the attack in language any Dodger fan could understand. "They make," he said, "the weirdest sound as they rush at you, screaming. It sounds like Ladies' Day at Ebbets Field."

Brooklyn players have long justified their reputation for being out of this world. The very fact that a Dodger could always be expected to pull something bizarre, whether brilliant or bonehead, tended to inspire a uniquely fierce loyalty on the part of the Brooklyn fans. Over two decades ago occurred perhaps the dizziest play in all baseball history. On August 15, 1926, Brooklyn, under the managership of Uncle Wilbert Robinson, was playing Boston at Ebbets Field. In the seventh inning of that game, DeBerry smashed a double, and was advanced to third when Dazzy Vance followed with a single. The bases were filled when Fewster was hit by a pitched ball. The next man was out on a pop fly. Now it was Babe Herman's turn to bat. When Herman, great player and greater screwball, cracked a hit to right field, DeBerry scored; but Vance, fearing that the ball might be caught, held up until he saw that it would fall safely. Puffing into third, he rounded the sack, but then, believing that he could not reach home before the ball, dived back to third. Fewster, seeing that Herman's drive would be at least a double, sped around second and headed for third, with Herman, determined to stretch his hit into a triple, hard on his heels. All three—Vance, Fewster, and Herman—found themselves piled up at the same base.

Herman, awakening ever so slightly, decided to backtrack to second; but he merely loped toward that bag while looking over his shoulder to observe how his equally daffy mates were faring. Fewster, thinking that he himself was automatically out, stepped off third and was tagged out by the Boston third baseman, Taylor, who had grabbed the relay from the outfield. Taylor then shot the ball to the second baseman, who gleefully dispatched the lumbering Babe. By this time the fascinated fans were hysterical; significantly, those who laughed outnumbered those who wept. Nothing like this play had ever been seen before by mortal man. The Brooklyn manager, all too familiar with the zany potentialities of his players, merely remarked: "Well, what next?"

Needless to say, Dodger followers have never forgotten the episode. One day a taxi driver asked his fare, who had been forced to leave the park early, how the Dodgers were doing. "Good" replied the fan. "The Bums are leading, and they have three men on base." Without cracking a smile, the cabby asked: "Which base?"

Herman was constantly proving himself a character. One day in 1932 Manager Max Carey attempted to signal the Babe to shift his position slightly in the outfield, but Herman was too absorbed in watching the flight of a bird to see or hear his frantic manager. It is little wonder that the Babe was always fair game for the sports writers, or that the latter loved to chronicle his incredible acts on and off the field. Tiring of his role as the Dodger clown prince, Herman asked Joe Gordon, who covered the Dodgers for a local paper, to stop picturing him as an incorrigible, if lovable, buffoon. The scribe promised to do so, but it was a short-lived pledge. As he turned to leave Gordon, Babe pulled out a lighted cigar butt from his pocket. The flabbergasted reporter ultimately recovered his breath, and declared: "It's all off. Nobody who carries lighted cigars in his pocket can tell me he isn't a clown."

Whereas the acts of the Bums and their worshippers have usually been on a comedy level, a fan once permitted his passionate allegiance to the team to result in stark tragedy. On July 12, 1938, the Dodgers dropped a game to the Giants, their traditional and bitterly hated foe. That night Robert Joyce, a rabid Brooklyn rooter, glumly sipped his beer in a Flatbush tavern. Joyce was never able to take Dodger defeats lightly; this particular night he was inconsolable. Several of the patrons began to kid him; and when a Giant fan joined in the fun, something snapped within Joyce's tortured brain. He dashed out of the saloon, only to return with a gun. He thereupon shot to death the Giant rooter, and severely wounded another heckler.

In a game at Ebbets Field late in September 1940, a Dodger fan proved once again that a supporter of the Bums can be completely uninhibited. All during the contest the Flatbush players and fans alike rode umpire George Magerkurth. As the game ended, with a Brooklyn defeat, Magerkurth trudged to the showers, still beset by the snarling players and their followers. Without warning, one of the fans, a paroled convict named Frank Germano, attacked the umpire. Caught by surprise, Big George, who weighed 230 pounds, and was an ex-heavyweight fighter, found himself on the turf with the short, but stocky Germano, beating out a rhythm of hate on his chest. Magerkurth was finally rescued when another umpire pried the raging Germano loose. The fan paid for his all-out loyalty by being returned to custody, but at least he had the satisfaction of realizing that his sacrifice had been warmly appreciated. His fellow fans took up a collection and hired a lawyer to defend him. Appropriately enough, the lawyer's name was Wacke.

Expressions—and proof—of undying devotion to the Bums have never been wanting in Brooklyn. Early in 1943 Dolf Camilli threatened to sit out the baseball season on his ranch. Asserting that he could find no one to ride herd on his cattle, he informed President Rickey that he would have to do the

chores himself. When the fans heard that Camilli was planning to desert, they sent an avalanche of protesting letters to the big first baseman. An Italian barber was prepared to make almost any sacrifice if Camilli would only play ball. "I will lay down my scissors," he wrote, "and learn to ride a horse and do your work, if you will come here and hit home runs for the team."

An even goofier example of the awe-inspiring fanaticism of the Brooklyn fan was furnished by a condemned murderer. On April 21, 1941, a Flatbush baseball nut was walking his last mile, in payment for the killing of a Boston policeman. As he was strapped in the electric chair, he asked a guard, "Did the Bums beat the Giants today?" Other Dodger fans were not surprised by the convict's last words. The typical comment was: "What did you expect the poor guy to say?"

Even the clergy were not immune from the fever. In September 1946, as "Dem Bums" and the St. Louis Cardinals raced neck and neck in the stretch drive for the pennant, the Reverend Bennay J. Benson, of the Brooklyn Reformed Church, led mass prayers on the steps of Brooklyn's Borough Hall for Dodger success. The Reverend was distinguished also for chartering a plane and praying for divine assistance as the craft cruised over Ebbets Field.

A deathless description of the way the fans take their baseball in Flatbush was supplied by Billy Herman, Dodger infielder. In 1941 the awed Billy, a Bum of only a few days, declared: "Every day it's like a world series game around here. What a town."

CARE AND PROTECTION OF DODGER FANS, VOLUME II

(Ten safety and sanity commandments for Brooklyn baseball addicts)

(An accident prevention manual for the 1949 baseball season for ball park spectators, for radio listeners, for video viewers. Published as a service to the people of Brooklyn and elsewhere by the public information department, Brooklyn Chapter, American Red Cross, 57 Willoughby Street, Brooklyn, N. Y., and by radio station WMGM, 711 Fifth Avenue, New York, N. Y.)

Because the reduction of accidents and the promotion of safe and healthful living has long been a goal of the safety services department of the Brooklyn Chapter of the American Red Cross, the Brooklyn Red Cross again joins with radio station WMGM in combating the injurious—to self and to others—effects of that peculiar combination of exuberance and excitability known as "Ebbets Mania."

The many dangers inherent to the manner in which Brooklyn Dodger fans support their baseball team are applicable almost equally to the fan in the ball park, the radio listener at home, and to the television viewer, at home or elsewhere. Therefore, the Red Cross addresses to these three groups of fans, in the hope that they will come through the 1949 National League baseball season unscathed, the following 10 safety and sanity commandments for Dodger fans."

1. Ye must not get overexcited. So someone drops a third strike. So someone steals home with two outs and the score tied in the nineteenth inning. So just relax. Give vent to your feelings vocally, but with restraint. Don't jump up and down or flail the air wildly. You can fall over the seat in front of you and break an arm, or hit someone nearby and blacken his eye. Try to remain calm at all times, even when the doings on the diamond make you feel as explosive as an atom bomb.

2. Ye must not lose your temper. The Dodgers are only human (it says here), and so are, if you'll pardon the expression, Giant fans. So don't let exasperation or annoyance turn you to teeth gnashing or face mashing. By holding on to your temper you will ward off the possibilities of broken teeth, jaws, noses, and will save yourself many an abrasion and contusion.

3. Ye must remain seated. The springs in the knees of Dodger fans have caused peculiar happenings. They have been known to jump over the railing to attack umpires and players, they have become entangled in their seats while jumping up and down, winding up flat on their faces while everyone else enjoyed watching the game or listening to the WMGM broadcast. So, avoid accidents, eliminate the risk of sprained ankles, broken bones, and shaken dignity by remaining seated at all times except during the seventh inning stretch. Remember this cardinal principle; down in front, at all times.

4. Ye must take refreshment in moderation. If the hot sun beats down unbearably on your bleacher seat, or hunger overcomes your resistance to the blandishments of ball-park or kitchen supplies of foodstuffs, watch your diet. Too many cold drinks on a hot day can upset your stomach, or even aid and abet a case of sunstroke. Too much of anything is harmful. So take it easy. Excitement and a full stomach are not the best of friends.

5. Ye must not throw things. Leave that to the ballplayers. A bottle or even a folded score card, can be a dangerous weapon. And, besides, you might hit a fellow Dodger fan, instead of an umpire or rival player. Only when you are close to the recipient of the missile are you likely to feel some of the after effects yourself, but remember your responsibilities to others in your community, and protect them from bruises, concussions, and damaged eyes by refraining from throwing things in the heat of enjoying a ball game.

6. Ye must keep thy excitement to thyself. Don't share your feelings with your neighbor by pounding him on the back or head. He might be eating a frankfurter at the time, and he'll just choke on your joy. Just because Jackie Robinson or Pee Wee Reese steals home or hits a three-bagger is no reason to give your neighbor a concussion. Besides, he might hit back.

7. Ye must eat carefully, while rooting. Don't eat and cheer at the same time. In the excitement, you could bite your thumb instead of a hot dog, or send a swig of cold soda down the wrong tube. Do one thing at a time, and you'll wind up happy, and well fed. You won't spend the afternoon nursing a thumb or choking until help arrives.

8. Ye must not stay too long in the sun without a hat. Whether you are in the ball park or standing alongside a taxicab with its radio going, wear a hat of some sort on hot, sunny days. This way, you can avoid sunstroke. You can't hear that home run with bases loaded if you're out cold because of the heat.

9. Ye must retain control of your senses at all times. Don't let despair over Dodger fielding or an unexpected victory by men who follow the dicta of Branch Rickey and Burt Shotton daze you. If they do, stay seated until the fog lifts. Otherwise you are a setup for automobile, subway, and other accidents. Confusion is a leading cause of unnecessary mishaps.

10. Ye must prepare thyself for any eventuality. The Dodgers are unpredictable, and so are Dodger fans. Even with the best of intentions, something might well go wrong. Therefore, it is wise to be prepared. Do the following. Take a Red Cross first aid course now. And, if you want to be really farsighted, why not protect yourself completely by giving a pint of blood to the Red Cross, so that one will be available for you if you need it.

To be serious, this is really not a laughing matter. Overexcitement does lead to serious accidents. Thousands of safety-conscious residents of Brooklyn have protected themselves with the training and knowledge that come from Red Cross first aid courses. Thousands more have protected themselves and others by joining the Greater New York Red Cross blood program. The Brooklyn Red Cross chapter and WMGM urge you to enroll in these programs today. Telephone MAin 4-6001, for information.

Acquiring Sites and Making Plans for Post-Office Buildings To Be Built in the Future

---

EXTENSION OF REMARKS
OF
HON. CARL ELLIOTT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. ELLIOTT. Mr. Speaker, I will support the present bill authorizing the Federal Government to acquire a site and prepare plans for building one public building in each congressional district in this country. My decision is based upon the following facts:

First. There is a great need for public buildings in the United States at present. It has been almost 10 years since the Federal Government stopped its post-office building program. Over 4,000 new post-office buildings are needed immediately in this country.

Second. This bill is the first step in a planned program of Federal buildings. I believe in economy in Government. We can have no economy in building post offices and other public buildings unless we first give attention to making careful and detailed plans. I think it is a sound principle that public buildings should be built during periods of widespread unemployment, when the Government will not be in competition with private business for labor and materials. Unless we make plans and acquire sites for these buildings now, we are liable to be caught with widespread unemployment and no plans on which to launch a public building program.

In the Seventh Congressional District, which I have the very great honor to represent here, there is a great need for Federal post-office buildings. Almost every day I receive letters describing the great need for post-office buildings.

Under the formula fixed by law, the following cities and towns in the Seventh Congressional District are eligible for consideration: Aliceville, Carbon Hill, Cordova, Hamilton, Red Bay, and Winfield. These cities and towns are eligible because their post-office receipts are in excess of $10,000 yearly.

When this bill becomes law, a site will be acquired in one of these towns, and plans drawn for the construction of a post-office building in that town.

This building will be constructed at a later date, when the Congress provides the funds with which to construct it.

This bill provides a beginning. It is the first such legislation in 10 years. It is to be hoped that this Congress will pass a similar bill next year providing for the acquisition of at least a second post-office building site in each congressional district in the country.

How will these sites be selected? The Public Buildings Commissioner and the Post Office Department will select the sites. This is a wise provision. The Public Buildings Commissioner and the Postmaster General are the best advised and equipped persons to make this decision. I would hate to have the job of choosing one site from among the eligible towns in my district, in each of which there is, to my personal knowledge, a great need for a post-office building.

Someone has said in the debate here that the acquisition of only one site in each congressional district will be politically hurtful to each Congressman, in that the eligible towns where no site is acquired will be resentful. I do not believe that will be true of the district which I represent. Post-office buildings are needed so badly that I believe our entire district will be happy that a start, however meager, is being made toward a solution of the entire problem. I personally expect to support legislation next year to authorize the Federal Government to acquire an additional site in each congressional district. I think the program should be broadened so as to authorize the acquisition of an additional site each year until sufficient sites have been acquired to satisfy the needs in all eligible towns. Marion and Lamar Counties in my congressional district have no Federal post-office buildings. Franklin County has a Federal post-office building at Russellville. Likewise, Winston County at Haleyville; Cullman County at Cullman, though this building is inadequate for present needs; Blount County at Oneonta; Fayette County at Fayette; Pickens County at Carrollton; Walker County at Jasper, which building is too small for present needs. Thus we have three courthouse or county-site towns in the Seventh Congressional District that do not have Federal post-office buildings. These county-site towns are Vernon in Lamar County; Hamilton in Marion County and Double Springs in Winston County. Vernon and Double Springs are not eligible for consideration under present law.

Mr. Speaker, I supported an amendment to this law, which amendment had for its purpose the making of county-site towns eligible for consideration even though they did not have postal receipts of $10,000 per year. I am sorry that this amendment failed, because I feel that where the people of a county have dug down into their pockets and built a nice courthouse for the transaction of State and county business that the Federal Government should build a post-office building in that town.

Mr. Speaker, I also supported an amendment to this bill providing that the Federal Government actually construct one post-office building in each congressional district each year until the great need is met. I am also sorry that this amendment failed. I personally am of the opinion that employment conditions are rapidly becoming worse. I know that there is now fairly widespread unemployment in the Seventh Congressional District of Alabama. We are going through a leveling-off process that might become severe. A new generation has grown up since the depression of the late twenties and early thirties, and I hope this new generation will not have to experience another such depression as this was. Be it always remembered that in that depression homes and farms in this country were sold by the hundreds of thousands under the dreadful impact of the auctioneer's hammer; banks closed by the thousands; people starved and did without the necessaries of life. A government attuned to an outworn view failed to act. The people of this country arose in their democratic might and elected a new government which placed its foremost emphasis on the fact that this Nation is comprised of 140,000,000 human beings.

Mr. Speaker, when a post-office building program comes it will make sense—hard, economic sense. This Government is now paying rentals for the use of buildings it does not own, of some $13,000,000 per year. Thirteen million dollars would build 130 buildings costing $100,000 each in 1 year. The rental saving brought about by building post-office buildings would be enormous.

But having lost that argument on the floor of this House today I still believe that we should vote for this bill authorizing that one site be acquired and one set of plans drawn for a post-office building in each congressional district. It should pass.

Standard of Living Can Be Raised for Every Citizen; Government Spending Will Not Raise It

EXTENSION OF REMARKS

OF

HON. LAWRENCE H. SMITH

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 12, 1949

Mr. SMITH of Wisconsin. Mr. Speaker, every thinking person in this country is greatly concerned about the possibility of another depression. Prices are falling and unemployment is increasing. This is cause for alarm and requires the constructive genius of every citizen to the end that the future be protected against economic collapse. All of our people have a considerable stake in this situation and hence it is not the responsibility of public officials alone but of citizens everywhere.

Once again, Mr. Speaker, Mr. James H. McGraw, Jr., president of the McGraw-Hill Publishing Co., has made a valuable contribution to public thinking on the subject of the economic future of this country in a statement just released. Briefly, his theme is that our only chance of getting ahead—of raising our standard of living and beating a depression—is to produce more of the goods that we and the world needs. In short, if we are to raise our standards of living—and we surely want to do that—then we must produce more wealth, which means more of the things that people need and want.

Mr. Speaker, the figures show that since the end of the war the American worker has not increased production per hour over what he produced in 1941, and this in spite of the fact that our population has increased and we have given generous assistance to people all over the world. Obviously, if this situation continues, we are faced with a lowered standard of living and not an increased one. There is also a danger in this connection if we spend our natural resources and productive effort in building a super-duper military machine. Billions spent for armaments will not increase our wealth but instead will deplete it. The sad fact remains that American industry's ability to turn out more and more goods—with less of each worker's time and effort—has been stymied for eight long years. Mr. McGraw says the biggest block to progress is the fact that industry in the United States has been unable to provide our workers with all the new tools that they need. Only with efficient tools can we expect to increase this standard of living. Let us not forget that the United States has led the world in building labor-saving, wealth-producing machinery. The worker, plus his tools, determines how much goods he can turn out and just how much his paycheck will be every week or month and all this adds up to his standard of living.

Mr. Speaker, this brings us to the heart of our problem. We have seen that the worker without his tools could not achieve a high living level and the question is how does he get these tools? The highly important fact is, Mr. Speaker, that investment capital gives the worker his tools. Business itself invests in capital equipment from the profits it makes; money is plowed back into the enterprise. Then, too, ordinary people who have money and want it to produce some income for them invest in sound business concerns. This is sometimes referred to as venture capital. It is this kind of investment that has enabled the United States to become a productive industrial giant, the envy of all the civilized world. It is not generally known, Mr. Speaker, that since the end of the war business men have spent $60,000,000,000 for new plants and equipment. Translated this spells new tools for the American worker which means greater efficiency in his productive effort.

Mr. Speaker, people in business are always looking ahead. In a competitive economy they must be on the alert. If American industry is permitted to earn the money to buy the equipment and tools, it can raise the American standard of living 50 percent in the next 25 years, according to Mr. McGraw, and he should know. Does any other nation promise its people so much? Absolutely not.

Now you may say, "all right, why doesn't industry go ahead—what's to stop it, for we all want a higher standard of living?" There is a simple answer.

Mr. Speaker, today the Democratic administration is taking a course which will make investment by industry, in new tools and facilities, impossible. Government spending programs and wasteful bureaucratic spending is becoming an unendurable burden which eventually calls for more and more taxes, not only from industry but every taxpayer. It will not be denied by Socialists or Government officials that Government spending cannot improve American living standards. Let me repeat, Mr. Speaker, that Government spending will not raise the standard of living of our people. Excessive taxation has always destroyed the initiative and expansion of business, so let us not be victimized by those who advocate the elimination of corporate profits and high excessive taxes on business. Let us not kill the goose that lays the golden egg.

Better living can only be paid for, Mr. Speaker, with more production. We can only get more production by increasing productivity—each one of us producing more for each hour of work. The first thing is to get production—in peace and in war—for better living—for security. Industry is planning to provide it—and is using $13,000,000,000 of its profits this year to improve and expand its facilities.

Mr. Speaker, the only sensible, the only safe national policy is to make it possible for American industry to do its job. Business must not be terrorized with proposals of ruinous taxation, controls, and threats of nationalization. American business and industry is the people. It is not something apart from the social, economic, and political life of this great Nation.

Mr. Speaker, just one final statement which is an eternal truth. Whatever makes industry do its work better contributes more to the common welfare than a socialistic bureaucrat Government can ever do.

Pay of the Armed Services

EXTENSION OF REMARKS
OF
HON. JAMES B. HARE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. HARE. Mr. Speaker, I have listened to the debate on this bill with a great deal of interest and the clear explanation by the members of the Armed Services Committee has impressed me with the tremendous amount of study and work which is behind this piece of legislation. As has been pointed out, H. R. 4591 is the culmination of some 18 months of study by a very prominent civilian committee and by the very capable members of the Armed Services Committee of this House. I understand that these studies, particularly those by the civilian committee, embraced the over-all picture of pay within the armed services and in considering this matter it took into consideration the allied questions of procurement, promotion, and retirement. It seems to me that before any Member of this Congress should oppose this legislation in the face of the recommendation of the Hook commission and the unanimous report of the Armed Services Committee, he should first advise himself completely upon all the studies that have been made and the facts which they have developed.

I fully realize that the Congress is becoming more and more economy minded and with this I am in complete accord, but I have always been a firm believer that in the long run economy was best served by the wisest utilization of our financial resources. I also realize that it is a natural reaction after every war, and the history of this country bears it out, that the armed forces should be whittled to the bone. On the other hand when war comes we are ready then to spend our every resource in defense of our country. It seems to me that it would be wisest in time of peace to maintain the most efficient trained military personnel so that in the event of war our armed forces may be quickly expanded into the necessary defense required. In this age of science, I do not think that the next war, which we all hope will never come, but which we have no reason to think will not, will give us much time within which to marshall our manpower and economic resources. Personally, I prefer to see a military service maintained in time of peace which is ready to fight immediately upon any attack made on this country. In order to do this the armed forces require leadership. Just as important, however, are those who are able to immediately put into practical operation the plans and orders of those who are in command. I can gladly go along with some economies which might be made in the Military Establishment but I am not yet convinced that economy is to be achieved by penalizing those upon whom we depend for our defense. Such an attitude on the part of the Congress or the American public does not promote military efficiency.

Since debate started upon this bill there has been an undercurrent of doubt and possibly opposition among many of the Members. I still am unable to determine what the main points of this opposition are. There has been some criticism which I did not feel went to the merits of the matter whatsoever, but even were this criticism justified, I see no point in trying to destroy a constructive piece of legislation simply because there may be minor changes called for. Undoubtedly no bill could be written which would please every Member of this House and possibly all of us could make some criticism of the armed forces as we could any other branch of the Government, even the Congress. Some criticism has been levied at the elimination of the family allowances.

It has been pointed out very clearly that the law which established family allowances for enlisted men was a wartime measure and a definite termination date. No enlisted man in the service expected this type of compensation to continue indefinitely. I, for one, do not consider that the military service is a relief organization. It was not established and it should not be maintained as a governmental agency which puts a premium upon the number of children which a man may have. Certainly from the standpoint of military efficiency, no justification can be made for encouraging large families within the armed services. The necessary changes of duty, sea duty and foreign duty, do not lend themselves to large family life and development. Of course I do not advocate that people in the military service should not have families but I am not willing to put a financial premium or an inducement on military personnel to increase them at the expense of the taxpayer and of military efficiency. On the whole, I think the committee's approach to the problem of family allowances has been fair and wise from the standpoint of building a strong military organization with the efficiency which the people of this country have a right to demand at all times.

Any effort made to send this bill back to the committee for further study is nothing more than an effort to kill it altogether. I do not know what further study could be given. If all the legislation which comes before the Congress had as much study as this one, certainly the Members of this House would be in position to vote more intelligently on the matters which are presented to them. Should there be items in this bill which the House feels should be changed, an opportunity is given us to amend them. There may be some changes that I will support but I, for one, do not intend to vote to kill this bill either outright or by sending it back to the committee and neither do I intend to go back to my constituents and say to them that I am willing to gamble with the defense of their homes. Some of you may delude yourselves into thinking that we are today smoking the peace pipe with Russia, but for my part I prefer to keep our Nation ready for the next knife that will be buried in our back.

Voice Blockade Goes On

EXTENSION OF REMARKS
OF
HON. HAROLD D. DONOHUE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. DONOHUE. Mr. Speaker, under leave to extend my remarks, I wish to include a very timely editorial entitled "Voice Blockade Goes On," that appeared in the magazine America under date of May 21, 1949. The editorial follows:

VOICE BLOCKADE GOES ON

Jamming a radio program is like interrupting a speech by hooting and catcalls. A radio transmitter, broadcasting on the same frequency as the station to be jammed, broadcasts, at equal or greater intensity, a constant shrill noise which drowns out or

makes unintelligible the program to be interfered with.

Since early in 1948, stations within the Soviet Union have been interfering with the Voice of America programs. Protests direct to Russia and to the International Telecommunications Union at Geneva (of which Russia is a member) have got nowhere. By April 24—the day before the announcement by Russia of the Berlin blockade talks—no less than 60 Russian stations were engaged in this other type of blockade.

The Voice of America and the British Broadcasting Corp. accordingly decided to combine their forces and break through the jamming. Programs beamed to Russia were extended from 2 hours a day to 24 and the power of the transmitters was stepped up. The Soviets retaliated by marshaling 150 stations to step up the jamming. They were so anxious to prevent news of the free world from getting in that they even canceled the usual daily program in English from Moscow. Even so, it is estimated that a steady 12 percent of the Voice-BBC broadcasts get through to the Russian people regularly, and as high as 35 percent when Soviet jamming is foiled by western frequency changes.

Why this frantic effort to keep out news from the west? The average Russian by this time surely knows about the lifting of the Berlin blockade and the signing of the Atlantic Pact. It is vital in Stalin's mind, however, that the average Russian know the news only and exclusively in its Communist version.

This is a tactic that could be adopted only by a police state. It is the same tactic that was employed by the Nazis in jamming short-wave broadcasts during the war.

But, more than that, it is a tactic inspired by fear. As the voice program says, "Obviously, somebody considers it dangerous to permit the Soviet people to listen to truthful information from a free radio." Yet a considerable number of Russians must be listening. The secret police could easily smash up a few radio sets and liquidate the listeners. But what if they number millions?

It is admittedly a long way from even millions of Russians hearing the news from the free world to the liberation of the Russian people. It begins to look, however, as if this propaganda is paying off. When the daring ingenuity of the air lift proved that we would not submit to the Berlin blockade, the prestige of the west was enhanced mainly in the eyes of the Germans. If we prove that we are not going to submit to this newer blockade of the air waves, our prestige will grow in Russian eyes.

Programs to break through the jamming must be sustained and even expanded. Their result will be that when the regime of tyranny in Soviet Russia collapses (and it will in God's time), there will be millions who will not have to be taught from scratch the meaning of the words "truth" and "freedom."

Japanese Reparations and the American Taxpayer

EXTENSION OF REMARKS

OF

HON. KARL STEFAN

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Monday, May 23, 1949

Mr. STEFAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a statement made by Gen. Carlos P. Romulo, Philippine Ambassador to the United Nations and chief delegate of the Philippines to the Far Eastern Commission. It is a statement of vital interest to the American taxpayer. It gives us a new light on present-day conditions in Japan.

Recently, our State Department announced a reversal of American policy regarding Japanese reparations. The Far Eastern Commission was told that the United States is against Japan paying any reparations at all. Needless to say, this announcement was received with dismay by our allies, such as the Philippines, China, and other devastated countries in Asia.

Ambassador Romulo, who, as we all know, is a war veteran, a brigadier general in the United States Army during the Second World War, holds the highest American decorations, and whose loyalty to American ideals is unquestioned, addressing the Far Eastern Commission the other day, made a statement that is an eye-opener and should be read by all Americans. Ambassador Romulo has been our colleague in this House and we all know that his words carry the stamp of truth and sincerity.

His statement follows:

PRELIMINARY STATEMENT ON THE QUESTION OF JAPANESE REPARATIONS BY AMBASSADOR CARLOS P. ROMULO, CHIEF DELEGATE OF THE PHILIPPINES ON THE FAR EASTERN COMMISSION

Mr. Chairman, on March 17, a little over 2 months ago, I made here on behalf of the Philippine Government a general statement on the problem of Japanese reparations. I deplored the prolonged delay in the solution of the problem of reparations, pointing out that this in itself was the result of our vacillation in defining the basis upon which a Japanese peacetime economy should be built. Because of its special responsibilities as the occupying power in Japan, I addressed an earnest appeal to the United States to help break the vicious circle in which the Commission was doomed to travel so long as we could not make up our minds as to the future of Japan.

On May 12, the United States representative on the Commission made a statement on Japanese reparations and level of industry. In that statement he announced that the United States Government was impelled to rescind its interim directive of April 4, 1947, bringing to an end the advance transfer program called for by that directive, to withdraw its proposal of November 6, 1947, on Japanese reparations shares, and to state that it has no intention of taking further unilateral action under its interim directive powers to make possible additional reparations removals from Japan. He gave four reasons for this action: First, the need of stabilizing the deficit economy of Japan and permitting it to move toward self-support; second, the reluctance of American taxpayers to continue underwriting this deficit; third, the failure of the Far Eastern Commission to agree on a schedule of national reparations shares; and fourth, the fact that Japan has already paid substantial reparations through the expropriation of its former overseas assets and under the advance transfer program.

Out of our anxiety and perplexity, we addressed 2 months ago a question to the United States Government. Today we have the answer before us. When first informed of the decision of the United States Government, my immediate personal reaction was as reported in the press. I said that I was flabbergasted. I used a colloquialism which those who are familiar with the nuances of the American idiom know to signify a combination of chagrin, astonishment, and unbelief. My reaction was personal and individual, like that of a man who, having pleaded with his friend for help and received some assurances that it would be given, is informed in the end that while his need is indeed great, that of the common enemy of the two of them is greater still.

But this problem, Mr. Chairman, is of vital importance to the people of my country and I would be recreant to my duty if I did not try to establish before this Commission by means of this preliminary statement the basis, beyond the level of personal sentiment, upon which the attitude of my government rests. Candor, therefore, compels me to state that the people and Government of the Philippines are greatly disturbed by the decision of the United States Government, that they protest in the strongest possible terms against it, and that they continue to have faith that this decision, whatever its immediate effect, will not bar the Commission from reaching a just and satisfactory solution through the means that are still open to it.

The effect of the United States statement on May 12 is that there is now neither a policy nor a program on Japanese reparations. The slate has been wiped clean. The vicious circle to which I have previously referred has not been cut; it has been swept away altogether. The partial, makeshift solutions have been discarded, and we are now face to face with the basic problem as we were in the beginning.

The basic principles governing the question of reparations are familiar to the Commission. They were reviewed in the United States statement of May 12, and I do not propose now to make an extended exposition of them.

At the core of these principles stands paragraph 11 of the Potsdam Declaration, issued on July 26, 1945, defining the terms of the surrender of Japan: "Japan shall be permitted to maintain such industries as will sustain her economy and permit the exaction of just reparations in kind, but not those which would enable her to rearm for war."

This general principle was spelled out in detail in part IV of the Basic Post-Surrender Policy for Japan adopted by the Far Eastern Commission on June 19, 1947. While making provision to avoid "acute economic distress" among the Japanese people which might militate against the long-range objectives of the occupation itself, the Commission laid down the principle in section 1, part IV, that: "The existing economic basis of Japanese military strength must be destroyed and not be permitted to revive." The Commission then decreed in section 4, that one aspect of this principle would be carried out by means of reparations: "For acts of aggression committed by Japan and for the purpose of equitable reparation of the damage caused by her to the Allied Powers and in the interests of the destruction of the Japanese war potential in those industries which could lead to Japan's rearmament for waging war, reparations shall be exacted from Japan."

Standing like an arch over the whole structure of reparations policy is this solemn declaration to be found in section 3: "The plight of Japan is the direct outcome of its own behaviour, and the Allies will not undertake the burden of repairing the damage. It can be repaired only if the Japanese people renounce all military aims and apply themselves diligently and with single purpose to the ways of peaceful living. It will be necessary for them to undertake physical reconstruction and basically to reform the nature and direction of their economic activities and institutions."

The whole policy on reparations, therefore, was based on a philosophy of stern justice tempered by a sober regard for the welfare of the Japanese people themselves and the success of the Allied occupation.

Accordingly, the Far Eastern Commission took several steps toward an over-all reparations settlement, including a series of policy decisions establishing an interim removal program, selection of plants for reparations, setting up criteria to be used in determining shares for each claimant country, and determining the peaceful needs of Japan.

The Commission, Mr. Chairman, has worked hard and long at these policy decisions. It is true that it has not always been possible to work out a satisfactory formula on every aspect of the reparations problem, and that on one point in particular, that of the schedule of national percentage shares, we have so far failed to come to an agreement. But I beg to point out that the Far Eastern Commission has reached agreement on a number of vital matters much more often than have the analogous bodies concerned with the occupation of Germany or, indeed, than similar political organs of the United Nations with whose work I happen to be familiar. When, therefore, the United States Government gives this instance of our failure as one of the reasons for its decision, I am constrained to suggest that while such a show of impatience may confirm one's sense of virtue and satisfaction, in the end it accomplishes nothing. I refer to the Commission as a whole when I say that a good surgeon does not amputate a whole arm because of an infected finger; nor is it a good thing as the saying goes, for a man to cut off his nose in order to spite his face.

Strangely enough, the spirit underlying the interim directive unilaterally issued by the United States Government on April 4, 1947, was also one of impatience—impatience, that is, with the members of the Commission who could not agree on their respective shares quickly enough to suit the generous temper of the United States. The United States Government was anxious to get on with the business of reparations, and in order to give it a firm push forward, the advance transfer program was established. That was fine and logical; but now, we are virtually being told that one and the same fact, namely, the failure of the Commission so far to adopt a schedule of reparations shares, may justify two completely contradictory acts.

As a matter of fact, therefore, while there may be various subsidiary factors that have contributed to the new United States policy on reparations, there is only one reason behind it; namely, the desire to stabilize the deficit Japanese economy in order to permit it to more toward self-support. The argument has been angled to catch the eye of the American taxpayer, that anonymous yet politically potent being who has carried on his broad shoulders the herculean burdens of lend-lease, the Marshall plan, the Atlantic Pact, and the Berlin airlift, but who is not prepared to carry one moment longer the crushing burden of the deficit Japanese economy. The further argument that a strengthened Japan would be a factor of some importance in the struggle for power in Asia may, of course, be assumed as corollary to the first.

The desire to prop up the Japanese economy is understandable, and far be it from me to wish that there shall be no diminution in the heavy financial commitments of the United States. But I believe that the American taxpayer is entitled to know all the facts about the economic condition of Japan, particularly the reasons why its economy is not recovering as fast as it should. The American layman who reads in his newspaper that Japanese reparations are being stopped because otherwise the United States would have to support Japanese economy to the tune of $1,000,000,000 every year, is apt to jump to the conclusion that the American people are in fact supporting Japan in order that she in turn may be able to pay reparations to other countries.

As is well known, Mr. Chairman, the total reparations so far removed from Japan and delivered to the four countries amount to about $70,000,000. These have included for the most part machine tools and laboratory and pilot plant equipment. Not one single industrial plant has been removed. Now we are told that successive surveys conducted by various American investigators have necessitated progressive upward adjustments of earlier estimates of Japan's future industrial requirements, and therefore correspondingly progressive downward adjustments of earlier estimates of the excess plants and equipment that could be earmarked for reparations.

With all due respect for the opinions of these American experts, I would like to say that so long as vital and far-reaching policies affecting not America alone but other countries as well were to be based on the findings and recommendations of these investigators, it would have been a wise thing to have sent mixed multi-national missions to Japan and thus ensure a certain degree of controls and counter-checks on their findings. It should be noted that three different American surveys have given three different estimates of the peacetime industrial requirements of Japan. Apart from the objective factors that could so markedly affect the estimates of three different groups, all of them composed of Americans, there would have been a certain insurance against error and partiality in the participation of non-Americans in such surveys. It is reasonable to suppose that the estimates of Chinese or Filipino experts who come from their little industrialized and devastated countries would serve as a corrective factor in the estimates of American experts who are apt to judge Japan's peacetime requirements on the basis of the massive and prosperous industrial plant of the United States.

My first point about these survey reports, therefore, is that there is no way of checking them, and the fact that they vary so considerably from one another leaves the accuracy and validity of any one of them open to serious doubt.

My second point concerns the internal pressures within Japan itself that have contributed to her critical economic condition. I have already stated that the basic post-surrender policy for Japan lays down the stern doctrine that "the plight of Japan is the direct outcome of its own behavior, and the Allies will not undertake the burden of repairing the damage." The policy goes on to state: "It will be necessary for them (the Japanese) to undertake physical reconstruction and basically to reform the nature and direction of their economic activities and institutions."

Now, we are told that the Japanese economy is in so critical a condition that the whole reparations program must be scrapped, since, in the words of the United States delegate, "the Japanese people must be enabled to support themselves at a tolerable standard of living," and since "no one could reasonably suggest that Japan should be abandoned to economic despair."

No, Mr. Chairman; we could not reasonably suggest such a thing, but we could more than reasonably suggest that the critical economic condition of Japan is due to its own behavior in a war of its own making, and furthermore, that its failure to revive economically is in large measure due to a deliberate conspiracy of its own industrial leaders, the Zaibatsu, and their political agents in government to sabotage such industrial recovery.

The responsibility of Japan for the critical condition of its economy is thus a double responsibility: The original one of being fully responsible for the consequences of its own criminal act of aggression, and the secondary one of being mainly responsible for the deliberate attempt to create financial chaos and to slow down production in order to embarrass the occupation authorities and win the sympathy of the Allies, especially the United States of America.

There was no reference to Japanese responsibility in the United States statement of May 12, and I feel, therefore, that this responsibility must be stated and fixed in order that it might become utterly clear to the world that what we ought to do is not to give the impression that Japan must be protected from the greedy reparations claims of other countries but rather that Japan needs above all to be saved from its own folly.

There is a chapter in the book, Prospects for Democracy in Japan, by T. A. Bisson, recently published under the imprint of the Institute of Pacific Relations, which the Commission will find interesting reading. Mr. Bisson has written with considerable authority on Far Eastern subjects and he brought to the writing of this volume first-hand knowledge and experience which he gathered as an important member of the Government Section of General MacArthur's headquarters in Tokyo. The Commission will find highly pertinent to this question of Japanese responsibility certain observations of Mr. Bisson. I quote from chapter 6 on the Struggle on the Economic Front:

"The occupation authorities were well aware of the necessity for far-reaching changes in the Japanese economic structure. But while they were drafting long-range programs * * * it soon became apparent that the old guard (the Zaibatsu, that is) was waging its shrewdest battle against the occupation on the economic front.

"As far as reparations were concerned, virtually no removals of Japanese industrial plants had actually occurred, and here again it was the old business groups that were most disturbed by the prospect of such removals. * * *

"The economic crisis in Japan reflected the operation of a more broadly determining factor. * * * Stated in its simplest terms, this was the failure of the occupation to achieve a sufficiently rapid and thorough destruction of the Zaibatsu's power, with the result that the leaders of these great combines were left in a position where they could effectively sabotage efforts to expand productions and curb inflation."

The author continues, and I am still quoting:

"To obtain production of essential basic materials and consumer goods, strict allocations of materials to essential industries were obviously necessary. Prudent fiscal policies were also needed. * * * Such a program, however, did not suit the requirements of Japan's business leaders, and they had the power to prevent its application. As the occupation began, the Zaibatsu concerns had control of Japan's industrial plant and the bulk of her commodity stocks. * * * Their power included not only operational control of fiscal measures, but also the ability to block any program looking toward the controlled allocation of materials. * * *

"From these vantage points, they even fought to secure government indemnities for the losses suffered in destruction and damage to their munitions plants. * * * The Zaibatsu firms had made vast profits during the war, and it was obvious that by seeking indemnities, they also hoped to escape the burden of paying for a war that they had lost by shifting the burden to the shoulders of the Japanese people."

I should add, at this juncture, Mr. Chairman, that, having passed the burden on to the Japanese people, the Japanese industrialists would indeed be very happy to see that the burden is next passed on to the victims of Japanese aggression in other lands.

In the next chapter on Recent Economic Trends, Mr. Bisson goes on to say: "Inasmuch as the economic machinery of Japan was left in the hands of Japanese that were bent on sabotaging industrial recovery so

long as American control remained in force, this policy imposed a continued financial drain on the United States. * * * This situation gave American Army and banking interests a plausible excuse to deplore the heavy financial burden placed on the United States as a result of Japan's failure to achieve industrial recovery and economic stability. * * * Their proposed solution of the problem was to restore Japan to what was, in essence, her pre-World War II industrial status, with one notable difference * * * henceforth American capital would be a partner of the Zaibatsu in prewar-style international cartels, or would simply take over certain key Japanese industries by means of large direct investments."

I have given rather extensive quotations from this timely book, Mr. Chairman. Of them I am not in a position to state that they are in all respects accurate or true, but only that they are pertinent to the question of whether it is reasonable to ask the Far Eastern Commission to accept as fact the statement that reparations must be discontinued because Japan is an impoverished country, so long as there is evidence that the Japanese economic crisis has been deliberately brought on by the Japanese themselves in order to arouse American sympathy and insure American assistance.

The Commission does not need, I am sure, to be told with what jubilation the news of the new United States policy was received in Japan. The Mainichi of May 13 had an editorial saying: "The latest Washington announcement has saved Japan's face in relation to the world. We feel that we can stand square-shouldered in front of the countries which may suspect us of attempting to rearm ourselves."

Nor need I tell you, Mr. Chairman, that in Manila the same news was received with dismay, even with bitterness. The Philippine Under Secretary of Foreign Affairs was quoted as saying over the radio that the Philippine Government considers itself specially entitled to Japanese reparations, and that the United States and other members of the Far Eastern Commission will readily see the justice and fairness of our claims. The Philippines, he said, has not lost hope of winning its case before the Commission. Somewhat more realistically, the National Economic Council of the Philippines met in a hurry to study the effect on the industrialization program of the American decision to curtail Japanese reparations.

I can recall, sir, only one instance in recent years of a report which created jubilation in Tokyo and consternation in Manila, and that was the news of the Japanese sneak attack on Pearl Harbor. Times must indeed have changed very much since then to produce this curious duplication of events in reverse. Or perhaps, we should say that this is a sneak attack, only an infinitely more insidious one—a delayed action attack that will someday explode in the very faces of those who now deplore the cost of the Japanese occupation, in the form of another massive effort of containment and perhaps war that will cost a billion dollars for every ten millions that are now being spent to sustain the Japanese economy.

If I speak with some bitterness, I would beg you, Mr. Chairman, to understand that I but reflect in moderation the sentiments of the Filipino people. I beg you also to believe that these sentiments spring from no blind vindictive passion directed against the Japanese people. Our interest in their political and economic reformation is genuine, just because they are our immediate neighbors and we are eager in the future that they shall live at peace with us. The United States can stay or pull out of the Far East as it pleases, but we have no choice, we shall always be there. In a very important sense, therefore, we have a stake in a peaceful and democratic Japan far more intimate and real than yours. For us it is not, as it is for you, a mere matter of forgetting the past and overcoming a deep and justifiable resentment toward Japan. It is rather a question of making absolutely certain that Japan will never again be a menace to our security and liberty.

With the whole world clamoring for American products, the United States has no reason to fear, now or in the predictable future, the revival of Japanese industry. But we have. The United States can regard without alarm the prospect of Japan becoming the "workshop of Asia," but we can't. For we know that military power is a concomitant of industrial power, and the willful and wily Zaibatsu class which is engineering the reemergence of Japan as an industrial power will soon, we have no doubt of it, be clamoring for an army and navy. The time to stop them is now, before we become weary of the burdens of the occupation, specially of the thankless task of watchdog and overseer. And the way to stop them is to take away the instruments of power from their hands. If we do this resolutely and refuse to fall into the snares and deceptions which are their stock in trade, we shall be serving not only our own interests but the interests as well of the Japanese people. For us there shall be no security and for the Japanese people themselves no peace and no prosperity while these ambitious and ruthless men remain in power.

The problem of reparations is not a problem of Japanese-American relations. It is not a question of Soviet-American power relations. It is a question of grave international concern to all of the States on the commission that have a stake in the future of Asia. It must, therefore, be solved on that basis, and a just solution must start not on the premise that reparations must be curtailed in order to permit Japanese industrial recovery, but rather on the premise that the remedies which lie within resources of the Japanese economy itself must first be explored and exhausted in some such manner as I have indicated. The Japanese must first help themselves to the utmost before we are asked to help them through abstention from reparations.

Mr. Chairman, I will conclude. No one can question the right of the United States Government to rescind the program of interim reparations which it initiated unilaterally, of its own free will. This offer, for which my government is endlessly grateful, was a gesture of magnanimity and as such may be withdrawn at any time by the same hand that bestowed it. However, in international relations, there are considerations beyond those of legal rights that ought, in our opinion, to be taken into account in questions of this kind. A decision, even if unilateral and voluntary in the beginning creates in the course of time a whole system of relations between the parties which subsequently limits the freedom of action of either of them. Neither may then withdraw from that new system of relations with the complete freedom, the arbitrary liberty of choice with which they first entered into the relation.

If I should seem to draw a thin line of moral responsibility across this question, I beg you, Mr. Chairman, to believe that I do so with the greatest diffidence and only because it is difficult for me to be completely objective and to cast out of my mind the special ties of affection and loyalty that bind my country to yours. My country was one of the four that benefited from the United States program of interim Japanese reparations, but it was not the first act of the kind that had taken place during the period of our long association, in peace as well as in war. It is not out of place, I trust, for a Filipino to express, even in this gathering of various nations wherein the United States must speak impartially on a question of high policy, the hope that since this policy gravely affects the interests of my country, some means will ultimately be found to make it conform to the established pattern of generous American action toward the Philippines.

I have made this preliminary statement on behalf of my government, reserving my right to make subsequent submissions to the commission either on the proposals that the United States representative has announced he will advance at a later time or on proposals of our own that we hope to be able to bring to the attention of this body.

Some Wisdom Is Contained in Truman's Stubbornness

EXTENSION OF REMARKS
OF
HON. ANTHONY F. TAURIELLO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. TAURIELLO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Thomas L. Stokes from the Buffalo Evening News of May 18, 1949:

THOMAS L. STOKES SAYS, "SOME WISDOM IS CONTAINED IN TRUMAN'S 'STUBBORNNESS' "

WASHINGTON, May 18.—The longer you watch what goes on here, the more the design of politics remains the same.

Here 4½ months ago, for example, we had a President go into office to carry out a program he had pledged in the campaign. It is a reform program.

This is just about the time, according to the design, that opponents of reform Presidents adopt familiar strategy to checkmate them and, sure enough, we are beginning to get it now. There are pleas for economy and for the President to be reasonable about reforms.

Just now opponents of the Truman program are able to capitalize upon economic conditions, upon a slowdown which may be temporary or not. There is no intention here to diagnose current conditions. The experts, themselves, disagree. Anyhow, the situation lends itself readily to arguments against new ventures.

There is a close parallel with the period when the late President Roosevelt inaugurated his New Deal reform program. This parallel concerns tactics but not economic conditions, for we were then in the midst of depression. Then the cry, as some will remember, was recovery first, reform later.

President Roosevelt went right ahead. And a good thing it turned out to be, not only because some of the reforms helped recovery, but also because we got on the books a number of statutes that will be very useful if we run into another depression.

Some people are getting annoyed with President Truman, as they did then with President Roosevelt, because he wants to go ahead. He is stubborn and unrealistic.

Economy then became a slogan of those who wanted to stop reforms. This is not to disparage economy. It's always a good thing and we could use more of it of the right sort. It has sincere advocates. But, if you've watched the show here long enough, you learn that the economy for which some interests and their spokesmen call so loudly is something else.

Economy can be used as a cover for cutting appropriations for purposes which they don't like, as, for example, in the Eightieth Congress, when funds for reclamation and

public power were reduced. This raised a clamor from the West that reacted for President Truman in the election. Also, certain functions of the Labor Department and other departments and agencies were sharply curtailed or stopped entirely by withholding appropriations.

In so many cases of the latter type, it was not economy at all, for the amounts involved were small. The aim was to hamstring or stop certain functions of government. It is so now with such measures as housing, education, and health, in which the amounts involved are very small compared with the total budget. Furthermore, housing, education, and protection to health are things we need whether there is a depression or not. We can afford them.

Some of those who promoted economy of the sort mentioned in the last Congress and are clamoring for 't now are those who benefited so largely from tax reduction in the last Congress and also from the Taft-Hartley labor law.

Modification of the Taft-Hartley law, on which President Truman is standing solidly, also has a depression angle, incidentally. The law as it stands has worked to make union organization more difficult and in a depression this would militate against labor. Labor unions always have suffered in depressions, as the economic history of our country shows.

President Truman's stubbornness on some points has its wisdom.

Proposed New Farm Plan

EXTENSION OF REMARKS
OF
HON. EDWARD H. REES
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, May 23, 1949

Mr. REES. Mr. Speaker, under unanimous consent granted me by the House, I am including herewith a statement from the National Grange Monthly entitled "The Proposed New Farm Plan."

It is written by Mr. Fred Brenckman, who has been associated with the Grange organization for many years and who is quite familiar with farm problems. I believe the Members of this House will be interested in Mr. Brenckman's views.

THE PROPOSED NEW FARM PLAN

(By Fred Brenckman)

After several months of intensive study and investigation on the part of the top-flight officials of his department, Secretary of Agriculture Charles F. Brannan on April 7 submitted the outlines of a new farm plan at a joint hearing before the House Committee on Agriculture and the Senate Committee on Agriculture and Forestry. At subsequent hearings before the House committee, Mr. Brannan was questioned at length regarding many angles in connection with the workings of the plan he advanced.

Basically, it may be said that the new plan is in harmony with the pledges given by President Truman during the last campaign, when he proposed high prices for farmers, coupled with lower costs of living for consumers.

NEW SUPPORT FORMULA

The plan advanced by Mr. Brannan would abandon the price parity system established in the early days of the Agricultural Adjustment Act. It would provide as a substitute a formula to set a total cash income goal every year. Then the Government would use loans and direct payments or subsidies to attain this income goal for farmers.

Mr. Brannan calculated that the income goal for farm cash receipts in 1950 should be $26,234,000,000, based on March 15 costs. That would be somewhat less than the $27,500,000,000 estimated cash income of farmers in 1949, and it would be well under the 1948 level of $31,000,000,000.

In discussing his plan, Secretary Brannan said:

"The standard of support has been established with reference to income criteria rather than price criteria. A recent 10-year period has been selected as the base. Simplicity of computation and application has been a constant aim.

"The recommended price support standard for any specific commodity does not represent a parity price nor does the composite average represent parity income as those terms are statutorily defined and commonly understood. This income standard simply represents a realistic minimum below which it is not in the interest of farmers or consumers to allow farm prices to fall, and above which I hope to find most farm prices most of the time. It is the minimum level from which we would be working toward narrowing, and eventually closing, the historical gap between farm and nonfarm income."

Taking as a moving base the average annual purchasing power of cash receipts from farm marketings for the years 1939 through 1948, the plan would set up an income-support standard, together with a specific price-support standard for individual commodities.

SOME ATTACHED CONDITIONS

Mr. Brannan emphasized the point that under his plan price supports for farm products could not be separated from the acceptance by farmers of reasonable undertakings to advance or accomplish the overall objectives of the plan. Among the conditions he enumerated were the following:

1. The observance of minimum and sound soil-conservation practices.

2. Compliance with or adoption of whatever programs are found necessary to curtail wasteful production or disorderly marketing. Included in this would be such measures as acreage allotments, marketing quotas, and marketing agreements which might be adopted from time to time through referendums or by the authority of the Secretary of Agriculture under terms of specific legislation such as is now on the statute books.

3. The limitation of eligibility for price support to a stated volume of production on each farm. This limit would be set at a point that would not encourage the development of extremely large industrialized farming.

Under the plan advocated by Mr. Brannan, for perishable commodities, such as milk, eggs, and meat, a new system of direct payments would be used. Under this scheme, the Government would allow the market prices for these perishables to vary with supply and demand. The difference between the market price and the sum calculated to be the support level would be given to the farmer in cash.

That it would call for a degree of regimentation far greater than anything that the farmers of America have heretofore known appears to be a safe assertion to make.

The plan is adroitly put together to appeal at one and the same time to both producers and consumers of farm products. Farmers are to get a high income, while consumers are encouraged to expect lower prices.

However, it must not be overlooked that both farmers and consumers would be taxed to raise the money necessary for payment of subsidies. They would also have to pay the administrative costs. There are those who declare that the CIO and the Farmers Union exercised a potent influence in the formulation of the plan, which is supposed to have the sanction of President Truman.

LONG-RANGE THINKING NEEDED

In the development of a long-range farm program it would be well for the farmers to do some long-range thinking. In the early days of the Republic, about 90 percent of the people lived on farms, and they molded the policies of the country. But from decade to decade the farm population has shown a relative decline as compared with the population as a whole. In 1940 only about 22 percent of the population was directly engaged in agriculture. According to estimates of the Census Bureau, only 19 percent of the people of the United States live on farms today. The other 81 percent are consumers.

In the long run, what the majority of the people want in a democracy, they are likely to get, if it is in the power of the Government to give it to them.

It is a fundamental trait in human nature that we try to satisfy our wants in the line of least resistance. While wishing the farmer well in a general way, what consumers want is cheap food. If prices of farm commodities are to be determined at congressional and presidential elections, where majority rules, then the farmers of the country will some day find themselves in a predicament from which it will be difficult if not impossible for them to extricate themselv-

Unemployment in California

EXTENSION OF REMARKS
OF
HON. RICHARD J. WELCH
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. WELCH of California. Mr. Speaker, pursuant to unanimous consent granted me to extend my remarks in the RECORD, while necessary in the circumstances, I reluctantly include the following United Press news dispatch from Salt Lake City, Utah, under date of May 18, 1949.

California is confronted with a condition over which it has no control. The fact that California now has over one-half million unemployed, including 170,000 World War veterans, is only too true and calls for serious attention by the Federal Government.

"KEEP OUT OF CALIFORNIA," JOB-SEEKING VETERANS ADVISED

SALT LAKE CITY, May 18.—Urban F. Stewart, of San Francisco, veterans' employment representative for California, advises the Nation's veterans, "In the name of common sense, stay away from California."

Mr. Stewart spoke at a regional economic conference here of American Legion leaders from the 10 Western States.

California now has 528,000 unemployed, Mr. Stewart said, including 170,000 veterans, and 15,000 more veterans descend on California each month in search of work.

"Most of them hit California without a red cent in their pockets," he added. "They add human tragedy to an already miserable picture."

He said more complications will come early this summer as 26,000 veterans finish school under the GI bill.

"For instance, enough watchmakers will be graduated from California colleges this summer to supply the Nation," Mr. Stewart

told the conferees. "Even if everybody in California had his watch repaired every week, there wouldn't be enough work for these watchmaking graduates."

He said California's public facilities are "so overtaxed that a man has to be dying on his feet to get into a hospital and he has to commit a major crime to be sure of a cot in a county jail."

Veterans Want Constructive Program

EXTENSION OF REMARKS
OF
HON. JOHN A. WHITAKER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. WHITAKER. Mr. Speaker, under leave to extend my remarks, I am including a letter which I have received from Mr. William T. Pendleton, Jr., president of the Daviess County World War II Veterans' Association, and which expresses very clearly the sentiment of that organization with respect to various matters affecting the veterans:

DAVIESS COUNTY WORLD WAR II
VETERANS ASSOCIATION, INC.,
Owensboro, Ky., May 8, 1949.

Hon. JOHN A. WHITAKER,
Member of Congress,
Washington, D. C.

DEAR MR. WHITAKER: Due to numerous bills pertaining to veterans' legislation and changes and procedures of the United States Veterans' Administration, this organization, by popular discussion and vote, has set forth its views on various and sundry matters affecting the veterans, as follows:

We still oppose the bills recently discussed by Congress which would have granted a pension to World War I veterans only, regardless of disability, at age 65. Only the disabled should be pensioned, and existing laws already provide for nonservice-connected disabilities. The cost of such legislation would be excessive, and unless adequate and separate appropriations were made it would doubtless force the Veterans' Administration to exercise economy measures in compensating younger veterans with legitimate war disabilities.

To substantiate our viewpoint, the Economy Act of a past administration is cited. Already it is noticed that veterans who suffered war disabilities have been reduced in pension, or else are not receiving adequate pension for the pain or lack of employability incurred. Many men with legitimate disabilities have never received suitable settlement of claims because of lost service records or slowness on part of the VA and the military to produce the service record. Some men have no service record of their disability because of being in fast-moving combat units that had little time for record keeping. Others failed to register ailments with service medical units because they did not "ride the sick book." The Veterans' Administration is obviously not cognizant of the esprit de corps and discipline in combat units which caused servicemen to keep ailments to themselves unless of a very serious nature, and not to "give over" to aid stations or hospitalizations.

The settlement of claims and the reviewing of cases is very slow in VA in general. Letters and inquiries from veterans likewise are not always given detailed answers as requested, but rather, short and fragmentary answers. Widow's claims are slow and harassing in detail, especially when handled from Washington or the Ohio office. The insurance service also needs reorganization on a commercial-type basis.

We oppose any curtailment in our VA hospital building program in Kentucky or any reduction of appropriation for the medical program. It is noticed that the VA can still spend millions of dollars in Kentucky for GI flight training disguised as nonavocational by claimants. Yet in the same year VA tried to reduce the hospital program. Congress legislated against avocational pleasure courses such as flight training under the GI bill, yet flight training goes on to the detriment of other VA funds. We do need our medical program at full strength, for each year will bring greater disabilities as age increases.

Along the educational phase of VA administration we opposed the edict of VA which prevented VA field personnel from supervising the GI bill training on the job. Veterans training in firms and schools received professional up-to-date assistance from VA field personnel; whereas the State agencies are not adequate in this respect. Adequate supervision periodically by VA personnel would protect the veteran from employers who attempt to use his benefits as cheap labor rather than as helpful training.

Furthermore, the difference in administration by the VA in respect to the two training laws (Public Law 346 and Public Law 16) has resulted in a definite disadvantage for the employment of the disabled veteran. A firm now, more than ever, prefers to hire a veteran not disabled—under the GI bill.

We favor the local field-office arrangement of the Kentucky Veterans' Administration and oppose any move to transfer records or services into centralized State or regional offices. The impending reduction of personnel mentioned by the press would thus be more practical in larger offices. Veterans like personalized service on a local basis rather than to have to resort to lengthy correspondence with some larger office. As we see it—what success the VA has had lay in its decentralizing program of records and services—right down to the individual veterans' community. So, whether it be disability or education a veteran likes to get expert, exact, and prompt information, and this at local level with adequate records available to discuss the problem professionally.

The GI bill loan provisions are fairly "dead" for all practical purposes. Lending institutions apparently have accepted all the 4-percent loans they can discount and are reluctant to accept additional straight GI loans, unless very small ones. Other lenders oppose the red tape, negotiation, and delay involved. The only way the GI loan can be made really effective is for Congress to legislate the necessary amplifications to the present law, or to provide a separate loan act, sufficiently effective.

In general summary:

We would like ample pensions for legitimate war disabilities, on a more presumptive basis, with less emphasis on finding service records that oftentimes do not exist. Expedite payment of claims for widows and dependents. We like the VA set-up with records and services at local offices and not in one centralized large office. We dislike the time, delay, and loss of work required when one has to negotiate by mail or travel to a large office. The GI loan bill must be amended so as to be workable, or other loan legislation should be enacted. The education program for the GI bill should be administered similar to the disabled training, so that the employment of disabled vets will not be jeopardized. The veteran training on the job under GI bill is entitled to better training with more adequate supervision. Veterans owing the VA money due to overpayment while in training, should have more leniency from the VA in the waiving of settlements, especially since it was not usually the fault of the trainee. Due to rising unemployment the unemployment pay for veterans should be extended beyond July 1949; however, stricter administration and disbursement by States should be exercised. In general, VA regional offices should instruct all of their staff personnel, especially those adjudging pensions, to give more adequate detailed answers to veterans' inquiries, rather than the old "run-around," cryptic, official-sounding, brief letters. Some should be reminded that they are public servants and are accountable to the people and Congress, who legislate for the people.

We shall appreciate your consideration of our viewpoint and for your referral of this material to the necessary congressional committee and agencies.

By direction of the membership.

Yours very truly,
WM. T. PENDLETON, JR.,
President.

Our Nation's Foundation

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. JENSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by A. M. Piper, editor of the Council Bluffs (Iowa) Nonpareil:

OUR NATION'S FOUNDATION

The foundation of our Republic is faith in the capacity of the common man—which means most of us—to discern truth, to see and accept, and live by ideals.

Where do these characteristics come from? Out of the Bible where we find the commandments of God and the teachings of Jesus.

The American belief is that people have a high moral dignity because of their relation to their Creator. As sons of God, they are entitled to freedom of speech and action, and their personalities are entitled to respect.

We Americans believe that man with such splendid origins and capacities can be inspired to put the general good above his own selfish interest and ambition—and find his greatest happiness in service.

This is the American creed. It is based on religion. Every American, citizen who believes in God, who is disciplined by prayer, who is taught and who teaches Christian morality, and takes seriously his responsibility to society, is strengthening the foundation upon which our Republic rests.

Conversely, those Americans who neglect religion, who do not seek the will of God for their lives, are weakening our Nation.

We cannot play at religion and keep the American way of life.

Dr. Daniel L. Marsh, president of Boston University, has indicated what he calls the American canon—comparable in secular literature to the canon of the Bible. It is composed of seven documents:

1. The Genesis is the Mayflower compact which began "In the name of God, Amen."

2. The Exodus is the Declaration of Independence—the going out into the promised land of liberty and self-government.

3. The book of law is the Constitution and Bill of Rights. "Thou shalt not" is spoken not to individuals but to their Government.

4. There are many major and minor prophesies, but the best is Washington's Farewell Address.

5. Our national psalm—the Star-Spangled Banner.

6. The gospel was spoken by the savior of the Nation, Abraham Lincoln, in his second inaugural address. It was and is still good news.

7. The epistles are many, but among the best is Woodrow Wilson's, The Road Away From Revolution. That memorable address concludes:

"The sum of the whole matter is this, that our civilization cannot survive materially unless it be redeemed spiritually. It can be saved only by becoming permeated with the spirit of Christ and being made free and happy by the practices which spring out of that spirit. Only thus can discontent be driven out and all the shadows lifted from the road ahead."

All these documents begin and end with God. Freedom can be maintained where the people are committed to belief in the value of human personality and have an invincible faith in the providence of God.

Our kind of government can succeed only in a Christian nation.

Constructive Effort To Save World From Atomic War Perils

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. DOYLE. Mr. Speaker and colleagues, I take pleasure in presenting for your consideration, the following editorial which appeared in the Long Beach (Calif.) Press-Telegram as an editorial on Wednesday, April 6, 1949.

Long Beach, Calif., is my home town, and the Press-Telegram is one of two daily papers printed in that important city of my native State of California. It is the largest city in the Eighteenth Congressional District, which I have the honor to represent in this the Eighty-first Congress as I also did in the Seventy-ninth Congress:

CONSTRUCTIVE EFFORT TO SAVE WORLD FROM ATOMIC WAR PERILS

There is much tumult in the world, but also a lot of constructive thinking.

This is evident in the statement of Clark Eichelberger, director of the American Association for the United Nations, who does not view the North Atlantic Security Pact as injurious to the United Nations, nor out of keeping with it.

Mr. Eichelberger, writing in the Nation magazine, says this:

"The effect of the Atlantic Pact upon the United Nations will partly be determined by the arguments used in presenting it in the Senate. There will be universal support of the major objective of the pact—to give assurance to the nations of western Europe that if they are attacked, this country will not wait for a Lusitania or a Pearl Harbor.

"Such assurance, however, must not be given in a way to increase insecurity in the rest of the world for that would weaken the security of the Western Hemisphere. On the other hand, if the pact is so defined and presented as to strengthen the security systems of the entire world, the security of western Europe will be doubly enhanced."

Fundamentally, the Atlantic Pact is an effort to avert war. If it succeeds in this it will be a long-range blessing to the United Nations, giving the latter another opportunity to get its feet on the ground.

Any step to prevent war is of immeasurable benefit, be it taken by the United Nations or signatories to the North Atlantic Pact.

The Second World War cost the lives of 40,000,000 people and 4 trillion dollars. This is the conclusion of C. Hartley Grattan, economist and writer, in summarizing the economics of destruction, in the current Harper's, a report which taxes human comprehension.

Even if $4,000,000,000,000 could be clearly perceived in relation to economics, no tabulation or figures could tell the entire story. Still not included is the moral cost of what men so systematically and purposefully did to man.

It may shock folk to be reminded that 20 out of every 100 residential buildings in Germany were destroyed, that every fifth Greek was left homeless, that 28,000 houses in Rotterdam were knocked down, that the British had 460,000 houses destroyed and the Japanese 2,250,000.

Mr. Grattan says that no earthquake, no hurricane, no flood known to record matched World War II in its destructiveness. No previous war did anywhere near so much damage. Even World War I was one-seventh as destructive.

The sardonic joke about the front line being the safest place in war became true. Three civilian casualties were chalked up for every military one. Total deaths, says Mr. Grattan, were just about equivalent to all the children in the United States under 19 years old.

A third world war would be much more destructive. One bomb killed one and one-half as many people in Hiroshima as died in the air bombardments throughout the entire war in England. The atom-bomb destruction in a third world war would advance not a mere 7 times from World War I to World War II, but on the order of 70 times and perhaps spell the end of civilization, and even life.

In the face of Mr. Grattan's data, how can any one dare assume a third world war is inevitable? Every possible means to prevent it must be explored. The North Atlantic Pact constitutes one of the road blocks to possible war.

Robert Nathan wrote in his "Winter In April":

"Yet in the midst of all the violence and unreason, something tells me not to despair. Perhaps it is because, when I was a child, the world was filled with a sense of God; and I have not altogether forgotten it."

Representative Abraham J. Multer

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the Brooklyn Eagle of Thursday, May 19, 1949, with reference to our distinguished colleague, Representative ABRAHAM J. MULTER. Representative MULTER was recently honored at a large dinner in Brooklyn marking his 25 years of active service toward the furtherance of brotherhood, tolerance, and understanding among peoples of all faiths. I know that all of his colleagues join in commending him for his splendid service on behalf of mankind.

MULTER HONORED FOR INTERFAITH WORK

An appeal for world peace through the furtherance of brotherhood, tolerance, and understanding among people of different faiths was voiced by Representative ABRAHAM J. MULTER of Brooklyn's Fourteenth Congressional District last night.

Culminating his 25 years of active community service in the fields of interfaith and brotherhood, Representative MULTER was honored at a dinner in the grand ballroom of the Hotel St. George. The dinner was sponsored by a committee of 100 prominent Brooklynites and was attended by more than 350 borough public officials and civic leaders.

Funds raised at the $50-a-plate testimonial will be used toward support of the "Eternal Light" radio program, sponsored for the past 4 years by the Jewish Theological Seminary of America. The broadcast is carried over the national NBC network every Sunday at 12:30 p. m., Brooklyn time.

GETS CERTIFICATE

Representative MULTER was awarded a certificate of appreciation "for the devoted service he has given his community in advancing the cause of the religious and cultural traditions of Judaism, and for his able leadership in mobilizing public interest in the program of the Jewish Theological Seminary of America." The presentation was made by Controller Lazarus Joseph, a close friend of the Congressman, on behalf of the committee.

In thanking the assemblage for the honor, Representative MULTER declared, "By your presence and support of the cause of brotherhood the vast importance of spreading knowledge and understanding throughout the world is clearly shown."

He extolled the abundance of brotherhood and tolerance in New York City, and urged its widespread application all over the globe. "Behold how good and pleasant it is to live at peace in our community. May it ever be with us," he concluded.

BARKLEY HAILS MULTER

Federal Judge Leo F. Rayfiel, who headed the sponsoring committee and introduced the speakers, read a telegram from Vice President ALBEN W. BARKLEY congratulating Mr. and Mrs. Multer and the seminary as well. Another congratulatory wire was received from former Court of Claims Judge Emanuel Greenberg, who was out of town.

The principal guest speaker was Dr. Louis Finkelstein, president of the seminary, who described the functions of the organization. "Our primary function is one of interpretation," he said. "We must interpret the relationships between parents and their children; the traditions of Judaism to its followers and their fellow Americans; and the values of brotherhood to everyone. The seminary is the Jews' spokesman to the world," he said.

SPECIAL PERFORMANCE

"The Brotherhood of Man is a paper organization," asserted United States Attorney J. Vincent Keogh, "unless each individual practices these principles in his daily actions. It is not enough to say that we are brothers, but to prove that we are by actions," he said, in singling out Representative MULTER as "one typical of this achievement."

The dinner program included the presentation of a specially prepared "Eternal Light" performance entitled "When Abe Lincoln Went to Sinai," written by Morton Wishengrad and narrated by Eddie Dowling, prominent actor, director, and producer. The cast included Cantor Robert H. Segal, Leon E. Janney, Karl Swenson, Mitzi Gould, Guy Repp, and Henry Norell, and the performance was directed by Walter McGraw, of the NBC.

Former Supreme Court Justice Mitchell May was honorary chairman of the dinner. Others on the committee included H. Sidney Landau, cochairman; former Judge Greenberg, and United States Commissioner of Jurors Morris J. Solomon and Dr. Abram Kanof, associate chairmen; Sidney Squire, secretary; Louis Rothbard, treasurer, and Rabbi Halpern, of the East Midwood Jewish Center, rabbinical chairman. The latter delivered the invocation.

Among those present were Maximilian Moss, president of the Board of Education; Supreme Court Justice George J. Beldock, Deputy Boxing Commissioner Jack J. Doberstein, State Senator Louis L. Friedman, Representative Louis B. Heller, Aaron L. Jacoby, chief clerk of the Surrogate's Court; State Senator J. Sidney Levine, and Corporation Counsel John P. McGrath.

Also, Supreme Court Justice William T. Powers, Benjamin C. Ribman, member of the Board of Higher Education, Abe Stark, former Commerce Commissioner and prominent borough merchant; Burton B. Turkus, former chief assistant district attorney, and City Councilman Edward Vogel.

To What End?

EXTENSION OF REMARKS
OF
HON. DANIEL A. REED
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, May 20, 1949

Mr. REED of New York. Mr. Speaker, it must be becoming clear to even the most ardent spenders and wasters of the taxpayers' funds that their honeymoon will have to come to a close unless they wish to drive this country into deficit financing and ultimate ruinous inflation.

Under leave to extend I am inserting in the RECORD an editorial which appeared in the Wall Street Journal for Tuesday, May 24, 1949:

TO WHAT END?

It must be clear to our Washington policy makers that there are now but two choices in fiscal policy; either cut Government expenditures or run the risk—it is almost a certainty—of deficit financing.

The so-called third choice of raising tax rates is illusory. The effect of such action would be to so reduce the activities which produce taxes that the total of tax collections would fall even further below the contemplated level of Government expenditures.

The situation is that this Government must save or go further into debt. The sources of more income are just not there.

Deficit financing might have either of two results.

It might again result in increasing the money supply and send prices and wages on another whirl upward. There are signs that the policy makers believe that would happen.

More likely deficit financing in a period of high business activity would have a psychological effect which, in spite of the inflationary implications, would lead to a full-scale depression.

Whatever happened, inflation or deflation, there would be set up powerful demands for Government controls over the economy. Such measures as proposed in the Spence bill, large programs of public works, Government-directed output are what we could expect.

In face of those clear prospects, there is resistance to any moves for economy. And along with that resistance is the continued and persistent demand for legislation to give the Government the measures of control which it demands.

There is a quotation from the House Divided speech of Abraham Lincoln which we think bears on this situation. It follows:

"We cannot absolutely know that all these exact adaptations are the result of preconcert. But when we see a lot of framed timbers, different portions of which we know have been gotten out at different times and places and by different workmen—Stephen, Franklin, Roger, and James for instance, and we see these timbers joined together, and see they exactly make the frame of a house or a mill, all the tenons and mortises exactly fitting, and all the lengths and proportions of the different pieces exactly adapted to their respective places, and not a piece too many or too few, not omitting even scaffolding—or if a single piece be lacking, we see the place in the frame exactly fitted and prepared yet to bring such piece in—in such a case we find it impossible not to believe that Stephen and Franklin and Roger and James all understood one another from the beginning and all worked upon a common plan or draft drawn up before the first blow was struck."

Coalition Meat Ax

EXTENSION OF REMARKS
OF
HON. JAMES G. POLK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. POLK. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include therein a very timely editorial from this morning's Washington Post entitled "Coalition Meat Ax."

COALITION MEAT AX

The House Appropriations Committee has just dealt another thoughtless and thoroughly irresponsible blow at the foreign policy of the United States. A coalition of Republicans and Dixiecrats on the full committee has proposed an arbitrary slash of 15 percent in next year's ECA funds, thus discarding the work of its own subcommittee, disregarding the testimony of every competent witness, and playing politics with world recovery. The committee has proposed a colossal waste in the name of economy, for its action would almost certainly make the ECA program ineffective. Unless Speaker RAYBURN and the other House leaders rouse themselves and get this misguided decision reversed on the floor, the world will conclude that American foreign policy is at the mercy of every political wind that blows.

The full committee's action is all the less defensible because careful study had led its subcommittee to a different conclusion. The subcommittee held day-long hearings for two and a half weeks. It went into every relevant aspect of the recovery program; it resisted every temptation to make cuts that could not be justified. The administration itself had asked for $157,000,000 less than the authorized amount, in view of falling prices; the subcommittee proposed an additional cut of one hundred and eighty-two million from the authorized figure. It would thus have made substantial savings without endangering the ECA program. Yet the full committee, wielding the meat ax as blindly as Mr. TABER did a year ago, threw its subcommittee's work into the ashcan, on the theory, blithely expressed by Representative ALBERT THOMAS of Texas, that prices could be counted on to fall by that amount by June of next year. If the 435 Members of the House permit this kind of crystal gazing to take the place of statesmanship, the House might as well forfeit its claim to be a partner in shaping and controlling American foreign policy.

Much more is at stake here than the reputation of the House. There is a cynical belief abroad, and in some parts of our State Department, that Congress simply will not do what is needed to check Soviet pressure unless it is whipped up by a sense of crisis. Possibly one of the calculations behind Moscow's new reasonableness is the thought that a little sunshine will cause Congress to take off its cloak and drop its guard, like the traveler in Aesop's fable. Mr. Acheson must have been fearful of the same thing just before he flew to Paris last week for his meeting with the Russians. He said it would be tragic to have American efforts slacken now, just when they seemed for the first time to be succeeding; and he added that there was "nothing more important in the world today than the steadiness and consistency of the foreign policy of this Republic." The Appropriations Committee has thrown doubt on this steadiness of purpose just when American negotiators at Paris need it most.

The full House can still save itself and save the country from the folly of its committee. We hope the 118 new Members, in particular, will see to it that the cuts made by the full committee are reversed and the figure approved by the subcommittee is allowed to stand. A quick reversal will show that the House knows the meaning of world leadership.

Address of Hon. James P. McGranery

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. BARRETT of Pennsylvania. Mr. Speaker, under leave to have my remarks extended in the CONGRESSIONAL RECORD, I would like to have inserted the following address delivered by the Honorable James P. McGranery, judge of United States District Court for the Eastern District of Pennsylvania, at a luncheon meeting of Delta Epsilon Sigma, on Thursday, April 21, 1949, at the Bellevue-Stratford Hotel during sessions of the National Catholic Education Association convention in Philadelphia, Pa., April 19–22, 1949:

It is a singular privilege to speak before this distinguished group composed as it is of the representatives of a national association whose members "bear upon themselves in an eminent degree the impress of Catholic higher education through the liberal arts." Many here present are of great note not merely because of their "effective scholarship"—not only because they bring "the principles of Catholic philosophy to bear upon the problems of a modern free society"—but even more because they have valiantly dedicated their entire lives to the apostolic mission.

The name of your scholastic honor society, Delta Epsilon Sigma, is a constant reminder of the golden words of Saint Thomas: "It is for the wise man to set things in order."

If "peace is the tranquillity of order," as another great saint has stated, then the wisdom that is yours forms the treasure for which men of our time and men of all time are forever searching whether consciously or unconsciously.

It is true that in each generation of mankind the water level of progress has reached no higher than the level of its most inspired scholars.

Fortunately for America, our Declaration of Independence was written by men whose minds reached the spiritual level of eternal principles. Hence the inspired statement: "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

And in each succeeding generation of our Nation there have always been reared some children who learned in their first catechism days the answer to that essential question: "Why did God make you?" The answer to which is the most simple—the most profound truth of all: "God made me to know Him, to love Him, to serve Him in this world—and to be happy with Him forever in the next."

St. Gregory once said that those who are very close to our Lord do not need much explanation, much explicit statement of the first principles: they see in them all the other truths, even as the angels see all other truths in the first principles of natural thought.

Nevertheless there have always been men who have benefited—even after acts of faith—from the clear-cut definitions uttered from time to time by holy mother church. The investigations by theologians have made use of the progress of philosophical and scientific thought to illustrate and more clearly present the hidden beauties of supernatural truth.

If faith is indeed "the act of pondering with assent"—then it continues to be a virtue perfecting the mind of man.

And in proportion as the minds of our Catholic youth are developed in conformity with the principles of Catholic philosophy—in the same ratio may we see the arts and sciences—whether of pedagogy or government—continue to shape a world where all men can use their freedom for the only purpose of lasting importance—for the purpose of finding their way to God.

The greatest menace of our time is not intellectual progress in our universities—but rather moral decay among those faculty members who would destroy the patriotism, the high ideals, the religious faith of our youth.

Progress means literally "taking steps forward"—and so I distinguish between true intellectual progress—(which is forever one with true Christian education)—and so-called progressive education which too often means letting the mind wander loosely about as does a cow munching clover in a field—for so-called progressive education completely ignores the need to train the will and to exercise the intellect according to rules of order.

The intelligentsia who infest the faculties of many colleges and universities are so lacking in mental and moral discipline—that they attempt to enlist our youth in the ranks of the Communists—actually—in the foreign legion of Soviet Russia.

Their aim is not to educate—not to develop even the natural faculties of youth. Their aim is to discourage, to confuse, to destroy youth's capacity for right thinking and good living. These false teachers would erase youth's faith in his fellowmen, in his Government, in his God.

Communism can conquer only where there is chaos. And chaos follows in the wake of confusion.

When the minds of our young citizens are confused by false charges—then only is there a wavering of loyalty to country and the final loss of respect for authority.

Authority—we know well—comes from God to the elected representatives of our people. And so our Nation has been greatly blessed that the men legally entrusted with judicial, executive, legislative functions of our Government have been and are preponderantly honest, able, and fearless Americans—with the same philosophy of life that characterized our founding fathers.

If this is to continue to be true—if our democratic form of government is to continue to be based upon the Bill of Rights safeguarding the dignity of the individual—if our Republic is to survive the insidious attacks of the totalitarian state, then the price of eternal viligance must be paid over and over by the men and women endowed with Christian scholarship and entrusted with molding the minds of the men and women of tomorrow.

The precious heritage of Christian "love of wisdom" must be shared by more and more of the boys and girls of today.

Then only can we hope for the lasting peace which is the tranquillity of order. Then can we be sure that the world in which we live will be the kind of world that it was meant to be—one where every child will have the opportunity to know and to love and to serve God here—and to say when approaching that further world—in the hallowed phrase of St. Augustine: "Thou has made us for Thyself O Lord—and our hearts are restless till they rest in Thee."

Let the Marines Keep Telling It

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. SMATHERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New Orleans States of April 14, 1949:

LET THE MARINES KEEP TELLING IT

"Louis Johnson, the new Secretary of Defense, is giving the Army renewed hope that it might be allowed to gobble up the Navy's Marine Corps as unification of the armed forces is pushed. The marines had figured that they were assured of continued life."—From the April 15 issue of United States News and World Report.

The United States Marines?

If the Marine Corps lives that long it will be 174 years old on November 10.

Its life is threatened by interservice jealousies, and the inability of the Secretary of Defense to make the military establishments of this country work hand in hand as the Congress has decreed and common sense dictates.

But must the marines go?

They fought at the battle of Trenton in the Revolutionary War.

They fought with muskets and cutlasses aboard *Old Ironsides*.

They marched with Eaton and O'Bannon across African deserts to capture Derna and raise in 1805 the Stars and Stripes for the first time in a foreign land.

They have fought in the West Indies against pirates. Their proud ranks marched through Korea and fought in the Boxer Rebellion. Their battle honors include the Aisne, the Marne, Chateau Thierry, and the Argonne.

They were the first American troops to be sent to Iceland in 1941. Their defense of Wake Island was an epic of courage.

They landed at Guadalcanal, 8 months after the war and before any other service was ready, and gave the Japanese their first defeats. They saved our life line to Australia, then.

Does Tarawa mean anything to the American people? Those were marines.

Does Iwo Jima mean anything to the slide-rule civilians and jealous opponents who would eliminate the marines?

Is there no more use for the stoutest amphibious fighters this Nation has ever developed? Is there no more need for a corps which always prided itself on being a volunteer outfit?

Are there no more islands on the face of the globe? Are there no more beaches to be captured, anywhere, ever? Or are the marines just too damn good?

After Wake Island, President Roosevelt said:

"The courageous conduct of the men and officers who defended Wake Island against an overwhelming superiority of enemy air, sea, and land attacks from December 8 to December 22, 1941, has been noted by their fellow countrymen and the entire civilized world, and will not be forgotten as long as gallantry and heroism is respected and honored."

Is jealousy and partiality going to make that their epitaph?

Reduction of Federal Expenditures

EXTENSION OF REMARKS
OF
HON. WILLIAM M. McCULLOCH
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. McCULLOCH. Mr. Speaker, in times of prosperity the careless spenders justify their actions on the ground that the people can well afford high taxes and larger and larger Federal expenditures.

In times of disinflation, or recession, or depression the careless spenders justify their actions on the ground that huge expenditures and deficit financing result in a lasting stimulant to business.

In good times and bad times their program is to tax and tax and spend and spend.

The fiscal year ending June 30, 1949, will be the most prosperous in our history. Unbelievable as it may seem, we will end the fiscal year with a deficit.

Furthermore, responsible administration spokesmen admit that disinflation is now taking place. Others believe that we are now experiencing a minor recession.

In any event, the time has come to reduce appropriations and cut expenditures.

If there be a Member of Congress who has not decided on a course of action in the matter of appropriations and expenditures, I would suggest a careful reading of the editorials from the Christian Science Monitor of May 18 and May 21, and the editorial from the Washington Post of May 20, which follow:

[From the Christian Science Monitor of May 18, 1949]

GOVERNMENT, TOO, CAN RECONVERT

Economizing may yet become popular in Washington. Increasing talk of saving by

Congressmen reflects not only budget necessities but an aroused public interest.

Like a good many businesses which are no longer able to raise prices when costs go up, the United States Government is feeling the pinch. Declining business spells a lower level of national income and a reduced return from income taxes. But at the same time the expenses of Government have increased.

In this situation businessmen are tightening their belts, trimming out dead wood, hunting new and more efficient methods, cutting costs. In this situation President and Congress have been proposing to buy new governmental equipment and services which will add billions to a budget already unbalanced.

In strict accuracy we should say that Congress and President still are proposing extra expenditures. Mr. Truman's expanded social welfare program would add at least $1,500,000,000. Plans for arming America's allies call for something like another billion. The Senate has recently added several hundred millions for housing and education bills and the House tacked more than a billion on to the defense appropriation.

The Committee for Economic Development points to roughly $3,000,000,000 in extra Federal expenses to which the Nation is not yet committed, but which it is in process of contracting. The CED has just released a comprehensive and useful report by its research and policy committee, pointing out that it is in this area of proposed new expenditures that savings should be most feasible. It favors taxes rather than a deficit but declares economy can remove the need for new taxes.

At the same time Congress has got from the staff experts of the Senate-House Tax Committee a jarring estimate that the Government will go $3,000,000,000 into the red next year. Three billion is repeated once again. It is roughly the amount the Hoover Commission reported could be saved by streamlining the administrative departments. This is not exactly a magic figure, but it may be one at which the public should ask Congress to aim.

Another demand the people might make on Congress and President—that any addition to costs be accompanied by provisions for paying the bill. It is altogether too easy to "charge it."

From Washington in the last few days have come some signs that the wind is shifting. Government is beginning to feel the pinch, too—and to hear from the people. If the public demand is strong enough Government will also "reconvert" to a more efficient and economical operation. If business can do it so can Government.

[From the Christian Science Monitor of May 21, 1949]

FEDERAL FINANCES OUT OF CONTROL?

In face of a prospective deficit Congress continues to add to rather than subtract from appropriation bills. In face of a business decline President Truman continues to call for increased taxes. This unrealistic behavior indicates that the American people will soon have to insist on drastic measures to meet a fiscal crisis or frankly recognize that their Government is unable to control its finances.

Latest developments in the Senate confirm the impression that Congress can't or won't deal firmly with the situation created by rising costs and falling revenues. Within 10 days the Senate has rejected attempts to trim three giant appropriation bills. Administration supporters have led the way in turning down Republican proposals to cut these bills by a straight 5 percent. Now Democrats are putting forward an economy plan of their own. Senators TYDINGS and RUSSELL have introduced a resolution which would require the President to slice that much from the total of appropriations for administrative departments.

This proposal partly abdicates that primary function of the people's elected representatives—control of the purse strings. But it does leave Congress fixing the total for expenditures. And there is something to be said for leaving to the Executive a good deal of flexibility in making the adjustments required by economies. There is also some justice in putting over-all saving up to the President since his followers in Congress have opposed specific savings.

Mr. Truman so far has made cuts in Marshall-plan aid — permitted by lower prices—but otherwise has taken the position that his original budget had been trimmed to the bone. He has also urged Congress to give him authority to reorganize the administrative departments. The Senate and House have moved in this direction, but in divergent bills and with strings attached which could largely limit the economies the Hoover Commission declared possible through reorganization. Adoption by Congress of the Hoover proposals would be a more straightforward procedure.

Meanwhile, we begin to hear warnings against saving. Some of these may be induced by the political difficulties of economizing. Others come from those who hold that deficits are better than depressions. This view is widely accepted. Certainly if adding $20,000,000,000 to the debt would prevent a depression, few citizens would oppose it. It has been estimated that the United States lost $200,000,000,000 in potential production in the depression that followed 1929. Under some conditions balancing the budget could be a mistake.

But has the United States really come to that situation? The Nation is still in a period of relative prosperity and high employment. If it must resort to borrowing in order to give the economy a shot in the arm at such a time, then Federal finances are indeed already out of control. We cannot believe that is the situation, although political pressures are toward irresponsible spending. More emphasis on economy would be helpful in counteracting these temptations. It would also save funds with which to lighten the burden of taxes and improve Government's ability to meet the demands which a continued business decline might present.

[From the Washington Post of May 20, 1949]

ECONOMY

Commentators stand accused of inconsistency who, while the national economy is in a period of readjustment, back one spending program after another and at the same time render lip service to the cause of retrenchment. Yet, if it be agreed that economy is a necessary Government contribution to the readjustment, there must be more than lip service to retrenchment. On Capitol Hill economy is winning, more and more advocates, and without regard to party. There are the 5 percenters—those who would pare administrative costs by a method which at the most would save the Government $1,500,000,000. Others are said to be lining up behind Senator RUSSELL's proposal for a $3,000,000,000 slash as a final amendment to the concluding appropriation. And, of course, there is always Senator BYRD, who wants to repeal the exemption of the military agencies, the Veterans' Administration, and other bureaus from the current Federal personnel ceilings set up several years ago by Congress, and fix new over-all ceilings. As yet, the only bill of the dozen huge appropriation bills that has been acted upon is the Treasury-Post Office measure, and this got no special economy treatment.

Over-all reduction of appropriations on a percentage basis is admittedly a crude device for reducing governmental costs. But it appears to be the only feasible method of effecting substantial economies until accounting reforms and changes in methods of handling appropriation bills are introduced that would enable Congress to determine the cost of specific functions and activities and obtain a comprehensive picture of all governmental spending programs. It will take a long time to bring about these much-needed reforms, even if Congress consents to make them. Meanwhile, expenses are likely to reach unmanageable proportions unless drastic action is taken soon.

The 5-percent reduction in Labor-Federal Security appropriations proposed by Senators BRIDGES and FERGUSON, which has now been rejected in the Senate, was not as undiscriminating as it superficially appeared to be. For the amendment provided that cuts could be made in varying percentage amounts at the discretion of the heads of the agencies concerned, with the approval of the Director of the Budget, if the aggregate required amounted to 5 percent. Moreover, appropriations for public assistance grants-in-aid, unemployment compensation, and other outlays that represent obligations to which the Government is committed would have remained untouched. The reductions, confined to administrative outlays, according to Senator FERGUSON's estimates, would not have exceeded $15,000,000. There may still be a chance of effecting economy by the method advocated by Senator RUSSELL.

The fact that economy in actual practice entails hardship for some people is another reason why Congress hesitates to take strong action to bring down Government costs. Nevertheless, no employer, not even the Government, can for humanitarian reasons spend for the sake of providing jobs for men and women when the costs are not justified by the results and, in the case of the Government, lead to the overburdening of the taxpaying public—at a time, moreover, when the state of the national economy calls imperatively for retrenchment. There would be no hope of Hoover reorganization—the wisest economy measure of all—if such an inhibition were to prevail.

Lessons From the Orient

EXTENSION OF REMARKS

OF

HON. DANIEL A. REED

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, May 20, 1949

Mr. REED of New York. Mr. Speaker, I believe that the experience of the Chinese war lords in collecting taxes in advance threatened with a deficit is worthy of consideration by those who wish to do a little finagling in order to keep up their spending and wasting program.

Under leave to extend I am inserting in the RECORD an editorial which appeared in the Wall Street Journal of May 24, 1949:

LESSONS FROM THE ORIENT

Every schoolboy knows that there was civilization in the East, particularly in China, when our own Occidental forebears were still primitive barbarians. Despite our primacy in many matters, it seems we can still pick up subtle tricks from the antique East.

There is the matter of taxes. The Chinese war lords long ago thought up the idea of collecting taxes in advance whenever they ran short of money. They began by collecting them only a little bit ahead. This seemed

such a good plan that before long the peasants were being hit for their taxes 5 and 10 years in advance.

The idea has been slow to catch on in this country, but we are making progress. Under certain circumstances, a man is legally supposed to pay income taxes on money he just hopes to earn in ensuing months. It can be a case of pay first, earn it later.

A proposal in Congress, the Mills bill, opens the way for the same thing on corporation income. This bill would speed up the payment of corporation income taxes so that a whole year's bill would be paid in 6 months instead of 12. The thought is that the quicker the Government can get the money the quicker it can spend it.

It seems illogical for the Mills bill to stop at this point. If quicker payment is good, why not have companies pay their taxes not just faster but in advance? Of course, not having earned anything yet they might be short of cash, but if so they could borrow it. Lots of times the Government has to borrow ahead and pay interest because it's short of cash. It's just a question of who does the borrowing.

For that matter, why should our individual income tax pre-payment be restricted to a quarterly basis? Is it any more illogical to have a man pay a year's taxes on money he hasn't earne' than to pay 3 months' taxes on money he hasn't earned? The yearly plan would be merely an extension of the principle.

The Chinese, with incontrovertible logic, saw that the principle need not stop even with 1 year's taxes.

It is true that such a system would load our children with a heavy burden of debt and poverty as it did the Chinese peasants. But it would be a great boon for present taxmakers, and not a great many of our legislators seem unduly concerned over posterity anyway.

Facts About the Wood Bill

EXTENSION OF REMARKS

OF

HON. CHARLES W. VURSELL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. VURSELL. Mr. Speaker, there has been so much misrepresentation about the Wood bill which failed to pass in the House by only three votes that I want to give the facts about this bill largely for the benefit of the laboring men who have not been given the facts by their big labor leaders.

When the administration leaders put on every possible pressure and recommitted this bill to the committee, it is my honest opinion that this action was a serious blow against the best interests of labor and the economy of the entire Nation.

The facts are, when the Wood bill was finally completed, it had gone as far as it seemed necessary or possible to go in solving the differences between management and labor. We had developed a bill fair and just to all, under which both labor, management, and the entire economy of the Nation could move forward in a more harmonious manner into a greater era of constant employment and prosperity.

We had written a piece of legislation so beneficial to labor that it appears this bill was recommitted largely to prevent the Republicans, supported by some Democrats, from taking the credit of having written a bill so fair to labor, that both labor and management could really accept it. The Republicans were, in fact, carrying the ball in the best interests of labor. That was too much for those who wanted to keep labor legislation as a political issue.

REPEAL EFFORT DEFEATED

The laboring men should know that when a straight vote to repeal the Taft-Hartley law and institute the Wagner Act in its place was taken, that only 31 Democrats out of 260 voted to keep the promise of the President and the labor leaders to repeal the Taft-Hartley law. The laboring men should further know that after this vote, their leaders and the administration leaders accepted the Sims amendments to the Lesinski bill which constitutes about 50 percent of the important provisions in the Taft-Hartley law which they had been damning for the past 2 years.

The amendments are as follows:

First. To provide for the use of the injunction by the President to protect the public health and safety of the Nation.

Second. Prohibition of secondary boycotts.

Third. Prohibit by injunctions jurisdictional strikes.

Fourth. Free speech for the employer.

Fifth. Provide that labor unions shall make a financial accounting to their members and to the Government.

Sixth. To let the State governments retain the power to outlaw closed shops.

Seventh. Labor leaders and employees as well must file non-Communist affidavits.

Now I want to explain to you just how far we went in the Wood bill in an effort to meet, if we could, every objection that had been made to the Taft-Hartley law. I think the rank and file of labor will agree we did meet the real objections of labor to the Taft-Hartley law with the following amendments:

First. It provided for the repeal of the Taft-Hartley law.

Second. Union-shop election requirement eliminated.

The Taft-Hartley Act provided that before a union-shop contract could be negotiated, a majority of the employees in a plant were required to vote in favor of it. The Wood bill eliminated this requirement so unions could bargain with management for union-shop contracts without first having received the approval of a majority of the employees in the plant.

Third. Union hiring hall recognized.

Considerable criticism of the existing law has developed on the ground that the traditional union hiring halls under which employers gave unions the opportunity to fill requirements for new employees could no longer operate. In order to meet this objection, the Wood bill was amended to specifically provide that it shall not be an unfair labor practice for an employer to submit his requirements for new employees to a union and to give the union a reasonable opportunity to fill those requirements.

Fourth. Increased authority for unions to discipline their members.

Under the existing law, an employer with a union-shop contract could be required to discharge an employee who did not belong to the union, "only if the union had expelled him because of nonpayment of dues." Union leaders have objected to this provision on the ground that it did not give them sufficient disciplinary authority over their members. The Wood bill, as amended, adds five additional grounds under which a member expelled from the union must also be discharged from his job where a union shop contract is in effect. These grounds are: (a) engaging in wildcat strikes; (b) engaging in Communist activities; (c) disclosing confidential information of the union; (d) conviction of a felony; (e) engaging in any activity which subjects the union to civil fines or criminal penalties.

Fifth. Relaxing of secondary boycott ban.

The existing law prohibits all secondary boycotts. Union leaders have objected that this provision is too broad in that it illegalizes struck-work clauses in contracts and indirectly requires union members to act as strikebreakers. This objection was met in the Wood bill by an amendment which specifically legalizes struck-work clauses in collective-bargaining contracts and allows employees to refuse to work on orders being performed for the account of an employer whose own employees are engaged in a lawful strike.

Sixth. Anti-Communist affidavit required of employers.

Union leaders have objected to the anti-Communist affidavit since it applied only to union officers. The Wood bill meets this objection by extending the requirement to representatives of employers as well as representatives of unions.

Seventh. Economic strikes given right to vote in representation election.

One of the major objections which union leaders made to the Taft-Hartley Act is that it denied the right to vote in representation elections to economic strikers. It has been pointed out that the employer could theoretically replace the men who were out on strike with new employees and manipulate an election so that the new employees would vote out the union since the employees on strike would not be entitled to vote under the law. The Wood bill as perfected by an amendment meets this objection by providing that economic strikers shall be permitted to vote in representation elections for a period of 6 months after they have been replaced by other employees.

Eighth. Restricts use of injunction in labor disputes.

There has been considerable misunderstanding and misrepresentation concerning the possible use of injunctions under the Taft-Hartley Act. Only Government officials are given the power to obtain injunctions and they can do so only in cases involving national emergency strikes, jurisdictional strikes, secondary boycotts, and unfair labor practices. The Taft-Hartley Act does not

authorize the use of injunctions against economic strikes unless a national emergency is involved.

Union leaders have particularly objected to the fact that the Taft-Hartley Act made the use of injunctions mandatory against unions in secondary boycott cases and discretionary in all cases against employers. The Wood bill, as perfected by an amendment by the gentleman from Texas [Mr. BENTSEN] meets this objection by making the use of injunctions against both employers and unions discretionary rather than mandatory and by providing that injunctions can be issued only after charges have been investigated and a complaint filed.

Ninth. Free-speech section clarified.

The Taft-Hartley Act provided that no statement by an employer could be introduced as evidence in unfair labor practice cases unless the statement itself was coercive. Union leaders have objected to this provision and have contended that statements by employers should be admitted in evidence where, under all the circumstances, those statements could be found to be coercive. The Wood bill, by an amendment, meets this objection by providing that statements by employers shall be admissible in evidence before the Board.

Tenth. Possibility of union liability for unauthorized acts of members removed.

Under the Taft-Hartley Act, it has been claimed that a union could theoretically be held liable for the acts of its members even where those actions were completely unauthorized. The Wood bill, as perfected by an amendment, removes this possibility by providing that in no event shall the union be held liable for the actions of its members solely on the basis of union membership alone.

Eleventh. State laws legalizing closed-shop recognized.

The Taft-Hartley Act recognized the validity of State laws banning the closed-shop. The Wood bill, as perfected by an amendment, recognizes the reverse of this proposition and provides that where a State law specifically legalizes the closed shop, that law shall supersede the Federal law in that State.

Among other amendments to the existing law which the Wood bill contains are the following:

Twelfth. The elimination of the requirement that employees vote on management's last offer in national emergency strikes.

Thirteenth. Clarification of the existing law so that reopening provisions in contracts are recognized.

Fourteenth. Allowing unions 120 days to file financial reports.

Fifteenth. Clarification of the section on jurisdictional strikes, so as to expedite settlement of disputes.

Sixteenth. Recognition of the validity of closed-shop contracts which are in effect at the time the law is passed.

MORE FALSE PROPAGANDA

Mr. Speaker, you will note that about 16 amendments were written into the Wood bill, all at the suggestion of union men, and every amendment giving greater protection and benefits to the laboring men. In other words, we who supported the Wood bill sought to take out every valid objection raised against the present Taft-Hartley law to make certain that these objections could not be raised against this bill.

Notwithstanding, we wrote these amendments into the bill meeting the objections of labor, yet some of the big labor leaders through labor publications immediately condemned the Wood bill as nothing more, and nothing better than the original Taft-Hartley law. They know these statements are false.

Having joined with the Administration leaders in the campaign last fall, and, in their further attempt to dominate and control the Congress, they continue to misrepresent the intent and acts of Congress, and the provisions of the Wood bill.

The administration leaders in combination with the big labor leaders had their chance to repeal the Taft-Hartley law outright and failed miserably. They then accepted the Bentsen amendments which I have referred to. Then when we made the bill far better for labor by adding 16 other amendments, certainly the administration leaders and the labor leaders could have, and should have supported the perfected Wood bill.

Instead, they made a Dunkirk retreat to take the bill back to the committee. The responsibility rests fully upon the Administration.

It is time the workers demand their leaders lift the cause of the rank and file of labor above partisan politics.

By returning this bill to the committee, the administration leaders, in cooperation with the labor leaders, defeated a good bill, temporarily at least, and by such action they have kept the Taft-Hartley law on the statute books, preventing new legislation that had taken nearly every objection by labor out of the old law. This was a mistake against the best interests of labor. Some members of Congress believe they want to continue the Taft-Hartley law for use again in next year's campaign.

Community Swaps Rights for Water

EXTENSION OF REMARKS

OF

HON. NORRIS POULSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. POULSON. Mr. Speaker, this article which I am inserting, which appeared in the Los Angeles Times on May 19, written by Mr. Ed Ainsworth, Times staff representative, gives a good word picture of what is happening in the San Joaquin Valley at this time:

ORANGE COVE, IN SOLEMN CEREMONY, WILL ACCEPT FEDERAL DOMINATION

ORANGE COVE, May 18.—Day after tomorrow, in a solemn ceremony, this little farming community against the foothills of the Sierra will sign away part of its American birthright.

It will be surrendering, from necessity, to the whip hand of the Interior Department in Washington, D. C., in order to obtain water it must have to survive.

Just what is happening is not quite clear in the minds of many residents here.

CONTRACT SIGNING

They know that Richard L. Boke, regional director of the Bureau of Reclamation at Sacramento, is going to come down here Friday to sign a contract with them on water from the Friant-Kern Canal.

They know that a vigorous fight has gone on to prevent the Bureau from imposing its original demands in regard to the 160-acre limitation of ownership.

They know that their water rate is going to shoot up more than 100 percent when the project is completed (about 1951).

SURRENDERS REQUIRED

But they undoubtedly have not realized the significance of some of the surrenders they have been required to make to obtain water from the canal.

This little area now including about 25,000 acres extending from Mount Campbell on the north to El Monte Road on the south, was founded by E. M. Sheridan who, spry and alert in his late eighties, still owns the townsite, the waterworks and many other properties here.

Dwindling water supplies and constantly lowering well levels have caused great worry. When the Friant Dam on the San Joaquin River, with its appurtenant Friant-Kern canal came along, the district naturally wanted to obtain irrigation water.

LONG NEGOTIATION

Negotiations for a contract with Secretary J. A. Krug's Interior Department began. In fact, they have extended over a period of 11 years or so. The district has come to be known as a kind of guinea pig in negotiations over Central Valley project terms.

M. N. Jensen, president of the Orange Cove Irrigation District, in explaining today the stand of the people here, declared, "We won't submit to dictation—we intend to run our own affairs."

In the face of this statement, however, certain facts stand out.

The 160-acre limitation clause is in the contract to be signed day after tomorrow, although certain modifications have been included.

LEASE AGREEMENT

The contract is of the so-called 9–E type which is, in effect, merely a lease agreement.

The district is refused the right to buy any second-class water, which would cost only $1.50 an acre-foot as contrasted with the $3.50 an acre-foot to be charged after completion of the project; although some large landholders in the Mendota district are getting second-class water at a low rate.

Reluctance of the board of directors of the district to surrender on the 160-acre land-limitation matter is shown in a resolution passed March 5.

RIGHT TO PETITION

The resolution included this statement: "*Be it further resolved*, That in approving this contract, this board does not approve the principle expressed in the contract as to the excess lands (160-acre limitation) and reserves the right to petition Congress for the repeal of the excess-lands provision insofar as it affects this district."

Jensen said today that the excess-lands provision is to be ignored, and that the Reclamation Bureau has been so informed.

In actuality, the 160-acre limitation as applied here—presumably on the principle of breaking up large holdings and aiding the little man—is going to work just the opposite way and help the big boys.

EXCESS OWNERSHIP

Of the 25,000 acres in the district, about 5,000 acres are held in excess ownership by 27 owners, according to Jensen.

The district is entitled to 31,800 acre-feet of water annually. But it is estimated that

another 10,000 acre-feet will seep into the underground basin to replenish the dwindling water supply and raise well levels.

The seepage will occur because the portion of the canal in this area will not be lined with concrete as it is on both sides of Orange Cove.

SEEPAGE WATER

Now, it works this way:

The seepage water goes in and replenishes the water supply. Wells can pump effectively again. And a man who, say, owns 500 acres can pump all he wants on the lands in excess of 160 acres and not pay for the privilege.

The little fellow on the other hand must pay not only a $3.50-an-acre-foot rate for his water but also must stand the heavy cost of the new lateral system which has to be put in to distribute the water, a cost which the excess landholder escapes.

It is estimated that when lateral costs are tacked on the water may cost as much as $19 a foot for the little fellow—but the big boys get all they want merely for the price of shallow pumping.

Included in the excess landholders are George Zannovich, Jensen, and a score or more of others.

About 9,000 acres in the whole district are developed now, and other land no doubt will come under production as water is available.

Considerable dissatisfaction with the contract—in spite of the dire need of the farmers here to get water—was shown in the vote by which the contract was approved April 22, the ballot being 438 for and 122 against.

The town of Orange Cove itself is excluded from the irrigation district and depends upon its own wells for water.

At any rate, the contract is scheduled to be signed Friday and water supposedly will begin to flow to the land through some existing facilities this summer. Meantime other districts are watching Orange Cove's experience with the Interior Department in becoming a part of the federally dominated Central Valley project.

TRYING HARD

The adjacent 1,000,000-acre Kings River Water Association is particularly concerned. The Interior Department is trying hard to get the districts making up the association to join the Central Valley project, because the facilities, wealth, and prestige of the group are needed in the Federal project.

But Charles L. Kaupke, watermaster and spokesman for the Kings River Association, made it doubly clear again today that his groups want no part of any deal such as has been forced upon little Orange Cove by the Interior Department—and that they will not sign up on similar terms.

The Need for Old-Age Pensions

EXTENSION OF REMARKS

OF

HON. JOHN A. BLATNIK

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. BLATNIK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a most significant radio address delivered May 23, 1949, over the American Broadcasting Co.'s coast-to-coast network by our distinguished and able colleague from Ohio's Fifteenth Congressional District, the Honorable ROBERT T. SECREST. This speech, which relates to the problem of old-age security, is a most able presentation of the case for the adoption of a liberal and comprehensive old-age pension system for the benefit of our senior citizens, the fathers and mothers of America. I therefore urge every Member of the House to read this speech by Congressman SECREST:

The problems of old age are as old as the human race. Man lives by work and when his capacity for work decreases, or when profitable employment cannot be found, many individuals cannot purchase the bare necessities of life.

In ancient times when man wandered from place to place in search of game and other foods he had little time to care for the aged. He had less inclination to share his meager food supply with those no longer able to join in the chase. Old people were left to die alone by the side of the trail.

Under the influence of the Christian admonition to "Honor thy father and thy mother that thy days may be long upon the land which the Lord thy God giveth thee," the peoples of much of the world developed a new appreciation of older people.

The wisdom of our elders was sought after and the contribution they made to the wealth of the world by a lifetime of toil was considered worthy of the right to live out their days in happiness and security. Each family attempted to care for its own. Those without family or friends were cared for by the township, county, or municipality.

Great discoveries of medical science and the practice of modern sanitation has doubled the span of human life. Where few reached the age of 60 a hundred years ago, today millions live far beyond that age. In fact, there were less than 1,000,000 people over 60 years of age in the United States in 1850, less than 100 years ago. Today there are 17,000,000 and the total increases continually.

The advent of the machine age resulted in widespread industrialization and mass production. The fast pace in factories, mines, and other industries required alert, young, and strong workers. Year after year the older segment of our population found it increasingly difficult to secure employment. Except for the period of World War II, when the labors of all our people were required, there have been millions over 60 who could not find gainful employment, even if they were physically able to labor.

The depression made our people conscious of the needs of older people. Widespread unemployment, decreased wages, shrinkage of local taxes, made it impossible for either individuals or local governments to support the older unemployed. State after State adopted laws to provide old-age pensions.

Finally the Social Security Act as passed by Congress, and for the first time the Federal Government had a plan whereby a portion of our people could lay up a reserve to be paid them in old age. Everyone realized that this act was only a step toward a full solution of the problem. We must move ahead, either by expansion of the existing system or by a substitute system that will better serve the needs of our people. I prefer the latter course.

I have always been profoundly convinced that this country needs a universal national system of old age security. That is why I voted for the revised Townsend plan in 1939, along with 100 other of my colleagues in Congress; and that is why I have, during the subsequent decade, signed discharge petitions entreating the Ways and Means Committee to release national pension bills for debate and a vote on the floor of the House. I feel as strongly today as I have ever felt. Indeed, I believe the need for a national insurance system covering all the people is even more compelling now than ever before.

As I have stated, the proportion of aged persons to the total population is increasing rapidly and medical science is steadily prolonging the life span of our people. At the same time, industry is constantly inventing new machines to do the work previously performed solely by manpower. It is not fantastic to envision for the future a sort of Jules Verne push-button economy in which a relatively few number of workers will be able to produce all that the rest of us can reasonably consume.

This combination of increasing age and technological progress poses a challenge we cannot ignore. Suppose a depression comes? That is no idle threat. Or suppose that, short of depression, our economy enters a state often described as "recession." In such an event, it appears reasonable to assume that marginal workers will further find themselves among the ranks of the unemployed. And I think we can all agree that the marginal labor force consists primarily of the overaged, the disabled, the blind, and widows with small children to support. These are the people a national pension plan proposes to protect.

But we do not have to fear a future depression to justify the need for the legislation today. The need is already great. Total living costs have just about doubled over the past 15 years. I for one do not see how many families can live in decency today on the earnings they receive, and I don't see how a single man or woman—especially those who must buy their meals in restaurants—can do more than exist.

Yet millions of Americans are doing just that. Old-age assistance paid an average of only $42.02 per month to individual recipients as of December 1948. This program affects about 2,000,500 aged men and women past 65 years of age. Many of them, of course, received far less than the $42 average. Moreover, the amount paid depends to a great extent upon where the recipient happens to live. For instance, the December average in Mississippi was only $16.38. The most generous State, Colorado, granted an average of $78.18.

Those citizens drawing benefits under old age insurance, title II of the Social Security Act, are in even worse circumstances. They average only about $25 a month. As a result, thousands entitled to draw a few dollars under old-age pensions have been forced to seek supplementary aid under the old-age assistance section of the act in order to keep body and soul together.

Meanwhile, the old-age insurance reserve fund has reached the unprecedented total of some $11,000,000,000 (most of which, of course, is represented by bonds, or I. O. U.'s). Thus, we have the curious spectacle of billions collected and unused while millions of humans struggle to make ends meet on a pittance, and at a time when living costs are at an all time high.

In terms of per capita income, the old folks of America are truly forgotten people. For the Nation as a whole, per capita income for 1947 amounted to $1,323, according to the Department of Commerce. Contrast this with the average of $504 ($42 a month for 12 months) paid to old age assistance recipients, and the $300 paid to old-age insurance beneficiaries under social security.

We cannot gloss over the obvious conclusion that the present program is completely inadequate. It offers a mere pittance, not security at all. Its other shortcomings are legion. It fails to cover millions of useful citizens—farmers, farmhands, domestics, small business men, professional men and many others. It pins the stigma of charity on those obliged to rely upon old-age assistance, and thus strips the individual of his dignity.

The American people have shown that they recognize the failure of the present set-up. No fewer than eight thousand busi-

ness and industrial concerns have established private pension programs of their own, in an effort to supplement social-security payments. Labor unions are beginning to take an avid interest in the pension field, as witness the United Mine Workers success in getting $100-a-month pensions for retired members of that organization. And then, of course, we have civil-service pensions, railroad-retirement pensions, and special pensions for judges, school teachers, and war veterans. The list is endless.

But out of this confusion one undeniable fact emerges: Most of the people—ordinary, everyday American people—either have no old-age protection at all, or are forced to apply for the $42-a-month old-age assistance.

And so today we find ourselves meshed in a hodge-podge of pension systems, many of them overlapping, many of them contradictory, even, and at the same time we find a vast area in which there are millions of people who enjoy no protection at all. I do not want to destroy existing pension systems, but I do want a better system for old-age pensioners and I want a sound system for the millions of farmers and others that are not now covered by social security.

I want a system on a pay-as-we-go basis. Let us enact a program of social security that will be truly comprehensive—one that will take in all the eligible people of this Nation, and one that will grant equal benefits to all. Let us enact a program that will pay benefits high enough to enable recipients to live in decency rather than in poverty.

It is my belief that a social-security system worthy of the name should do far more than provide mere subsistence benefits. It should guarantee reasonable purchasing power to the retired, aged and disabled, and the blind. A cancer in a man's body is not an isolated thing; unless cured, it will eventually destroy the remainder of the healthy tissue in his body. So it is with poverty. If a substantial segment of our people—the old and the disabled and the blind—are forced to remain in poverty their poverty will eventually spread and infect the rest of us.

People without basic purchasing power cannot buy the goods that industry produced and dealers have for sale. And when lack of purchasing power dries up the market, depression is on its way. We help ourselves by helping the aged. By helping them become buyers in the marts of trade, we help ourselves remain prosperous because we help protect the health of the market.

I have urged the Ways and Means Committee of the House of Representatives to examine with care H. R. 2135 and H. R. 2136, now before this session of Congress, and to report one of them with such amendments as may be wise and desirable. They call for a national insurance system covering all people and providing liberal enough annuities to make healthy purchasers of those no longer wanted by industry. The bills are identical; one was introduced by Congressman John A. Blatnik, Democrat, of Minnesota, the other was introduced by HOMER D. ANGELL, Republican, of Oregon.

These bills embody the major features of the original Townsend plan, namely a 3 percent gross income tax from which would be paid a pension to every eligible person over 60 years of age. Contrary to popular opinion, the Townsend plan does not, and never did provide a $200 per month pension. It provides that the money collected in 1 month will be distributed 3 months later to those persons who are eligible to receive it. These bills provide for an adequate pension on a pay-as-you-go basis. In good times, when prices are high, the pension would be greater. In bad times when income and prices are low, the pension would be less.

The great advantage of this system is the elimination of social-security taxes and reserves. To date $11,000,000,000 have been paid in social-security taxes. This money is invested in Government bonds. In a few more years this reserve will be over $100,000,000,000. This means that when a worker is ready to retire all the people must be taxed to pay the bonds to get the money to pay the social-security benefits. It means a double tax for every pension paid. How can we be sure the money can be raised 20 years from now by normal taxation? The only safe step is to put the whole pension system on a pay-as-you-go basis and make all persons, including farmers, eligible for the pension if their income is below a specified amount. That amount is not stated in the bill, but should be inserted in accordance with the judgment of the Ways and Means Committee or the Congress.

Furthermore, this system will make it unnecessary for the State to tax its own people for approximately one-half of old-age pensions, as all States must do under the present law. In Ohio alone this would save $34,683,000 in taxes. This amount would permit Ohio to give teachers a real raise, contribute fully to distressed municipalities, replace condemned school buildings, and balance the State budget. In 10 years Ohio would save $346,830,000.

A national system of old-age security is certain to come and the sooner it is adopted, the better it will be for the Nation as a whole. Such a system will include millions not covered by social security, it will eliminate the tremendous reserves being built under the present law, it will produce sound economy by paying the bill as we go, and it will provide an adequate pension for all who deserve it. Furthermore, it will enable millions of elderly people to retire in comfort thereby assuring employment for all those who are younger. It is our greatest insurance against depression.

I hope this Congress will act.

Labor

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following address by Assistant Secretary of Labor John W. Gibson on the celebration of the tenth anniversary of the Textile Workers Union of America, CIO, Lawrence, Mass., May 14, 1949:

FREE LABOR WILL HELP STABILIZE NATIONAL ECONOMY

This occasion is an auspicious one for members and officers of the Textile Workers Union of America as you reach another milestone in the courageous and successful campaign you have been carrying on for the past 10 years to better the wages, hours, and working conditions of workers in textile mills throughout the United States.

I am glad to join you in celebrating your birthday in the heart of the textile industry in New England.

Textile workers have been going through a very tense period in the last 2 years. Your organizational task has not been an easy one. And the major obstacle which has been placed in your path, in the unorganized section of the South, has been antilabor, Taft-Hartley law. I am confident that if the liberal forces stand firmly together that the Taft-Hartley law will be repealed in this session of Congress.

It is un-American because it has seriously hampered the freedom of American workers. While its full impact may not have been felt in this particular textile area, your organizers in the South realize full well what happened when they endeavored to provide representation in collective bargaining to southern workers. A clear and concise report of the chaos the Taft-Hartley law created among southern workers was presented to a Congressional Committee on Education and Labor by your very capable vice president, Mr. George Baldanzi, several weeks ago.

The Textile Workers of America, which was formed in 1939 in Philadelphia, has made considerable progress in serving its membership of several hundred thousand textile workers. Your gains have not been won lightly. You have had to go on the picket line many times in the years preceding the Wagner Act to obtain simple recognition of your union by the mill owners.

The migratory tendencies of some northern mills whose creed had long been high profits at the expense of underpaid workers, led them into low-wage areas in the South.

This shift by the employers from New England to the South created industrial chaos in the 1920's and early 1930's. Unemployment was rampant with thousands of people being thrown out of work as mills were closed and the equipment moved to low-wage areas of the South. The city of Fall River, long recognized as a major textile center, went bankrupt in 1931, and the Commonwealth of Massachusetts was obligated to assume financial control.

We do not want history to repeat itself. We have got to have a stabilized economy in each of our 48 States and comparable wage rates, standard of living, purchasing power, if we are to continue as a free, happy, and prosperous people and enjoy high levels of employment plus peaceful collective bargaining.

The first and most important step to take in achieving the desired objective is to return to the worker his inalienable right to freedom in the field of collective bargaining. Repeal of the handcuffing Taft-Hartley law will be a step in the right direction.

No man alive can deny that honest trade-unionism has made long strides toward building up a strong economy. It is to the betterment of every segment of our population, the farmer, the small-business man, as well as the industrialist.

I can see partial solution to the problems which now confront you in the death of the Taft-Hartley law and the establishment of a minimum hourly wage of at least 75 cents.

Unemployment figures recently issued by our regional office of the Bureau of Labor Statistics in Boston report that in the last year, 30,000 workers have lost their jobs in the textile industry in Massachusetts. This presents a serious problem which will require real labor statesmanship.

I am glad to hear that textile workers in the greater Lawrence area have been enjoying a good relationship with management. This section of the country gave birth to the textile industry. The industry long ago reached maturity in age, but in some instances, chiefly in other sections of the country, it has failed to learn the primary lesson that a well-paid, well-fed, well-clothed, and well-housed worker is a happy and productive worker.

I feel strongly that self-legislation, through the extension of collective bargaining, rather than political legislation, is the thing that will do more than any other factor to stabilize the textile industry. There is little doubt that the real objective of those responsible for making the Taft-Hartley Act the law of the land was the desire to weaken and destroy the American labor movement.

In the last 2 years, your representatives have been experiencing the same kind of coercion, intimidation, and even violence that characterized the period previous to the passage of the Wagner Act. You fine people in Lawrence and in New England deserve great credit for banding together as a solid unit for the betterment of textile workers. A dozen years ago many of you workers resided in communities in which almost your whole life was dominated by the mills in which you worked. You were faced by a lot of little feudalisms. Workers lived in houses owned by the mill owners; they were obliged to make their purchases at a company store, and they even sent their children to the company school; attended services at a company church and were buried in the company cemetery. Under these conditions, American citizenship was merely a mockery.

Your union has accomplished a great deal, but the goal set forth in your constitution, adopted in the historic city of Philadelphia in 1939, has not yet been reached in some textile areas in the United States.

You have got to continue your fight to give these workers the protection and representation they so richly deserve. You have got to continue to tell the public what is going on in those textile areas where workers are intimidated and coerced by company foremen who bluntly tell them not to join the union.

We have just emerged from the first round of a terrific legislative struggle in Washington, which would go a long way to make that possible. We came out of it bloody but unbowed when we won a partial victory in recommitting the Wood bill to the House Labor Committee.

The second round will begin any day now, and I am certain we will emerge with a satisfactory and fair labor bill which will again allow unions freedom of organization and collective bargaining. However, we will not triumph without a fight because we still have some reactionary forces in the Congress who would retain most of the antilabor provisions in the Taft-Hartley law.

These forces are planning to drop the name of Hartley in the new bill, leaving only the name of TAFT. It is a bad bill and retains most of the bad points of the Taft-Hartley Act which were pointed out by Secretary of Labor Maurice J. Tobin in his appearance before the Senate Labor Committee last January. It is substantially the same old antilabor bill with only half of its original identification tag.

Even the Washington Post in an editorial appearing in its May 6 issue pleaded with Senator TAFT not to be identified with this new bill.

TAFT'S current proposals still contain many of the same union-busting provisions couched only in softer language which fails to take away the sting.

Nobody in the Congress, with a sense of fairness and justice uppermost in mind, will be fooled by the new Taft bill. I would like to review for you some of the major antilabor points that those who would continue to stifle organized labor want to keep.

The Taft-Hartley law bans the closed shop.

The time-wasting and disruptive injunctive processes are likewise retained. The Federal Mediation and Conciliation Service as an ineffective independent agency outside of the Department of Labor remains unchanged.

Slightly watered down language still retains the provisions outlawing peaceful picketing in many situations and some of the restrictions on the check-off.

It retains a Taft-Hartley provision for employers to secure representation elections. Let me point out the danger. The employer may find a point in which he thinks the unions in his plant are in a weakened condition. He can step in at that point with a no-union proposition and request an election. Under the new Taft bill, the employer can get this election.

Restrictions on health and welfare funds are still in the current Taft bill, slightly modified.

The law still allows damage suits to be brought against unions.

I have taken time to mention just a very few of the still damaging sections remaining in the new Taft bill. I don't have to tell you what that means to any attempted organizational progress in the South. In pointing out this problem in New England, one could hardly be charged with being a partisan for labor.

New England, as in the early twenties, is faced with the prospect of again having ghost communities.

Plant migration, industrial disruption, mutilated community life, exhausted small business, makes this not alone a problem of labor, but a most serious problem for all of the people in New England.

While your average hourly wages in New England in organized textile mills are at a good strong point, we must remember that thousands of workers elsewhere are still getting less than 75 cents an hour. Collective bargaining brought your rates in general up to more than 75 cents an hour. But it is absolutely necessary to provide protection for the unorganized workers and at the same time stabilize the competitive market by establishing a Nation-wide minimum immediately of at least 75 cents an hour.

As you know, in a recent new hourly minimum-wage determination in the textile industry for workers employed on Government contracts under the Walsh-Healey Public Contracts Act, an increase from a former rate of 40 cents an hour to a new rate of 87 cents an hour was allowed. I can assure you that this has resulted in even competition in bidding for Government contracts. This same fair competition would be realized in civilian production by elevating the present obsolete 40-cent minimum hourly wage under the wages-and-hours law to the proposed 75-cent-an-hour figure.

Amendments to the Fair Labor Standards Act of 1938 are now being considered by the Congress. These amendments, if enacted, would provide an extension of coverage to thousands of workers not now within the scope of the wages-and-hours law. The wages-and-hours law was a godsend to the low-paid worker more than a decade ago. It helped him to support himself and his family and it established a floor under wages and a ceiling over straight time hours. It is a natural sequence that the economy will be greatly increased if additional workers are brought within the coverage of the law.

The House Labor Committee has already reported out a bill which would increase the minimum to 75 cents an hour and would bring substantial numbers of workers within the application of the minimum.

One of the amendments would cover any employee of a retail or service establishment whose employer had a total volume of sales or services of more than one-half million dollars in the preceding year.

The House committee had this to say in reporting out the new wages-and-hours bill, and I quote:

"In this regard, it should be noted that the recommended coverage would in no event extend to any employer who does not have employees engaged in commerce or in the production of goods for commerce within the meaning of the 1938 act."

The committee report further said, in discussing retail and service establishments, and I quote:

"The bill would deny the exemption, however, to retail and service establishments operated by an employer whose total annual volume of sales or servicing (and all such establishments operated by him as a single enterprise) in the preceding calendar year was more than $500,000."

The small-business man who operates a corner grocery store or service establishment need not have any fear of these amendments because no attempt would be made to cover his employees.

Some of my listening audience may get the impression that the repeal of the Taft-Hartley law and the improvement of the Wages and Hours Act would only help the workers of New England. Such an impression is completely erroneous. Every small mercantile establishment has as great a stake in this legislative fight as the workers who trade at his counter. The stockholders and managements of New England industries likewise have a tremendous stake in seeing adequate revision to these two vital laws.

In general, throughout New England, labor and management through a peaceful medium of collective bargaining, have established high wages and good working conditions. The fact that these standards and the purchasing power of these workers will be undermined by some low-paid southern industries will affect them adversely also.

The problem of minimum wage and the problem of fair labor standards is now a community problem in New England. The prosperity of New England is dependent upon raising the living standards in mills throughout the country.

Your New England congressional Representatives are going to have an opportunity to decide whether they are going to legislate for the industries, the workers, the communities, and the citizens of New England, or whether they are going to indulge in skullduggery, and political coalition demands. They are going to have to legislate as statesmen upon the question of whether or not they are going to put the low economic areas of the United States up to the standards now existing in New England, or whether they are going to drag New England and other high-standard areas of the United States down to the low starvation level that now exists in some parts of the country.

I think I can speak for your workers here in New England when I say you do not want partisan prejudiced legislation, you want fair legislation, you want other workers to enjoy the freedom of collective bargaining and improved economic standards in your community. You want a fair minimum-wage law that will place purchasing power in the hands of lowly paid workers in the country so that they in turn can purchase the necessities of life and the textiles they need today but can't afford.

I hope that the rest of the community will band together with your leaders of labor, not in Lawrence where you have forward-looking congressional representation, but in other segments of New England where people seem at times to forget that the interest of New England in this respect is the interest of an entire nation.

If we are to build a stronger America, we must go forward in a progressive manner.

Social and economic legislation enacted under the leadership of our late great President, Franklin D. Roosevelt, in the early days of the New Deal Administration, brought to this country prosperity for the worker, the farmer, and the businessman. It snapped us out of the worst depression we ever had and it restored faith and confidence to our millions of wage earners and their families. The Truman "Fair Deal" continues this broad humanitarian approach to the Roosevelt program.

We must continue to set the pattern for the rest of the world to follow. Our standard of living, which can only be based on the amount of purchasing power each worker acquires through his labors, must be placed

on a solid foundation to keep our national economy stabilized.

The heavy anchors of reactionary forces must be removed from the backs of the workers on the production line. A worker shackled by the handicap of bad labor legislation is neither a happy nor contented worker. He becomes discouraged and it naturally follows that his work suffers and production slows down.

The worker has never wanted more than his fair share of the profits made from the goods he produces. Wages have not kept pace with the high profits made by our major industries. Leadership in the Textile Workers Union can help to secure for the worker the wages rightfully belonging to him by carrying on your brilliant campaign to organize the unorganized workers.

A free and strong economy in all the United States will be our strongest ally, helping to spread the cause of democracy in other countries throughout the world which will, in turn, aid in producing a lasting peace.

Doctors in the Armed Services

EXTENSION OF REMARKS
OF
HON. H. CARL ANDERSEN
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. H. CARL ANDERSEN. Mr. Speaker, it has long been my contention that the hue and cry raised by the military relative to the shortage of doctors in the services was unnecessary if the proper use was made of those already on their rolls. I was glad to receive a copy of a letter which a constituent of mine wrote to the Secretary of Defense along this line and I include it in the RECORD at this point. May I commend it to the serious study of the Members of the House. There is good, honest, clear thinking and some very fine constructive criticism in this letter:

OLIVIA, MINN., *May 21, 1949.*

Hon. LOUIS JOHNSON,
Secretary of Defense,
Washington, D. C.

DEAR SIR: I have read your urgent appeals to young doctors in last Sunday's newspaper and I have seen some of Secretary Forrestal's telegrams and letters to doctors who have been in the V–12 program and have not yet seen active service. I have talked to many doctors who have been in active service and they are almost unanimous in their opinions that the armed services have too many doctors. They also agree that many doctors with much rank do not do much medical work and are always crying about the shortage of doctors. I am sure that many of these young men who have not seen active service feel that there is very little need for them in the service and that it would be a waste of time and that their time would not be utilized in a medical way. Many of the doctors in the service resent spending so much of their time caring for the civilian employees of the Government or their dependents who are well paid and in the States could have private physicians.

I think that in the event of emergency, sufficient doctors would immediately offer their services if they felt that their services would be well utilized.

Why don't you inquire of the men who are now in active service and who are leaving the service as to what they think about better utilization of their time and the need for medical men in the service? I believe you would get some enlightening information which would be helpful to you in maintaining adequate medical care for the services.

I have heard that while the civilian population in many areas were short of medical care, there were many doctors doing little in the armed services during and after the war. There were many civilian doctor casualties from overwork.

I hope that my constructive criticism will be of help to you.

Respectfully,

J. A. COSGRIFF, M. D.

Message to Labor Leaders

EXTENSION OF REMARKS
OF
HON. MICHAEL A. FEIGHAN
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 5, 1949

Mr. FEIGHAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include the following address delivered by me at a testimonial dinner sponsored by the Cleveland Federation of Labor and affiliated locals honoring officers of the American Federation of Labor at the Hotel Carter, Cleveland, on May 17, 1949:

It is a privilege to meet with you tonight in the district which I have the honor to represent in Congress. Cleveland is a union city. The friendly relationship existing between management and labor has been due to the high principles of the leaders of unions and industry and their ability to deal amicably for their mutual benefit which inures ultimately to the good of the general public. I might add that Bill Finegan, Ed Murphy, Jack Burns, Phil Hannah, Mike Lyden, and others, in many instances, had to inculcate those high principles. The AFL industries show which opens tomorrow will present evidence of superior skill employed, and perfection of products in union made goods. It will present another singular example of cooperation between industry and labor.

It is unnecessary for me to review the provisions of the present Taft-Hartley Act. Suffice to say that even its stanch protagonists have since recognized many of its inequities and have agreed to accept some amendments to correct the injustices inherent in it. The House Committee on Education and Labor is now drafting a bill which should recognize the just rights of the employer and employee and the general public. They should not offer concessions or compromises, but rather should insist on the protection of the rights of all. No legislation should endanger or jeopardize the basic rights of labor or our democratic freedom. I can make no prediction, but I am hopeful that a measure will be presented for which not only I, but those who have heretofore failed to recognize the moral rights involved, can support wholeheartedly.

Both capital and labor are entitled to a fair share of their product. Neither can attain such without the benefit of consumers who are also entitled to benefits by being offered goods at fair prices; just as charity and reason demand that industry be run for the common good of the purchasing community as well as the private good of the employer and employee. The rights of labor, capital, and consumer will not be served unless there be first a family living wage for the male worker, and second, that reward which the common estimation of just men and the fair competition of markets allow to capital, and third, a just price for the commodity produced. The first is most neglected. There should be an absolute family-living wage: Not a subsistence wage, but what would suffice for the reasonably decent maintenance of a worker, his wife, and dependent children; not an "individual" wage considering the worker alone, nor "relative" considering the actual number of his children, but "absolute" reckoning the family a worker would have in the ordinary course of nature if he exercised his right to found a family. A reasonably decent maintenance allows for a truly human way of life to every member of the family: The care of body and soul, the provision for ordinary contingent sickness, old age, and the education of children; a living wage means a "saving wage," affording to the frugal worker the opportunity to acquire a modest fortune and the avoidance of a hand-to-mouth existence.

Such necessary objectives cannot be realized when a Federal act hampers labor's right to organize and to bargain collectively.

Several months ago, Business Week magazine, which is recognized as the voice of big business in this country, in an article on the labor legislation, stated in its column:

"The Taft-Hartley law has failed—it went too far. It crossed the narrow line separating a law which aims only to regulate, from one which could destroy."

The Taft-Hartley Act must be repealed and the philosophy behind it repudiated. Labor should never be deprived of its right to strike in order to attain its just demands.

Thirty dollars a week is a pitifully small sum with which to rear and educate a family, yet Congress is experiencing difficulty in enacting legislation to require the payment of 75 cents an hour, which for 40 hours' work means only $30 a week. On the moral side alone, we should pass that legislation. Besides, its enactment will increase purchasing power of more consumers than I would care to mention. It is surprising the tremendous opposition to extending the coverage of any minimum-wage legislation.

The protection of the laboring man is important to the general welfare of our national economy as is the protection of the farmer. When the prices of farm products fall, the workers in the city, while they may receive the benefits of lower food prices, they feel the impact of the farmers' lower purchasing power by reduced hours of work or lay-offs.

The depression of the thirties was not confined to any particular industry or section of the country. Farmers and laborers alike were equally affected. Their welfare is inexorably bound together. The present administration farm policy has endeavored to maintain the income of the farmer. The farm program is of vital interest to the welfare of the country, and naturally, the workingman. In the closing days of the second session of the Eightieth Congress the Aiken bill passed. It provides for a reduction of farm subsidies and will become effective January 1, 1950. The Republican leadership supported that measure, believing that the farmers were getting too much Government aid and that farm price supports were too high. The farmers were not fooled—they were alert. Their votes last November proved it.

The Republicans now face a dilemma—how to keep the farmers in their ranks and at the same time lower their income.

It is my belief that the present Congress will enact legislation postponing the effective date of the Aiken bill, or substantially modifying its provisions. This bill lowers the farmers' income by lowering the Government price supports which are the farmers' minimum wage. As I say, the Aiken bill does not go into effect until January 1, 1950. Meanwhile, the wartime 90 percent of parity Government guaranteed farm prices remain in effect.

The President's program provides for the development of the West. It includes the power program, the reclamation and the land-use program as well as flood control. Besides protecting our natural resources, this program will provide employment. It envisages billions in construction work and more billions in private capital to equip the newly developed areas. The Republicans again face a dilemma. How can they oppose these vast public power projects which will bring lower rates and provide power to many new consumers, and then expect their loyalty to the Republican Party?

Of vital interest to the people of our Nation is legislation to provide for slum clearance and low-cost housing, and also of paramount importance is the increase in payments and extension of coverage of social security. The amounts paid now are penurious and wholly inadequate.

These measures are not just the President's program, or just the Democratic program, they are the people's program, as was forcefully enunciated last November.

Labor unions have the opportunity to join forces with the farmer, with the beneficiaries of the rural electrification program, and with all who are intent upon a progressive program for the development and welfare of our Nation. Working together you can elect to public office men and women who will support legislation which provides for the general welfare of the entire Nation, rather than to protect the enormous profits of the privileged few.

Union Leaders' Problem

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, May 19, 1949

Mr. DOYLE. Mr. Speaker, I take pleasure in presenting for your consideration the following editorial which appeared in the Long Beach (Calif.) Independent, on Tuesday, May 17, 1949.

Long Beach, Calif., is my home town, and the Independent is one of two daily papers printed in that important city of my native State of California. It is the largest city in the Eighteenth Congressional District, which I have the honor to represent in this the Eighty-first Congress as I also did in the Seventy-ninth Congress.

The editorial follows:

UNION LEADERS' PROBLEM

Honest union leaders who despise radicalism have a problem greater than that of most industry managements. The problem is how to combat radicalism and not appear reactionary. In some unions conservative leaders have had to appear radical to hold their leadership. Often a conservative becomes harder to deal with because they feel a show of conservatism will be used as a sign of giving in to management.

Management should carefully analyze the problems of such leaders. If management attempts to take advantage of the conservatism of a union organizer or negotiator, it will strengthen the hand of the radicals. Where a union throws out Communist leaders, as many have, that union deserves special cooperation by management. Otherwise, the conservatives will have unnecessary difficulty in maintaining leadership in the union.

Thus, the conservative labor leader often finds himself between the forces of radicals in the union and reactionaries in management. The radicals are the most active in most unions. They are tireless workers and attempt to intimidate the less active members. It is they who attend all meetings, stay until the last vote is taken, and thereby hold control of many unions. To dislodge them is difficult because of the apathy of the great number of union members who are not active.

Many CIO unions have, during the past year, thrown out Communist leadership. Conservative leaders by courageous action accomplished this purpose. But to hold this leadership the new leaders must show results. In some cases the new leadership is inexperienced in negotiations. They fear the charge of management domination. The result is the new leaders may attempt to seem tougher than their predecessors.

These are problems management, who must deal with unions, should consider. It is to management's benefit that radicals be kept out of union leadership. It is also to the benefit of rank-and-file members. But the radicals will be watching every move with the idea of saying the new leaders have sold out to management. The new leadership should be looked upon as a strengthening influence of unions and not as a weakening influence.

Rank-and-file members of unions should understand these problems and support the conservative leaders they elect. The great majority of members are themselves conservatives and despise the radicals as much as does management. There needs to be greater activity by the rank-and-file members to protect their own interests. The radicals must be beaten by using their own weapons. Those weapons are constant attendance and the use of parliamentary rules in voting on resolutions. The members who attend and stay until the meeting is over are those who control a union. That is the answer to the kind of leadership a union may have.—L. A. C.

The Merchant Marine From a Legislative Viewpoint

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. RIVERS. Mr. Speaker, under leave to extend my remarks, I include herein an address delivered by our distinguished colleague of the upper body on the occasion of the celebration of National Maritime Day in the city of Washington:

THE MERCHANT MARINE FROM A LEGISLATIVE VIEWPOINT

(By Hon. EDWIN C. JOHNSON, of Colorado, chairman of the Senate Committee on Interstate and Foreign Commerce)

Since my home State of Colorado is a thousand miles from the ocean, my knowledge of the high seas is very limited. Reared as I was in the land-locked States of Kansas, Nebraska, and Colorado, freighters, tankers, colliers, tugs, and barges prior to the war did not appeal to me as implements of vital concern. Perhaps there is no person in this great audience tonight who knows less about these things than I. Nevertheless, here I am to discuss with you the importance of a "bridge of ships" to serve us in peace and save us in war. At least one thing is certain no one can point to a spot in this great country of ours tonight and truthfully say it is not affected by ocean-borne shipping.

Denver, a thousand miles from the sea, was a shipbuilding center during the recent war. Vessels of considerable size were constructed in segments, shipped by rail to the Pacific coast, and assembled there. Several thousand Coloradans served in the merchant marine. Farmers and ranchers of the Midwest are conscious now of the role which our merchant fleet play in their lives, carrying as it does their products to the far corners of the earth.

The primary effect of water transportation upon our economy and security is known to every schoolboy everywhere. This great Nation borders on three of the world's five oceans. Fleets of freighters swarm the Great Lakes. The Gulf of Mexico which serves so well our southern coast is almost an ocean, and our numerous bays, sounds, and harbors establish us as an important maritime nation.

Your Propeller Club has been doing an exceptional job informing the people of our inland cities and towns and farms of the importance of the maintenance of an adequate American merchant marine. You shipping folks have earned the confidence of the entire American people. Continuation of that confidence is the single most important factor in the development and maintenance of an adequate American merchant marine. Do not endanger that public confidence. While the merchant marine is an industry which both requires and deserves Government support, be careful to avoid trying to swallow the hand that feeds you. Temper your thinking along subsidy lines with horse sense. Endeavor to have the country understand your problems but at the same time be very sure you understand your country.

Some subsidization is essential because we are forced to compete directly against state-owned foreign carriers where the standard of living and the costs of operation are substantially lower. The expense of the national defense features which we have incorporated in the construction of many of our ships should properly be borne by the American people. However, any help that we offer the industry dollarwise must be given as an adjunct to private capital now available for shipping investment. We must neither be parsimonious to the point of undermining a justifiable maritime program, nor should we be liberal to the degree of retarding the best possible effort from the industry to stand on its own feet. It is the duty of the Congress to give reasonable aid, and to assure itself that commensurate value is derived from that aid.

The Merchant Marine Act of 1936 is the Magna Carta of the American shipping program. It was a wise and timely step, charting our course as it did toward assuming political and economic world leadership. In the public interest it sought to give the maritime industry a minimum of support and protection to enable it to share a very modest portion of world commerce. But it left to private management the privilege of applying its ingenuity, its know-how, and its varied ability to live and to grow. No one can expect government to take the place of imaginative private management. Neither must you who are engaged in this enterprise expect the Government to guarantee you profits. You must not push Government subsidization so far that it will endanger public support. It is the business of Government only to create a favorable atmosphere of opportunity and in the public interest do for you merely the things you cannot do for yourselves.

Despite the fact that there is substantially more tonnage afloat today than ever, the waters ahead do have some reefs and some

shoals. No phase of our economy experienced a greater dislocation during the war than did American shipping.

A particularly disturbing trend which has jeopardized many independent American-flag operations, causing serious unemployment among our maritime workers and posing a serious prospective competitive threat to American-flag carriers is the practice of certain shipowners of this and other countries to transfer their vessels to flags of convenience such as those of Panama and Honduras.

After 6 years during the war in which their ships were in the service of this Nation the coastal and intercoastal water carriers are finding the going exceedingly tough to reestablish their services. Serious operational cost and rate problems are faced by them. This segment of the industry has a particularly vital role to play in our domestic economy in providing relatively cheap transportation services essential to domestic industries.

Less efficient ships, commonly called obsolete tonnage, have not been retired. Instead they are being sold at junk prices to the sweat-ship operator and retained in competition. While this tonnage may be uneconomic to operate under the higher cost maritime flags, in the hands of the sweat-ship operators, contradictory as it may seem it can and is driving modern and more efficient tonnage into the status of laid-up fleets.

Too, the large-scale cargo movement engendered by the Marshall plan will dwindle rapidly as western Europe revives. The expectation that European recovery would lead to a great volume of international trade on the Atlantic has small chance of being realized.

Because of these and the many other problems facing the American merchant marine the Senate Committee on Interstate and Foreign Commerce has launched a major maritime study. We want to find the solution to these problems. Is the 1936 act doing the full job? How best can it be brought up to date and improved? How can we effect a policy of encouraging the retirement of older tonnage and replacing it with modern and efficient ships? What steps are necessary to effect the revival of our coastal and intercoastal fleet? How can we encourage the maintenance of a tramp fleet under the American flag? What are the real reasons for American-owned operations under foreign flags, and how can we return these vessels to the American flag? And most pressing of all how can we take the armed forces out of the commercial shipping business?

The Congress, in passing the Merchant Marine Act of 1936, recognized the necessity of an American merchant marine suitable for speedy conversion in an emergency to national defense and to develop the foreign and domestic commerce of the United States. The underlying philosophy of the act was that our higher standard of living, which is reflected in both the operating and construction costs of the American merchant marine, made it impossible to build in our yards American-flag ships which could compete in world trade.

My committee wants the cooperation and the constructive suggestions of the Propeller Club in meeting maritime problems. We seek solutions, not headlines. We enter upon this serious study with only one purpose in mind; how can we best accomplish the mandate laid down by Congress in its 1936 declaration of maritime policy.

The act authorized the establishment of 32 world-trade routes, essential to our foreign commerce, and it permits ship operators to contract with the Maritime Commission for a minimum number of sailings per year over these routes. The Government pays to the operators who have contracted to serve these trade routes, a differential that proposes to reduce the American operator's cost to a parity with his foreign competitors. In addition, in order to maintain a current construction program, the Government permits these contract operators to build the ships needed for these routes in domestic yards, and pays the excess American cost to afford the contract operator a parity in the capital investment necessary for his operation. The Government has also given these contract operators substantial tax advantages in the form of tax-deferred and tax-exempt deposit of earnings during their respective contract periods.

In 1937, shortly after its creation, the Maritime Commission began a well-conceived, long-range shipbuilding program designed to produce 500 ships in 10 years, at the rate of 50 ships a year. When World War II suddenly burst upon a cockeyed world, that program was doubled and redoubled again and again until virtually it became a shipbuilding crusade. Truly it was a race with death and we won. Nearly 6,000 ships were constructed in 5 years, instead of the original goal of 500 in 10 years. In 1939, American-flag vessels carried 22 percent of our export trade, but for the years 1935 through 1939, this domestic fleet showed an operating deficit aggregating $4,000,000. At the close of World War II we had practically all of the world's merchant fleet, and the world-wide need for consumer goods, plus our extensive rehabilitation programs, have made the shipping business admittedly good for the American operator up to the present time.

Since the war the Maritime Commission has made an extensive effort to dispose of surplus tonnage to private enterprise and to restore the American merchant marine to a traditional peacetime footing. Seventeen hundred and eighty-four vessels of the war-built fleet have been disposed of under the Merchant Ship Sales Act of 1946. American operators bought 671 of the best types of vessels available for American-flag operation, and after 1,113 ships were sold them, sales to foreigners were discontinued. In addition to vessels sold, over 1,900 were preserved in national defense reserve fleets. These laid-up vessels have been available for charter under the Merchant Ship Sales Act of 1946, and have moved in and out of the reserve fleets as needed. Bareboat chartering by the Maritime Commission in the postwar period has ranged from a high of 1,510 vessels on June 30, 1947, to a low of 354 on December 31, 1948, and has brought revenue of approximately $285,415,470 into the Treasury.

During the recent year we have witnessed a trend toward stabilization of world shipping, and foreign maritime nations are becoming equipped to resume their prewar positions in that trade. In an effort to assist world recovery we have sold more than a thousand ships to foreign operators. Some of these nations are putting ships into the world trade which excel our vessels in size and speed. And, because of their lower wage rates, their labor overhead ranges between a minimum of 22 percent and a maximum of 60 percent of our labor costs.

Our national maritime policy dictates that the American merchant marine shall be privately owned and privately operated insofar as is practicable. Restoration of the merchant marine to private ownership and private operation has been, therefore, one of the principal objectives of the Maritime Commission in this postwar period. There are now 1,566 vessels in the active American merchant marine. One thousand one hundred and thirty-four of them are privately owned and operated. Three hundred and eighty-nine are Government-owned, but operated under charter or general agency agreement by private American owners or operators, and 43 are Government-owned under charter to the Department of the Army.

These 1,566 ships, comprising the present-day active American merchant marine, total 17,730,000 dead-weight tons, compared to 1,092 privately owned ships of 9,300,000 dead-weight tons in 1939.

Although we have a bigger fleet today than prewar, we have an unbalanced fleet, due to the fact that during the war we built thousands of cargo ships but no passenger ships. Our present fleet of 1,566 active units consists of 1,036 cargo ships, 468 tankers, and only 62 passenger-carrying vessels having accommodations for 19,370 passengers which, for the most part, are the so-called austerity type. Our 1939 fleet, on the other hand, included 609 cargo ships, 352 tankers, and 131 passenger-carrying vessels with a capacity of 38,000 passengers.

Now, in 1949, American ship operators realize that the war boom is over. The shipping industry, in facing the future, meets a market in which cargo offerings are dwindling, and competition is becoming increasingly keen. Foreign-flag fleets have grown far beyond their 1939 levels and the United States insofar as active fleets are concerned now occupies second place among the maritime nations of the world. The United Kingdom has 2,547 vessels in operation compared to our 1,566, and other nations such as Norway, the Netherlands, France, Italy, Sweden, Russia, and Greece have come back relatively strong. Many bills designed to preserve, for the American merchant marine, the carriage of a fair proportion of our foreign commerce have been submitted to this Congress. Several of them propose to equalize what is felt to be a disparity now existing between American operators who hold subsidy contracts and those who do not. Other aspects of these legislative efforts tend to rehabilitate our dwindling domestic water-borne trade.

Long before ECA was authorized, the Maritime Commission was helping European nations to rehabilitate their shipping industry. Our purpose was to assist them to bring their fleets back to their 1939 levels, and when we were certain that that purpose had been accomplished, Congress by law discontinued foreign sales.

We have been generous in binding up the wounds of a war-torn world. Even though we owe more money than all the rest of the world combined, we have clothed the naked and fed the hungry everywhere without stint. It has been our policy to rehabilitate and restore the economy of all of our neighbors with little regard for the preservation of our own economy. Perhaps it is better to give too much than too little, but there must be a stopping place somewhere. There must be a point at which we discontinue depleting our resources. There must be a point at which we consider our own grave responsibilities to our own people and retain for them, and I might add for the sake of the world, the strength to provide wise and constructive leadership in world affairs.

Surely no adult American needs be reminded that it is necessary that the United States have a merchant marine sufficient to carry a modest portion of its own domestic and foreign commerce in peacetime so that it may be capable of serving the world as a military auxiliary in time of war.

The future well-being of the world requires a strong, self-reliant United States in all of its phases, able to cope with any emergency on short notice. In this respect our responsibilities are tremendous. We cannot meet them even halfway without American-flag shipping.

Unless we are reckless beyond word description, we will hold a substantial portion of our shipping for world insurance if for no other reason. Putting American seamen ashore without ships in which to sail cannot help a confused world. Idle domestic shipyards and smokeless domestic factories and millions of our own people walking the streets in search of a job is a poor way to serve mankind.

The most serious defect in the American merchant marine today is our glaring lack of passenger ships. This situation has put us at a serious competitive disadvantage in the international travel field and constitutes a grave danger, should an emergency arise suddenly.

The American merchant marine cannot compete with foreign-flag services unless it is equipped with fast, efficient vessels of the most modern design. Improved ships must keep coming off the ways year after year to replace vessels which become overage and obsolete. Most of the ships now in our fleet were built within a 5-year period during the war and will become obsolete as a group and at one time.

Recently contracts were signed for the construction of a 48,000-ton superliner which is to be the largest commercial vessel ever built in this country. It will be 980 feet long, will carry 2,000 passengers and maintain trans-Atlantic schedules equal to the best. As the result of patient and intensive cooperation over a period of many months by the Maritime Commission, the Navy, and the United States Lines, this vessel is on order. It will cost something over seventy million, a substantial portion of which will be spent for its national defense features, such as speed greatly in excess of commercial requirements, extraordinary cruising range, special safety hull design, independent engine rooms, special strengthening for gun platforms, and certain navigation features.

This superliner will go a long way toward putting the American flag back into a competitive position in the North Atlantic passenger service. Should we ever be so unfortunate as to need her for a troop ship she will carry 14,000 men at high speed.

Also under contract are five other vessels which will do much to restore our passenger fleet. Two of these are large passenger vessels for the Mediterranean service on the American Export Lines. They are being built by the Bethlehem Steel Co. at Quincy, Mass., at a cost of about $23,000,000 each. The other three are combination passenger-cargo ships, carrying 225 passengers each, for the round-the-world service of the American President Lines. These are being built by the New York Shipbuilding Corp. at Camden, N. J., and will cost about ten and a half million each. Other ships are in various stages of negotiation between the Maritime Commission and the steamship companies.

There is much in recent maritime history today that parallels the period following the war of 1812, the epochal era in which the *Savannah* made its historic voyage. We are again taking the lead in developing radically new and more efficient ships. Bids are being asked by the Maritime Commission on a prototype cargo ship speedy and economical to operate which could be produced in mass quantities in the event of a future emergency, and design to form the backbone of a modern peacetime freighter fleet. Our shipyards are turning out giant new tankers, the size and speed of which were undreamed of just a few years back.

It is important to the economy of the country, to the merchant-marine industry, and to our national defense, that we continue to build ships. For shipbuilding is essential to the maintenance of shipyard facilities and, even of greater importance, to hold the skilled and experienced personnel they employ. If shipbuilding should be permitted to dry up in this country, our shipyard facilities would of necessity be dismantled and our shipbuilding workers absorbed by other industries and scattered to the four winds. Then, if a crisis arose suddenly, we would lack even the nucleus of the facilities and the nucleus of the personnel from which to expand quickly into an adequate ship-construction program such as became so urgent in the World War II emergency.

At present, the skilled and semiskilled workers employed in private shipyards on the Atlantic, Gulf, and Pacific coasts and on the Great Lakes number about 74,500. There has been an increase of a thousand workers in new building since the first of the year, but a decrease of about 4,300 has occurred in ship repairing so there has been a serious net loss. It has been estimated that approximately 100,000 skilled and semiskilled workers should be employed in the Nation's private shipyards constantly to maintain the minimum nucleus which would be required in the event of war.

Also an adequate merchant marine contemplates and security requires a sufficient seagoing and shoreside personnel to constitute a nucleus force which can be expanded quickly in time of emergency. There are now 17,200 officers and 63,800 seamen employed in the American merchant marine, and an estimated total of 150,000 steamship company shore employees, stevedores and longshoremen which is far below minimum security requirements.

No one can deny the important part American shipping played in both World Wars. It has been said that without the substantial transportation factor which America provided World War II would still be raging. Certain it is that if America is to accept the challenge of suffering humanity to keep the world at peace, the logical approach is through a healthy shipping industry operating under the free enterprise system.

Admiral Louis Denfeld, Chief of Naval Operations, bluntly says: "Our merchant marine and our national existence are inseparable." Unless we want to return to the status of outmoded isolationism, certainly he is correct. Louis Johnson, Secretary of Defense, says: "The importance of the merchant marine to the well-being of our country cannot be overestimated. These ocean highways are in truth our country's lifelines." There you have it straight from the top military leaders of this Nation.

The United States is spending vast sums of money for national defense annually. Perhaps we are spending more than is warranted and more than we can continue to spend year after year. But whatever we spend for defense and world leadership, and the two are inseparable, a good proportion should go directly into domestic and ocean-borne transportation facilities. Congress must realize that if we would keep American ocean-borne shipping in the game it too must have support.

The free enterprise system has disintegrated throughout the world. State trading and socialism have replaced private shipping almost everywhere beyond our borders.

By Presidential proclamation today is National Maritime Day. It marks the first successful and epochal transoceanic voyage under steam propulsion. We have observed this day since 1933, with fitting ceremonies. I suppose the Russians, when they hear about it, will claim that it was not Capt. Moses Rogers who made this historic voyage but that it was Capt. Mosevitch Rogerisky; that the seaport was Leningrad and not Savannah, Ga., and the date was April 1, 1818, and not May 22, 1819.

Nevertheless, 130 years ago American genius cast the shadow of things to come when the old *Savannah* steamed into Liverpool on its historic voyage. America cannot rest on those laurels, magnificent and significant as they were. But all of us must hold fast to that spirit of adventure which surged in the breast of the intrepid American captain 130 years ago. For the sake of struggling humanity our national objective and aim must be to keep out in front.

The American mariner of today has the Moses Rogers tradition to uphold. During the last catastrophic war he measured up to his responsibilities with much to spare, but the peace he helped win in turn demands much today from Congress. America cannot improve herself in maritime effectiveness without helping humanity all over the world. Where goes our flagship, there goes our trade, and where goes our trade there goes our system of free enterprise and our determination to deal fairly as an inspiration and a goal for a totalitarian plagued world to contemplate.

With patience, understanding, and firmness, we should proceed with our mission of peace and our spirit of good will, determined to win the respect of all mankind and remain a dominant influence in the world for peace and international integrity.

In every harbor and in every port of all the world, day in and day out, should be seen ships flying the American flag. To a few this flag is the symbol of high purpose and generous friendship. To others it signifies a tough competitor, but a fair one. To still others, it may spell Santa Claus but I warn them that our barrel has a bottom. To some, who unfortunately are misinformed, confused and frustrated, the Stars and Stripes may carry the challenge of commercial imperialism. Positively that is not an American objective, but before we ask others to subscribe to our good motives, we must be convinced ourselves; we must wave our own flag; and we must take great pride in what it symbolizes and we must be certain that we ourselves are worthy of its noblest conception.

Unless administered with great caution and reserve, the European recovery plan, our substantial aid to China, and our free-will offerings to bolster decadent and indifferent economies wherever they may exist, are dangerous to us and to them. Friendship cannot be purchased, and men cannot be bribed to fight on our side. A wise Creator has decreed that man shall earn his bread by the sweat of his brow. If we continue our silly campaign to repeal this divine law at home and abroad we have a right to anticipate divine wrath and decadence ourselves. No one has any right to expect anything from us other than a fair opportunity to earn his own way. If he has goods to sell which we want we will buy them at a fair price; if he wants our wares he must pay for them out of his own production. Under no other system can we expect to survive.

True world prosperity can only be served by sharing through trading. Let us make it plain, therefore, to all that American shipping is operating on a fair and square business basis. That its mission is to transport goods from places where they are surplus to points where they are needed.

On this day and on every day with modest pride let us display our flag throughout the world. Let us honor the men who carry our national colors on the high seas, and sustain them in their honorable career of honest service. So let us support American shipping to the end that we have what the world need most—a strong and influential United States of America.

States' Rights

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. SMITH of Kansas. Mr. Speaker, sometimes in our reading we come across an article that in our opinion deserves wide attention. Such is the article I include herein—not for the names it mentions but for the fundamental American truths so vividly set out.

I have never met Strom Thurmond, the Governor of South Carolina, but I saw him once. I saw him leading the South Carolina delegation in the inaugural parade last January 20. As he came up the street to turn into Pennsylvania Avenue a series of boos started. The Governor demonstrated that great American trait of fair play. When the booing started he stood up, bowed, and smiled at his hecklers. That is the American way. But, I am informed the American way smile at the hecklers was not observed at the other end of Pennsylvania Avenue.

As a Republican who strongly believes in human freedom and liberty, States' rights, and above all a solvent constitutional form of government, I commend this article for your reading:

Mr. Chairman, Governor Thurmond, fellow Americans—or shall I say fellow American Democrats?—in all this broad land none are so entitled to be called American. In all this broad land none are so entitled to be called Democrats. If the name of that synthetic splinter over which Mr. Truman presides, for which Senator McGRATH is overseer and Senator HUMPHREY philosopher, the splinter that stands for federalism-gone-mad and socialism-come-creeping, if the name of that is national Democratic, then all the more is your name American Democratic. You are as American as George Washington. You are as democratic as Thomas Jefferson and John Calhoun and Woodrow Wilson.

I am proud to speak for you tonight in salute to another man of history. Because he is a living man, and young, and lives in a State where politicis never cease, he is destined to much political rough and tumble. But let it never be forgotten that he is also this man of history, part of the South's great story, the Nation's own song, and that whatever you do to him or for him politically in days to come he is entitled to your eternal respect and salute.

Salute then, fellow American Democrats, to a gallant leader, a right honorable gentleman, a man of courage that shames all cravens, a man of States' rights liberalism and light—Strom Thurmond. The salute which President Truman refused to give in return for your own loyal one, Governor, as you rode by him with the wise and beautiful young woman who is South Carolina's first lady, yours as a loyal American, a veteran of your country's military service, governor of this sovereign State, that salute your fellow countrymen tonight and throughout this South offer you in million-handed substitute.

You rode by the inaugural stand as an American, as we of your States' rights cause ride by. This is no movement of secession, any more than John Calhoun's was. It is a move against what makes for secession, as Calhoun's was. It is a movement of participation. We propose to go on being our Uncle Sam's nephew more than ever. We mean to go on contributing our taxes, our songs, and our fighting men in greater percent than any other Americans. We are for all the aids and all the obligations that belonging to this greatest Nation means. We are weary of lost causes and thin red lines. We are for a nation "one and indivisible."

And we know that what makes our Nation one and indivisible, as Calhoun said and as, in this day, that wise philosopher, Walter Lippmann, in pointing out, is respect for the regions making it up. And we know that of all the differing regions ours is the one that differs most. It differs because of cotton, because of climate, because of a more greatly surviving agriculture, and because ours is the only region ever devastated by war and the stamp is on us still. It differs even more because of the most delicate and difficult race problem with which any people anywhere ever had to deal.

And, if only we can be free enough of our nest foulers at home to make the rest of the country see it, this southern regionalism makes us the most American of all Americans now. Our sense of what an uncomprehending and all-controlling Government at Washington can do to our specially circumstanced civilization in the South lets us see more clearly and fervently than any other Americans what this same sort of Government can do to America itself, to the whole great way of liberty and self-government and man in an image.

The Communists are clear about their party line. They know its very dotted "i" and crossed "t," and they are religious about it, too. But we are dim about ours. We've had it so long, been sure so long it was the right and great line, that we have half forgotten what it says and how it feels. What is the party line of America? What is the philosophy for which the specially circumstanced South most stands at this hour? What is the basis of our magnificent American proposition that men can be free and have human welfare, too? It is a line in two points. A point against too much government. A point against government too far from the people.

It is a point against too much Government. We believe that democracy and controlled economy are incompatible, that beyond a certain point a government can control a great nation's economic life, with all the intricacies and wheels within wheels, only by making itself a dictator government—and that even then it won't work. Mr. Justice Douglas—and he and Senator HUBERT HUMPHREY are the two most likely successors to Mr. Truman in 1952 as nominee of the National Democratic Party—says the great invention of the twentieth century is "the human welfare state." All of us who are decent are for human welfare. All of us who are open-eyed know there must be more and more, even though Americans, whatever their race or region, or class, have more than any others on earth. But the human welfare state. That is something else. That is welfare sought to be achieved by the passing of laws, and more laws, by the sending around of policemen, by the setting up of bureaus and commissions, by the making of rules and regulations and the filling in of questionnaires in triplicate forever. If this human welfare state is the invention of the twentieth century, it was not invented in Washington. It was invented in Moscow. For that is what the Russians have. And Russia is what comes of having it. Look at her tonight with her human welfare state—a nation without democracy, without liberty, without God, and without human welfare. Democracy and controlled economy, beyond a limit we have begun to reach in our country, are incompatible.

Ours is a point, also, against government too far from home. Democracy and a too centralized government are incompatibles, too. When you have people governed too far from home, you have them governed without understanding and without support of the governed. You have a government that must operate through policemen, through force bills, through arbitrary rule and regulation. We talk of civil liberties, and it is precious talk. But the most civil of all our civil liberties is this one, the liberty to be governed at home on problems belonging at home. People all over this country believe it. Some call it home rule. Some call it local self-government. Here in the South we call it by the quaint old name of "States' rights." But whatever you call it, it is one of the two basic principles for America now, one of the two great points in America's party line against forces of despotism and enslavement that are challenging in the name of welfare all that is American and all that is light. Democracy and the too controlling state are incompatible. Democracy and the too central state are incompatible.

And, yet, ladies and gentlemen, you can be told that it is backward to stand for such things. That is because they have indeed been used at times in sorry causes by agents of reaction. But rightly used, they are liberalism in the word's real sense. The case against the too controlling state, as Senator TAFT makes it, for example, is not a case against Federal concern for human welfare. He is for a Federal floor to misery and underprivilege. He is for Federal aids and equalizations without Federal controls. He is for Federal umpiring of business competition. He is for opposing totalitarianism in business as in Government and in labor organization. But he is, also, for being free.

And the case against the too central state, as Strom Thurmond makes it, is no case for the abuses of States' rights which we know exist. Strom Thurmond is for States' rights, but he doesn't mean the right of the strong to prey upon the weak. He doesn't mean the right of the selfish to be let alone in selfishness, of the backward to hold the forward back, or of the chain gangs of prejudice to stop the march of time. He doesn't mean heyday for our Negro haters and baiters and cheaters and exploiters. We love that race as Henry Grady said we do. They are our companions through history, our brothers under God and the southern sun, and they are behaving admirably today in spite of humiliations and misleads imposed on them from outside. If there have attached themselves to the States' rights movement some of these exploiters, along with some political hacks and has-beens, and some reactionaries who don't know what time it is, that is the lot of all great political movements. Such men are no kinfolks to Strom Thurmond, and it is Strom Thurmond alone who has the South's mandate. It is he alone who has been voted for by a million southerners, and it is he alone who must and, I believe, will, stamp the States' rights movement with the liberalism and modern light to hold its place in the great new national political line-up forming dimly but surely now from the creeks and inlets and grass roots of this green land.

It is a time for identifying the South with great American principles. It is a time for holding these principles above party or personality, and for being brave and honest and believing enough to go wherever the principles take us. We may be thankful that the Democratic Party we own with these principles in the deep South today and mean to go on owning is not the party Vice President Barkley calls on us to support. It is not the party in whose name President Truman and Senator Humphrey and Chairman McGrath are proposing to eat the South and have it, too.

It is a party based on eternal principles and holding itself, let us resolve, subordinate to those principles. One of the great contributions the South can make in this hour of flux and confusion is its faith in things eternal, principles that do not change. That faith cursed us once when we stood too still, but today, with motion everywhere, and most of all in Southern States, it is our stabilizer, our balance wheel, our heart of progress. There are things eternal, and we know it. Eternal right and wrong, eternal love of liberty and excellence, eternal God, and, yes, an eternal South.

The eternal South. Made of the land and the way our people love it. Made of the climate, and what it does to the blood, bone and bright fancy of those who breathe it. Made of the latitudes and longitudes, the shore lines and elevations, the rocks and trees and running streams. Made of this miracle of southern springtime, the fertilities of

summer, the technicolors of autumn, the generosities of rain, the multiplying pines, the wine-making sun, the love-making moon—and what these do to you and me, and have done to all who went before and will do to those who come after.

The eternal South. In its sign, in its serenity as atoms split and planets boil, let's take our stand with Strom Thurmond—for freedom of American enterprise, for States' rights, and for men in the image of God.

The Fraternal Order of Eagles and the Gosselins—the Living Memorial

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. MANSFIELD. Mr. Speaker, a young war widow and her two children arrived here yesterday from the West to begin an exciting visit in Washington which will include many high lights of happiness but with overtones of remembrance and sorrow.

They are Mrs. Henry George Gosselin, of Butte, Mont., whose husband was killed in action with the Fourth Marine Division on Saipan in 1944, and her little son and daughter, Henry, Jr., 8, and Lorraine Ann, 5.

The Gosselins are the central figures in the living memorial created by the million and a half members of the Fraternal Order of Eagles to honor Eagles who died in World War II—and they represent 1,258 sons and daughters who are being given health care and educational opportunity by the Eagles' Memorial Foundation.

This living memorial, which Gen. George C. Marshall, among other distinguished Americans, has commended as "one of the greatest humanitarian activities ever undertaken," is dedicated to the education and welfare of all children of Eagles who gave their lives in the recent war. The Gosselin family symbolizes the mother and children pictured on a special memorial foundation seal issued by the Eagles to add to the $3,000,000 foundation fund, raised by Eagle subscription, for benefits ranging all the way from treatment for simple childhood ailments to major surgery and university tuition.

The family will remain in the East through May 30, when special Memorial Day celebrations will be held in 2,000 communities throughout the United States and Canada as a climax to the foundation drive. While here, they will be guests of honor at a reception in Washington, represent Eagles in Memorial Day exercises, and participate in several radio programs.

The father of Henry and Lorraine Ann was a marine who enlisted in Butte in January 1944. He sailed from San Diego for the Pacific a few months later as an automatic rifleman with Company A of the Twenty-second Regiment of the Fourth Marine Division—saw service at Roi-Namur, and was killed in action June 18 of the same year after 3 days in the fighting on Saipan.

Henry, Jr., a bright and responsive lad, has been a victim of spastic paralysis since childhood, but is now greatly improved after treatment at Shodair Hospital in Helena, Mont. His young sister has needed little more than routine childhood health attention, which she has received through the Eagles' Memorial Foundation.

DeVere Watson, of Council Bluffs, Iowa, national president of the Eagles, who will join the Gosselin family in the East, said the memorial foundation was first conceived early in 1944.

There were 170,000 of our members in uniform—

Watson said—

Many of them had already lost their lives. Before the war ended, in fact, more than 3,000 Eagles had been killed outright, or had died as a result of war injuries or war-incurred ailments. Since our organization is made of down-to-earth, common people—our casualties were high because our men were in the thick of it everywhere.

We Eagles chose to feel that we had a deep and proud responsibility for the children of these men who gave everything. So we established the memorial foundation to care for them.

The fund grew steadily through enthusiastic voluntary contributions of our membership. It is probably the largest fund of its kind in the world—if, indeed, there is one anywhere to match it in motive and inspiration.

The first actual case handled by the foundation, Watson said, was in June 1947—a tonsillectomy for a 7-year-old boy in Ohio whose father was killed in the Battle of Bastogne.

Today he said:

More than 1,250 boys and girls are on our eligibility list. Every one of them has been given complete medical and dental examinations; those who need it are getting treatment from doctors, and in hospitals, of their own choosing. The Eagles gladly pay the bills.

The eligibility list is growing. Many cases are still unreported. New cases are constantly added as other Eagle fathers succumb to ailments or injuries which originated in the war. Also, educational demands increase as these children grow older. Eighty percent of those eligible have indicated a desire for college education—17 of the foundation's charges are already being helped through higher education and our college list will grow each year.

That is why we have issued a memorial seal—to carry on this humanitarian movement. Eagles everywhere are enthusiastic about this unique and satisfying service they have brought into being. To them, and to the proteges of the foundation, Memorial Day this year will have special significance.

Mr. Speaker, the Members of the United States Congress and the Supreme Court paid their tribute to the Gosselin family last evening at a reception sponsored by the Fraternal Order of Eagles at the Mayflower Hotel. To the Gosselins and to the Eagles I want to say that both will remain enshrined in our hearts and in the hearts of our country forever. The Gosselins will never forget their sacrifice; the Eagles will always remember.

Skipper Ignores Storm Warnings

EXTENSION OF REMARKS

OF

HON. JAMES T. PATTERSON

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. PATTERSON. Mr. Speaker, I believe it particularly appropriate to insert in the RECORD the column by Joseph Alsop, appearing in the Washington Post on Sunday, May 22. Mr. Alsop, in his usual accurate manner, relates to the inefficiency and disorganization of the executive branch of the administration in handling the problem of unemployment.

Even though the economic advisers to the President, in their quarterly report were, as is unusual, unanimous in the opinion that some Government program should be considered to meet this problem, no action is, as yet, forthcoming from the President or any of the administrative agencies. I might note at this point that there is one exception—in that last Friday, Major General Fleming, the Federal Works Administrator, publicized the fact that his agency was considering a public-works program to cushion the shock of our business decline. Under date of May 13, 1949, I had inquired of General Fleming as to the policies of his department in this respect and have not, as yet, received a reply. His action, in publicly releasing information about a policy being formulated, would indicate that when and if a reply is made to my communication, I might be able to inform the Members of the House in more detail as to what is being considered.

It is significant to note that there is an increasing tendency on the part of those in the administrative branch to recognize the necessity for measures to cushion a downward spiral and to plan for such an eventuality. It now seems evident that the only person in Government worried about inflation is the President himself. All economists, whether they be connected with business, labor, or Government, agree that the trend is deflationary rather than inflationary and, consequently, it seems ridiculous for the President to persist in his refusal to accept reductions in expenditures by governmental departments and, at the same time, to insist upon a $4,000,000,000 increase in the tax burden on our citizens.

The article follows:

SKIPPER IGNORES STORM WARNINGS

(By Joseph Alsop)

Possibly the noise the business forecasters and economists are hearing is not the crash of surf on a reef of bad times. But it must be said that when so many of the chart studiers think there is depression ahead, it is a bit alarming to find that the cast, cumbersome old Ship of State is perilously close to drifting.

What is frightening is not that the President and his advisers have adopted bad plans for coping with a business recession, but rather that there should be no plan at all.

The President is known to feel that the increasingly widespread predictions of depression contain an element of big-business propaganda, intended to defeat his economic program in Congress. Probably there is some justification for this view. But that does not justify ignoring the problem altogether.

The treatment accorded the quarterly report of the President's Economic Advisory Council is highly symptomatic in this connection.

UNANIMOUS ON RECESSION

After frightful internal wrestlings and disputes, Messrs. Nourse, Keyserling, and Baldwin submitted a unanimous report containing one major admission and four significant recommendations. The admission was that the inflation danger was past, and that a business recession must now be regarded as a definite possibility.

The two most important recommendations, which have been much misrepresented in the press, were as follows:

A, since they were not immediately needed, the inflation control provisions of the President's January request to Congress should be temporarily shelved. B, to encourage business, the President's January demands for new taxes should be revised downward.

Specifically, the Council suggested jettisoning the $2,000,000,000 of proposed social-security tax increases, and lowering the original proposed increase in corporate and income taxes well below $4,000,000,000.

In addition, the council urged the President rather significantly to extend present provisions for unemployment benefits under social security, and to provide limited funds for planning public works programs in areas where serious joblessness is already appearing.

Although these last two recommendations give a certain grim emphasis to the whole report, the President's decision was simply to stand pat on his January program. He is said to have reasoned that he would only undermine confidence still further by admitting the possibility of a depression at this juncture.

Considering how seldom his experts are unanimous, it is rather surprising that the President should have ignored them when they agreed for once. For, in fact, there are four separate and distinct theories current in the highest administration quarters, about how to deal with depression.

SNYDER HAS HIS OWN

Theory 1 is that of Dr. Leon Keyserling. Keyserling is a New Dealer, believes in a managed economy, and advocates stabilizing the economy at its present high level by major governmental efforts, if necessary. Theory 2 is that of Dr. Keyserling's chief, the Chairman of the Economic Advisory Council, Dr. Edwin Nourse. Dr. Nourse advocates the policy popular with businesses, of drastically reducing both Government expenditures and taxes.

Theory 3 is that of Treasury Secretary John Snyder. He is close to Nourse, but differs from him in insisting that business is still good and the prospects are not alarming.

Finally, theory 4 is that propounded at the Federal Reserve Board by Marriner Eccles. He is close to Keyserling, but believes the present economic level cannot be maintained and accepts the inevitability of considerable disinflation.

Since Eccles thinks the bump must come some day, he would prefer it to happen now. But he, too, wants the Government to intervene massively before the readjustment becomes a serious slump, to stabilize the economy at a level lower than Keyserling advocates.

These are extremely brief and crude summaries of complex and expert viewpoints. Inevitably, they distort a little. (Keyserling, for instance, wants price readjustments as much as Eccles, but insists they must be accomplished with no transitional hard times.) Nonetheless, the divergence of the viewpoints is sufficiently indicated to show that the administration has nothing like a master plan for dealing with a possible depression.

There cannot be a master plan, when the men who should be making it are all traveling in different directions, without higher direction from the President. In the end, of course, political pressures are likely to recommend Dr. Keyserling's approach to the White House.

If the forecasters are correct, and bad times really come, the administration will seek to promote recovery by spending. But even the spending theory will not be given a fair trial, if it is applied haphazard and in crisis.

Military Pay for Technical Competence

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. BROOKS. Mr. Speaker, we are confronted with a great responsibility; the urgent, insistent, continuing need to maintain the best military organization in the world. It need not be the largest. Weight of numbers is no longer the sole measure of power. It must be the smartest; the most skillful at every technical talent related to the complexity of all-out war. It must be the best.

It must be able to defend the United States today or tomorrow against any force that can be assembled or developed by scientific research.

No single weapon or combination of weapons can achieve this national security for us. This year, next year, and in the foreseeable future this Nation will be defended by people.

People operate and direct the weapons we have today. People will direct and operate the weapons of tomorrow. It will be people who will convert tomorrow's scientific developments into weapons that may decide whether this country can survive. Those weapons, too, will be directed and controlled by people. By our people, I hope.

Even in a robot world such as fiction writers dream of, the robots would be controlled by people.

Our security rests, therefore, in keeping our defense organization supplied with the best qualified technical servicemen our country can produce. To some extent we can create them. In our military schools and research laboratories we train experts in a hundred branches of advanced technology. We equip them with the mental capacity to make scientific discoveries of their own.

But in order to benefit from their skills we must be able to retain these men after they have finished training. We must offer them a reasonable inducement instead of a career of genteel poverty.

The national defense ceases to benefit when an electronics engineer resigns and uses his technical knowledge to devise an improved automatic method of dispensing soft drinks.

Most of the officers are engineers, of one classification or several. All of them have talents valuable to private industry and many of the most accomplished go into private industry. This is not surprising in a civilization where achievement is so frequently measured by the financial reward it receives, and where the differential between service pay and that offered by industry is so great.

In the Navy alone, and the other services have suffered similarly, almost 3,000 Regular officers—career officers, that is—almost 3,000 resigned during the first 3½ years after World War II. More than a third said flatly that the pay was inadequate. Most of the others said the same thing indirectly. Most had jobs waiting for them in private industry.

Most of us have encountered the situation. We have appointed talented young men to the military academies; have watched pridefully when they graduated with honors, only to discover a few short years later that they have left the military for an adequate living in business.

The basis for our present military pay scale was established in 1908 and has been meagerly increased since then to correct only a few of its most glaring hardships.

There was no Air Force 40 years ago; the Cavalry was the glamor service. There were no armored divisions; no guided missiles. Navy ships were slow, coal-burning vessels with low-pressure steam and simple machinery. Gunnery was a matter of simply pointing the weapon at a visible target. Radio, a crude combination of sparks and crystals. Radar, Sonar, Loran; the new sciences of electronics and nucleonics were all in the future.

These and other new sciences influence our daily lives, and new developments in any of them may completely alter our future. We need and must have in our National Military Establishment the men to carry on the development and operation of our modern weapons. We must provide an emolument commensurate not only with the increase in actual costs of living, but one which will be attractive to the capable, ambitious officers who are qualified right now for positions outside the military service; positions where they could rear their families on a scale of relative luxury compared to the living we offer them.

Many of them are awaiting congressional action on this measure before they decide what they must do. Generally, they are highly efficient, battle-seasoned officers who are devoted to the service and anxious to remain on active duty if their economic security is reasonably assured.

Passage of this measure will insure that economic security to our servicemen and I consider its passage by the Congress essential to our national security.

Trouble in the Paradise of the Pacific

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. ANDERSON of California. Mr. Speaker, the following self-explanatory communication from my good friend, Arthur C. Schoen of Honolulu, should be of interest to every Member of Congress.

We in California are deeply concerned over any extensive work stoppage which results in a lack of trade and shipping between the Territory of Hawaii and the mainland. I think it is high time that the Department of Labor, using the authority which has been given it by the Congress, look into this situation and make every possible effort to stop the strike of the ILWU which threatens the Hawaiian Islands with bankruptcy if continued.

ATHLETIC SUPPLY OF HAWAII, LTD.,
Honolulu, Hawaii, May 20, 1949.

Hon. J. Z. ANDERSON,
House of Representatives,
Washington, D. C.

DEAR MR. ANDERSON: I hate to pile the burdens of an outlander on your shoulders but as we have no one to vote for us and as California is our nearest neighbor and one of our principal suppliers, I am turning to you for help.

I am, as you know, an American citizen and taxpayer (also one of Uncle Sam's unpaid tax collectors). Hawaii is my native land and the birthplace of my mother and grandmother. My father was a Californian. I am a veteran of World War II, having served in the Navy from July 1942 until November 1945. I saw action as shore based Navy in the battles for the Marshalls (Majuro, Eniwetok) and the Marianas (Saipan). I am a married man with two sons. The businesses, which I built and operate, have 27 full-time employees, many of whom are stockholders. I was special assistant to the NRA administrator for Hawaii in 1934 at his request and while in this position also served as president of the Retail Merchants Association.

I believe the above qualifies me to be heard by the elected Representatives of the American people. My request is for immediate action by the Federal Government to give us relief from this strike of the ILWU which is seriously damaging the economy of this Territory of over half a million Americans and threatens many of us with bankruptcy if continued.

This is no ordinary strike nor should uninformed or partially informed people decide hurriedly that it is. The only means of supplying this Territory with food, clothing, and all other merchandise is by ocean freight. The only means of exporting our sugar, pineapples, and manufactured products is by ocean freight. A glance at a map will show that truck and railroad service are not available. Therefore one union, dominated by a few men, absolutely controls our commerce. At any time that they decide that conditions are not to their liking, our commerce is brought to a complete standstill.

This union is a complete monopoly—in fact a perfect one as it is protected by Federal law. Other monopolies are prosecuted. Obviously, such a union has no place in the American system and since it was brought to power by Federal law, the Federal Government must regulate it.

Hawaii is a Territory, not deemed capable by Congress of governing itself, so Congress must now act to prevent a small group of men from dominating and ultimately destroying what has been built up here by a half century of the American system.

The stevedores are continuing to unload Army and Navy cargo at the old rates of pay because if they didn't the Army and Navy would unload their own ships. There are a good many people here willing to unload the cargo on ships in the harbor other than Army and Navy ships but that is considered strike-breaking. Doesn't it sound funny that the Government can unload its ships and its citizens can't. Doesn't this sound a little on the Russian side—in other words "the Government can do no wrong."

The Honorable WAYNE MORSE, Senator from Oregon, says the employers should arbitrate. Others involved say don't. Arbitration is not the answer; at best it would be a temporary solution as the wage issue could be reopened any time by the union and as long as they have a Government-protected monopoly we are at their mercy.

Let us give an example of the unfairness of this monopoly which says give us so much or we won't work or let anyone else do the work. If the electric light company said "pay us 5 cents per kilowatt hour more or we shut off your lights," how long would they be allowed to keep them off and how soon would their franchise be revoked? The same would hold for the gas company.

How long would the Federal Government allow a monopoly to exist on all the oil produced in the country or any other key product? And yet it protects a monopoly so complete that it can in effect shut off not only lights and power but the very food we need to sustain ourselves.

As an American citizen without the power to vote for regulatory laws because I reside in Hawaii, I ask that you, one of the fortunate ones, bring our plight to the attention of the Government. We need relief from this monopoly now and protection against a repetition of this situation.

Sincerely,

ARTHUR C. SCHOEN.

P. S.—My 27 employees have asked me to be their spokesman.

James Forrestal

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following extract from a broadcast of William Hillman:

The tragedy of James Forrestal is an American tragedy. The tension and the fatigue that come from overwork, paved the way for the climax. Forrestal gave unsparingly of his energy and his nerves. He gave in greater measure than many men in the service of their country those resources of strength and skill that set men apart. But at the hour of his greatest effort—he was denied a distinction he deserved—freedom from base and slanderous questioning of his motives. No man in public life is above criticism. No nation would be safe without criticism of its leaders. But the American tragedy is that our public men are subjected to such vicious and such baseless calumny that the wonder is any decent men want to serve their country.

Reporters and commentators and editors are busy tonight trying to find out how many times in recent months Forrestal attempted suicide. Good reporters have done their job admirably in giving all the details of Forrestal's plunge to death. But this death of Forrestal is more than a story of a tragic event. It should be the hour of deep soul searching by Americans—of questioning of how far we can go in pillorying and crucifying men in public office. It is one thing to say that Forrestal made a mistake, if mistake he did make, in following this or that particular course of action in his heartbreaking job as first Secretary of Defense. Democracy requires full information and a balancing of views and no man's plan is God's plan. But to have subjected Forrestal to the charge that he was a tool of Wall Street, that he was a vicious warmonger, that he was using the crisis of the world merely to enhance his own power or his profit—and yet to have withheld proof of such a charge—is a crime that some journalists and radio commentators have been guilty of; guilty in a way that taints American sense of fair play.

Washington and this country need a shaking up—a reorientation of our public life. There is too much slander and too little debate. The forces of the mud slinger are more potent than the forces of reason. It is getting more and more difficult to discuss public problems, because it is easier for the vicious, for the unscrupulous, for the special interests—whether minority or majority interests, whether financial or economic interests—to attack rather than to argue. Rumors and gossip fill the air and the columns of newspapers to an extent that social historians some day will look upon with amazement. Decent reporters and commentators everywhere must combat the few raucous-voiced, insinuating, villainous men who are setting the fashion, which has gone into legislative halls and public offices everywhere, the fashion of villification. President Truman said a man had to be a man of iron and have elephant skin to be in public office. The President may well have added that a man in public office today has to be without a heart and nerves. And pity the nation that eventually gets rulers without heart and nerves. But we are asking for it. Too many want to listen to the vicious gossip and battering criticism of verbal assassins, because, perhaps, it is too much work to listen to debate or argument. Who are these self-appointed slanderers and critics, who but by the grace of a microphone and a typewriter set themselves up to judge the public weal and pillory public men? I think the time has come when certain men at the microphone and at the typewriter should be subjected to the same public scrutiny and criticism that public men are subjected to. Incidentally, have you ever tried to criticize any of these so-called public tribunes, and see the howl they set up, declaring the freedom of speech or of the air are violated? The death of Forrestal is a moment in which Americans ought to begin to examine the record.

Up in Montreal today the American Psychiatric Association meeting in annual session described the suicide of Forrestal as a "familiar reaction to excessive stresses and strains." The association issued a statement tonight expressing regret at the public attitude toward Forrestal's illness. The statement said: "We see in the papers the notice of Mr. Forrestal's death from the result of an acute attack of depression that is so common in middle life. The war has shown that there is a breaking point for every one of us, if the pressures are great enough. No one is immune from the effects of stress and exhaustion. To ridicule such sickness is to

revert to the dark ages of superstition when such illness should be understood in the light of present scientific knowledge as a familiar reaction to excessive stressses and strains. The accomplishments of such people as former Secretary Forrestal speak for themselves. If this man's heart had given way first, beneath the burden, instead of his overcharged emotions it would have fallen into the round of any ordinary illness and no special emphasis would have been given to it. The fact is that the outlook for recovery from such illness is as good as for other illnesses from which we recover completely and carry on as effectively as before. It is too bad that while Mr. Forrestal was being given the finest kind of medical care he was subjected to the destructive influence of unenlightened attacks. It is regrettable that in this day and time such conditions cannot be looked upon as any other illness by the public at large."

This is a timely statement. It needs to be repeated to every corner of the land. And lest foul gossip get the upper hand in this tragic hour—as tragic to the Nation as it is to the man—let me say this—nothing was done by Mr. Forrestal as Secretary of Defense—that has not been thoroughly reviewed for any errors that might have arisen in moments of stress. The greatest stress and strain that Forrestal suffered came when he left office—when he left feeling as though he had not been understood or appreciated—for that is the meaning of those lines of poetry on the open page of the book of poems found at his bedside—that passage from Sophocles—

"That deeds that he hath done
Seem hostile all to hostile eyes."

This is an American tragedy as old as Greek tragedy. I think the time is come, too, for an end to vicious political debate—to hysteria among the people invoked by unsubstantiated or half-supported accusations against individuals who haven't even been given trial. Communism has no greater ally in this country than the half-backed hysterical charges against leaders of this country by political opponents. Breaking down proper respect for certain officials, too, is doing more to help anarchy and communism than all the muddled-brained extreme left-wingers who are tools of cunning and dangerous men. Let's get back to debate and put an end to evil tongues.

Coddling of Nazi Cartelists by AMG Shapes Into Explosive Issue

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. MULTER. Mr. Speaker, the following column, written by Charles Van Devander, which appeared in the New York Post of May 20, 1949, is further proof that we are building another Frankenstein in Germany. It is not too late to insist that President Truman's policies be carried out in that area:

CODDLING OF NAZI CARTELISTS BY AMG SHAPES INTO EXPLOSIVE ISSUE

(By Charles Van Devander)

WASHINGTON, May 20.—The coddling of Nazi cartelists by the American military government in Germany is rapidly becoming the most explosive issue in Washington. President Truman is watching the situation closely and may eventually have to intervene dramatically. The Army Department, temporarily headless since the resignation of Secretary Royall, is strictly in the middle. Apparently it is helpless to guide events or to persuade AMG officials in Germany to carry out announced United States policy, which is to smash the big Nazi combines once and for all.

The history of recent events in this field is almost too fantastic to be believed. Yet, the story of sabotage of United States policy by United States representatives in Germany is now completely documented.

Best place to pick up the story is with the appointment of a civilian committee late last year by then Secretary Royall to conduct an impartial investigation of charges that the decartelization program had broken down. The committee, headed by Garland Ferguson, of the Federal Trade Commission, held hearings in Germany. Three weeks ago this committee reported that the charges were true. The men in charge of breaking up the German cartels were unsympathetic with the program; therefore there was no record of achievement in carrying out the job.

The world-wide I. G. Farben trust, whose main plants at Frankfurt were miraculously spared by British and American bombs which leveled the rest of the city, is still functioning. The Ruhr industrial combines are untouched. Proceedings have been dropped against the German subsidiary and affiliate of SKF, the Swedish ball-bearing combine.

In effect, the committee recommended that three men responsible for this sabotage of United States policy be fired. It named Richardson Bronson, chief of the decartellization branch of AMG; Lawrence Wilkinson, his economic adviser; and Philip Hawkins, deputy to Wilkinson. Hawkins, incidentally, is the son-in-law of Gen. William H. Draper, Jr., New York banker, who, as Under Secretary of the Army, first charted that soft policy on cartels.

These men have not been fired. Instead they are now carrying out flagrant reprisals against subordinates in AMG who testified before the Ferguson committee at its invitation. Wilkinson brazenly described the official Army report criticizing his activities as "low comedy."

The recall of Military Governor Gen. Lucius Clay was directly connected with the failure of the decartelization program, which has the support of President Truman. The Ferguson committee had let Clay down easily with the probably accurate statement that he had been misled by AMG aides. Clay's lack of understanding of the whole problem was indicated, however, by his comparison of the situation in Germany to laborious antitrust prosecutions here at home and his statement that "we must expect constant efforts to circumvent the law in Germany."

Without notice to the Army Department, General Clay suspended one AMG critic, Alexander Sacks, as his last act before leaving Berlin. The suspension was promptly lifted by Acting Army Secretary Gordon Gray. Immediately after Clay left the trio which had misled him—Bronson, Wilkinson, and Hawkins—turned on another critic. Under guise of economy—which may preclude review or reversal by the Army Department—they fired Charles H. Collison, deputy chief of the decartelization branch. Collison, like Sacks, had testified critically before the Ferguson committee. The Army Department first learned of Collison's dismissal from press dispatches.

President Truman has repeatedly declared that the German cartels, which did so much to bring Hitler to power and to provoke World War II, must be broken up and never permitted to revive as they did after the first war. There are indications that he has been quietly incensed by what has gone on in American military government during the past 3 years. The Army is now making an analysis of the Ferguson report.

John H. McCloy, as newly appointed United States High Commissioner for Germany, is stepping into the midst of this malodorous mess. The only convincing evidence that the Truman program finally is to be carried out will come if he sends the Bronson-Wilkinson-Hawkins trio home on the next boat after he arrives.

Walkerville Fire Department Has Been In Service Almost 50 Years

EXTENSION OF REMARKS
OF
HON. MIKE MANSFIELD
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. MANSFIELD. Mr. Speaker, it is with a great deal of pride that I call to the attention of the House the outstanding record made by the Walkerville, Mont., fire department.

Many of the members of this organization are personal friends of mine and I value their friendship highly. They have made outstanding contributions to their city, to Butte, and to Montana. Their community spirit is remarkable and their efforts to make their city outstanding are recognized by all.

To Chief Walter Murphy and all the members of the department, I want to say thanks for your work over the years and to all of you I want to extend my personal congratulations and best wishes for a job well done.

The article from the Montana Standard for April 11, 1949, follows:

WALKERVILLE FIRE DEPARTMENT HAS BEEN IN SERVICE NEARLY 50 YEARS

Walkerville's volunteer fire department is entering on its forty-seventh year of service to the hill city, and at a recent anniversary meeting and dinner members reviewed an enviable record and then turned to the future with plans to continue the improvement of the home neighborhood.

At the banquet meeting, presided over by Chief Walter Murphy, who was taking office for a third consecutive term, and with Garfield Harris as master of ceremonies, it was recalled that the original fire department was formed in 1903 by a group of civic-minded residents who feared the scourge of fire.

During the organization meeting Mike Murray was elected chief, a position he held until 1907, when he declined to continue in office. The department's equipment at that time, it was recalled, consisted of a handcart, a minimum amount of hose, an ax, one nozzle, and one hydrant wrench.

Fire fighting in those days amounted to a simple task of pouring hundreds of gallons of water on the burning area and more often than not the water damage was far greater than would have resulted from the flames. Nevertheless, the fire fighters did the best they could with the tools at hand and happily the fire losses were held at a minimum.

At about the same time the department was organized, old timers recalled, the membership seeking to avoid a drenching in cold

weather—that was when most fires occurred—instituted an educational campaign, one that is being carried on today on a national scale—"prevent fires."

The department progressed through the years, and in 1936 a second-hand automobile was procured. The machine had been the private car of the late L. O. Evans. Funds were limited at the time, and designs for motorized fire-fighting equipment were scarce—but the membership relied on ingenuity and initiative to rebuild the machine.

However, with such craftsmen as Raymond Fontain; Henry Sullivan, who designed the body; Francis Holland; Mike Peters; Joe Church; Garfield Harris; Walter Cannon; Dominick Ravazon; and Joe McNulty on pipe, carpenter, and tin work; and Frank Carney, while not a resident of the city, as mechanic, a first-class truck was turned out.

This rebuilt machine served the city well until 1939, when it was called into service for a big fire. The truck reached the scene of the blaze without mishap—a fortunate situation because it had no brakes—and was brought to a stop within a few feet of a hot burning fire only by losing momentum on an uphill run.

Fearing for the safety of the firemen and not overlooking the value of property that could be lost in an emergency, members of the department took steps to procure a new truck. With the aid of friends, who sympathized in the cause, and through benefit socials, enough money was realized to purchase the truck now in use.

The present truck was added to the department in 1939 but improvements have been added as they were developed by manufacturers of fire-fighting equipment. While the truck is 10 years old, it compares with those of the current era in performance and reliability and is seldom out of service for repairs.

Members of the department serve without pay but they seldom miss a regular meeting or practice session to keep in trim for an emergency.

In seeking out and eliminating the causes of fire the firemen naturally find other conditions in the community that can be improved and these matters are discussed and steps taken to develop and improve the neighborhood. As a consequence the department plays a vital role in city affairs.

Among improvements in Walkerville contemplated for the current year and backed by the firemen is a proposed new lighting system. Lights presently in use are to be replaced with modern fixtures and when the project is completed will make Walkerville one of the best lighted communities in this region.

The Walkerville department is the possessor of an electric hose drier, believed to be the only one in this region. It was purchased from funds provided by the firemen from social activities. The department has also taken steps to protect the membership in the event of injuries suffered while fighting fires by purchasing insurance.

In addition members of the organization have perfected a relief association in accordance with State laws—an organization that devotes its efforts to the welfare and protection of members who risk their lives that the lives and property of others can be protected from loss and destruction by fire.

Besides Mr. Murray, first officers of the deparment were John Purcell, assistant chief; J. W. Wilcox, secretary; Mike Peters, treasurer; John McGraw, captain No. 1; Pat Gleason, captain No. 2; Ed Finnegan, foreman No. 1; William Cuff, foreman No. 2.

Chiefs of the department following Mr. Murray and their terms of office included Jack Whelan, 1907 to 1909; Joe Briney, 1909 to 1912; Jeff McNamee, 1912 to 1914; Frank Dent, 1914; Jerry Hurley, 1914 to 1917; Al Davis, 1917 to 1918; Virgil Vacherie, 1918 to 1919; Harry Blewett, 1919 to 1920; Ed Matthews, 1920 to 1922; Elmer Duhame, 1922 to 1924; John Bowden, 1924 to 1930; Ed Matthews, 1930 to 1932; Francis Holland, 1932 to 1940; Pat Murphy, 1940 to 1942; Ed O'Neill, 1942 to 1946; and Mr. Murphy, incumbent, who was elected first in 1946.

Mr. Dent resigned his office after he volunteered for duty with the armed services in World War I and was succeeded by Mr. Hurley.

Officers now serving the department are Mr. Murphy, chief; Joe Church, assistant chief; William Hodge, captain No. 1; Al Schonsberg, foreman No. 1; John Casagrande, captain No. 2; William Buzzo, foreman No. 2; Geno Levi, treasurer; Thomas Quale, secretary; William Foy and John Lester, trustees.

By virtue of his office as chief, Mr. Murphy is president of the relief association. Other officers are Al Schonsberg, secretary; John Casagrande, treasurer; John Giop, Jack Lester, Joe Church, William Johns, and Jack Church, trustees. The association was formed in 1928 at a meeting by Charles Cortese, Joe Actis, Garfield Harris, John Casagrande, and Walter Murphy.

Walkerville's department has turned out for all spring clean-up campaigns and through their efforts last year assisted in bringing recognition to Butte as the first-place winner for cities its size. The department also holds membership in the Volunteer Firemen's Council of Silver Bow County, an organization ending its first year of service to the community as a whole.

AMG Firing Saves "Food Hitler"—Crack-Down Is on Foes of Cartels

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. MULTER. Mr. Speaker, the following articles which appeared in the New York Post of May 22, 1949, one by Arthur Massolo, and the other by Ernest Leiser, again directs attention to the serious situation extant in Germany with reference to the rebuilding of its industries:

AMG Firing Saves "Food Hitler"—Crack-Down Is on Foes of Cartels

(By Arthur Massolo)

Charles H. Collison, fired last Thursday as deputy chief trustbuster in the American zone of Germany, charged on Saturday that he was dismissed as he was preparing to crack down on a "little fuehrer" who operates a multimillion-dollar food monopoly in Hesse.

Collison identified the German as Fritz Dietz, a former Nazi whom he has had under investigation since September.

In a radio telephone interview from Frankfort, Collison told the Post Home News that his inquiry had disclosed that Dietz made $3,000,000 on American food shipments to Germany when the currency reforms were instituted a year ago.

"I had been working on this case since last September," Collison said. "I had it cracked and I was trying to present it when I was fired. I have 100 witnesses, but they are being intimidated by Dietz. The United States Government is doing nothing about it."

Collison said that he had been released because of his testimony before the special Army investigating committee, headed by Garland F. Ferguson, that recently accused high military government officials of not having carried out the antitrust program in Germany.

PUT ON SURPLUS LIST

Collison was given 30-days notice last Thursday and put on the surplus list by Richardson Bronson, United States Chief of Decartelization. He was the first of the 44 employed by the trust-busting division fired for economy.

"Bronson told me that I was fired because of my testimony before the Ferguson committee. It's no coincidence that I have just come out with discomforting disclosures about Dietz and the food monopoly," Collison said.

Collison said Dietz has broken practically every decartelization law on the books. He has been a member of the Nazi Party for "3 or 4 months," he said.

GOT A KEY JOB

In 1945, Collison declared Dietz got a job in the German food office, and was put in charge of issuing licenses to distributors of food shipped to the zone from the United States.

"He was supposed to hand out licenses to other distributors," Collison explained. "In fact, three companies were supposed to share, but he took the work on himself."

Collison said that Dietz invested 100,000 marks, and in the first 3 weeks made 125,000. Within 2 years he made 835,000 marks, a "neat profit of 696 percent."

Collison, a former New York City corporation lawyer associated with United States Steel and Electric Bond & Share, explained how Dietz made the $3,000,000.

"Before the currency reform," he said, "Dietz paid United States banks a dollar for a dollar's worth of food. After the reform he had to pay only 10 cents, but the food was still worth $1."

Collison said that Dietz "openly bragged that if I continued the case I would be fired." He said that three witnesses, working in the food office, have been declared surplus. Others are being intimidated, he said.

THEY'RE AFRAID OF HIM

"One witness told me the other day," Collison said, "that 'I am more afraid of Dietz than I am of the United States Government. He has more power here than the Americans.'"

"Who is protecting Dietz?" Collison was asked over the phone.

"That's the $64 question," he replied. "I'm a lawyer and I can't talk until I have sound proof."

Collison said he meets with an Army grievance committee soon but asserted, "I plan to fight this out as long as I can. I won't leave here until I receive some satisfaction."

"Do you see any evidence of a revival of Nazism?" he was asked.

"I can't tell you over the phone," he said. "but I've got one case that's a beaut."

(By Ernest Leiser)

FRANKFURT, May 20.—Gen. Lucius D. Clay, former United States military governor of Germany, acted in direct opposition to the Army Department when, on the eve of his departure for home, he reopened the proceedings against a military government official for criticizing that body's asserted failure to break up German industrial trusts in the American Zone, that official charged today.

Alexander Sacks, former member of the military government's decartelization staff, now employed in its democratization branch,

accused the military government of "illegal proceedings" in seeking his dismissal.

Sacks said he had just learned that on May 13 Gordon Gray, acting secretary of the Army, had notified his lawyer, Wendell Berge, former United States assistant attorney general, that the case against him had been definitely closed.

"However, General Clay on May 14 ordered the case against me reopened," Sacks said.

He made no attempt to deny that he had sharply criticized a number of military government officials for failure to implement the United States Government's policy on deconcentrating the giant trusts in western Germany. That criticism was made in testimony to the investigative committee headed by Garland S. Ferguson, of the Federal Trade Commission, which probed the decartelization program of the military government here last December.

"The military government has not questioned thus far, and I doubt if it ever will question the accuracy of my criticisms," he pointed out. He noted that the Ferguson committee report "has confirmed" the charges against a number of Clay's aides.

Sacks said that as a loyal public servant, he felt he could not have acted otherwise than criticize the decartelization policy when called on to testify before an official body. He remarked that he had left the decartelization staff before the initial attempt last January to discharge him.

The proceedings were then dropped on orders of Secretary of the Army Royall, and he was fully reinstated, Col. James Duke, military government personnel officer, told him then that Clay "disagreed" with the order, and was filing an appeal from it.

Sacks has been ordered to appear before a military government grievance board hearing next Wednesday. "I have been given only 9 days advance notice," he said.

President Truman's Socialistic Program—the Record to Date

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. MASON. Mr. Speaker, Candidate Truman promised the voters that he would, if elected, repeal the Taft-Hartley Act; prevent falling farm prices; pass the civil-rights bills, including FEPC; extend rent control 2 years; reenact legislation covering price control, allocations, priorities, and rationing; pass a Fair-Labor Standards Act; pass a Public Housing Act; and extend the social-security program to include socialized medicine. After 5 months what has he accomplished?

So far not one of these promises has been kept, and it begins to look as though not one of them can be kept in full. President Truman will be lucky if he gets a greatly watered-down version of any of his promises. Certainly his request to increase taxes by $4,000,000,000 will be turned down flatly.

What is wrong? Why cannot President Truman deliver? The Eighty-first Congress is composed of 54 Democratic Senators and 42 Republican Senators; 263 Democratic Representatives and 171 Republican Representatives—a substantial working majority in each branch of the Congress. If the Democrats in Congress voted together they could pass President Truman's entire program. But President Truman's program is very largely a socialistic program, and Jeffersonian Democrats do not believe in a socialistic program. Today there is little, if any, difference between a Republican and a conservative Democrat in the face of a program that threatens to hamstring private enterprise, discourage savings, and place the national economy in the hands of Government bureaucrats. So Jeffersonian Democrats team up with Republicans to block the march toward socialism. I predict that President Truman will have more reason to call the Eighty-first Congress names when the record is complete than he had to call the Eightieth Congress names.

THE TRUMAN DEPRESSION

Mr. Speaker, the Truman depression is with us. Its seeds were planted last November when President Truman was elected on a Socialist platform that he swiped from Henry Wallace. Cutting the margin required on the stock market to 50 percent will not save us. The trouble is not one of dollars and cents, it is one of human emotions and faith in the future. What is needed to bring forth investment dollars is confidence in the Government. Potential investors want assurance that whatever is earned in profits will not be branded as "ill gotten gains" and confiscated by punitive tax policies.

The way to get venture capital back into the investment market is to repudiate the Socialistic promises made by the President in his campaign speeches, and repeated as recommendations in his messages of last January to the Congress. This is a responsiblity facing the Eighty-first Congress. If Truman's socialized medicine, his socialized public housing, his greatly expanded Social Security program, his request for power to control prices, make allocations, and establish priorities, his program for higher taxes, and so forth are blocked by the Eighty-first Congress, then and only then can we expect confidence in the future to start the flow of venture capital back into the investment market so it can be put to work producing the goods needed by a hungry consuming public.

The Truman depression is growing in depth and scope. It is the direct result of the Truman program. Call it "Socialism," "redistribution of wealth," "economic democracy," "the era of the common man"—call it by any fancy name you will—it boils down to the silly theory that everyone can live comfortably with no more exertion than voting himself a check from the Government.

Under President Truman's program the creation of wealth through private initiative becomes immoral; and the chief function of Government will be to take from the "haves" and give it to the "have nots." The question today is, "Will the Eighty-first Congress be able to hold the line?"

Mr. Speaker, the method for achieving this socialistic program is so clearly pointed out and analyzed in an editorial taken from the Richmond Times-Dispatch dated May 18, 1949, that I include the editorial as a part of my remarks. I recommend it for the careful consideration of my colleagues:

THE PIECEMEAL MASTER PLAN

Rome wasn't built in a day, and socialism can't be imposed upon the American economy overnight. Washington planners are fully aware of this. That's why they plan to accomplish their ultimate objective "by dribs and drabs," piecemeal, one step at a time.

The master plan's principal advocates are reported to be Vice Chairman Keyserling, of the President's Council of Economic Advisers; C. Girard Davidson, an Assistant Secretary of the Interior, and Louis Bean, an economist in the Department of Agriculture.

Basically the master plan envisions an eventual control economy that will mean perpetual full employment, full production and full consumption as well as personal and national security. These goals are not now achieved, the planners believe, because too many people are uneducated, in poor health, living in slums, and exploited by businessmen who are motivated by an instinct for profit rather than the national interest.

Any attempt to impose the plan as a whole at one fell swoop would meet with determined resistance. So the planners plan to impose it a little at a time, through subsidies to various blocs, such as the farmers; through allocation of materials as part of the defense plan; through Federal construction projects; Federal housing, Federal loans to favored industries; easy Government credit to industries in need of expansion either in the public interest or to meet defense needs; gradual nationalization of major utilities, such as light and power; price guaranties to encourage new business enterprise; extensive Government buying and steeply increased taxes on corporations whose undistributed profits are too high; tax easement for essential industries, etc., etc.

Although mass production of a greater food supply and higher production through greater efficiency have thus far been achieved only through the incentive of profit expectancy, the planners hope to stimulate individual effort by legislation, one law at a time. They will bide their time and strike when fear of war or of unemployment during a threatened depression, or both, bring mass pressure to bear upon Congress.

They also feel that they can win price support in Congress for piecemeal welfare legislation as the concomitant of their economic master plan—by cheaper food prices (such as the Brannan farm-support plan proposes); by cheaper, tax-subsidized Federal housing; by higher minimum wages, medical-care insurance, great grants to education; by free lunches to millions of pupils, investments in national park and recreational areas, and other such projects too numerous to mention.

Apparently the planners believe that it would be possible (in a free country) not only to bring about this intricately interlocking and interdependent social-economic structure—but to cut each piece of the jigsaw puzzle so cunningly that with half of them in place the others would drop in snugly and almost automatically.

Even agreeing—for the sake of this discussion—that the plan were humanly feasible and that it would be implemented without political exploitation and favoritism, and without destroying individual enterprise—granting all these fantastic assumptions—two questions still remain to be answered:

"How much will it cost?" and "Who will pay for it?"

The first question has been ignored by the planners; some of them are said to believe that no matter how exorbitant the cost, government spending always aids prosperity.

But there is no doubt as to the answer to the second question.

All of us would pay for it—and at a rate that would more than neutralize any theoretical benefits we could possibly derive from a federally harnessed and regimented economy.

Pattern for Middle East Prosperity

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. MULTER. Mr. Speaker, the following article written by John C. Henry and which appeared in the Washington Star of May 22, 1949, contains a great deal of factual material showing the necessity for the early passage of House Joint Resolution 257, which I introduced on May 18, 1949, and which is being cosponsored by some 50 Members of this Congress:

PATTERN FOR MIDDLE EAST PROSPERITY—PUBLIC WORKS PROGRAM AWAITS POLITICAL STABILITY

(By John C. Henry)

Establishment of a reasonable political stability in the Middle East could set the stage for a program of public works in that area which would bring to it a prosperity it has not known for centuries.

If attempted and achieved quickly it could solve the desperate problem of nearly a million Arabs, displaced by creation of the Jewish State of Israel. On a long-range basis, it could bring not only economic prosperity, it could bring social rehabilitation to countries that are strong in ancient culture but weak in modern democracy. It could bring more fully into the orbit of the western world a group of countries and peoples whose inclination is to be in that orbit, but whose own internal weaknesses have left them relatively powerless in the face of any threatened aggression from Communist force or infiltration.

Engineering studies for many of the potential project developments already have been made, some in preliminary form and some in more advanced degree. The over-all cost, for a program that might accomplish with pennies what the Marshall plan is attempting to do in Europe with dollars, does not appear great. For the projects already engineered in one degree or another, $300,000,000 would finance them to near completion,

And on Wednesday of this past week 50 Members of the House joined in sponsoring a resolution calling for establishment of a Near East Survey Commission to study these and other development projects. Pointing toward what it termed "self-liquidating and wealth-creating" projects without commitments on the part of this Government for financial or service assistance, the group proposed a 15-member Commission to make the study. It estimated that at a cost of $500,000,000 another ten to fifteen million cultivable acres could be developed in the various countries involved.

OIL INVESTMENT PLANS

By contrast, the network of American oil interests alone in the Middle East already have projected capital expenditures of nearly $2,000,000,000 in that area in the next 5 years if the requisite of political stability and cooperation is achieved. Some of this sum would be expended in the United States on machinery and other facilities, but its end use and benefit would be directed to the Middle East. The accompanying table shows a break-down on these projected expenditures. Some of this sum already is being expended—without the assurance of stability. And even this projected total does not include the additional millions flowing eastward each year in royalties and normal operating expenditures.

One of the major projects in the over-all program of the oil interests received the go-ahead signal only this week when the Syrian Government ratified the proposal for extension of the 1,100-mile trans-Arabian pipe line across Syrian territory from the Saudi Arabian border to the frontier of Lebanon and its eventual terminal near Sidon. The Syrian action, incidentally, is an interesting development in that it may signify an intent on the part of the recently reconstituted Syrian Government to follow a positive pro-American policy.

The initiation and accomplishment of any or all of these contemplated works, either the privately or publicly financed ones, fit rather logically into the bold new program enunciated by President Truman in point four of his inaugural address of last January.

Obviously, the problem of accomplishing the condition of stability is not a simple one. The Middle East is in a torment over the establishment of Israel and the military victories which the young country has scored over its neighbors. Both the governments and the people are baffled, wounded in pride, distrustful of the United States in particular, and confused as to even what their own internal policies should be. Along with this newer torment is the older one of rivalries and jealousies among each other. It is an old pattern and probably will exist until today's poverty is translated into tomorrow's prosperity—in terms of greater agricultural production, a lesser development of industrial potential, and improved standards of health and living conditions.

STUDIED YEARS AGO

The major public works projects thus far considered involve the great and small river valleys of the Jordan, Tigris, and Euphrates with some of their tributary streams. Since the flow of each of these river systems crosses international boundaries there must be international agreements. International agreements presuppose conditions of peace between the affected countries and reasonable foundation of good faith in years to come. Obviously then the first step is establishment of a firm peace between Israel and the neighboring countries; the next step a series of agreements between the various governments involved. The further step is financing, probably on limited term loans to be liquidated eventually through American capital expenditures in the area and through the hoped-for raising of the internal economic fortunes of the countries affected.

The projects considered for the three great river systems were studied in most concrete form in years prior to and during the war. Each of them involves several steps and alternatives.

The beginning of the Jordan Valley scheme contemplates the diversion of the Litani River in Lebanon, now flowing uselessly into the Mediterranean, away from the mountainous Lebanese coast through a tunnel into the Jordan Valley. A further step contemplates utilizing the waters of the Yarmuk River which arises in Syria and Transjordan and flows into the Jordan just below the Sea of Galilee. For these two steps agreement would be needed between Lebanon, Syria, Transjordan, and Israel.

An additional project considered is that of raising salt water from Haifa by about 80 feet and then taking advantage of a natural 700-foot drop to Beisan and thence down the Jordan to the Dead Sea. Installation of electric pumps and flow controls could thus build up pressure for hydroelectric power and a continual supply of salt water into the Dead Sea. The benefit would be in power, potashes, and other chemicals for manufacture of fertilizers and similar products.

Tentative estimates for these various parts of the Jordan scheme total about $190,000,000, but a livelihood for nearly a half million people is envisioned as an end result.

For the Tigris, three major projects have been studied. The most costly probably would be at Bekhme Gorge in Northern Iraq where the waters of the Greater Zab River, major contributor to the Tigris, would be harnessed behind a 300-foot concrete dam to provide both hydroelectric power and controlled irrigation. An estimate of $50,000,000 has been placed on this project and agreement would be necessary between Turkey, where the Zab rises, and Iraq. Southward, a less costly irrigation system has been studied for the confluence of the Lesser Zab and the Tigris.

LOW-COST CONSTRUCTION

More typical of the relatively low-cost construction seen as effective in most of these projects is the plan for the Fatha Dam, an earthen structure about 40 miles south of Mosul on the Tigris. Located near Ashur, one of the earliest cities known to world history, the construction there would take advantage of the Jabal Hamrin, a range of low hills. Another low-cost project has been engineered near Samarra on the Tigris, calling for a dam and irrigation channels into the marshes of Wadi Tharthar. An additional control dam has been studied for the Diyala River, another Tigris contributory, northwest of Baghdad.

In Syria, a small independent project which could provide power and reclaim land for agricultural purposes would involve the Orontes River, now flowing uselessly from its point of origin in Syria across into Turkey and thence to the Mediterranean.

Involving the Euphrates and its tributaries are several projects extending from control of the Khabur River in northwest Syria (rising in Turkey) to a rebuilding of an ancient canal system near where the Tigris and Euphrates join to flow into the marshlands at the head of the Persian Gulf. Flowing for the most part in an easily sloping valley, hundreds of miles of the Euphrates offer no serious engineering problems or costly construction for more effective utilization.

A pattern for this general type of improvement was established in some of the development projects undertaken by the British and French in the Middle East before World War II.

In a general way the development and improvement potentialities of Syria and Iraq are similar. Both are primarily agricultural countries where the lack of controlled water leaves a disproportionate amount of their acreage out of production entirely or with very low yield. The fertility of their land under conditions of scientific irrigation has been proven and all or a substantial portion of the developments mentioned above would add millions of acres to production. Syria's principal crops are wheat and other grains, while those of Iraq are grains and dates.

OTHER SPECIAL PROBLEMS

Lebanon, already intensely cultivated within its small area, does not offer great possibilities for further agricultural development. With one of the most advanced populations of the Middle East, however, the country has industrial possibilities and great attractions as a tourist and vacation area.

Egypt and Saudi Arabia offer special problems in themselves.

Ninety-seven percent of the area of Egypt is desert, leaving a cultivated area of about 5,000,000 acres in the Nile Valley. While

these acres have a high yield of crops, particularly cotton and corn, even the further development of Nile River controls promises little more than an additional 1,200,000 acres. With a fast-growing population rate, the long-term improvement of the country is believed to lie more on industrial than agricultural lines.

On Thursday, Foreign Minister Bevin announced in London that agreement had been reached between the British and Egyptian Governments for further development and control of the Nile waters. The initial project, estimated to cost about $40,000,000, calls for construction of two dams on the White Nile at the outlet of Lake Victoria in Uganda. Both power and flood control are expected to result from these works.

GOOD LABORATORY

Saudi Arabia, emerging in a few years from the Middle Ages to the twentieth century, provides a laboratory in which almost any kind of experiment might arrive at success. Its income in oil royalties already approximates $30,000,000 yearly and are projected to $60,000,000 in 1953. It has sizable potentialities in mineral deposits and it has substantial yearly income from the Moslem pilgrimages to Mecca and Medina.

Up to now much of this income has been channeled into the beginnings of improvements in transport, communications, and health facilities. Experiments in scientific agriculture have indicated astounding possibilities and the Bedouin of a few years ago has contributed his share of surprise by proving an adaptable and industrious worker under the guidance of American oil technicians. Saudi Arabian national prosperity seems assured for a long time to come but perhaps the most fortunate development for the country on a long-range basis would be further experimentation in irrigation and farming.

Israel likewise is a special problem. A small country, already being flooded with immigrants, it probably possesses more technical skill per unit of population than any other in the Middle East. With financial support coming in large quantity from the United States its industrial and agricultural development are expected to progress at a high rate of speed.

In its proposal for a Near East survey commission the congressional group on Wednesday remarked significantly:

"The fate of Israel is now unalterably linked with the fate of the whole region and this bill is one way to bring permanent peace and neighborly relations between Israel and the other Near East countries."

Development of the smaller countries—such as Transjordan, Yemen, Kuwait, Bahrein, and others—is less subject to prediction. Some have proven oil resources and should benefit substantially; others may benefit only indirectly from their location as and if the Middle East nations demonstrate the vision to develop and utilize their natural wealth.

The following table breaks down the tentative projected plans of American oil interests for capital investments in the Middle East during a 5-year period. The companies and projects listed are either wholly or in majority part owned by American firms. Some of the projects are already under way.

Trans-Arabian pipe line	$200,000,000
Mediterranean Refining Co	69,000,000
Iraq Petroleum Co	180,000,000
Refinery additions, Haifa	25,000,000
Aramco producing facilities	520,000,000
Middle East pipe line	230,000,000
Kuwait eastern pipe line	200,000,000
Producing facilities in Iraq, Kuwait, Neutral Zone, Bahrein, Qatar, Trucial Oman	700,000,000
Total	1,924,000,000

The Forrestal Tragedy

EXTENSION OF REMARKS
OF
HON. JOHN E. RANKIN
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. RANKIN. Mr. Speaker, the tragic death of Secretary Forrestal has aroused the sympathy of decent Americans everywhere for this great man who gave his life for his country.

It has also aroused, and intensified, the indignation of decent Americans everywhere against those slime mongers of the air whose vicious attacks undoubtedly contributed to his untimely death.

Under permission granted me to extend my remarks in the RECORD, I am including a statement by Mr. Hanson W. Baldwin that appeared in this morning's New York Times, and excerpts from an article by Westbrook Pegler and a 1-minute speech which I made to the House on April 11.

Mr. Baldwin's article reads as follows:

THE FORRESTAL TRAGEDY—SECRETARY'S STRAIN, HIS FAILURE TO RESIGN EARLIER, AND ATTACKS ON HIM ARE BLAMED

(By Hanson W. Baldwin)

The tragedy of Jim Forrestal had its origins in what Freud described as "the great subterranean pool of the subconscious mind."

An extremely sensitive, very shy and thoroughly conscientious person who held emotion at arm's length, Mr. Forrestal had built around his inner soul a wall of toughness and reserve that seemed to some to amount to brusqueness. But behind that Irish jaw and broken nose lay a rare intellectual warmth and eagerness for new knowledge, and a heart kindly and selfless.

He was as unselfish an administrator as any public servant Washington has seen, and his driving, restless energy—which gave him no rest—his powerful mind and his real intellectual humility made him in the Nation's Capital a rara avis, a man who sought for himself nothing save the knowledge of a job well done, an official who had no truck with crass political machinations or petty maneuverings.

TRAGEDY STEMS FROM PAST

Mr. Forrestal's tragedy stems from the past, but its last acts were rooted deep in the soil of political Washington. The nervous strain of war, the exhausting regimen of unending work and the heavy sense of responsibility that he bore always with him combined, as President Truman has said, to make Mr. Forrestal a war victim as surely as those who fell in the front lines. But this strain, severe though it was, was not the final straw.

The shooting war was succeeded by cold war, and in Washington the inner-service battle raged without intermission. Mr. Forrestal was subjected to almost intolerable pressures; he was never at peace, even on rare social interludes the people who saw him usually wanted to influence him.

During this period he made perhaps his greatest mistake. He should have yielded—some 6 months after the Unification Act went into effect and after he had set the National Military Establishment on the right course—to suggestions from friends that he resign. His contribution had been made, and it was a great one; he had worn himself out for the Nation; he deserved his rest. But he felt that his job was not done—he was to come increasingly to feel this toward the last; the driving energy that kept him working incredible hours made him feel the job was never done.

Mr. Forrestal probably made his second great mistake last year; he has made other mistakes, of course; what man has not? He should have cracked down and made heads roll. But Mr. Forrestal was not sure of his own final judgment in the schisms that divided the services; he wanted with certainty, to be right before he took definitive action, and in any case lopping off official heads would, as he said, merely make a political and service martyr out of the deposed and would not contribute to that teamwork that he was so desperately striving to achieve.

ATTACKS ON HIM INCREASE

Before and after the election, as the name of Louis Johnson, who had long wanted the job of Secretary of Defense came to be more and more mentioned as a possible successor to Mr. Forrestal, vicious attacks upon Mr. Forrestal increased.

Drew Pearson and Walter Winchell and some others maligned and traduced and attacked him in various commentaries—unfortunately not very different in tenor from similar outrageous attacks made upon others in our day and age—commentaries for which the radio and the press must bear the burden of shame. These attacks seared deeply a very sensitive man.

Such is the brief background of a personal and a national tragedy. It is a background that cannot fill any American with too much pride, for the dirty in-fighting of politics and the corrosive personal abuse of gossip and keyhole commentators—both products of the national environment—had their share to do with the final acts of the Forrestal tragedy.

Mr. Forrestal died believing he had failed in his great responsibilities to the Nation, fearing he had imperilled the national defense. Not he, but lesser men are to blame for the feuds and frictions that still plague the services. He performed mightily for his country; lesser men must not wear the laurels that are rightly his.

The excerpts from the article by Westbrook Pegler, which appeared in the Times-Herald this morning, follow:

FAIR ENOUGH

(By Westbrook Pegler)

James V. Forrestal, a loyal, brave, and self-sacrificing servant of this Republic, certainly was, as President Truman said on hearing of his sudden death, a casualty of the Second World War. He was also a victim of the wanton blackguardism and mendacity of the radio, which has been a professional specialty of Drew Pearson.

Pearson has become a man of great power and special privilege because other decent men like Forrestal go in fear of fantastic lies to be spread over the Nation by radio, all to stimulate the sale of a brand of hats or laxative.

Pearson's current sponsor, Frank Lee, of Danbury, Conn., cannot escape a share of the responsibility for his false statements blackening the character of good men or implicating innocent citizens in discreditable or merely embarrassing episodes.

The American Broadcasting Co., which leans to this kind of radio material, most of it motivated propaganda thinly disguised as news, once tried to disown responsibility and frankly advised a citizen who was the victim of a fictitious incident not to demand a retraction or an apology.

Ed Noble, the chief owner of the company, a professional New Dealer who prospered greatly by his political adherence in radio, said the amend, if it were made, would be made in such manner as to aggravate the original falsehood and make the victim wish that he had taken it lying down.

Pearson's motives are seldom apparent. But, whether ulterior or, possibly, aboveboard, the fact is nevertheless that he has habitually "got on the wheel" of this or that defenseless personality in public life and inflicted such personal hurt as to deter decent men from entering public service.

In the case of Forrestal, Pearson made a false charge of disgraceful cowardice. Forrestal, in the role of Under Secretary of the Navy, a civilian job, made four landings with the marines, behind the assault waves, on Pacific islands held by the Japanese.

Franklin D. Roosevelt held a similar position during the First World War. It is no disparagement of him to point out that Roosevelt's only experience anywhere near the front in France consisted of tours of inspection amid considerable panoply and privilege, not personal intimacy with danger.

The contrast does favor Forrestal nevertheless.

On January 16, 1949, over Station WJZ, of the American Broadcasting Co.'s network, Pearson purported to read a dispatch direct from the White House villifying Forrestal.

At least his voice said, "The White House: Well, President Truman was about to accept the resignation of Secretary Forrestal when, last Sunday, he heard Walter Winchell's broadcast about Forrestal's income tax finagling in the 1930's."

In newspaper and press association language, that term "the White House" at the start of an item is called the date line.

The date line is the source or the ostensible source of the facts or falsehoods which then ensue and, in this case, clearly implied to the public that he was reading a dispatch direct from the White House. As to whether this was a truthful representation the individual citizen may draw his own conclusions.

"Whereupon," Pearson continued, "Truman sent for a transcript of the Winchell broadcast and literally hit the ceiling. 'I'm not going to let that little so and so,' he stormed, 'tell me who I'm going to keep in my Cabinet.' And a day later, he told Forrestal he could stay on, at least for the time being."

There ensued a paragraph of artful smear concerning Forrestal's income tax based on Pearson's own independent charge which for its credibility relies on Pearson's own record of erroneous, not to say false, statements.

Then Pearson said: "For my part, I personally think Mr. Forrestal is a very nice and charming gentleman. But I agree with Walter Winchell that a man who avoids taxes by concealing his money in a foreign country cannot command the respect of boys who are drafted into the Army."

You are invited here to note that Pearson does not charge that Forrestal was guilty of any wrong but does a job of log-rolling for another equally mendacious, ulterior and malicious radio terrorist whose high, moralistical posture is fantastic.

* * * * *

Now, finally, Pearson came to the foulest smear of his evil text.

"And I would go further," he said, "and state that a man who runs out the back door of his house into the alley, leaving his wife to cope with a jewel robbery alone, would not appear to have the courage or chivalry to be the best Secretary of National Defense."

I have personal knowledge of the Forrestal jewel robbery of July 2, 1937, because Mike Lomars, the mastermind of the hold-up, was a union racketeer with AFL charter controlling many workers in the tobacco trade in New York.

The case was broken by detectives Tom Tunney and Ruddy McLaughlin through a confession by a thief whom they arrested in another case. Not that he need rely on his brother's fame, Tom Tunney is a brother of Gene.

Not trusting my memory or even my old notes, when Pearson charged Forrestal with deserting his wife in the hands of gunmen, I called on Herman Stichman, the chairman of the New York State Housing Authority, who had handled the prosecution in November 1940.

Mr. Stichman said there was absolutely no excuse to impugn Forrestal's conduct because he was asleep inside the house at 27 Beekman Place when the stick-up took place on the street outside at about 2 o'clock in the morning.

Mrs. Forrestal had spent the evening at the Persian room at the Hotel Plaza with several friends. About 1:45 she and her escort, Richard B. W. Hall, got into Mr. Hall's car, driven by his chauffeur, and drove to Beekman Place. When they pulled up at the curb, Mrs. Forrestal said:

"Instead of the chauffeur opening the door, a man jumped in the car in back with us. He said, 'This is no joke; it's a stick-up.' I told him it was a silly way to make a living.

"He had a gun. The gun was pushed up at Mr. Hall. There was another man with the chauffeur. At one point there were two men in the back of the car. Both had guns."

After they got Mrs. Forrestal's jewelry, valued at more than $50,000, the men ran to a car that was parked just ahead, leaped in, and got away. Mrs. Forrestal saw four men altogether. When they had left she rushed into the house, notified her husband, and called the police.

Mrs. Forrestal had been fingered by a woman named Dorothy Stirrat, alias Dolly Turner, a criminal known as the Lady Finger. With her own escort, a member of the gang, the Lady Finger left the Plaza when Mrs. Forrestal and Mr. Hall left, followed the Hall car in her car, pointed it out to the gunmen who were waiting in another car close by, and wished them luck as they took out after the quarry.

The stick-up was so quiet that, far from awakening Jim Forrestal, it escaped the notice of a special watchman for the block who, for the moment, chanced to be conversing with a taximan out of sight around the corner.

The Lady Finger got 10 to 20 years, Lomars 10 to 20 years, and Joseph Weiss, alias Morris Seitchick, 30 to 60 years. Lomars held a union meeting and passed a resolution appropriating $5,000 for his defense on the ground that he was a labor spokesman and a victim of a Wall Street plot.

The Forrestal house is on the east side of Beekman Place. There is no alley through or behind the block through which Forrestal could have fled if he had been the coward that Pearson said he was.

Mr. Speaker, the fate of Mr. Forrestal illustrates what may happen to any man in public life who openly challenges communism at home, as well as abroad.

The House will remember that on April 11, I took the floor to defend Mr. Forrestal against these vicious attacks. For your information, I am reinserting that speech in the RECORD at this point. It reads as follows:

DREW PEARSON'S VICIOUS ATTACK ON SECRETARY FORRESTAL

Mr. RANKIN. Mr. Speaker, Secretary Forrestal needs no defense at my hands. He is one of our greatest living Americans. We all regret to learn of his illness, and pray for his early recovery. Practically every Member of the House I have talked to this morning, as well as employees of the House, including page boys, have expressed their indignation at the vicious attack made upon him by Drew Pearson last night.

I wonder how much longer that loathsome slime monger of the air will be permitted to carry on his filthy diatribes against decent individuals who are unable to defend themselves.

As I said, Secretary Forrestal is a very sick man, and probably delirious at times, as a result of the agony through which he is now passing; but for this smear monger to go on the air and broadcast his outrageous attack on him to all the American people is enough to arouse the resentment of every decent human being throughout the entire country.

I am calling for a copy of this vicious speech; and I am going to call upon the Federal Communications Commission to take steps to prevent such inhuman abuses as this being broadcast over the radio.

It is about time the Government stepped in and put a stop to such ghoulish practices.

The SPEAKER. The time of the gentleman from Mississippi has expired.

Public Housing Facts

EXTENSION OF REMARKS
OF
HON. JACK Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. ANDERSON of California. Mr. Speaker, with the rather fantastic provisions of H. H. 4009 staring the Congress in the face, the following article from Practical Builder is worthy of attention:

CHICAGO.—There is something very fishy about a public (or charity) housing program that contemplates housing poor families in $12,000 to $15,000 apartment homes with money taxed away from workmen who are struggling to pay for and own $8,000 homes, says Practical Builder, authoritative building publication in Chicago.

"If you think that's exaggerating, look at the record," continues Practical Builder. "Even before the war, when prices were low, public housing units cost as much as that and more. No one knows what they will cost now. Yet, the ordinary taxpayer who is paying off $50 and $60 every month on a modest little home can't help but wonder why he should be called upon to support someone else in more expensive quarters."

All over the country are examples of what private enterprise builders are doing to provide low cost, and good shelter. Take for example the 8-unit rental built in Long Beach, Calif., at a cost of $29,000. Each unit in this 8-family project contains: living room, dinette, bedroom, kitchen and bath; renting at $45 a month with a profit to the investors. Labeled as good construction by Gilbert E. Morris, Los Angeles superintendent of building, this project could not get FHA approval. According to Rollins MacFayden, technical liaison housing adviser for the American Legion of California, no plausible reason could be given although the building passed the uniform building code of the Pacific Coast Building Officials' Conference. "There are myriads of arbitrary restrictions on building today," says Mr. MacFadyen, "which are preventing the construction of decent low-cost housing. The comparable FHA requirements (excessive and unnecessary) in bills now before Congress could run the cost of such a project as high as $80,000. Legislation before Congress today would have Government paying as high as $2,500 per room. Walter H. Wilson, builder of this rental unit was forced to seek 100-percent private financing. His courage and initiative prove that private enterprise can produce low-cost housing. Government

thinking and regulation should change to permit more of this."

In Birmingham, Ala., the Russell Realty Corp. has completed 100 rental units for Negroes (64 still underway) to rent for $35 per month. Units include living room with dining space, one bedroom, kitchen, full size standard bathroom and equipment supplied, consists of gas space heater, automatic gas water heater, kitchen sink cabinets, and small 3-burner stove. The duplex units are set on lots 55 by 120 located in close proximity to school, church, and shopping.

In the Memphis, Tenn., area Wallace Johnson, Inc., has built duplex homes for Negroes renting for $37.50 (2 bedrooms) and $30 (one bedroom). In the same section H. Diugach & Co. has furnished Negroes with units that rent for $30 to $38.50. These and other builders in Memphis are also offering homes ranging in price from $4,950 to $6,200.

"Maybe some form of Government help in housing the very poor is needed," continues Practical Builder, "but there certainly is a need for house cleaning in the kind of thinking that so far has resulted only in furnishing very ordinary shelter at about twice the cost of comparable private industry jobs."

Cominform Plots New Conquests

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. MULTER. Mr. Speaker, I commend to the attention of my colleagues the following article written by Karl H. Von Wiegand, which appeared in the New York Journal-American of May 20, 1949:

COMINFORM PLOTS NEW CONQUESTS

(By Karl H. Von Wiegand)

ROME, May 20.—While the Chinese Nationalist ribs in Shanghai are cracking under the increasing pressure of Mao Tse Tung's and Gen. Chu Teh's Communist armies and while American and other western statesmen are sharpening their diplomatic swords in Paris to "stop Russia," the Soviet-dominated Cominform is working on plans for further conquests by its visible and invisible well-trained forces in many countries.

The enterprising Swiss daily "Die Tat" gives the first description yet printed of the general headquarters on the outskirts of Bucharest of the Cominform central organization of international communism and "world revolution," obtained, it is claimed, "through indiscretion."

The Cominform headquarters is as mysterious and more difficult to enter than once was Lhassa, the forbidden capital city in Tibet of the Dalai Lama.

Just as the UN headquarters now being erected in New York City will be the capital of the world, so is the Cominform the capital of world communism—an "extraterritorial" and tiny state within a state.

Unlike the UN headquarters, the Cominform headquarters is hermetically sealed off from outside contact.

The complex of buildings is described as "comparable to a small Vatican City."

The Cominform capital, says the report, is guarded day and night by a strong force of Soviet MVD secret police.

The Cominform central world headquarters has a picked personnel of about 700 who live with their families in the compound and have no contact with the outside world.

It is independent—from its own administration, its own school, post office, telegraph, telephone, radio, and cooperative store down to a cleaning brigade.

The Cominform organization is divided into five divisions, like ministries. They are connected in an executive bureau.

George Dimitrov, until recently Premier of Bulgaria, was, until recently, chairman of this bureau—thus head of the Cominform.

DRAFT PLANS

The political division or section is the first of the five. It has a personnel of 150. Here specialists and experts in tactical and strategical matters work out plans and issue instructions to Communist Parties in various countries the world over.

This section is divided into four departments.

The first of these is the foreign political department, something like a foreign office. It is looked upon as the espionage or intelligence service center of the Cominform and of international communism.

The second department deals with the organizational work and directives for Communist cells, parties and trade-union infiltration, penetration, and camouflage in the different countries. This department also is alleged to keep book on all chief enemies of communism in each country.

YOUTH SECTIONS

The third department has the international youth organizations. Youth is the hope of the Cominform.

The fourth department has to do with the war of communism against religion or the use of religion to further communism.

The largest division of the Cominform is the second division. This is the military division. It has a trained personnel of 350 and is divided into 6 departments.

The first department has recruiting and the creation of "international brigades," such as participated in the Spanish Civil War and which are reportedly active in the rebellion in Greece. Arming of Communist groups and forces also comes within the scope of this department.

SEEK ATOM DATA

Next comes the military reconnaissance and intelligence service department. Obtaining information on atomic energy is one of the chief functions of this department.

The third, fourth, and fifth departments have transport, arms, and liaison.

The sixth is the operations department.

The third division has two departments: One handles the central accounting and bookkeeping, and the other economic matters.

The latter has charge of the economic planning for southeastern Europe and for the Far East. It could be called the anti-Marshall plan aid section because it has the undermining and frustration of Marshall plan aid under its directives.

PROPAGANDA SECTION

The fourth division is the globe-wide propaganda section of the Cominform.

According to Die Tat, this section is divided into a department for world revolution and another for internal affairs.

The former department has branches in Vienna, Prague, and elsewhere. Its special function is propagation of class warfare, the mobilization of the poor against the rich and of communism against capitalism.

The internal affairs section has four subdivisions: Pan-Slavic, Germanic, Latin, and Colonial. Each chair is filled by specialists and experts from representative countries.

EXECUTIVE BUREAU

The executive bureau comprises the fifth division.

Communist parties in all countries come directly under the directives of the highly organized general headquarters of the Cominform at Bucharest.

All of these directives have been so well formulated and carried out, notably in China and in Greece and elsewhere, that the Soviet regime in Moscow can say, "it's not me."

And that is going to make things even more difficult at the Paris Big Four conference.

One-worlders are agitating for a one-world government—a kind of heaven on earth with the difference that heaven is supposed to be ruled by God, who is almighty and therefore a dictator.

In the Cominform, communism already has a one-world government with its own god—Stalin—who also may not be openly criticized but ever praised.

Tennessee Valley Authority

EXTENSION OF REMARKS
OF
HON. GUY CORDON
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, May 25 (legislative day of Monday, May 23), 1949

Mr. CORDON. Mr. President, during the current session of the Congress the President has committed his administration to the advocacy of the creation of a Columbia Valley Authority, or, as it is termed, I think, in certain proposed legislation, a Columbia Valley Administration, modeled along the lines of the Tennessee Valley Authority. Several bills have been introduced to effectuate the recommendation. Other areas have also been interested in recommendations made at one time or another for the creation of authorities in their sections, particularly the Missouri Valley, as to which bills are pending for the creation of the Missouri Valley Authority. I understand thought is being given to the creation of numerous other authorities, which might conceivably, in the end, blanket the United States.

The introduction of bills on this subject with the strong backing of the President has created intense interest, in the whole Columbia Basin, and in the Pacific Northwest generally. As a result of the public interest in the matter, one of the members of the editorial staff of the Oregon Journal, one of the two metropolitan dailies in the city of Portland, Oreg., was commissioned to make a study of the history and operation of the Tennessee Valley Authority. He did that. He reported his findings in a series of 12 articles published in the Oregon Journal. The articles represent a comprehensive and factual study of the Tennessee Valley Authority. They are readable, meaty; they deserve the attention of every Member of this body and of the House of Representatives, and also the attention of all citizens who may be interested in the question at hand. The purpose of the study was to furnish information with reference to TVA, which might be used in connection with proposals for broadening the authority area of the United States. Because of the comprehensiveness of the study, its objectivity and its conclusions, I ask

unanimous consent that the articles be incorporated in the Appendix of the RECORD. They will fill some 10 or 11 pages. I have an estimate from the Printer that the cost of printing the articles will be $825.00. I believe the articles should appear in the Appendix of the RECORD, so that all may read them. I may say, Mr. President, that the junior Senator from Oregon [Mr. MORSE] joins me in this statement and in this request.

The PRESIDING OFFICER. Is there objection?

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

TVA: MIRACLE OR MONSTER?

(By Tom Humphrey)

TENNESSEE RIVER VALE FOUND FABULOUS SPOT

(One of the livest issues in America today is that of valley authorities. Tom Humphrey, associate editor of the Journal's editorial page, who gave Journal readers More Power to You and more recently Kilowatt Crisis, has just completed an on-the-ground study of TVA, an accomplished fact, what it has done for and to the Tennessee Valley, and what current agitation for Columbia Valley Administration might do for and to the Columbia Valley. The resultant series of articles will be run daily in the Journal.)

TVA is a shield. A shining shield against flood and erosion and poverty and hopelessness. A shield held aloft by power.

Across it is emblazoned (just as one finds emblazoned across the walls of all TVA powerhouses) this legend:

"Built for the people of the United States of America."

It was to see this shining shield and, if possible, to see the other side of it, that recently I flew to the great, the legendary Tennessee Valley.

This is the land of De Soto, would-be Spanish conqueror, the land and the river of the Cherokee Nation; the land of countless conflicts—man against the elements, tribe against tribe, white hunter against Indian, North against South, brother against brother, river boat against railroad, government against private enterprise. It is a fabulous place, reeking with history, a land whose people were more than once almost annihilated by savages, a people who survived an obliterating civil war, and, more recently, a devastating depression.

I found that TVA lived up to its advance billing. Every bit of it. Believe me.

For TVA, like the valley it dominates, has size and scope and grandeur.

It makes one proud to see this glittering new thing in its ancient setting, this product of engineering genius, this evidence of calculated daring, this master plan in action. It is strictly dream stuff, yet you can see it, feel it and get your hands on it.

You almost want to stand and salute every time you see one of those soul-lifting, block-lettered slogans, every time you see another dam, every time you remember how some of your fellows tamed this most ribald and brawling of rivers after a century of failures. They've turned the "unconquerable Tennessee" into a string of placid lakes, chained it at last to do man's bidding. They're turning an eroded, one-crop land into a pastoral paradise—at least they're trying.

And you want to salute again when you think of Oak Ridge, the atomic energy giant where Hanford plutonium is processed, and see the great electroprocess industries which cheap and abundant power has drawn to the region like a mighty magnet—industries with magic names like ALCOA, and Monsanto Chemical, Victor Chemical, and Reynolds Metals.

You fly over or drive to some of the dams. You see the sprawling industries. You talk to the people. You remember this country as you saw it 30 years ago when you were a brash young army flyer, looking down upon the cotton fields and the red hills of Georgia and Alabama and Tennessee. The Tennessee was a narrow ribbon then. Today it is a region of man-made lakes. You are amazed at the change.

Then you stand in front of the monument to John Sevier beside the picturesque Knox County courthouse. "Nolichucky Jack" they called him. The pioneer, soldier, statesman, Governor of the "Lost State of Franklin," six times Governor of Tennessee, four times Congressman. Dead since 1815 he is, yet he symbolizes the tough-fibered independent fighting men who wrested Tennessee from the savage wilderness, and whose descendants, just as tough-fibered and independent are again making history in the valley.

You stand there, thinking of the past, trying to project yourself back to the days of the old Tennessee River, trying to imagine what this land was like when Hernando De Soto was there in 1541, when the Cherokees and Creeks and Chickasaws were kings of the valley, when the Tennessee was just "the great bend," so wild and turbulent that the first white men had to be "half horse, half alligator" to negotiate it.

You stand there and you think of the wilderness campfire tales of the "first" inhabitants of Tennessee Valley—the legendary "Welsh Indians" with their blue eyes and fair skins, and of the mound builders, offshoots, perhaps, of the great Mayan stock of Mexico and Central America, with its maize civilization, or survivors, perhaps, of sunken Atlantis. And you wonder about the Roman coins dug up in Tennessee Valley and what became of the "Stone Age Indians" who, unlike the later more energetic and warlike Cherokee tribesmen, were too lazy to hunt or farm or make war, but were content to live upon the mussels and snails along the river, tossing the shells into heaps that must have smelled to high heaven.

A fabulous place, the Tennessee in those olden days. As fabulous, almost, as it was when the first hunters came with their long rifles—and the Carolina traders after. Or as the Scotch baronet, Sir Alexander Cuming, who tried to create an Indian empire in the Tennessee wilderness—and darned near did it.

As fabulous, almost, as the days when Christian Gotlieb Priber, first radical to appear in the southern mountains, tried to establish a communistic-type federation, a "Kingdom of Paradise," a wilderness utopia for the Indians.

As fabulous, almost, as the later days of the flatboats and keelboats and steamboats which plied the upper and lower Tennessee and which found their passage blocked by Muscle Shoals, the Suck, the Boiling Pot, the Frying Pan and the Skillet, which defied progress (until TVA came) much as the Cherokee warriors blocked the westward movement of American civilization for more than a century.

As fabulous, you reflect, as TVA with its shining shield and its power and its dream of a pastoral-industrial civilization.

You turn back to your hotel, the swank Andrew Johnson, property of Jack Reynolds, the tobacco king. You take another quick look at the old Chisholm tavern, just below your hotel, built by John Chisholm in 1792, Knoxville's first hotel. A dreary ruin, in which four or five white families live amid squalid surroundings. Symbolic of the river-boat days that are gone. You think of gleaming white McLoughlin house at Oregon City and hope the Knoxville Journal's project to restore the old Chisholm tavern to its former glory is successful.

You turn away. Enough of history.

You have a date with chairman Gordon Clapp of TVA and with Bill Sturdevant, information director.

You want to know a lot of things, what TVA has done for and to a great valley, what an imprint of TVA could do, if anything, for a greater valley, the Columbia.

Tomorrow you're going dam hunting with Van Court Hare, TVA engineer.

And you're a right smart piece from home, as several have reminded you.

Time's awastin', even in this hydroelectric paradise.

TVA: MIRACLE OR MONSTER?

(By Tom Humphrey)

DEVASTATING STREAM CONTROLLED BY DAMS

(Art. No. 2)

TVA, in its original intent and purpose, is an instrument for controlling one of the "orneriest," most exasperating, most unpredictable, most devastating rivers in all America.

It has done just that. Done it with neatness and dispatch.

The Tennessee's development into a great hydroelectric power stream is supposedly incidental. Actually, it is a tail-wags-dog phenomenon, planned all the way.

TVA engineers—and TVA was able to grab some of the smartest boys in the business during the depression—now have nine great barriers across the main stem of the Tennessee. They start with Kentucky Dam near the confluence of the Tennessee with the Ohio near Paducah, Ky., and they end with upstream Fort Loudon Dam named for the famous French fort, the ruins of which may still be seen near Knoxville.

These dams, including Wilson which was inherited from the Army engineers, and Hales Bar, picked up from a private company, aren't big by western standards. Grand Coulee is bigger than all of them put together.

But they're called high dams in Tennessee Valley, and they really do a job for navigation. They drown out the treacherous shoals or "hogbacks" that spelled pure "hell" for rivermen for almost two centuries.

Each supplied with a lock, they provide a year-round, slack water channel 9 feet deep from the Ohio to Knoxville, some 630 miles upstream. And they've turned the old Tennessee River into a miniature Great Lakes (from the air the country seems to be half water) and as a byproduct their stream-flow plants pour a terrific jag of power into TVA's 2,500,000-kilovatt pool.

Take a look at the accompanying pictograph of the TVA water-control system and you see what we mean. Lakes, like Paul Bunyan steps from Paducah to Knoxville. Above them, on the Tennessee's brawling tributaries—the Little Tennessee, the French Broad, the Holston, the Clinch, the Nolichucky, the Watauga and the Hiwassee—is the great fan of storage or flood-control dams. Eighteen in all, including the five ALCOA dams tied into TVA's string, and with a storage capacity of 11,500,000 acre-feet.

These upper drainage basin dams, where the rain pours down at a normal rate of 60 inches a year, have no locks, but they have powerhouses, every one of them. They produce great gobs of power, too, and incidentally firm up the energy of the lower river plants.

It's really something. Holding a river in check. Using it over and over. Taming it for the Diesel-driven tugs and barges that have replaced the pole and sweep-driven tugs and barges that have and the picturesque steamboats that once plied the river and are now no more.

Don't be misled by the oversimplified pictograph of this great river system.

The Tennessee doesn't run in a straight line. It meanders every which way. It's really shaped like a fish hook. No one knows where it rises, though the confluence of the French Broad and the Holston near Knoxville is its official starting point. And the river certainly didn't know where it was going, once it started. There were no TVA-planned rivers in those days. It simply wandered off in a southeasterly direction, as though starting for the Gulf, then changed its mind, made a great bend and, contrary as ever, finally headed northward to the Ohio and Mississippi.

Twice it passes through Tennessee, dipping into parts of Alabama and Mississippi and finally cutting through a corner of Kentucky.

The lower reaches of the Tennessee, therefore, become one of the few north-flowing rivers of consequence in the United States, the Willamette being another..

So you fly over a flock of these dams and look down on the placid lakes backed up behind them. You stand at the bases of other dams, gawking upward. You look at the maps. And you reflect that here, almost completed—the South Holston and Watauga Dams are still under construction—is the most complete system for controlling an unruly river ever devised and executed by man.

This is an engineer's dream—a comprehensive plan and a blank check with which to effectuate it. This is multi-purpose planning in its ultimate form. This is a model of what the Columbia may someday be—on a much grander basis, of course, on a 10-to-1 scale.

And you wonder about it, as well as wonder at it. The countless millions of man-hours that went into it. The $850,000,000 of Uncle Sam's money that made it possible.

You wonder about its benefits versus costs ratio and the cost per kilowatt of installed capacity of its beautifully engineered power plants (no expense spared).

You wonder about its impact upon the people of the valley—upon their transportation pattern, upon their agriculture, upon their income, and upon their vaunted independence and their way of life.

You think a bit nostalgically of the golden days of the steamboats, of their struggles with the rapids. You recall that it was John C. Calhoun, Secretary of War back in 1824, who first suggested the taming of this river by the Federal Government. Those were the days when, as President Andrew Jackson forcibly pointed out, it simply wasn't fittin' for the Federal Government to spend good money for the benefit of a local community or region. And you think of the abortive efforts that followed, all miserable failures.

You think of the record flood of 1867, when the Tennessee, sometimes a mere trickle, thundered down upon Chattanooga at a hundred times its low-water volume, a monster of destruction.

You think of the current wrangle over flood control at that same Chattanooga and the predictions of Army engineers that if the city doesn't bestir itself about local levees and flood works, it risks a $100,000,000 flood—for all of TVA and its vaunted flood-control system. TVA itself estimates the possible damage at $80,000,000. And you think about that.

Then you get out the Tennessee River survey maps prepared by Maj. Lewis H. Watkins, Hugh B. Hooper and the Corps of Engineers at Chattanooga back in 1928—5 years before TVA was anything but a frustrated dream. You compare it with the latest map you picked up at TVA. And they are so much alike that at first glance you think they are the same.

You ask about that and find that TVA simply picked up the Army engineers' program for the comprehensive development of the river, refined it a bit, put a TVA label on it, and had at it—after the great depression gave the plan urgency and Messrs. Roosevelt, Norris, and McKellar and the Congress gave it the nod.

You wonder about that too, and what would happen to the Army engineers' main control plan (308) for the Columbia Basin, a plan that makes TVA with all its glitter look like kid stuff. Would it, some day, bear a CVA label?

And you wonder about the five ALCOA plants that have finally been integrated into the TVA system after 5 years of resistance. ALCOA really did the hydroelectric pioneering on the Little Tennessee, you know, starting way back in 1916 and perhaps it had some pride of authorship, besides a need for great blocks of TVA power.

You ask, finally, if TVA really does what it is billed to do, that is, really controls floods in Tennessee Valley and really serves as a boon to navigation. You are assured by everyone in TVA that it does. Here are the figures to prove it right here in black and white in TVA's latest report to the President and the Congress:

"Flood control by the multiple-purpose system of dams averted about $13,000,000 in damage at Chattanooga, Tenn., (in 1948) and about $1,600,000 damage to agricultural areas in the lower Ohio and Mississippi Basins," it says.

"The new 630-mile navigation channel carried 350,000,000 ton-miles of traffic in 1947," it says, "with volume increasing about 30 percent in the first 6 months of 1948. Freight savings in 1947 were estimated at nearly $3,000,000 or about a third of those foreseen when traffic reaches full development."

All this and 15,000,000,000 kilowatt-hours of electricity, too.

There it was again, that shining shield—dulled a bit by pictures you'd seen of last spring's floods in the streets of Knoxville and Chattanooga, blurred a bit by the lonely looking tug you'd seen nudging its barges toward the deserted looking docks of Port Knoxville. Dulled and blurred a bit, but gallantly shining still.

So you ask how they do this flood control trick, this trick no one has been able to do since Calhoun, not even General Goethals, builder of the Panama Canal. And they show you. And it's really something to see.

A weather expert, imported from Washington, has devised a special weather reporting system for TVA. He can tell the head river control engineer days in advance how much rain to expect in each of the six districts that comprise the 40,000-square-mile Tennessee watershed.

This weather man also gives the river control engineer daily rain gage reports from 150 places, 40 of them from clever automatic radio gages in remote areas. When it rains, they broadcast—just like that. Taking these predictions and precipitation reports the engineer makes his decision each day of the flood season, sending orders to the various dams for releasing or storing water.

The chief load dispatcher can then give his power orders to the various control rooms at power plants all of which are instantly available over carrier current systems.

It's a sweet deal, with absolute control of the flow of a river in one man's hands and two and one-half million kilowatts of power for another to play with.

That river control engineer is like a train dispatcher, but instead of dispatching trains he dispatches rivers. It must seem like playing God, but you feel sorry for him just the same when the rains are booming down and he's on a three-shift basis, and he must be wondering if this is another record buster. You see, if he makes an error, the ensuing wreck is worse than it would have been without any master-control plan whatever. Thank you, and how are your ulcers?

So you shake your head in wonder.

You're still in the conducted-tour phase, you see, in which many a big-eyed reporter before you has become entangled for weeks on end. So you resolve to break the spell and barge out on your own.

There's the other side of the shining shield, remember—if you can just get around to it.

TVA: MIRACLE OR MONSTER?

(By Tom Humphrey)

PRIVATE POWER LOSES BATTLE FOR CONTROL

(Art. No. 3)

TVA is now an accomplished fact—big, real, seemingly impregnable.

But TVA had need for its shining shield in the early days when it was fastening itself upon a region.

It had a magnificent plan. It had great and good friends in Washington—friends like Roosevelt and Norris and McKellar of Tennessee. It had a brand new, nay a revolutionary, tool to work with, a flexible private corporation with the power and wealth and prestige of the United States Government behind it. It had a backward, dirt-poor region bigger than the British Isles to work on. It had a mission, a mandate, and a blank check. Its burning purpose was to wipe all sins away, social and economic. And but quick.

But it had opponents, too. Plenty of them. It had a fight on its hands.

It was dealing with a stubborn river, a stubborn land and a proud and stubborn people.

Thus while TVA engineers went at their jobs hammer and tongs, TVA attorneys and their triheaded boss, the TVA board, had plenty on their minds. TVA was in the courts all the time, it seemed, either suing somebody or being sued by somebody. Directors complained that they couldn't get their work done for suits.

TVA had to have land—more than a million acres of it—for dams and reservoirs, for transmission lines and towns. So if it couldn't negotiate deals with owners, it exercised its powers of eminent domain. It sued.

It even evolved an ingenious technique for blanket take-overs. Individual suits were too time consuming. TVA, therefore, worked out its nontrading scheme, ostensibly to protect the Government against land speculators.

The scheme was simple and effective. Appraisers set the price. TVA made the offer. There could be no trading. The owner had to take it or leave it. Most of them took it, but many went to court to defend themselves against condemnation.

Remember, the war hadn't come with its insatiable demand for the light metal and chemical industries and for explosives. So TVA had to have customers, preferred customers. The TVA Act had directed that preference be given municipalities, rural electrict cooperatives, and other public agencies. And there simply weren't any worth mentioning in the Tennessee Valley area. Ergo, TVA had to promote them. And it did so.

It used as weapons (a) its broad bond-issuing powers, (b) the relatively high rates of the private companies of the region—the southern power companies weren't as far-sighted about rates as those of the Pacific northwest—(c) the PWA grants Mr. Ickes held out to any public power group that was interested, and (d) TVA's own wholesale and retail rate structures. Yardstick rates, they called them. And they were so low, by then current standards, that they made people's eyes stick out.

It made little difference that these rates were subsidized rates pulled out of a hat before TVA had figured its costs and that allocations to power on multiple-purpose dams were later arbitrarily made to fit these rate structures.

All the people cared to know was that the hydroelectric kingdom was coming. So municipal power boards and rural coops bounced up all over the place. They grabbed Mr. Ickes'—40 percent grant—PWA handouts—Tennessee communities $5,000,000, Alabama $2,600,000, Mississippi $2,000,000—and either started to build competing systems or to hack existing privately owned systems to pieces. Yes, just as Washington PUD's are hacking Puget Sound Power & Light to pieces.

The private companies, which had tried unsuccessfully to make a deal to buy TVA power and distribute it at rates fixed by the Federal Power Commission—just as Henry Ford had tried unsuccessfully to buy in the old Muscle Shoals project for $5,000,000—didn't take it lying down. They faced extermination. So they fought back. They and their stockholders in the Tennessee Valley filed about 50 suits, injunctions, and pleas for dismemberment damages. They charged conspiracy, coercion, and fraud. They won a few lower-court decisions, lost others.

Finally 19 companies joined together in the famous Ashwander case which attacked the constitutionality of the TVA Act and all that it implied. Their case made Supreme Court history, the dissenting opinion was caustic, but they lost it just the same.

The Congress, after a bitter fight, amended the TVA Act to permit the Authority not only to acquire the transmission lines and water-power properties of Wendell Willkie's Commonwealth & Southern group, but also to acquire its steam plants. TVA could do anything from then on.

Ana Mr Roosevelt obligingly called Mr. Willkie to the White House and laughingly told him that he'd better sell Tennessee Electric Power Co. while he still had something to sell.

That did it. Willkie sold for $78,600,000—about 80 percent of the real value of the properties. The other power companies gave up, either selling or making deals to cede parts of their territories to TVA distributors. They were paid $116,000,000, lost 288,000 customers in the deal The TVA team had won. It had an unbeatable hand.

Soon Knoxville, Chattanooga, Memphis, Decatur, Meridian, and everyone else was in the public power business. TVA and its retail outlets had an undisputed power monopoly over 80,000 square miles of the South, twice as much as the Tennessee Valley watershed over which the original TVA Act gave it jurisdiction.

Today TVA has 140 municipal and cooperative distributors, all bound to TVA by 20-year contracts, all committed to buy from no one but TVA, all selling at the TVA retail rate, all bound by law to use power revenues for nothing except expanded service or reduced rates. Between them they serve a million customers, customers formerly served by 32 private companies.

It was a clean sweep. The kilowatt kingdom had come.

But there were other than land acquisition and power company problems to be ridden down by TVA in TVA's hectic, formative years.

From time to time nosey congressional committees cluttered up the place, probing into TVA's funny accounting system, its "carpetbagger" personnel policies and what have you. These hearings took months, filled volumes, were very annoying, but they didn't stop TVA.

States, counties, and cities and outfits like the Tennessee Taxpayers Association began to shout for in-lieu payments to make up some of the millions in taxes the private companies had been paying. They had to be hushed up. Displaced persons had to be taken care of some way. But these things were merely petty annoyances to TVA.

TVA was really rolling.

Then, suddenly, up jumped the devil, internal strife.

F. D. R. had named Arthur E. Morgan, distinguished engineer-educator, chairman of the TVA Board. He naturally assumed leadership in the engineering phase. David E. Lilienthal, Harvard law school graduate, brilliant young New Dealer and leader in Wisconsin's fight to regulate power companies, was also named, despite Senator McKellar's strenuous objections. Passionate advocate of public power and social reform, he naturally assumed leadership in this field. And Dr. Harcourt Morgan, president of the University of Tennessee and no relative of A. E. Morgan's, shared their great power. His chief interest and concern was the fertilizer and agricultural phase.

Thus with a kingdom divided, a clash was inevitable.

It came while the Tennessee Electric Power Co. case was still pending and the claims of Maj. George L. Berry and associates for $5,000,000 for marble mines inundated by Norris Dam were a noisy issue.

Chairman Morgan broke openly and vocally with Lilienthal and the other Morgan. He really threw the book at them. He charged they were guilty of "evasion, intrigue, and sharp strategy," that they had not supported him in his drive for "honesty, openness, decency, and fairness" in the conduct of TVA affairs. He tossed in the matter of altered Board minutes in connection with the Commonwealth & Southern deal. He charged that Lilienthal and Harcourt Morgan had gone around him on power and fertilizer policy matters. He demanded a congressional investigation.

There was hell to pay—an internecine war in a hydroelectric heaven.

TVA opponents were delighted.

Lilienthal and Harcourt Morgan took their case to F. D. R. himself. F. D. R. first told all three directors to compose their differences or quit. They did neither. Then he ordered A. E. Morgan to the White House. Morgan held out. Finally F. D. R. fired him outright. Morgan refused to be fired. But Morgan lost his fight. He was curtly dismissed as Chairman and director. He was destroyed. And the men he had accused of "undemocratic behavior" were retained.

Idaho's Senator James P. Pope got A. E. Morgan's job. But Lilienthal and his boys were in the saddle. They still are. You see, aging Dr. Harcourt Morgan has quietly retired and has been replaced (while I was there) by the scientist-educator Dr. Harry Curtis, former chief chemist for TVA. Mr. Lilienthal, of course, has become Chairman of the Atomic Energy Commission, again over the strenuous objections of Senator McKellar. But Gordon R. Clapp, who became Chairman of TVA when Lilienthal switched to AEC, is a Lilienthal-trained man. He was also persona non grata to Senator McKellar in the beginning, though McKellar has since relented.

Anyway, TVA is still a Lilienthal show and that TVA shield is a Lilienthal shield. Your reporter instincts tell you so. You can certainly feel his presence there. You have a hunch that if a CVA were ever established in the Pacific Northwest, it too, would be in the Lilienthal pattern, no matter who the nominal directors might be.

You have a feeling, too, that while TVA professes to have learned a lesson from the famous Morgan-Lilienthal feud (board members say they don't divide the kingdom as they once did, confining their activities to policy-making and working through a general manager) the TVA board is again unconsciously doing just that.

Pope, the politician, devotes most of his time and energy to community relations.

Curtis, the scientist, is taking over the fertilizer deal. Incidentally he is thoroughly familiar with the phosphate situation in the Pacific Northwest.

That leaves Clapp a free hand on power policy and that, despite all protestations, is the real TVA show.

TVA: Miracle or Monster?

(By Tom Humphrey)

HUGE POWER PROJECT SUBJECT TO NO CONTROL

(Art. No. 4)

Down in the Tennessee Valley you find they still preserve the polite fiction that TVA is primarily a flood-control and navigation project. With free fertilizer a major sideline, of course. But with power a minor incident.

Maybe it's because the original legislation establishing the Authority back in 1933 didn't even mention power in its title and stated purpose, which read:

"An act to improve the navigability and to provide for the flood control of the Tennessee River; to provide for reforestation and the proper use of marginal lands in the Tennessee Valley; to provide for the agricultural and industrial development of said valley; to provide for the national defense by the creation of a corporation for the operation of Government properties at and near Muscle Shoals in the State of Alabama, and for other purposes."

(Note that "for other purposes." It later came to cover everything under the Tennessee sun.)

You have to dig way down to item L of section 5 of the TVA act to pick out the first direct authorization to produce, distribute, and sell electric power. Even so, the act directed the TVA Board to operate its dams and reservoirs "primarily for the purpose of promoting navigation and controlling floods."

Well, TVA has tried to promote navigation and to control floods and to promote the agricultural well-being of a region. It has tried to do good on a grand scale. It has given away hundreds of thousands of tons of fertilizer. But make no mistake about it, TVA is primarily a power show.

Power has enabled TVA to extend its influence outside the Tennessee watershed—to double its former size. Power, cheap power subsidized by interest-free tax funds, has proved very attractive indeed to the people of a vast area. Power from TVA plants accounts for fabulous Oak Ridge and the great light-metal and heavy-chemical industries in Tennessee Valley. It's power that holds aloft that shining TVA shield, as I said at the beginning.

It's ironic in a way, that the power program which was mentioned only in whispers in the early TVA days and always last, even today, is by far the most successful operation in the TVA book.

People may say that TVA reservoirs have flooded more valuable agricultural land, flooded it permanently, than floods ever touched in the pre-dam days. And the record seems to sustain them.

People may say that the navigation channel provided at such great cost came 100 years too late.

They may even argue about cost of the plushy TVA dams and powerhouses. But the fact remains that Messrs. Morgan, Lilienthal, and Clapp really did a job on power. They may have bent the TVA act a bit (particularly in formative years) in the doing, but they did it. Witness this:

TVA's 27 hydro and 6 steam plants produced 14,250,000,000 kilowatt-hours of energy last fiscal year. TVA sold it for almost $49,000,000 to distributors who sold it in turn to almost 1,000,000 customers for more than $60,000,000.

That's a lot of power from a lot of plants for a lot of customers.

It's a lot of power, even by northwest standards.

TVA has taken this power and created a power empire, the greatest power monopoly in the United States, bar none. For, you see, TVA is the sole supplier of power for 80,000 square miles of territory containing 5,000,000 people. This is power, king size.

TVA is answerable to no one (except nominally to the President) for its costs, its rates, or its methods of operation. It can plow its earnings back into system improvements or fertilizer or recreation or fish or seedling trees or traveling libraries or towns, or what have you—without going back to Congress for permission.

It has had to go to the Congress for permission to build the new $54,000,000 New Johnsonville steam plant, an unprecedented proposal that makes many Congressmen, many United States Chamber of Commerce members very unhappy, but that's another story and another issue.

TVA controls the rates and the operations of its 140 public power outlets, controls them absolutely. States and municipalities have nothing to say about it. Neither has the Federal Power Commission or any other Governmental regulatory body. TVA and its affiliated distributors can do anything and everything with power—anything but eat it.

Of course, by Northwest standards, TVA's power installations are pretty expensive. And their production is limited by the demands of comprehensive control of a river for flood control and navigation purposes.

Our two great power projects, Bonneville and Grand Coulee, have a combined capacity three-fourths as great as all of TVA's 34 power plants, yet they cost only 55 percent as much as TVA has cost. They produced almost 11,000,000,000 kilowatt-hours of power last fiscal year.

In engineering terms, Bonneville and Grand Coulee cost only $171 per kilowatt installed, including transmission lines, whereas TVA's cost, including cheaper-to-build steam plants, is $214 per kilowatt installed, also including $125,000,000 worth of transmission lines.

Of course, TVA lists 14 of its dams as multiple-purpose projects, that is, they combine flood control, navigation and power features. But Bonneville and Grand Coulee are multiple-purpose projects, too, though we in the Northwest don't kid ourselves or the Congress about such things. We think of them first as great power projects, secondly as navigation or reclamation or flood control jobs.

TVA has a lot of angles. Here's one:

It can allocate costs on its multiple-purpose projects any way it pleases. And it has done just that.

For example, TVA's last report shows that it had spent more than $811,000,000 altogether up to last July 1. Of this, $579,000,000 was spent on multiple-purpose projects like Bonneville and Grand Coulee. But TVA has allocated only $277,000,000 to power at these multiple-purpose dams. That's only 48 percent, by our slide rule. Try to figure that one out.

In the Northwest, allocations to power, navigation, reclamation, flood control, fishways, etc., must be approved by the Federal Power Commission, according to long-established formulas. As a consequence, 71 percent of the total cost of Bonneville and Grand Coulee Dams (about $317,000,000) was allocated to power. But only 59 percent (it was 40 percent originally) of the total cost of TVA has been allocated to power. See what we mean?

Bonneville power administration's rates, based upon these allocations, are not only subject to approval of the Federal Power Commission, they must also be high enough to pay interest on the total power investment at 2½ percent and to amortize this investment in 50 years. TVA doesn't worry about interest, and it didn't worry about amortization either—until the Eightieth Congress directed that it do so, starting this year. In short, up to this year, TVA hadn't paid a dime back on the $777,000,000 in direct appropriations made to it by the Congress.

It's only money, apparently—Uncle Sam's money.

Bonneville Power Administration has paid back into the Federal Treasury a total of $122,700,000 in 9 years, or approximately its gross power revenue. Like other Federal agencies, however—all but TVA, that is—it must go back to the Congress each year for maintenance and operation funds and for appropriations for new projects. But it pays the money back, with interest. To date, BPA has paid more than $38,000,000 in interest, plus $32,000,000 net, over and above operating expenses and depreciation, for amortization purposes.

By contrast, TVA uses whatever revenues it needs for capital improvements and services, and also goes back to the Congress each year for more money. Meanwhile it has paid back into the Federal Treasury only $30,970,333. And it still has $54,000,000 worth of bonds outstanding. The only interest TVA pays, incidentally, is 1 percent on these bonds.

In simple terms, power users of the Northwest are paying for the power installations at Bonneville and Grand Coulee. They're amortizing the allocation to power, helping pay for the reclamation of 1,200,000 acres in the Columbia Basin project and paying interest, too. They're going to do the same thing on McNary Dam and other great projects. They can do so, of course, only because these plants are among the most efficient in America. They carry themselves, but permit a very low wholesale rate, too—lower than TVA's wholesale rate.

Power users of the Tennessee Valley do nothing of the kind. They've got themselves a deal. And they weren't and aren't going to spoil it by talking to me or anyone else about costs arbitrarily allocated or rates pulled out of a hat.

Power is thus the big show in TVA-land. Flood control, navigation, and free fertilizer are window dressing.

Again tail wags dog.

TVA: Miracle or Monster?

(By Tom Humphrey)

TVA is a land of displaced persons, displaced agencies

(Art. No. 5)

No one is stupid enough to assume that a great multiple-purpose project like TVA—with its vast construction program and its regionalization of 80,000 square miles of America—can be consummated without dislocations of various sorts.

You can't spend almost a billion dollars anywhere or in any manner or for any purpose whatsoever without touching a lot of lives, without pushing people around.

You assume all this when you enter the Tennessee Valley.

So you try to put preconceptions behind you. You try to evaluate these dislocations dispassionately. You weigh them against benefits, and against dislocations you have seen in the Pacific Northwest. You classify them, insofar as it seems reasonable, among the prices of progress.

You make careful inquiry as you move around. How many displaced persons has the TVA program produced? What happened to them? How many acres of rich farm land lie on the bottoms of those 22 beautiful man-made lakes? How many dislocated homes and businesses are there? What's happened to the old-line Federal agencies that operated or still operate in the Tennessee Valley? Things like that.

You find some reticence on the part of TVA officials and the defenders of the faith. They hedge a bit. But you finally dig out the facts. And they aren't pretty.

TVA, you find, is a land of displaced persons and displaced agencies.

These persons, these agencies, didn't ask for TVA, you find, yet they got it, superimposed from outside the valley. And they have felt its ruthlessness as well as tasted its largesse.

You ask at TVA and at the University of Tennessee and elsewhere how many people TVA had to move to get that more than a million acres for dams, locks, and reservoirs, for fertilizer plants, and construction towns. How many pieces of property?

They sidestep a bit (just as they look blank when you ask about self-liquidating projects such as those of the Pacific Northwest). But finally they reduce it to families—about 14,000 of them, they say, counting some 225 displacements at South Holston and Watauga Dams, still under construction. More than 30,000 different tracts of land, averaging about 40 acres. About a half million acres of it agricultural land (the Extension Service estimated) that produced $27,000,000 worth of crops annually—at prewar prices.

Do a little mental arithmetic and you see that at least 75,000 persons were actually forced to leave their homes, farms, and businesses to make way for the taming of a river. And this does not include the thousands of persons who lived on higher ground and worked on lowland farms or in lowland canneries, flour mills, and other small establishments.

I imagine what would happen in Oregon if 75,000 persons were told they must leave their homes to make way for progress—any kind of progress. Remember what a howl went up when it developed that one of the Willamette Valley project dams would flood out picturesque Sweet Home in Oregon—and how the Army engineers changed their plans accordingly? Imagine what would happen if the Army engineers were to attempt to move as many people as now reside in Eugene, Albany, and Oregon City. There would be hell to pay.

And there was hell to pay in Tennessee Valley, particularly in east Tennessee where the people are every bit as independent and home loving and as adverse to being pushed around as are the people in Oregon.

Of course, TVA handled the displaced persons things with kid gloves. It persuaded the Extension Service and the county agents—they knew these about to be displaced people, these victims of progress, personally—to do the job and they did it skillfully. TVA didn't haggle over prices, either, though it had to take some cases to court.

Nevertheless there was big trouble in Tennessee Valley, particularly over Douglas Dam which became a cause celebre and still is. You see, Douglas took some of the richest bottom land in Tennessee out of the picture. It necessitated removal of 759 families—1,000 full-time and 1,150 part-time farmers. It eliminated five canneries and four flour mills employing more than 2,000 persons. Altogether it affected more than 20,000 persons who depended either directly or indirectly upon that area for a livelihood.

These people didn't like any part of it. The farm bureau didn't like it. Dr. C. E. Brehm, now president of the University of Tennessee didn't like it. Dr. James D. Hoskins, then president of the university, didn't like it. And doughty Senator McKellar—for my money, more than Senator Norris, the father of TVA, but sometimes its severest critic—didn't like it. And they said so. Said so loudly. So loudly that they were heard in Washington.

Dr. Hoskins put his university experts on it, and determined exactly how many people, how many jobs, how much agricultural income were to be destroyed.

But TVA engineers went right ahead with their plans. They wanted more power.

They wanted it right there. No other spot would do. The hill land to which the people could be moved could be made as productive as the bottom land, they said—if you used enough free fertilizer. And they promised to provide the free fertilizer.

This line didn't satisfy Dr. Brehm who said: "The concentration of so many reservoirs in such small areas as east Tennessee where there is a small amount of good farm land to support the population presents a serious problem, not to mention sentimental attachments that people have for homes. Could not these reservoirs be distributed over a wider area of the United States? There is no price that can compensate people for these values in a home."

Dr. Hoskins demanded: "What provision can be made for these dispossessed? Is a Government check or ready cash any solution of their problem or of the community problem? When good soil and farm homes are destroyed, the loss may be irretrievable."

And Senator McKellar made a caustic attack upon Mr. Lilienthal and J. A. (Cap) Krug, then TVA power manager, now Secretary of the Interior. He charged them with "indefensible and vindictive obstinacy" and demanded that they resign.

The critics were making headway, too, when suddenly the war came. All their protests were swept aside by the national emergency. The people were moved to red hill farms, the rich bottom lands inundated. Pearl Harbor built Douglas Dam. It also bailed TVA out of one of its most embarrassing situations.

And what of the existing agencies?

Remember that TVA makes a fetish of cooperation. It denies flatly and hotly superstate charges. It likes to work through other groups, at the grass roots, whenever it can and whenever it suits TVA's broad objectives. Witness the things with land-grant colleges and the extension service on test demonstration projects and the use of county agents to relocate displaced persons—a ticklish job if there ever was one. TVA calls these arrangements "partnerships." It has hundreds of them and says "more than a score of Federal agencies and bureaus make their specialized services available in the valley program."

Remember, next, that other Federal and State agencies had done a great deal of work in Tennessee Valley before TVA came—not as much by far as TVA has done or half the amount needed—but a great deal just the same.

The Corps of Engineers, for example, had built Wilson Dam, started Wheeler Dam when TVA took over. It had evolved a comprehensive high-dam plan for the multiple-purpose development of the Tennessee. Among other things, it had located 149 hydroelectric sites and indicated they could produce 25,000,000,000 kilowatt-hours of power a year.

The Soil Conservation Service had its program, too. So did the Forest Service, the National Park Service, and other agencies. The Bureau of Reclamation had little to do with the valley which needs little irrigation and has never been irrigation-conscious. The States all had their various programs. Not coordinated, but they had them.

What of them now?

The Army engineers (who thought of the whole thing first) have been elbowed out of the Tennessee Valley. Oh, they were allowed to complete some of the locks they had designed. And TVA still graciously permits them to operate these locks. The Bureau of Reclamation was asked to design Norris and Wheeler Dams and did it, just to save TVA time. But the Army engineers are out of the valley.

The Soil Conservation Service also is out of the valley, frozen out by TVA. It still has nominal responsibility for soil conservation in that area, as it has elsewhere in the United States, but it isn't exercising it. Not any more. And William Vogt, in his Road to Survival charges that "soil conservation therefore has lagged far behind much of the rest of the country."

This is hard to verify on a brief stay in the valley, but this is for sure: The Department of Agriculture is very unhappy about the treatment accorded the Soil Conservation Service in Tennessee Valley, and will seek a better deal if and when a CVA is established.

Secretary of Agriculture Charles F. Brannan told the Senate Committee on Public Works, in connection with proposed amendments to the TVA Act last year, that:

"It would not be appropriate to leave the committee with the impression that the TVA and Department of Agriculture have reconciled all of their policy or operational differences or difficulties. To date the Soil Conservation Service program is operative with respect to less than 5 percent of the farm lands within the Tennessee watershed. It is now operative with respect to approximately 66 percent of the farm lands of the Nation."

Mr. Brannan also indicated that there is waste and duplication of effort in the forestry program, but told the committee "we are doing, and TVA also, our very best to eliminate any possible waste as to the result of exercise of our duplicate authority."

The Forest Service, with headquarters in Atlanta, still operates in TVA territory, though national forests are relatively unimportant there as compared with the Pacific Northwest. It trades lands with TVA, plants TVA seedlings, cooperates with TVA on experimental work, reforestation and fire-protection work. TVA hasn't encroached on the Forest Service as yet, but Forest Service people, noting what has happened to other agencies, have a feeling that their time may come. They concede that TVA has the authority to push them around any time it feels like it. As for the Coast Guard, TVA still permits it to patrol the chain of lakes that was once a river. The National Park Service is hacking it all right with TVA, one reason, perhaps, being a 40,000-acre gift of land near Fontana, Great Smokies National Park.

The Army engineers at Atlanta and Nashville watch their language.

Officially they say their working relations with TVA, at the operation level, are very pleasant. They deliver power from Dale Hollow Dam to TVA. They keep very busy with the comprehensive development of Cumberland Basin, with projects on the Savannah, the Alabama-Coosa, the Apalachicola-Chattahoochee, the Etowa and Pearl Rivers, and with plans for controlling the unruly Lake Okeechobee in Florida. They have some magnificent jobs under way.

They do point out, however, that up to last year the Cumberland, despite its obsolete locks, carried more tonnage than the Tennessee. They do have projects on this great river that will produce 850,000 kilowatts of power, even with the low dam at Eureka, a concession to the wishes of the Governors of Tennessee and Kentucky.

They keep busy and they aren't talking. But they know the signs of another takeover by TVA when they see them. And despite denials hedged by statements that the people will decide the issue—pro-TVA papers in the Tennessee Valley are demanding action. They're saying the Cumberland could be another Tennessee, that TVA needs it.

It's just a question of time.

Thus time and regionalism march on.

The other side of the shield is appearing.

TVA: Miracle or Monster?

(By Tom Humphrey)

CLIQUE RULE CHARGED IN LABOR RELATIONS

(Art. No. 6)

The TVA Board has absolute control over the hiring and firing of its employees—13,581 when I was in Tennessee Valley last month, more than 42,000 at the peak of construction. And when I say absolute, I mean absolute. The TVA Act sees to that.

Once the TVA Board is appointed (for 9-year terms at $10,000 a year) by the President and confirmed by the Senate, they're the works.

The law specifically exempts all TVA employees from the Civil Service Act.

It says: "The Board shall, without regard to the provisions of the civil-service laws applicable to officers and employees of the United States, appoint such managers, assistant managers, officers, employees, attorneys, and agents as are necessary for the transaction of its business, fix their compensation, define their duties, require bonds of such of them as the Board may designate, and provide a system of organization to fix responsibility and promote efficiency."

Then, as if that weren't enough, the act says: "Any appointee of the Board may be removed in the discretion of the Board." Period.

True, the Board is directed to pay the prevailing rates of wages for work of a similar nature and to take into consideration such wage rates as have been secured through collective bargaining in the area. But the Board is not directed to make contracts with established labor unions, nor has it done so. And if workers are not satisfied with the wage rates established by the Board, their only appeal is to the Secretary of Labor, whose decision is final.

So in TVA you have no civil service, no formal agreements with organized labor. Each year TVA holds a conference with the 15 or so representatives of organized labor in the region. At this conference, wage scales and working conditions are determined. TVA then hires its men on an individual basis, without consulting union leaders or employing union hiring halls.

Nearby, at the Oak Ridge atomic energy plant, all Atomic Energy Commission construction workers are hired by private contractors through the unions, under union contracts. Over the ridge in the Cumberland Valley, workers on Army engineer projects are hired by the contractors through the unions, under union contracts. The Pacific Northwest also. On Government jobs all over America, in fact. But not at TVA.

So TVA has worked out its own unique labor-relations program. No political or racial discrimination.

You find, however, all major construction work is done on a force-account basis. TVA makes its own plans and specifications, does its own engineering, hires its own workers direct. No advertising for bids, no private contracts—except an occasional tunnel or highway or installation job that TVA doesn't want or can't handle.

There's no civil service to bother with, so TVA has set up its own merit system, its own training program, picking up or developing skills wherever found. It has set up its own retirement plan (it applies to workers on an annual basis only). You see, TVA employees also are specifically excluded from the benefits of the Social Security Act. That means, of course, that workers on an hourly basis can work for TVA for 10 or 12 years, as some of them have, and they have no old-age retirement insurance whatever and they're not covered by TVA's own retirement program.

You remember the strong position taken by the Portland labor-management committee against force-account work. (Incidentally it commissioned me to check working conditions in TVA-land.) You remember the consistent fight made by the League of Women Voters and others for extension of civil service. So you ask about these things everywhere you go in Tennessee Valley.

Senator Pope (TVA board member for a decade) tells you that TVA does its own con-

struction work on a force-account basis for three reasons:

1. TVA had such a big construction program (three times greater than the Panama Canal) that it was found better to acquire its own equipment and skilled personnel and move them from job to job.

2. TVA thinks this procedure more economical (private contractors have to make a profit, you know).

3. TVA wants to deal directly with all its employees, not through contractors, not through the unions.

And on at least one basis the matter of peaceful labor relations, this system seems to work in Tennessee Valley. There were no work stoppages during the war and only one short-lived strike to date, while Oak Ridge has had several.

You ask Van Court Hare, the TVA engineer, about this as you drive up to Fontana and ALCOA's string of dams on the east Tennessee.

Hare thinks force account operation is good in an emergency such as TVA faced. He said TVA didn't have time to contract big TVA jobs. There were no large, heavy construction outfits in Tennessee Valley like Morrison-Knudsen, Kaiser, and the Big Six outfits in the West. (Outfits, incidentally, that build anything anywhere on earth.) And he estimates TVA saved $20,000,000 during the peak construction period by accumulating a reservoir of equipment and trained personnel and moving them from job to job.

So you ask B. J. Hannifin, business agent of the Building Trades Council at Knoxville. He tells you how the Tennessee Valley Trades and Labor Council, made up of TVA and representatives of various internationals, confers over wages once a year. This understanding runs for a year, he says, seems to work pretty well. TVA hires its men from its own personnel files, not through the unions. It operates on an open-shop basis (as it must under the Tennessee law). An employee of TVA for 10 years, he feels that TVA has been friendly and fair with labor.

"The bad feature," he admits, "is the fact that there is no social security for any men working for TVA on an hourly basis. You can work for 10 years on TVA construction jobs and not be covered by old-age retirement insurance."

You look at the new wage schedules in TVA's office memorandum covering 1948. They're not bad. Not quite as good as those of the Pacific Northwest, but not bad—good, in fact, for Tennessee Valley where wage rates once were notoriously low. For example, carpenters working for TVA get $1.90 an hour, those in Portland $2.10. Machinists get $2.12½ there, $2.15 here. Electricians get $2.25 there, $2.13 here. Painters get $1.85 there, $2.10 here. Unclassified labor gets 95 cents there, $1.70 here.

TVA also tries to employ Negro workers in about the same ratio they bear to the population of the region.

But the point is, TVA has the authority to fix both wages and working conditions. It's take it or leave it.

That's about all, except this:

You talk to some former TVA employees who got enough of TVA and took a walk, men like L. B. Bolt, Jr. and Arthur L. Davis, prominent Knoxville attorneys. Both are fugitives from TVA's legal staff. Bolt was on condemnations and Davis on patents. Both since have told congressional committees what they think of TVA's merit system, its land-acquisition program, its fertilizer program, its methods of handling patents. They have nothing to lose. They speak frankly.

The merit system, they say, is one of the most highly propagandized aspects of TVA. But there is no such thing. TVA is run by a small clique. "If you aren't a member of the Lilienthal-Clapp lodge, you're out," they say. "And most of the good technical people, who didn't get the gospel, were out of TVA by 1946."

Appointments and advancements to or in the good jobs are on a personal, political, and ideological basis, they charge.

"TVA merit system? What's that?

"If TVA could get rid of 20 or 30 of the lodge brothers," they add, "it would be all right. Ninety-five percent of its employees are O. K."

There it is. All sides of the case for you to judge.

You look back at the copy of the TVA Act Senator McKellar sent you. You find at least a partial answer to a question that grows in your mind: How is this thing? It's in paragraph (h) of section II. It sets forth the only qualification for appointment to the TVA Board that you can find. It says simply:

"All members of the Board shall be persons who profess a belief in the feasibility and wisdom of this act."

They and their employees like them.

TVA: Miracle or Monster?

(By Tom Humphrey)

REVERSAL OF ONE-CROP CYCLE OVER-ALL OBJECT

(Art. No. 7)

TVA does everything in a big way, with a flourish.

Thus, its fertilizer program is one of heroic proportions.

Great chemical plants at Muscle Shoals, Ala., and Godwin, Tenn. Between them they produce almost 350,000 tons of highly concentrated phosphate and ammonium nitrate fertilizers.

More than 15,300 test-demonstration farms using free TVA fertilizer—13,200 of them in Tennessee Valley States; 2,100 of them in 18 other States; covering 1,800,000 acres.

Fertilizer research going on all the time. Experts coming from all over the world to see TVA's miracle fertilizer operation and to study its newly developed electric-furnace processes for converting lower-grade phosphate ores into higher-grade plant nutrients.

A beautiful show, and one of particular interest to the Pacific Northwest, with the greatest deposits of phosphate ore on earth.

It's all a part of TVA's soil- and water-conservation program, the over-all object of which is to reverse the one-crop, soil-erosion cycle, and restore, at least in part, the bountiful cover of pasture herbage, or Indian pasture, that Daniel Boone and his contemporaries found in the central basin of the Tennessee.

Ostensibly, TVA's fertilizer operation is a pilot-plant deal.

TVA was directed by the Congress to take over the Government-owned nitrate plants at Muscle Shoals—a $100,000,000 white elephant—salvage what it could, then provide much-needed pilot plants for the production and testing of new more concentrated, more efficient fertilizers.

Once TVA got hold of the problem and determined that phosphate was the key to its design for plenty in the valley, and test-demonstration farms the instrument, it needed fertilizer—plenty of it—so it produces plenty of it.

Witness last year's production record: 153,00 tons of triple superphosphate, 6,000 tons of calcium metaphosphate, 27,000 tons of fused tricalcium phosphate, and 155,000 tons of ammonium nitrate.

If this is pilot-plant operation, I'll go back to my cage.

It's fertilizer production, in a big way. About one-sixth of the national production, it appears from recent figures. In any event, it's a $16,000,000 business. Not as big as TVA's $49,000,000 power business, but big business just the same.

So much publicity has been given this fertilizer and test-demonstration program that one gathers that all the fertilizer TVA makes is for free.

It isn't.

TVA last year furnished 34,000 tons of fertilizer for test-demonstration purposes, the farmers selected to receive it paying the freight and signing up on a 5-year soil-building program. That's a lot of fertilizer—about $3,000,000 worth—but it isn't $16,000,000 worth. TVA sells the rest of its production at manufacturing cost. All TVA's domestic sales are to farm cooperatives, but it keeps a string on this distribution by requiring the co-ops to place it with farmers who, like the recipients of free test-demonstration fertilizer, are willing to follow the TVA pattern of soil conservation and land management.

While soil-conservation service experts say this is a fertility program rather than conservation fitted to the needs of the land, TVA is proud of this pattern. It cites the resultant shift of more than 1,000,000 Tennessee Valley acres from soil-depleting row crops, such as corn and cotton, to hay, small grain, and pasture. It points to the terracing of another million acres and the increase of 800,000 acres in pasture coverage.

This, coupled with TVA's tree-planting program (10,700,000 seedlings planted on 3,300 farms last year) is called just a beginning by Mr. Lilienthal, but a good beginning, one indicative of a new way of life in the valley.

The University of Tennessee likes it, too. It recites that the cash income from farm marketings in Tennessee, once shamefully low, showed an increase of 312 percent from 1939 to 1947, or somewhat higher than the 283 percent increase for the Nation as a whole.

(Oregon had an increase of 600 percent from the 1935–39 average to 1947 and, of course, Tennessee has never been strong on exporting farm products as Oregon is.)

Like everything else that TVA does—power production, navigation, flood control, recreation, reforestation, conservation of fish and wildlife—you find the fertilizer, test-demonstration program is highly controversial.

The United States Department of Agriculture, for example, says in effect that TVA has placed all its eggs in one basket—a phosphate basket—and that Tennessee Valley farmers are being denied the broader benefits of the Soil Conservation Service.

This program, familiar to the West, involves helping farmers in soil-conservation districts with their responsibility to adapt combinations of conservation measures to the needs of the land. The United States Department of Agriculture also provides limited payments for certain soil-building crop practices, such as contour plowing, ditching, and terracing. For some reason, perhaps political, TVA has never refused these cash payments, in addition to free fertilizer, even though it has denied the farmers the know-how of the SCS and the democratic processes of soil-conservation districts.

Secretary of Agriculture Charles F. Brannan bluntly told the Senate Subcommittee on Flood Control hearing testimony on the McKellar bill, to amend the TVA Act, that:

"The farmers within the Tennessee Valley are being denied all of the benefits of the soil-conservation service program which has proved a very valuable program elsewhere in the United States and, I am sure, will when it is projected into the valley."

Mr. Brannan said TVA virtually had told the Soil Conservation Service to stay out of the valley and as a consequence there were only three soil-conservation districts in the entire TVA area. This checks with what George Will, assistant to the Secretary of Agriculture, told me privately when he was in Portland recently with Charles Murphy, executive assistant to the President, to sound out sentiment on a CVA bill. Will stated frankly that the Soil Conservation Service

UNIVERSITY OF MICHIGAN LIBRARIES

hoped to get a better deal in the Pacific Northwest, if and when a CVA bill is adopted.

Senator JOHN S. COOPER, of Kentucky, a friend of TVA and member of the Flood Control Subcommittee, made this comment after looking at a national map showing soil-conservation districts:

"I was astounded in view of all the testimony heard here (about TVA cooperation with other Federal agencies) to see that Tennessee is the one area in that whole belt of States down there that has very little soil-conservation practices going on, or districts. I know in my own State of Kentucky they are covered by soil-conservation districts, but in Tennessee there is just one small area."

Senator MCKELLAR, who has helped get more money for TVA than any other Congressman, but whose Senate bill 1277 would require TVA (among other things) to quit giving away fertilizer, had this to say at the hearing:

"They give away a million and a half to two million dollars each year as prizes to farmers, for fertilizer."

While farm bureaus of Pacific Northwest generally oppose CVA, witnesses for the American Farm Bureau Federation defended the TVA free fertilizer program.

The National Grange, however, took sufficient notice of charges that test-demonstration farms are selected on a political-influence, discriminatory basis (you hear these charges in various parts of the valley) to include this resolution in its 1949 legislative program under the heading, "TVA fertilizer distribution":

"Present methods of distribution of fertilizer by TVA should be investigated, and any changes that will insure distribution without discrimination against or in favor of any farm organization or group should be made."

TVA maintains that its test-demonstration program has created a greater demand for commercial fertilizers throughout the country. It points out that its new electric furnace processes are made available to manufacturers and are used by Kaiser's Permanente Metals of California, the Simplot Fertilizer Co. of Idaho, and others.

Not all fertilizer manufacturers are happy, however. Take James W. Dean, of the Knoxville Fertilizer Co., Tennessee, who charges that TVA's invasion of the fertilizer manufacturing field and its policy of limiting distribution to members of cooperatives has meant that many farmers of Tennessee Valley are denied the types of fertilizer they need.

A large part of the farmers, perhaps 60 to 70 percent, are unable to get any of the TVA products, as they have no connection with the cooperatives and are not close enough to make it practical to get TVA fertilizer from them," he says. He estimates that TVA's fertilizer distribution system has encouraged the organization of 57 cooperatives in Tennessee, then says:

"The big cooperatives are getting wealthy and the farmers are being penalized for a considerable take-out."

Of course, Mr. Dean may be a bit prejudiced, as he sought to purchase 4,000 tons of ammonium nitrate fertilizer from TVA and distribute it through 700 dealers at prices equal to or below those charged by the TVA cooperatives. But he was told, in effect, by agents of TVA that they didn't like his attitude or philosophy and couldn't do business with him. "There's nothing in the TVA law to prevent it, either," he complained, then added:

"Owing to the fact that the TVA has gotten into the ammonium nitrate business heavily, independent manufacturers of ammonium nitrate have declined to ship their products into certain parts of Tennessee and Kentucky. As a result this section of the country has suffered for solid nitrates perhaps more than any other section in the United States in the last few years."

Senator MCKELLAR shed this further light on the situation:

"I have been advised that in selling fertilizer to cooperatives they (TVA) charge such cooperatives $10.26 less per ton than they charge themselves to give it away. In other words, on page A27 of the 1947 annual report of TVA, it is stated they charge cooperatives $79.73 per ton and charge themselves $89.99 for the privilege of giving it away. Is this good business or good government?"

There it is again, the other side of the shield.

TVA: MIRACLE OR MONSTER?

(By Tom Humphrey)

REBELS FOUND—FRANK ANTI FEELING VOICED

(Art. No. 8)

If you want to get your teeth kicked in, just get up on your soap box in downtown Knoxville, Chattanooga, or Nashville and start a harangue against TVA.

Everyone is for TVA—on the surface, that is. The workers to whom TVA has meant jobs; the merchants to whom it has meant unaccustomed prosperity; the chambers of commerce, to which it spells industrial development; the land-grant colleges, to which it signifies interesting projects with grants, additional teaching staff, more students, and greater prestige.

The municipal power boards and rural electric co-ops naturally like it or they wouldn't be in the deal. The hotel men like it, since it has given the Great Smoky country millions of dollars' worth of free publicity and brings in more tourists.

The governors like it for the help it gives State agencies; besides, it's a nice political tie-up. Most of the newspapers plug it because most editors think it's good for the region, though you find in talking to some of them that they have some honest doubts about its ultimate effect upon home rule, the self-reliance, and autonomy of the people.

You begin to wonder if it's unanimous. Can that be? So you dig around a bit.

You find, if you persist, if you are patient, if you promise not to quote them directly, that some of the organizations and people who pay lip service to TVA and what it has brought to the valley, admit privately that some of its do-good phases, some of its socialistic implications, frankly scare the living daylights out of them.

For instance, more than one chamber of commerce official who cited the fact that his board was on record for TVA—yes, including the highly controversial New Johnsonville steam plant that has become a national issue—tells you that if his board members, free-enterprisers for the most part, could vote secretly on the New Johnsonville steam plant matter, they'd snow it under.

Finally you begin to uncover some of the irreconcilables, some of the unreconstructed rebels—(don't be misled, the ancestors of a lot of these east Tennesseans fought for the Union). And they don't mind being quoted. In fact, they demand it.

Here are a few of them:

Guy L. Smith, editor of the Knoxville Journal, one of the few newspapers in Tennessee Valley that still doubts the wisdom of TVA:

"If State socialism is what you want, that's what you get with TVA and will get with CVA if it is fastened upon the Pacific Northwest.

"We're human enough down here not to be sore at having a billion dollars dumped into the Tennessee Valley. We admit that TVA has created a certain amount of economic momentum. I could create momentum myself with a billion dollars.

"We know that if you have to do flood-control and navigation work, the Federal Government is the only agency with enough money and authority to handle it. And it would be stupid not to generate power, once you dam a river, but you can do these things without an agency like TVA.

"The greatest loss due to TVA is the loss of political independence. No man in Tennessee Valley, from constable to United States Senator, dares run unless he declares he is first, foremost, and always, for TVA.

"There's another thing. The same people who own the city of Knoxville also own the city power board. One would assume that they could operate both as they see fit. But they can't. The power board's contract with TVA is so airtight that the city government could be broke and the power board could have $50,000,000 and we couldn't use a cent of it for city purposes.

"TVA's fertilizer operation also has strong political implications.

"Most business people and newspapers are afraid to express their real sentiments—reprisals, you know."

Now let's take L. B. Bolt, Jr., TVA attorney from 1935 to 1946: handled land acquisition in early phases, defended TVA against condemnation, damage, and constitutionality suits:

"TVA has done a job that was too big for private industry—even the power companies admit that. But Lilienthal's appointment was unfortunate. He has a ruthless lust for power.

"We had a potentially good set-up, but it was ruined by the Lilienthal-Clapp management and propagandists, who attempted to warp the functions of the professional men who were interested only in doing a good job. It took several years for the Lilienthal-Clapp crowd to unload them.

"TVA has been good for the region, but it needs a good housecleaning, more businesslike methods and more simple honestly.

"As a policy, TVA acquired twice as much land as it really needed (more than 1,100,000 acres) for its various projects. This seemed to be part of the TVA philosophy of pushing paper and people around without their knowing the score."

Now listen to an educator, Dr. James D. Hoskins, president emeritus (still active) of the University of Tennessee, including the college of agriculture, the man who helped set up the TVA test-demonstration program through the extension service:

"At first there was a great revolt against TVA taking over the farms in the valleys and moving more than 40,000 people. At one time a group living in the Norris Dam area, where the first dam was constructed, threatened to move to Brazil in a body.

"When I opposed the building of Douglas Dam, because it destroyed great stretches of the richest land in the State, I was charged with being anti-TVA. I wasn't. This was the only TVA dam that I opposed. I supported the remaining TVA program.

"My primary interest was in the production from land, and I had to speak out against this unnecessary destruction of farm property and food canneries in the Douglas Dam area. North Carolina now produces a considerable part of the fruits and vegetables used in the canneries.

"I said Douglas Dam could be built elsewhere, and Senator MCKELLAR agreed. But the war came and we lost the argument.

"TVA said the hill farms to which many people were moved could be made as fertile as the rich alluvial bottom land, but I said it was impossible. I still think so. Douglas Dam was a great error. Erosion isn't the only way to destroy land.

"Every time the Federal Government comes in, State rights suffer.

"I also warned the governor that TVA could generate power here and use it anywhere it chooses.

I think other regions should wait until the success of TVA is proved. It is one of the greatest experiments in history. Time will have to tell. I hope TVA is worth what it costs. An experiment of this magnitude cannot prove its value in a short period of time."

Now listen to Arthur L. Davis, of Knoxville, patent attorney for TVA from 1934 to 1948, former chemistry instructor at the University of Missouri and William Jewell College, former chief chemist for Standard Oil Co., of Indiana, and Empire Oil Refining Co., of Oklahoma.

"This tri-headed Government corporation set-up is no good. One man could give TVA more efficient administration. There should also be accountability to someone. TVA can thumb its nose at the Congress. It would be the same with a Columbia Valley Authority. The boys would move in with a well-oiled propaganda machine and go to town.

"TVA got control of the land-grant colleges and the extension service by subsidizing experimental work and paying assistant county agents. The TVA crowd sneers at the old-line agencies it can't control. It has built an iron curtain around the valley, ruling out the Army engineers, the Soil Conservation Service, the REAs. Result: We're dropped from 34th to 44th place in rural electrification. It's the hand-picked farmers with political influence who get the free fertilizer. The little fellows who really need it are out of luck.

"TVA is not self-liquidating. Its allocations to power were made to fit arbitrarily low rates. Bonneville Power Administration pays 2½ percent interest on the money Congress appropriates for power plants. Boulder pays 3 percent. TVA doesn't bother.

"All this talk about the great new chemical fertilized discoveries by TVA is malarkey. Private industry produced triple-superphosphate commercially back in 1892. Lilienthal called TVA calcium metaphosphate 'a modern miracle.' I handled the purchase of the patents on calcium metaphosphate from a Czechoslovakian firm back in 1937. Defluorinated phosphate is also an old product, TVA merely improved the process.

"As for patents, the TVA act is so tight that a TVA employee can't invent anything without TVA claiming it, whether or not it is related to the TVA program or was worked out at home. My prize example: One of the TVA employees invented a tackling dummy for football. TVA grabbed it—said it had to under the TVA act."

You talk to people in four States.

You talk to a former governor, the president of a big coal company, the president of a life insurance company, the president of a neighboring power company, the president of a State chamber of commerce.

They speak freely to you—off the record.

One says the socialistic implications of TVA are "appalling."

Someone else says, "it's a definite threat to local self-government."

Another says "you couldn't run for a dog catcher and win if you oppose TVA; it's insidious stuff."

"The average voter down here is convinced he is getting the benefits of TVA at the expense of the rest of the country, so he keeps his big mouth shut or beats the drums for TVA," says still another.

"Can I quote you on that?" you ask hopefully.

"Don't be silly," comes the answer. "We didn't ask for TVA. But we got it. And we've gotta live with it. You'll know what we mean if you get a Columbia Valley Authority. Good luck to you; you'll need it."

Thus some of the unreconstructed rebels think plenty. But they won't talk—not for publication, that is.

TVA: Miracle or Monster?

(By Tom Humphrey)

YOU CAN'T OPPOSE TVA IN TENNESSEE VALLEY

(Art. No. 9)

You make a deal with yourself when you enter the Tennessee Valley.

Try to do a reporting job. Look at both sides of that shining TVA shield. Divide your time equally between pro and con—if that be possible. Subject yourself to the standard TVA treatment, then break away and talk to the opposition, if there is any. Soak up as much of that fascinating Tennessee Valley history as possible. Work days, fly nights. Move around.

So you do just that.

First, you make an interesting discovery.

The pro side of the TVA story is a lead-pipe cinch. It's all around you—the dams, the electro-process industry, the navigation, and flood-control angles. Just like the Pacific Northwest. Easy for a Pacific Northwest reporter to grasp. Made easy by Bill Sturdevant and his information division. Look at the physical plant, check the figures, ask questions. Talk to people. Engineers, policy people, power boards, the works. Four full days of it. TVA is running out your ears.

Then you write out a series of questions—not weighted questions, either—and arrange to come back for a "clean-up session" with Mr. Clapp. Now for the seamy side, if any. Now to get behind that shining TVA shield.

Some of it comes easy. City and rural slums amid charm and plenty in a hydro-electric garden of Eden. Per capita income coming up, but still miles and millions below the Pacific Northwest. Low power rates canceled out by high property tax rates (while you are there the charge is made in the papers, and not denied, that Chattanooga has the highest property tax rate in America, bar none. Knoxville tax rate, 45 mills—"very high." City's bonded debt, $18,300,000.

Rural electrification record in Tennessee the fourth worst in the country, due in part to those arbitrary, too-low TVA rates. Damaging floods last spring in both Knoxville and Chattanooga. Crime and comic book problems (all the same home). Unfamiliar bootlegging troubles (they crack wise in the South that Knoxville has more churches and more bootleggers per square inch than any other city). Things like that. Obvious things.

Then the going gets tougher as you try to get at the intangibles: States' rights, ideologies, politics, personal freedom, effect on initiative and private enterprise, moral fiber of the people, treatment and reactions of labor, bureaucracy in action, education and health and what have you.

On the surface, everything is lovely. Governors (all but Governor Talmadge, of Georgia) on record in favor of TVA. Fine for the State. No interference with State sovereignty. TVA benefits not just the region, but the whole country. Greatest experiment in empire building.

Most of the TVA-area Congressmen are for it, too. Representative Whittington, of Mississippi, who opposes all valley authorities, being the principal exception.

All the land-grant colleges are for it. All the county agents are for it. Good for education and agriculture. All the farmers are for it, too, it seems. The test demonstration program, with its free fertilizer, you see. Everyone for TVA. A good deal. Cheap power. More money for everybody.

Most of the editors are for it—Ralph McGill, of the famous Atlanta Constitution and Colman Harwell, of the Nashville Tennesseean, men like that. Good men.

Even the power company and Army engineers of the South keep a civil tongue in their heads despite the bad deal they got and get. TVA is a good engineering job, no argument—gold plated, but good. Cooperate with TVA. Get along.

All the municipal power boards and rural co-ops for it a million. Making money, selling power like mad. Managers well paid (Max Bartlett, manager of the Knoxville Utilities Board, makes $18,000, $8,000 more than TVA directors, thinks it's fine.)

A beautiful picture, altogether. Maybe this thing is perfect. Maybe absolutely everyone's for it. Maybe it's for us up in the Pacific Northwest.

But the seeming unanimity of opinion challenges your reporter instincts. You gulp and try again.

Then tiny cracks appear in the shining shield. Some of the irreconcilables begin to talk. Editors, former TVA employees, labor leaders, chamber of commerce managers, city councilmen who can't understand why their power boards are flush and their city government floundering in high taxes and debt. Some of them can't be quoted, they say, but they refer you to others who can.

Businessmen members of chamber boards who vote for pro-TVA resolutions, including the New Johnsonville steam plant, but privately hate TVA's gaudy guts. Former employees who took all the TVA guff they could stomach, then took a walk. Some of them talk freely. Labor leaders and employees who pay lip service to TVA's force account policy and its merit system, admit privately their unhappiness over having wage rates and working conditions handed down from on high—no contract, no social security, no civil service, no appeal.

Some educators who subscribe to the tenets of the TVA program admit to their close friends that its socialistic implications "scare the hell out of them."

Editors like Guy L. Smith of the Knoxville Journal and Brainard Cooper of the Chattanooga News-Free Press who sometimes blast away at some phases of TVA, admit that every time they do so the heat's on. They tell you quite frankly, however, that they are concerned about the autonomy of the region. They indicate their abhorrence of the capping of the moral fiber of the Tennessee country, by arousing its selfish sectionalism, by appealing to its desire for subsidized power, subsidized fertilizer, subsidized recreation.

Others break down and confess that you couldn't run for dog catcher and win—not on an anti-TVA platform, not in Tennessee, anyway.

Gov. Gordon Browing, who, like Senator Kefauver, ran on a pro-TVA-anti-Crump platform (the governor after a stretch in the Army and a break with Crump), confirms this openly.

Governor Browing says TVA is "free of politics," that it has speeded the agricultural and industrial progress of the State and valley, that it cooperates very well with State agencies and doesn't try to run State shows. But he grins and admits, in answer to your question at a press conference:

"It would be like coming out against the Ten Commandments to come out against TVA."

Finally, you come to the conclusion that no one in Tennessee (and to a lesser degree, in bordering States) can say a word against TVA or any of its works and get away with it—no one, that is, but Senator McKellar.

You see, Senator McKellar has been in the Senate so long, he has done so much for TVA (Norris Dam should have been named for him, not the late Nebraskan) that he can take Lilienthal apart and get away with it. But no one else can—not in Tennessee.

Even so, the rabid TVA fans almost flayed McKellar alive when he dared to suggest in his S. 1277 to amend the TVA Act, that it might be all right for TVA to quit giving away fertilizer, that it might employ civil

UNIVERSITY OF MICHIGAN LIBRARIES

service and keep books like all other Federal agencies, and might even come back to Congress each year for appropriations like every other Federal agency, instead of putting its power money in the TVA kitty and spending it as it darn well pleases.

As we say, they almost skinned McKellar alive. At least Senator Kefauver and the pro-TVA papers tried. They accused him of everything under the sun, including an effort to sabotage that beautiful TVA structure. They accused him and Senator Stewart of teaming up with the private electric-power lobby for the purpose of crippling TVA. Of all things.

Anyway, you begin to get the picture.

You simply don't oppose TVA any more. Not in Tennessee Valley. Not if you want to stay in business and in one piece.

You try to analyze this. You talk it over with people. You take a look around, a good look, and you find part of the answer—TVA in everything.

First, TVA has undisputed control of the water resources of the Tennessee watershed and in large measure its land resources.

TVA is in absolute control of the manufacture and distribution of power for 5,000,000 people.

TVA has the bordering power companies buffaloed; companies like the Southern Co. system (Georgia Power, Mississippi Power, Gulf Power, Alabama Power), companies like Birmingham Electric.

Oh, they'll talk about their operating relations with TVA. Very good. They'll talk about their own power plants, services, and community relations. Very sound. Georgia Power Co. is particularly proud of its annual home-town contest, and with reason; it's a honey.

They'll even talk about their rates—TVA rates plus taxes, in general terms. But they won't talk about challenging TVA—not after what TVA did to Willkie's power empire. They know that if they want a fight, Mr. Clapp and his boys will be glad to oblige—the minute TVA has the power capacity to do so and despite gentlemen's agreements dividing service areas.

TVA is in the fertilizer business in a big way—$16,000,000 a year. It's one of the biggest manufacturers and distributors of phosphate fertilizers in the world. It isn't worried about costs. And it controls its distribution to test-demonstrations farms, which it supplies with free fertilizer, and selects the cooperative which get it at cost and pass it on under TVA rules.

TVA is in all the land-grant colleges, their extension services and the offices of their county agents. It sets up attractive research projects in the universities, paying all the bills. It allows the extension service and their county agents to handle the free fertilizer, test-demonstration deal. It pays the salaries of assistant county agents where needed to carry on the TVA land-use program.

And TVA is in the planning commissions of the various States. It set up most of them, manned them, still helps some. And some of them are excellent, don't misunderstand me, particularly the Tennessee State Planning Commission which is certainly doing a job (wish we had as good in the Pacific Northwest).

TVA provides free seedling trees for State forestry departments, as well as thousands of privately owned farms, helps set up fire districts, makes good deals with Federal, State, and local agencies on fish and wildlife projects, parks and recreation sites along its chain of man-made lakes. All under contract, all according to the TVA pattern.

You recall that list of 30 businesses TVA was supposed to be in a few years ago. You find, on checking, that TVA has unloaded some of them. It's disposed of Norris and Fontana villages, for instance. It doesn't run drug stores or service stations any more. But it's still engaged in a lot of enterprises, besides power and fertilizer, flood control, and navigation.

TVA has a big malaria control program, a successful one, despite the fact that much of the malaria problem was of its own devising—those man-made lakes and mosquitoes, you see.

It's in the banking business. It may issue bonds up to $100,000,000 for its own use or to finance its public power distributors. It competes with the private contractors by doing all its own construction work. It quarries limestone and marble. It does engineering work both inside and outside the valley. It is in the recreation business, either on its own or through contracts with private operators. It builds and operates river terminals, docks, and piers. It promotes food processing and marketing associations and cooperatives to handle TVA fertilizer. It engages in widespread research and development projects, such things as deep freeze, wood products, agricultural machines.

TVA has contracts with other Federal agencies, with States, cities, counties, cooperatives, utility boards, industries, schools, libraries, and universities—hundreds of them. And its work is well publicized, in reports, booklets, special brochures, movies, news and radio releases. They go everywhere.

As we say, TVA is in everything—all within the broad terms of the TVA act, all on a cooperative, grass-roots basis, all very smoothly handled.

TVA doesn't engage in personal politics.

TVA doesn't interfere with State and local governments of the Tennessee Valley.

TVA doesn't have to. For TVA is the government in Tennessee Valley.

There is nothing, no one above it.

TVA: Miracle or Monster?

(By Tom Humphrey)

TVA chief answers clean-up questions

(Art. No. 10)

After you've milled around Tennessee Valley, pestering everyone with questions, you come back by prearrangement to the final authority, Gordon R. Clapp, Chairman of the TVA Board, with your "clean-up questions." Here they are, with Mr. Clapp's answers:

Question. Why doesn't TVA pay interest on its power investment, as does the Bonneville Power Administration, as well as amortize the capital investment over a period of years?

Answer. As a matter of sound accounting, TVA pays interest on only that part of its power investment which has been set up as interest-bearing debt in the form of bonds. TVA considers the rest of its power investment, whether provided by appropriations or from earnings, to be the property of the Federal Government and considers the equity owners to be the people of the United States. Therefore, rather than assuming that the people have borrowed from themselves the TVA power system, and that they wish to repay themselves over an arbitrary period of years after which they will continue to own the property as before, TVA considers it more businesslike and more informative to evaluate its earnings in the simple terms of the return which the people are earning on their investment. This return has averaged about 4 percent, and if any of the owners prefer to think in terms of earmarking a part of the return for interest and another part for amortization, the return is ample to cover such assumptions.

Question. What about TVA's expansion plans, that is, do you intend to embrace the Cumberland Basin area or encroach any further on surrounding territory now served by private companies?

Answer. TVA has no program for expanding its power-service area and we have no desire to encroach on territory now served by private utility companies. Communities outside the area presently served which own their own distribution facilities or which may see fit to acquire them are entitled to request any surplus TVA power. Whether or not any such additional communities will obtain TVA power in the future will depend upon their own wishes in the matter and upon whether it appears to be feasible for TVA to stretch its power resources over any larger area. We have been discouraging any hopes for TVA power on the part of communities which have an alternative supply of power in adequate amounts and at low cost.

Most of the Cumberland Valley has been within the TVA service area for 10 years; as to the remainder, the same comment as above. We have made arrangements to purchase the power generated at the dams which the Army engineers are building in Cumberland Basin.

Question. How cheaply can you produce power at the proposed New Johnsonville steam plant? Please compare this cost with the kilowatt-hour cost at your hydro and older steam plants.

Answer. The New Johnsonville steam plant will be a modern and efficient plant which will be able to produce power at low cost. If it were necessary to use the plant continuously, in order to add to the firm power of the TVA system, the cost would be somewhat higher than the present cost of producing TVA power; however, the operation of the plant will be integrated very closely with the rest of the system and the additional firm power created will be produced only in part by the steam plant and in considerable part by the use of seasonal secondary hydro power. As a result, the total cost of the additional power will be approximately the same as the cost of power presently produced (0.718 mill for multiple-purpose hydro, 4.689 mills for steam, average for multiple-purpose and single-purpose hydro and steam, 1.47 mills, as compared with 0.82 mill for Bonneville, 0.849 mill for Grand Coulee). The cost at New Johnsonville plant will be only a fraction of the cost per kilowatt-hour of energy generated in older TVA steam plants (Watauga steam plant, highest of all, 19.315 mills).

Question. What is your firm capacity now (for the TVA system) and what will it be in 1952?

Answer. The firm peak-load-carrying capacity is now 2.5 million kilowatts and is expected to be 3.55 million kilowatts by the end of 1952. (Ratio of average gross generation to install capacity, 64.68 percent.)

Question. What is the over-all ratio of costs to benefits for the entire TVA system?

Answer. TVA has made no studies leading to an over-all ratio of that kind. It is difficult in view of TVA's range of activities. On power we are producing net revenues from operations which are averaging over 4 percent on the net average investment in power facilities. Estimated direct benefits of TVA flood control are about $11,000,000 annually, not counting indirect benefits. Navigation benefits in terms of direct savings in transportation charges only are estimated at $9,000,000 annually after a reasonable period of development based on the experience of other improved streams. Incidentally, preliminary figures for 1948 show more than 410,000,000 ton-miles of traffic as compared with 350,000,000 ton-miles the year before. Estimated benefits for both flood control and navigation are sufficient to cover the costs of operation, including depreciation, plus a margin which could be likened to a return on the respective investments.

Question. What is the installed cost per kilowatt for your entire system? Also hydro and steam.

Answer. Entire system, as of June 30, 1948, $158 per kilowatt installed; $173 for multiple-use dams, $223 for single-use dams, total

hydro $178. Fuel-burning plants, $68 per kilowatt installed. Over-all fixed assets, hydro and steam, $352.8 million, not counting allocations to navigation or flood control or ALCOA plants operated as part of TVA system.

Question. Have you a power shortage now and have you had to curtail deliveries to any of your customers, particularly ALCOA?

Answer. The power supply situation in this (TVA) area is already very tight and while our curtailment of power deliveries has been limited to secondary power, it is a fact that some of our customers have not been able to obtain at all times all the power they have wished to buy. This has been true of all our large directly-served customers, including ALCOA. The Oak Ridge atomic energy plant, now the largest consumer of TVA firm power, has recently announced substantial expansion. TVA is expected to supply an additional large block of power for this purpose.

Question. I note your recent statement that by 1952 "sales to private utilities will practically disappear." Does this mean cancellation of existing contracts with privately owned electric utilities, that is, that you won't have enough power to go beyond your preferred-customer list, or that the private companies won't need TVA power?

Answer. The reason that TVA firm power sales to private utilities will practically disappear before 1952 is that no surplus firm power will be available and these sales are therefore being canceled in accordance with the cancellation provisions in the contracts.

Question. Percentagewise, how are your over-all costs allocated to power, flood control, navigation, recreation, fish and wildlife, etc.?

Answer. The TVA allocation of investment applies only to navigation, flood control, and power facilities. Allocation is provided for in the TVA Act to flood control, navigation, fertilizer, national defense, and development of power. Actually, allocation is made only among flood control, navigation, and power, none to national defense, none to fertilizer. The distribution is approximately 20 percent to flood control, 19 percent to navigation, and 61 percent to power.

Question. Would a TVA-type CVA be better for the Columbia Basin than our existing program of working through existing agencies like the Corps of Engineers, the Bureau of Reclamation, the Soil Conservation Service, etc.?

Answer. I do not hesitate to say that I believe an intelligent adaptation of the TVA idea—and autonomous agency with a clear assignment fixed upon it, an agency decentralized into the region and committed to real cooperation with State and local agencies—would work successfully in any great river valley in this country. But whether you should seek to adopt it for your own region is a question irrelevant to my responsibility. It is a part, an important part, of TVA's responsibilities to report its experience so that you may assess the quality of its stewardship and so that you may consider its applicability to your problems.

TVA: MIRACLE OR MONSTER?

(By Tom Humphrey)

REGIONAL PUNDITS FIND NEW TOOL IN TVA

(Art. No. 11)

The doctrinaires of regionalism are on the march.

You find them in the Tennessee Valley, in Washington, in the Columbia Valley, in the Missouri Valley.

They believe they have in TVA a bright new tool with which to carve out a new way of life—a corporation clothed with the power of government, but possessed of the flexibility of private enterprise, and with none of the limitations of either, of course.

They would imprint this new tool, like a biscuit cutter, upon other great valleys. And at the moment they seem to have selected the Columbia Basin as next on the list, using last spring's flood, the regional power shortage, and what they interpret to be a Presidential blessing as hooks on which to hang it.

Most vocal of the current pundits of regionalism—besides David E. Lilienthal, former Chairman, and Gordon R. Clapp, present Chairman, of TVA—are the following:

Representative HUGH MITCHELL, of Washington, author of a long string of Columbia Valley Authority bills, head of the CVA League.

Senator GLEN TAYLOR, of Idaho, Henry Wallace's running mate, famous for sounding off out of turn and entering wrong doors.

Representative RANKIN, of Mississippi, author of H. R. 3522, a Missouri Valley Authority Act, introduced March 14.

Senator MURRAY, of Montana, cosponsor of S. 1160, his latest and somewhat modified MVA bill.

Representative JACKSON, of Washington, who couldn't wait for the administration bill and introduced his own measure, a replica of the TVA Act for the Columbia Basin.

Some of these measures (including the new administration bill, written but still under wraps) are substituting the word "administration" for "authority" to avoid what Senator MURRAY refers to as the "taint of odium" that has come to be attached to the word "authority." But despite titles and numbers and polite bows toward local advisory committees and State laws, they all provide exactly the same thing—a three-man authority in the image and likeness of TVA, with virtually limitless powers over the electricity and water and land of these vast regions.

Some of the more important advocates of regionalism (Senator TAYLOR frankly admits it's socialism, for whatever that's worth) are for blanketing the entire United States with regional authorities—seven of them in most cases, six or nine in others.

As far back as 1937 they were introducing omnibus bills authorizing regional authorities all over the place—a Columbia Valley Authority, a Missouri Valley Authority, a Southwestern Authority, including the Colorado and Central Valley, a Great Lakes-Ohio Valley Authority, an Arkansas Valley Authority, and a Tennessee Valley Authority that would take in everything to the Gulf of Mexico, an Atlantic Seaboard Authority, taking in everything on the east coast, including the St. Lawrence.

More specific proposals, however, deal with the Columbia, Missouri, St. Lawrence, Colorado, and Arkansas valleys on an individual basis.

Some States, like Colorado, Utah, Nevada, Wyoming, Montana, California, and New Mexico may find themselves in several different authorities at once, if the regional planners have their way.

The proposed Columbia Valley Administration would affect more than 4,000,000 people, 8 States, and some of Canada. Its tentative boundaries would embrace all of Oregon, Washington, and Idaho, western Montana, and parts of Wyoming, Utah, Nevada, and California—287,000 square miles in the United States, 39,000 square miles in Canada, that is, in the Columbia watershed or the proposed power-service area.

The MVA deal would affect 9,500,000 people in 10 States—585,000 square miles in the United States, 9,000 square miles in Canada. Most of Montana and Wyoming, parts of Colorado and North Dakota, most of South Dakota and Nebraska, the northern part of Kansas, and corners of Missouri, Iowa, and Minnesota.

The Colorado Valley (or Southwest) Authority would cover all of Arizona, parts of New Mexico, California, Utah, Colorado, and Wyoming.

The Arkansas Valley Authority would affect 7,500,000 people in 7 States—New Mexico, Colorado, Kansas, Oklahoma, Arkansas, Texas, and Missouri.

In short, a Missouri Valley Authority would rule over an area equivalent to 15 TVA's, a Columbia Valley Authority over 8 TVA's, an Arkansas Valley Authority over 4 TVA's, and so on. Half that much if you figure it on an expanded power service area basis.

You have to go back a bit to get at the ideology of the doctrinaries of regionalism.

One of the best authorities, naturally, is Mr. Lilienthal. You find the best quotes in his book TVA—Democracy on the March. He says:

"The use of the region as an autonomous unit of development was a deliberate experiment.

"Congress in creating TVA broke with the past.

"For the practical purpose of Federal legislation, this is a country of regions, not states.

"Modern regionalism * * * rests squarely upon the supremacy of the national interest. The particular and limited concerns of private individuals or agencies in the development of this or that resource were disregarded and rejected in favor of the principle of unity.

"The idea that the Tennessee Valley region was set up as a kind of testing ground for the Nation has been expressed often and appears in the President's (FDR's) original message: 'If we are successful here,' he said, 'We can march on, step by step, in a like development of other great natural territorial units within our borders'."

Then you come to Mr. Clapp, a Lilienthal-trained man (like "Jebby" Davidson and "Cap" Krug, J. Lawrence Fly, et al.) who says:

"I do not hesitate to say that I believe an intelligent adaptation of the TVA idea—an autonomous agency with a clear assignment fixed upon it, an agency decentralized into the region and committed to real cooperation with State and local agencies—would work successfully in any great river valley of this country."

Mr. Clapp hastened to assure me, too, that while Mr. Lilienthal declared in his book that the TVA region "ought not to be substantially enlarged"—beyond the Cumberland Basin which Mr. Lilienthal says should be incorporated into TVA, that is—"he did not mean that this necessarily was an indication of what the size of other regions ought to be to be suitable for a TVA-type development."

And let's not forget the old curmudgeon, Harold Ickes. He went for the valley authority thing in his time—with a Department of Interior string on it, of course. But he realistically told a congressional committee:

"You have before you not merely a question of establishing a single authority, for eventually the Congress will not do less for one watershed than for another. Therefore, there is before you a major step in the reorganization of the Government of the United States as we have known it for the last 150 years."

And, for once, Mr. Ickes was guilty of an understatement.

This, then, is the pattern of regionalism which has been implanted upon the Tennessee Valley and which may be implanted upon other valleys.

R. L. Duffus, who wrote a book about TVA, the Valley and Its People, expressed it very well, as well almost as Mr. Lilienthal. Mr. Duffus puts it this way: "The principle, if not the exact pattern, can be applied elsewhere. It might be applied in the basin of the Colorado—a river flowing deep in the earth through arid highlands. It could be applied to the Columbia, with its two mighty dams, the irrigable lands of its headwaters. It might be applied to the Connecticut, the Delaware, the Arkansas, and other valleys still. We need not even stick to rivers. The

Great Plains; for instance, New England is a region. California is a region."

It took President Truman's recent and less lyrical statement to the effect that "we should apply the lessons of our Tennessee Valley experience to other great river basis," and his order to a five-agency committee to come up with a CVA bill; however, really to set the valley authority pot boiling.

It's still boiling. It has become the hottest issue in the Pacific Northwest, if not the whole country. People asked me about it everywhere I went in Tennessee Valley, and in Chicago, Atlanta, Birmingham, and Los Angeles.

And it didn't cool off any when the President's five-agency committee—two members of which were very enthusiastic and three less enthusiastic, shall we say—came to the region with a ready-drawn bill and blandly gave residents of the region a Hobson's choice: A TVA-type CVA or a TVA-type CVA.

Anyway, you think of these things as you tour the Tennessee Valley, as you talk to Chairman Clapp, as you reread Mr. Lilienthal's book. You wonder if you can credit rumors that Washington has cooled off a little on CVA.

You think of the seven governors of the CVA States, five of them openly antagonistic, the other two pegged with the opposition by their representatives. You wish you could talk to the governors of the 10 MVA States, having been told that 9 of them prefer their Pick-Sloan plan of interagency development to the authority approach.

You recall the unalterable opposition of the National Reclamation Association.

You read the unanimous adverse report on MVA (sent to you by Representative D'EWART of Montana) by the Senate Subcommittee on Irrigation and Reclamation which says in part: "The creation of an MVA would amount to the welding of economic and political powers resulting in nothing short of autocracy. It would mean the substitution of arbitrary power for democratic processes."

This doesn't indicate that the people of the Middle West and Pacific Northwest are panting for another TVA to make another paradise of the Columbia basin.

Then you think of wise old Dr. Hoskins, president emeritus of the University of Tennessee (no foe of TVA he), and his admonition:

"I think other regions should wait until the success of TVA is proved. I hope TVA is worth what it costs."

TVA: MIRACLE OR MONSTER?

(By Tom Humphrey)

PROS AND CONS OF TVA AS THEY APPLY TO PROPOSED CVA

(Art. No. 12)

Well, you finish 8 days of intensive research in the great Tennessee Valley. You do another 8 days of reading—eight books, a flock of reports, congressional hearings, speeches, and news releases. (The eights have it, it seems.)

You give the nearest TVA dam a final pat—after all, you helped pay for it, didn't you? It's part yours, too, on account of it was "built for the people of the United States of America."

Then you more or less cheerfully pay excess poundage on those books, pamphlets, and other TVA impedimenta you've accumulated—besides the ones you mailed—and take off for home, "a right smart piece" away.

You know the answer to that miracle or monster question, all right.

TVA is some of each, but neither—though many people you talked to and much of what you've read indicate that old white or black approach—either unmitigated success or abysmal failure, either brave hero or foul villain.

But you find you still have two other $64 questions to answer:

1. Has TVA been good for the Tennessee Valley?

2. Would a TVA-type CVA be good for the Columbia Basin?

You start weighing the evidence, reading your notes, and perusing your mail, particularly that from Pacific Northwest Congressmen to whom you've posed the same question you sought to answer in the Tennessee country.

The answer to the first question is found fairly readily.

TVA has been good for the Tennessee Valley, particularly the State of Tennessee; it has helped bring a backward, eroded, dirt-poor, one-crop region out of the doldrums, giving it hope and purpose. TVA has given some 5,000,000 people cheap power. It has provided flood control, navigation, and soil fertilization projects that the several States could not or would not provide. It has done so by pouring almost a billion dollars into 81,000 square miles of seven different States. TVA has given Tennessee and portions of six adjoining States something brand new to America, a controlled river, a planned economy.

But TVA, the evidence says, has cost too much. It has cost too much in money—almost $1,000,000,000 in tax funds—virtually none of which has been or will be returned to the United States Treasury.

It has cost too much in terms of power capacity, when you compare it with installed-capacity cost of western projects like Bonneville and Grand Coulee, Shasta and Boulder.

It has cost too much, for the benefits so far returned or possible, to provide that navigable 9-foot channel from Knoxville to Paducah.

TVA's flood-control program has cost too much in terms of rich agricultural land permanently flooded by TVA dams—some 500,000 acres, half of it good bottom land.

Most important of all, it has cost too much in the priceless coin of regional and local autonomy. When you give an agency of Government as much power over people and water and land and hydroelectric resources as TVA has, and impose that authority upon a region, you pay for it, no matter how benevolent its purpose.

The second $64 question raises an entire group of correlative questions.

What do we want when we talk in terms of a TVA-type CVA?

Is it a comprehensive plan for the region?

We have, in the recent Corps of Engineers master control plan for the Columbia and its tributaries, the most comprehensive plan for multiple-purpose development ever devised for a river basin. Not to mention the previous Bureau of Reclamation program for the West, parts of which have been embraced in schedule R which has the approval of the Corps of Engineers, the Bureau of Reclamation, and the Bonneville Power Administration.

The Corps of Engineers drew the original plans for the comprehensive development of the Tennessee, remember. TVA merely put a label on them. Would it help to put a CVA label on these Columbia basin plans, as TVA did in the Tennessee Valley back in 1933?

Do we need a CVA to provide more power faster?

The Corps of Engineers, the Bureau of Reclamation, and Bonneville Power Administration say schedule R will give us the most power in the shortest possible time, regardless of what agency does the job. And that raises a related question:

Would CVA get more money for us, as TVA did for the Tennessee Valley?

There are several answers, of course. First, the Congress poured money into Tennessee Valley in two great emergencies, the depression and World War II. There is no depression now, certainly, and we hope we don't have a war. That demands evaluation.

Second, the Congress has shown more willingness recently to appropriate money for self-liquidating western projects than ever before, and it is also showing some impatience with TVA which returns no interest on power investment and has only begun, at the insistence of Congress, to make payments on the principal—after 15 years.

Actually, while TVA has spent about $850,000,000 in the last 15 years, and has plans that would make the cost $1,200,000,000, the seven Northwestern States, much larger in area but smaller in population, have received and spent approximately $750,000,000 in the same period, without benefit of an authority. On a money basis alone, we haven't done badly.

Could CVA solve our flood problem, as proponents claim?

Perhaps, in time. But for that matter so can the corps of engineers and the Bureau of Reclamation. They have coordinated plans, they have a good start. All they need is time and money, the same tools a CVA would have to have.

We have floods, sure. That 1948 flood was no spring freshet. But TVA has floods, too—it had them last spring—despite allocation of $160,000,000 for flood control. And remember, TVA dams have flooded more agricultural land permanently than was formerly ravaged by periodic floods.

Would a CVA speed navigation on the Columbia?

First, it's unfair to compare the Tennessee with the Columbia. God gave us a majestic river to start with. But TVA's vaunted man-made channel carried only 2,800,000 tons of freight in 1947, whereas the Columbia carried 42,400,000 tons, 2,100,000 tons of it through Bonneville Dam. And the little Cumberland River, with its obsolete locks, carried more tonnage than did the Tennessee up to last year, despite TVA's navigation system.

Would a CVA bring interagency harmony?

TVA hasn't brought peace to that valley. Its feuds with the Soil Conservation Service and the Army engineers are historic.

Finally, is it cheap power we'd be getting by imposing a CVA upon this region?

We have that already—cheaper than they have in the Tennessee Valley. Bonneville Power Administration can sell power produced by the Corps of Engineers and the Bureau of Reclamation cheaper than TVA, and make interest and amortization payments, too. And power consumers of the Pacific Northwest enjoy lower retail rates than consumers in TVA territory. They use more power here and pay less for it and have more power available per customer than do consumers in any other region. Here's the proof:

Domestic consumers in TVA territory paid an average of 1.58 cents for their power last year; Oregon consumers paid 1.52 cents, Washington consumers 1.36 cents. TVA power-system consumers (domestic farm) used an average of 2,519 kilowatt-hours of power; Oregon consumers used 3,385, Washington consumers 4,206. Portland domestic customers of Pacific Power & Light used an average of 3,925 kilowatt-hours, 56 percent more than the TVA-system average; Portland General Electric customers used 4,300 kilowatt-hours (71 percent above TVA average) paid an average of 1.33 cents.

Incidentally Oregon distributors of electricity (mostly private utilities) sell almost as much power as TVA's 144 public power distributors—4.3 billion kilowatt hours here, 4.9 billion kilowatt hours there.

True we have a serious power shortage in the Pacific Northwest, due to our unprecedented growth. But so has TVA, which estimates a 250,000-kilowatt shortage by 1951 unless steam can be brought in quickly.

What about the economic well-being of the two regions? Would a CVA help? We're in the top per capita income bracket. TVA States barely rate 60 percent of the national average.

Rural electrification?

Again Pacific Northwest States are at the top of the list. Tennessee is fourth from the bottom. Our privately owned distributors pioneered in rural electrification; still lead the field.

To summarize:

Pacific Northwest States have come farther faster, in the past 15 years, than have Tennessee Valley States. And some States bordering Tennessee, States barely touched by TVA's cheap power and free fertilizer, have progressed equally as fast as Tennessee. Boosters from North Carolina, most prosperous of them all, and Georgia, show you statistics which tend to prove that they've done even better, agriculturally and industrially—despite Oak Ridge, ALCOA and Victor Chemical.

That's the record.

Now for that shining shield—both sides of it.

Glittery side first:

TVA has done a terrific job in a large segment of the South, a job that cried to be done. Its engineering is beyond criticism. Its agricultural fertility program, built around great phosphate plants, and its tree planting program are changing the face of the land, bending farm practices away from soil-eroding row-crops toward soil-building cover crops and livestock. Its coordinated program for controlling a rampaging river and making it navigable has also permitted development of 2,500,000 kilowatts of cheap power, power that has attracted light metal and heavy chemical industries. Its spending program has been beneficial to business, particularly in Tennessee.

Think of this when you think of the proposed Columbia Valley Administration.

Now the drab side and this too must be evaluated in considering CVA:

TVA's tri-headed administrative set-up has spelled trouble. Its personnel policy gives no protection to workers. Its fertilizer program is not well balanced, is susceptible to favoritism. Its power policy, without checks of any kind, is wide open to criticism. Its bookkeeping system, its arbitrary allocation of costs do not follow standard practice and discriminate against other public power agencies. Its treatment of landowners, competitive private enterprise, and other Federal agencies has been high handed and capricious. TVA has too much power over human beings, their lives and fortunes and independence. And that, undoubtedly, would be obnoxious to the freedom-conscious Pacific Northwest.

There it is, all wrapped up, paragraph by paragraph. All but this:

What's TVA got that we haven't got?

You, the reader, must answer that one—and soon.

Two views

Representative RUSSELL V. MACK, Washington: "More unified management of power, navigation, flood control, and irrigation development will eliminate the confusion certain to result where the authority over these four purposes of river control is divided, as is presently the case. I am convinced, however, that in any boards or commissions created for a CVA, if we have a CVA, provision should be made requiring that the membership on such boards be confined to western men who know western conditions." Representative LOWELL STOCKMAN, Oregon: "I do not think that just because TVA has been successful in the South that it necessarily follows that a similar plan would be advantageous for the Pacific Northwest. Our people in the Pacific Northwest are different and our country is different. Flood control is a paramount issue on the Tennessee, while hydroelectric energy and irrigation are the important items on the Columbia. It seems to me that the Bureau of Reclamation and the Corps of Engineers are making most satisfactory progress on the Columbia, and their administrative direction is such that we do not assume the risk of having a bureaucratic commission to govern our policy."

Official opinions varied

The so-called administration bill, for the establishment of a Columbia Valley Administration, is still under wraps. Meanwhile, here's what Congressmen think of TVA and TVA-type valley authorities:

Senator GUY CORDON, Oregon: "I am unreservedly opposed to any regional authority operated by remote control from Washington. I am strongly committed to the proposition that a representative government should have those charged with high responsibility, such as are necessarily included in such an authority, directly responsible to the people themselves, and that can be gained only by election of such officials."

Representative WESLEY A. D'EWART, Montana: "I have opposed valley authorities and expect to do so, because to me they are contrary to our form of government. This concentration of political and economic power in the hands of a few is not, to my way of thinking, the best process for developing the resources of our great country."

Representative HUGH MITCHELL, Washington, author of several CVA bills, head of the CVA league: "I think the overwhelming majority of people in TVA States and elsewhere are satisfied with TVA's operations, and I share that feeling. In applying the lessons of TVA to the Pacific Northwest, it does not follow that the imprint of TVA in the rigid sense, must necessarily be imposed. Certain differences in development and special regional problems must be taken into account. An objective and disinterested appraisal of TVA should prove helpful in enabling other valley authorities to avoid some of the pitfalls that TVA may have encountered."

Senator JAMES MURRAY, Montana, author of the MVA bill: "In the overall, I believe that it is agreed that the TVA has done a splendid job."

Senator WAYNE MORSE, Oregon: "I think the regional representation issue is fundamental. I am not in favor of rushing a CVA bill through this session without adequate time for careful consideration. There are great differences in the social attitudes and economic needs of the people in the Columbia River region from those of the people in the Tennessee Valley."

Representative HARRIS ELLSWORTH, Oregon: "I disagree with and disapprove of the whole philosophy upon which the CVA is based. I do not believe the administration bill or any other authority bill should be seriously considered by Congress until we first know why we need a bill and what kind of a bill, if any, is required."

Senator ZALES N. ECTON, Montana: "I do not believe the TVA principles can be adequately applied to either the Columbia or the Missouri Valleys. Unless so-called valley authorities can be set up to place much of the direction, supervision, and planning in the hands of the people living within areas involved, instead of being directed by a small group of men who would have almost unlimited authority, I shall be forced to oppose them."

Representative WALTER NORBLAD, Oregon: "I am definitely opposed to any program that would place control in the hands of a few men who are nonresidents of the Pacific Northwest and who would operate from Washington, and I likewise am opposed to granting broad economic powers over our region to a supergovernment agency."

Senator LESTER C. HUNT, Wyoming: "As Governor of Wyoming, and now as Senator, I think I represent by far the majority sentiment of my State. The citizens of the State of Wyoming have on many occasions gone on record as opposed to all 'authority' legislation and in favor of over-all development of our river basins by the Bureau of Reclamation, the Corps of Engineers, and other Federal and State agencies. We must protect the principle of State control of our water resources."

Senator KENNETH MCKELLAR, Tennessee: "I think the New Johnsonville steam plant is absolutely essential to firm up the power of the Tennessee Valley system. Yes, I am satisfied with the present manager of TVA, Gordon Clapp. It is true he was appointed by Lilienthal, but notwithstanding that he was thus appointed, Mr. Clapp seems to be a man of most excellent ability, of genuine fairness, and tremendously interested in the TVA system. It is true that Douglas Dam and Reservoir covered up some very good land in Tennessee, but I think the dam was needed. At the time, you may remember, I was opposed to putting the dam at that particular place, but no one could change Lilienthal."

Representative WALT HORAN, Washington: "I have some differences with the present operation of TVA which are borne out in my own Columbia interstate commission bill. Among them are the lack of local control of the corporation, the refusal of the corporation to cooperate with specialized Government agencies like the Soil Conservation Service, the lack of effective guaranties of labor rights to employees, inadequate accounting methods, lack of local representation on the governing board."

Senator GLEN TAYLOR, Idaho: "I agree with President Truman that the logical change is to a CVA. I want to cite two sentences of that editorial which sums up the opinion of the Times: Now we face the problems of other possible river authorities, and they are not simple. What TVA has done is to show that they can be solved in a democratic way, with few or none of the evils of a centralized bureaucracy.' "

Home Rule for the District of Columbia

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Wednesday, May 25 (legislative day of Monday, May 23), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD a thoughtful editorial entitled "Home-Rule Hope," published in the Washington Post of May 25, 1949, setting forth the great importance of early congressional consideration of a bill for home rule for the District of Columbia.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HOME-RULE HOPE

Senators MCGRATH and KEFAUVER appear to have breathed a new breath of life into the District home-rule bill by carrying their appeal for its enactment at this session of Congress before the majority policy committee of the Senate. Senator TAFT, too, has again expressed his deep interest in the measure. Senator HOLLAND has done some excellent behind-the-scenes work in behalf of the bill, and Majority Leader LUCAS, with the support of the Policy Committee,

UNIVERSITY OF MICHIGAN LIBRARIES

has promised to try to sandwich it into the Senate's schedule this week or next. This is extraordinarily good news. It indicates that the leaders of the Senate have thoughtfully surveyed the situation confronting themselves as well as the District. If Congress as a whole will examine the home-rule problem in this spirit, we suspect that the conclusion will be that it cannot afford to ignore this issue through another year.

The muddle in Congress over the sales tax dramatized one aspect of the issue. In spite of the great pressure of national and international legislation, the Senate spent nearly a week on the District's revenue bill. To be sure, some Members are saying that because of this there will be no time for the home-rule bill at this session. But that is a very short-sighted view. For in the wake of the tax bill come many other local measures that Congress ought to enact. For example, the Senate has just approved and sent to the House bills to permit continued operation of six child-care centers and to let the District government kill weeds on private property. These must be followed by various others of similar nature. Often when such comparatively minor bills have been enacted by both houses they have to go to conference, and of course they always have to be signed by the overworked President. It is incredibly wasteful to force measures of this sort through our national law-making machinery. Yet so long as Congress clings to its burden as city council for the District, it cannot dodge petty issues without disastrous local consequences.

If Congress looks at only this one aspect of the situation from its own selfish point of view, it cannot fail to pass a home-rule bill at the present session. We do not suggest, however, that this is the heart of the matter. It is not. Even the extra burden upon Congress is insignificant beside the continued deprivation of this community of its right to participate in its own local government. Let Congress remember that it is sponsoring a great celebration in Washington next year under the title of the Freedom Fair. Unless the home-rule bill is enacted at this session, the United States will be inviting all the world to a festival of freedom in a city in which the right to vote does not exist. The very suggestion of freedom without the franchise is a mockery of the word.

Visitors of the Freedom Fair would be constantly reminded that a government of its own was included in the vision of the founding fathers for this Capital City; that home rule actually existed in the District for more than 70 years when only a handful of people lived here; that now upward of 900,000 persons are deprived of suffrage rights. Such a record of retrogression, with nothing done about it in Congress over a period of many decades, would make the sesquicentennial Freedom Fair a hollow sham. We beg the Congress to look seriously at this flagrant contradiction of American principles in its own home bailiwick before casually assuming that there is no time to enact the home-rule bill.

The question boils down to belief or disbelief in our own American principles. If the right of the people to govern themselves means anything, it ought to have the same meaning in the District of Columbia as it has in Virginia or Minnesota. Sometimes emergencies make temporary suspension of suffrage imperative. But to perpetuate such an emergency measure over three quarters of a century, as Congress has done in the case of the District, and then to invite the world to a Freedom Fair in the spot where the chief badge of freedom has vanished, would be a dose of cynicism that no Congress could reasonably defend before the people. Yet that is precisely the predicament in which Congress and the Capital will find themselves if the home-rule bill is not enacted.

How Much Must We Spend for Real National Security?

EXTENSION OF REMARKS
OF
HON. EDWIN C. JOHNSON
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Wednesday, May 25 (legislative day of Monday, May 23), 1949

Mr. JOHNSON of Colorado. Mr. President, last night, May 24, it was my privilege to appear on America's Town Meeting program with the Senator from Maryland, Mr. Tydings, Representative Dewey Short, and New York Times Correspondent Hanson Baldwin. I ask unanimous consent to insert my remarks in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

HOW MUCH MUST WE SPEND FOR REAL NATIONAL SECURITY?

Mr. Baldwin seems disturbed and worried over the "new isolationism" which he says I epitomize. He should be disturbed and worried instead over the current waste of American money and resources by the armed forces.

Recently, before the Senate Armed Services Committee, former President Hoover stated:

"Our military budget system has broken down.

* * * * *

"Congress allocates billions without accurate knowledge as to why they are necessary and what they are being used for.

* * * * *

"The Defense Establishment of this country is permeated with waste and inefficiency and duplication of effort."

And former Secretary of War Robert P. Patterson, referring to what he termed "the extremely expensive and pernicious practice of empire-building" by the Army, said, "I would hesitate to say how much money has gone down the drain just due to that single factor. It is very large."

There you have the testimony of two greatly respected Americans.

I do not like to be a penny-pincher or a wet-blanket, but I am alarmed by the certainty of the indescribable world misery which must follow our national bankruptcy if we stretch our economy too far. We must remember that whatever expensive military program we adopt this year we must be able to maintain at an accelerated tempo, years after, from this day henceforth. We better keep it within our means and we better start it off on that basis. Senator TYDINGS says if we throw out a 15-foot rope to a drowning man 30 feet from shore it will do no good; but, what I fear is, that we will get caught out of rope.

America has gotten herself into the fool habit of trying to solve every problem with dollars borrowed from future generations. We just love to spend other people's money. We owe more money three times over than all the rest of the world combined. Our Government "blows" in every cent it can lay its hands on and when cash runs low we raise additional funds by placing American infants not yet born in hopeless bondage.

We just love to kid ourselves, too, with pretty names for disagreeable things. The current borrowing spree all too cleverly is named the opportunity bond drive. Liberty loans and victory loans and opportunity loans roll off our tongues with all the sweetness and lure of singing sirens. We should be honest with ourselves and call these loans what they are—great-grandchildren loans—for we ourselves have no honest intention of ever paying one cent toward their retirement. Deliberately and nonchalantly we pass them on to succeeding generations to be paid by them out of their blood, their sweat, and their tears.

The President has requested, and Congress is planning on, spending $15,000,000,000 for domestic rearmament and $6,000,000,000 for the Marshall-plan aid during the next fiscal year. Furthermore, in addition, the President insists that Congress ratify a military alliance which cannot cost less than $20,000,000,000 over the next 3 years.

For 10 years I have been a member of the Senate Finance Committee, and that committee and its staff of tax experts are in substantial agreement that taxes cannot be increased this year without running into the probability of diminishing revenue returns. A deficit of three to five billion dollars is freely predicted for the next fiscal year. That would touch off a new wave of uncontrolled inflation that might shake the very foundation of our Government and push our economy off the deep end into a devastating depression.

Slap-happy we flounder about the brink of the very disaster Stalin has been predicting so gleefully for us. If we fall into his booby trap, which we ourselves have built, the whole world may go communistic.

Little wonder then that George Denny asks, "How much must we spend for real national security?" While a price tag can never be placed on real national security, further reckless indulgence in deficit spending and loose Federal fiscal policies can result only in frightful insecurity.

The Hoover Commission has called attention to the extravagance and the waste of the armed forces. The Bureau of the Budget, the President's own fiscal agency, has pointed out with graphic charts that 75 cents of every tax dollar goes to pay for past wars or to prepare for the next war. There is something radically wrong with the judgment of a nation that plans to spend three times as much for guns as for education.

Ordinary prudence dictates that we reduce our military budget and Marshall-plan expenditures one-third to make certain that we maintain a balanced budget, which is so necessary right now to restore confidence to our sagging economy. Our military expenditures for the next fiscal year should not go one dime above $10,000,000,000 and Marshall-plan aid should be held to a total of $4,000,000,000 in the interest of security and solvency.

America should get on its collective knees this very night and pray to God with earnestness and fervor to pound some sense into Congress and give us the courage to do what we know is right.

Tribute to the Late Harlan J. Bushfield

EXTENSION OF REMARKS
OF
HON. MILTON R. YOUNG
OF NORTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, May 25 (legislative day of Monday, May 23), 1949

Mr. YOUNG. Mr. President, I ask unanimous consent to have printed in the RECORD a brief memorial address prepared by me on a distinguished son of South Dakota, the late HARLAN J. BUSHFIELD, with whom I had the privilege of serving in the Senate for a number of years.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

A man who has strong convictions and who has the courage to stand up for them is a man among men.

Such a man was the late Honorable HARLAN J. BUSHFIELD, of South Dakota, who served his State with distinction as a private citizen and later in life as one of its public servants.

It was my privilege to know Senator BUSHFIELD before he came to the United States Senate, during his tenure as chairman of the South Dakota Republican Committee and as governor of his State. A staunch Republican of the old school he never once during his political life wavered from the principles and standards which he was convinced were for the best interests of his State and Nation.

I was also privileged to serve with him on the Senate Agriculture Committee where he strove hard to solve the many problems confronting the farmers of our Nation. The farm problem was ever uppermost in his mind and farmers had no better friend in the Senate.

Senator BUSHFIELD was a kindly man—a trait which welled from his early life in Miller, S. Dak., when pioneering the then new State called for close human relationship.

As a printer's devil in his father's newspaper shop at Miller, Senator BUSHFIELD developed an early interest in public affairs—an interest to which he clung throughout life. His political philosophies were the product of individual thinking while puttering around type cases and based on his observations of life among rugged sons of the soil. He was constantly guided by these philosophies during his long political career, never compromising for political expediency. In this last he set a worthy example in this august body.

Although his colleagues here did not always agree with the Senator's convictions, they did respect his unwavering adherence to principles of government he believed were right and just.

And this, in my opinion, is one of the highest tributes which can be paid to any man.

The Republican Party's Program

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, May 25 (legislative day of Monday, May 23), 1949

Mr. WILEY. Mr. President, in the newspaper, the Northwest Republican, published in Minneapolis, it is my pleasure to contribute a regular column on Republican Party affairs.

I ask unanimous consent that the text of my column for the May–June issue on the theme of the GOP program be reprinted in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

What should the Republican Party's specific program be? What issues should it advance and on what points should it fight the administration? There is a tremendous amount of agreement as to the specific points in a national GOP program. But, there is, however, considerable disagreement among our fellow Republicans, particularly on those points involving Federal aid of one sort or another.

Let me respectfully submit various points on which I feel we can and should have unanimity of Republican opinion:

1. Backing of the Hoover Commission Reports on reorganization of Government to the greatest extent possible (in order to achieve Government economy and efficiency).
2. Fighting for a balanced budget and in opposition to deficit financing.
3. Fighting against the administration's tax-crazy program which would saddle our people with more burdens and which would only serve to encourage a business recession.
4. Supporting worth-while bills for self-liquidating investments such as the Great Lakes-St. Lawrence seaway, which has been pending for 30 years and which has been backed by every Republican and Democratic President in that time.
5. Endorsing continuation of the basic provisions of the Taft-Hartley law with modifying amendments in those instances where such amendments are necessary.
6. Opposing the administration's fantastic postage rate increase bill which would completely kill many weekly newspapers, church publications, farm periodicals, fraternal journals, etc.
7. Seeking complete unification of the armed forces in order to achieve the highest possible efficiency for America's fighting arms.
8. Fighting any tendencies toward wishy-washy appeasement of the Soviet Union while seeking to find a basis for realistic understanding with the Soviet Union.
9. Supporting efforts for cooperation between the western European nations and the United States in the form of the North Atlantic Pact.
10. Supporting equitable increases in the minimum wage but limiting such increases to only those businesses involved in actual interstate commerce, rather than intrastate commerce.
11. Support of constitutional versions of the antilynching and antipoll tax bills.
12. Opposition to the Brannan catch-all farm program with its undetermined costs; but endorsement of assurances to farmers of their cost of production plus a reasonable profit.
13. Increases in present inadequate old-age pensions.

Now, my fellow Republicans, what do you think?

Civil Rights

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, May 25 (legislative day of Monday, May 23), 1949

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a digest of addresses delivered by me on civil rights on the floor of the Senate on March 14 and 16, 1949.

There being no objection, the digest was ordered to be printed in the RECORD, as follows:

DIGEST OF SPEECHES ON CIVIL RIGHTS MADE BY HON. HUBERT H. HUMPHREY, OF MINNESOTA, ON THE FLOOR OF THE SENATE, MARCH 14 AND 16, 1949

Mr. President, we have had many comments from our distinguished colleagues during the course of the debate of the past few weeks. I have patiently listened to those comments and as a new Member of this body chose not to participate in the deliberations. I remained silent also because I knew that the American people wanted more action and less talk. Events of the past day, however, led me to stand and express my views.

We have had a long debate, Mr. President, and many issues have been raised. The rules of the Senate are inadequate to meet the needs of our day. Under the rules it has been possible for a determined and organized minority of Senators to keep this body from taking any action at all, by refusing to stop talking and thus preventing the Senate from voting. In most cases the talk is not even pertinent to the issues. Our inability over the past few years to pass civil-rights legislation in the Senate, even though it has received the approval of the House of Representatives, the majority of the Senate, and the overwhelming support of the American people, is an indication of the way the rules have permitted a form of minority control. Since this is a violation of the principle of majority rule on which our democracy is based, it was generally agreed that some change in the rules was desirous and in fact necessary.

Many proposed changes were introduced: Some favored allowing debate on any issue to be curtailed after a reasonable period by a majority of the Senate; others by a constitutional majority; some by a two-thirds or three-fourths; others by a constitutional two-thirds. The Rules Committee, under the leadership of the distinguished Senator from Arizona [Mr. HAYDEN], held full hearings on this question. Out of these hearings came a compromise, the Hayden-Wherry resolution, allowing a two-thirds vote to prevent a filibuster from continuing endlessly on any matter before the Senate. The old rule allowed a two-thirds cloture only on a bill itself.

Mr. President, I felt the Hayden-Wherry resolution was too mild and did not face up to the problem of minority control of this body; but I welcomed the opportunity to discuss the resolution and perhaps support it if it seemed the best compromise we could now get. A number of our colleagues from the South also opposed the Hayden-Wherry resolution on the ground that it was too stringent a rule for them, and also probably because under this rule it was likely that civil-rights legislation could pass the Senate. But, unlike those of us who opposed the resolution for other reasons, our southern colleagues chose to filibuster and thus keep us from discussing the Hayden-Wherry resolution, thereby demonstrating again the evil of filibuster and the necessity for a change in our rules.

After listening patiently many days while our colleagues from the South held the floor, our distinguished majority leader [LUCAS] circulated a petition to end the debate and allow the Hayden-Wherry resolution to be discussed on the floor. Vice President BARKLEY accepted the cloture petition on the ground that Senate rule XXII passed in 1917 allowed such cloture on a measure and the motion to discuss the Hayden-Wherry resolution, which was being subjected to filibuster, was a measure and hence subject to cloture.

Mr. President, I need not add my views to the respected authorities introduced by Mr. BARKLEY in support of his ruling. It is inconceivable to me how any other interpretation can be valid after studying the legislative history of this question since 1917, listening to the scholarly debate on this floor, and even examining the standard dictionaries in the field. Nevertheless by a vote of 46 to 41 Mr. BARKLEY's ruling was overruled last Friday night.

The significance of this vote last Friday, Mr. President, cannot be exaggerated. There were many honest differences of opinion on this question, but it is significant that of the 46 Members who voted against Mr. BARKLEY's ruling, 23 Republicans, the majority of the

UNIVERSITY OF MICHIGAN LIBRARIES

Republican delegation, joined the 19 Members from the South and 4 from border and southwestern States. It is also interesting to note that of the 23 Republicans who voted against our Vice President's ruling and thus dealt a body blow in turn to civil rights, only 5 were elected or reelected last November.

The vote last Friday was a blow to civil rights as well as to the dignity of the Senate, Mr. President, because it meant that this body could not proceed to discuss legislation so long as there was a determined minority ready to prevent consideration by continuing to talk. In the face of such a minority, our choice is either to submit or make a farce of the legislative processes by allowing weeks of valuable time and many thousands of our taxpayers' dollars to be spent as a few Senators hold the floor and talk on. The problem is a particularly crucial one because of urgent rent control, Marshall plan, agricultural price supports and labor legislation awaiting action which would necessarily have to be sidetracked to outlast our colleagues from the South. After much thought those of us on this side of the aisle came to the decision that the danger of minority control was so great and was so threatening to the whole of the President's program that it was important for us to break that control now and change the rules of the Senate to conform to democratic practices. We believed we had a good chance of winning, even though each member of the minority could speak twice at any length, because we were assured by our Republican colleagues that they too were interested in enacting the civil rights program and were opposed to unlimited filibuster.

Mr. President, those of us on this side of the aisle interested in civil rights acted in complete good faith. Even our distinguished colleagues from the South acted in good faith in that their position against civil rights and against cloture was always clear. But in the midst of these events, rumors and talk of informal meetings began to fill the air; then suddenly a petition was brought to the floor signed by 52 Members of the Senate.

It is this petition which we are now discussing. It is this petition and the so-called Wherry compromise proposal which I raise my voice against and which I know the American people will rise up against.

First as to the nature of the petition. It was signed by 52 Members who agreed, Mr. President, not only to the fact that they were in favor of the Wherry proposal, but also that they would not accept any amendments to it. Those who signed this petition, Mr. President, the overwhelming majority of whom are Republicans and Senators from the South, have their minds made up and closed. They never consulted us and they tell us now that nothing we say can change their position even though we represent the program for which President Truman campaigned and which was supported by the American people. This is an outrage against the legislative processes, Mr. President. It is a blow to the democratic principles of discussion, debate and compromise.

Second, as to the effect of the Wherry resolution. It provides that a filibuster can be stopped only when 64 Members of the Senate, two-thirds of the whole membership vote for cloture. Much has been said about the Constitution in the course of this debate. Mr. President, I speak not only as a member of the United States Senate, who has taken an oath to uphold and defend the Constitution, but also as a former professor of political science when I say that the Wherry resolution is both unconstitutional and a defeat for democratic forces.

The Constitution is based on the doctrine of majority rule. It provides in article 1 that a majority of the Senate shall constitute a quorum and be sufficient to conduct business. Whenever the framers of the Constitution intended that more than a majority would be necessary for action they specifically so stated in the Constitution. On four different occasions for example a two-thirds vote is required: to impeach the President of the United States and other Federal officers; to expel an elected Member of the Senate; to ratify a treaty; to override a Presidential veto. It will be noted that these steps are most serious and for that reason require more than a majority vote. Yet even with these extraordinary acts a simple two-thirds or a possible 33 out of a quorum of 49 can act. Yet, the Wherry resolution would rule that 64 Members must vote to stop a filibuster. These gentlemen, Mr. President, would have us take a backward step and adopt a rule more stringent than any ever conceived by our Constitution and in fact contrary to the Constitution and they would call it a compromise. This is no compromise. It is a desperate defeat for the forces of human brotherhood, decency, and democracy. It is an unholy alliance against civil rights.

Our country escaped from minority control back in the days of the Articles of Confederation. At that time we operated under a plan whereby the approval of 9 out of 13 States was required for passage of any legislation. The chaos resulting from such an arrangement was so great that government under the Articles of Confederation became impossible. This led to the Constitution with its provision that a majority would constitute a quorum to do business.

The Wherry resolution therefore runs counter to the whole intent and philosophy of our Constitution.

In a practical sense, moreover, it probably means the end of civil-rights legislation. It means that 64 Senators must agree before a filibuster can be stopped. It means that where 33 Senators out of 96 decide that the Senate should not consider an issue, their will is superior to the will of 63 other Senators who may be in favor of the bill. It means, furthermore, and this is one of its most dangerous ramifications, that where a Senator is absent from a vote on cloture his absence is equivalent to a vote against cloture and in favor of the filibuster.

Mr. President, those of us who oppose this unholy, unconstitutional Wherry resolution do not propose to ignore the rights of any minority in this body. I know of no suggestion to prevent their right to express themselves—even at length. We only propose that there be some time limit to this speaking which would prevent a minority from controlling and permanently preventing majority action. The question is not one of allowing men to express their opinions but of allowing a majority to act. The issue, moreover, is more than one concerning a Senate rule. Basic to this discussion is our obligation to conform to the Golden Rule. I do not know whether after a discussion and debate we could in this body pass civil-rights legislation, but I do know that we owe it to the people to discuss it and stand up and be counted on it. The Wherry resolution will prevent us from even considering the legislation.

We are told by the gentlemen on the other side of the aisle that there is a difference of only one vote requirement between the Wherry resolution and a proposal to allow a simple two-thirds vote to apply cloture which we now have under rule XXII. Let's not be deceived. There is a difference of at least eight votes. Since 1917 we have had 19 roll-call votes on cloture. The average attendance at those roll calls was 84. Under the Wherry resolution, which we are now asked to swallow, 64 votes would have been required. It is a step backward. I must therefore say I will never vote for this proposal. I would rather lose 100 percent now and come back another day after another election. I know some Senators will go forth and say, "We got cloture." I say to them: "No, you did not get cloture. You got some kind of concoction that might deceive somebody into thinking it is cloture."

The coalition of Republicans and Southern Democrats being formed before us today has serious consequences for Americans. By refusing to face the need for civil rights, we have given strength to the totalitarian forces within our society from the right and the left. I have had a great deal of experience, Mr. President, fighting subversive forces. I know that the Communist Party will now exploit this step we take today and against which I fervently protest. They will spread their tales not only in our own country, but to the people of the world. They will say that America is not interested in the democratic principles of liberty and equality. They will say that Soviet Russia and not America is the true friend of the millions of colored people in the world. They will say, and we will have presented them with the ammunition to say, that America is insincere and that our political parties are insincere.

We have a responsibility to the principles for which we stand to pass civil-rights legislation. We have a responsibility to the people of the world to assure them we are their friends regardless of their color, that we believe in democracy. We have a responsibility to the Catholics, Protestants, and Jews who suffer from discrimination in community after community to assure them that we are not going to forget the evils of our society and that we are going to correct them.

Mr. President, I have before me a resolution pledging those in this body who sign it to hold the Senate of the United States in session until the civil-rights program set forth in the platform of both the Democratic and the Republican parties is voted upon. The people have a right to know where each of us stand. My position in this matter is clear. I shall vote for majority rule in the Senate and for the right of a majority of this body to employ cloture so that every Senator has the opportunity to debate and express himself on all issues. I shall vote for civil-rights legislation in accordance with the platform of our party and the program of President Truman. These are my convictions. I am prepared to stay all summer to vote in accordance with my convictions. This body can do no less.

Memorial Day

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the National Tribune, Stars and Stripes, May 26, 1949:

IN REDEDICATION

On May 5, 1868, Gen. John A. Logan, then the second commander in chief of the Grand Army of the Republic, issued his famous General Order No. 11 which first established Memorial Day. Since that day, on each May 30 it has been read and reread. It called upon the people everywhere in this Nation to decorate the graves of those who had defended their country in a great civil conflict. It sought to preserve the memory of the vast

sacrifices they had made, and it asked that there never be forgotten the cost of a free and undivided republic.

During the course of its existence, the Grand Army and its membership wielded a great influence on American life. Of two and a quarter million men who served in the Union armies in the Civil War, it had as organization members in its heyday less than 410,000 veterans, but it assumed its rightful place in the political and economic structure of the country. It was a force for good, and it contributed far out of proportion to its numbers to the advancement of the national interest. From its rolls came those who assumed leadership in all walks of life, those who led their people in civil affairs at the country crossroads, in the States and the Congress, and in the Executive Mansion. Indeed, nobody today could possibly overestimate the wealth brought to the well-being of our land by those who fought for and preserved the United States as one Union.

When General Logan proclaimed Memorial Day 81 years ago, he spoke for less than 10,000 souls. Although his command in time had been 400 times multiplied, there are living today only an even score of members of the GAR in some 15 States. Indeed, there survive now only 30 Union veterans of the Civil War and about the same number of their adversaries of the Southland. They average in age well over 102, and those ages range from 100 to 107 years. When the final roll is called at the eighty-third and last campfire in Indianapolis 3 months hence, it is doubtful if more than three or four will be on hand physically to answer to their names.

One of the great heroes of the North in the war of 1861–65 was the principal speaker at Arlington National Cemetery on May 30, 1868. He later was to become the twentieth President of the United States, only to die a few months later at the hands of an assassin. Time has in part erased the thoughts he uttered on that first Memorial Day, but it is remembered that he stressed the meaning of some of the timeless words of the then commander in chief of his veterans' organization. He repeated a sentence of General Logan's order that for all time should serve as injunction to new generations of veterans of later wars: "Let us in this solemn presence," he recited, "renew our pledges to aid and assist those whom they left among us as a sacred charge upon the Nation's gratitude." He referred, of course, to those who lay lifeless beneath the green and carefully tended mounds before him.

Nowhere can be found a simpler definition of the reason why service men and women of all wars should organize in strength. Never was it more essential that their potential might and their vast resources be held at the disposal of their Government. At no time in history has it been more necessary to be welded together for self-preservation and for the protection of the widows and orphans of the honored dead than it is now, more than four score years since Memorial Day was first established.

When, on the coming Monday orations are intoned from public platforms throughout this country, and, in fact, from other rostrums the world over, patriotic men and women will voice warnings that Americans everywhere must search their consciences and renew their interest in civic duty if there are to be preserved the great principles that have made possible the freedoms they enjoy. They will be reminded that there is real danger of revolutionary changes in their way of life through infiltration of alien influences that have been instilled in younger minds under the guise of liberalism. And no doubt in many a locality the memorial occasion will afford the opportunity, in the name of freedom of expression, to preach sedition in honeyed phrases and double talk. Our people must be able to distinguish between good and evil, and we know of no better medium than a strong and forceful campaign—and a continuing one—led by veterans who have organized to defend the Americanism for which they have fought in war.

At some period in almost every generation during our existence as a Nation a notorious element of this citizenry has sought to destroy the usefulness of veterans as a preferred class by legislative attacks upon their privileges. Until recent months no onslaught has achieved success since the black days of the so-called Economy League of nearly two decades ago, but today there is a well-organized attack in progress. Aided by improved channels of communication, the enemies of "those whom they left among us as a sacred charge upon the Nation's gratitude" are striving desperately to destroy so-called veterans' benefits and lump them together with other social outlays. The greatest propaganda drive of all times is being carried right to the ramparts of servicemen's organizations and those of their auxiliary bodies. The defeat of veteran proposals in recent weeks and months has been the reward of carelessness and lack of unity among veterans and as between their societies. Unless they awaken to a realization of the dangers that face them, and unless they repair their systems of defense and reinforce their redoubts, all that has been won over the years can be lost. These are the themes most to be accented on this Memorial Day.

America must continue to live as a Nation of free and undivided people devoted to ideals that have stood the test of time with all of the changes it has wrought. The first citizens of America, those who have served their country in uniform and have bared their breasts to a foe that would have destroyed everything they most cherish, must become stronger and must reassert their purpose to assume their leadership in affairs closest to their hearts. They are called upon to save their people from stealthy enemies both within and without these borders. Theirs is the right to show the way to a stronger national life and a vaster program for good, and theirs is the duty to destroy the forces that would forget the country's responsibility to those who have borne the battle. On this coming day, devoted to the sacred memory of the warriors of this land, its war veterans rededicate themselves to the reasons for banding together in associations for God, for country, and for fellow being. With all that is in them they will strive to protect their own.

The Other Side of the Merger-Monopoly Issue

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 24, 1949

Mr. HOFFMAN of Michigan. Mr. Speaker, from time to time the Federal Trade Commission has issued reports on the merger of corporations and a creation of monopolies.

So far as I have been able to learn, no wide publicity has been given to the views of those who do not agree with the conclusions of the Federal Trade Commission.

Because of this situation, there is printed herewith a recent review and analysis of the Federal Trade Commission's report on the merger movement, prepared by the research department of the National Association of Manufacturers. That report is as follows:

FEDERAL TRADE COMMISSION'S REPORT ON THE MERGER MOVEMENT [1]

In this review of the Federal Trade Commission's report, we are not going into the merits of the legal proposals with respect to mergers. We are addressing our analysis entirely to that portion of the report which surveys company acquisitions during the period from 1940 through 1947 for the purpose of indicating the growth of the merger movement and its economic effects.

The FTC has made a study of some 2,062 acquisitions for the period from 1940 through 1947. These acquisitions are studied in considerable detail. The report points out, however, that there are in addition to those tabulated in the report 388 cases of acquisitions reported in special surveys made by the Textile World, which would bring the total to 2,450.

The 2,062 mergers tabulated in the report are presented in various tables and charts with textual discussion for the purpose of indicating that an alarming merger movement is under way which, if uncorrected, will lead to serious consequences. The Commission closes its report with the following warning:

"In practice, competition has proved to be a somewhat crudely working but, on the whole, highly effective theory and system. Yet, it would be blindness not to recognize the obvious fact that the effectiveness of competition, as the protector of the public interest, has been seriously weakened during the last several decades. In industry after industry, prices, production, employment, and, in fact, all forms of economic activity have come under the domination of the Big Four, the Big Six, or in some cases, the leader."

The Commission pleads for "some effective means of preventing giant corporations from steadily increasing their power at the expense of small business."

In other words, the Commission believes that on the basis of the data on which it has analyzed the recent increase in acquisitions of subsidiary companies presents a serious monopoly threat. In the brief time at our disposal it is utterly impossible to ascertain the full facts regarding the 2,062 acquisitions as to their relative size in the industry in which they have taken place, as to the nature of the activities to be carried out through these mergers, and as to whether or not each of these so-called mergers represents a reduction of competition and the building up of monopoly power. These problems are treated in general terms throughout the report, but the information provided in the FTC report is too inadequate for an appraisal of the acquisitions from these points of view.

One of the most serious defects of the presentation is that the assets of the acquired firms are not given by industry groups. Therefore it is impossible to determine to what extent the properties acquired by various companies represent increasing concentration in the various industries indicated. This omission is inexcusable because from statements made in the text of the report, it is apparent that the information as to the value of the assets acquired in each case was available to the Commission.

---

[1] Report of the Federal Trade Commission on the Merger Movement—A Summary Report, U. S. Government Printing Office, 1948.

UNIVERSITY OF MICHIGAN LIBRARIES

Even on the basis of the number of firms acquired, the acquisitions are exceedingly small in relation to the total number of firms in the manufacturing and mining industries. As shown in table 1, attached, the 2,062 acquisitions represent a yearly average of less than one-tenth of 1 percent of the total firms operating in these two industrial fields. It will be recalled that these acquisitions were made over a period of 8 years, i. e., 1940 through 1947. Even if acquisitions continued at this rate, it would take over 1,000 years to merge all industrial and mining concerns into one great monopoly—the private supergovernment indicated by the FTC.

It is stated many times throughout the report that this recent resurgence of the merger movement will have a stifling effect on small business. Throughout the report all of the emphasis is placed on the acquisitions purchased. The implication is that large and powerful corporations are forcing the small and weak companies out of business through outright purchases. No recognition is given to the fact that many companies find it to their advantage to become part of a larger corporate unit or to join with another small company, because the smaller unit alone often lacks the necessary capital or technical skill to develop, manufacture, and market its product effectively.

The implication that small business is "disappearing" is hard to believe in view of the fact that the over-all figure of the number of firms in operation in mining and manufacturing has actually increased 49 percent from 1939 to 1948. These figures, calculated by the Department of Commerce, are given in table 2. In 1939, there were 235,600 firms in these two major fields and in December 1948 there were 351,400 such firms. The FTC statements about the "disappearance" of small business firms are absurd in the light of this upward trend.

The merger movement, as described in the FTC report, is never clearly related to the long-term trend of mergers throughout American business. In the TNEC report on mergers (TNEC monograph No. 27, The Structure of Industry) figures are given for mergers throughout the years 1919 to 1938 by quarters. In the TNEC study, mergers are referred to under the misleading title of "concerns disappearing." For all practical purposes, the classification is comparable to the one used in the FTC report. It might be well, therefore, to compare the recent trend in mergers with that exhibited in earlier years. As indicated in the FTC report, the Commission states that there were 2,450 mergers from 1940 through 1947. This would be at the average annual rate of 306 throughout this 7-year period.

According to the TNEC study, as shown in table 3, there were 1,245 mergers in the peak year 1929 alone. In fact, although the average annual rate during this recent 8-year period is about twice that prevailing from 1932 through 1938—a period of very low rate of merging—it is far below the average of the decade ended 1929. In the 10 years ended 1929 the mergers averaged 682 per year compared with 306 per year during the past 8 years.

Only incidentally does the FTC report deal with the factors that were responsible for mergers during the war period. In order to get a supply of materials during the war period and during the price-control period following the war, it was imperative for many companies to obtain through vertical acquisitions facilities of other plants in various regions. For example, in discussing the mergers in the field of textiles and apparel, the FTC report points out that:

"A modern example of this type of movement is that which has occurred in recent years in the textile industry, a field in which the merger movement is nothing less than spectacular. According to the Cotton Textile Institute, in the years 1940–46, inclusive, approximately one-fifth of the productive facilities in the cotton-textile field changed ownership. The commonly recognized underlying causes of this wave of mergers were: (1) shortage of gray goods, caused by enormous demands during the war and the immediate postwar period; (2) more favorable profit margins, particularly under wartime price controls, in the finished-goods lines; (3) consequent assumption of the finishing operations by gray-goods mills; and (4) responsive efforts of converters, selling agents, dry goods wholesalers, etc., to gain access to gray goods through mergers."

Later the report discusses recent cases of acquisitions of "tight cooperage" firms by distillers, and makes the following point:

"In the case of the purchase of tight cooperage facilities, it is apparent that the distillers were motivated not so much by a desire to make this a captive industry as by the competitive necessity of securing whisky barrels. Without whisky barrels, whisky cannot be aged, and without aged whisky to sell, the large distillers would soon have found themselves in the extraordinarily difficult position."

Undoubtedly a careful analysis of many of the mergers in other industries would reveal the same type of acquisitions.

The over-all statistical record and chart provided by FTC clearly indicates that the recent increase in acquisitions is a purely temporary phenomenon brought about by the war and its aftermath. There is no statistical indication that the long-term trend of mergers is upward. As already indicated, a considerable number of acquisitions were made during the period of acute shortages under war conditions and price control in order to insure a supply of needed materials. Probably a careful examination of the facts of each individual case would reveal this, but such information, even though available to the FTC investigators, has not been disclosed. In addition, it is likely that one cause for the recent high rate of mergers grew out of the tax situation. Under the excess-profits tax, which was in effect through 1945, corporations were allowed to take an exemption which in many cases was based upon invested capital, and this fact lent a special impetus to the acquisition of other concerns.

There are many assertions, although little proof, throughout the report that these mergers stifle competition. Even if the over-all figures supported the claim that the merger process has resulted in a reduction of the number of firms operating, there still would not be conclusive proof that these combinations actually restrained competition. As already indicated, throughout the period under review the number of firms in mining and manufacturing actually showed a large net increase. In other words, the 2,450 companies which "disappeared" through mergers were rather heavily offset by the net addition of over 100,000 firms in operation. (See table 2.)

But there is a fundamental error in assuming that all acquisitions and mergers reduce competition. In fact, mergers and acquisitions frequently intensify competition. Obviously, if there were only two companies in a field, the acquisition of one by the other would eliminate competition. However, if there were three companies—one large and two small—a merging of the two smaller ones might provide formidable competition for the top company. The fanning out of this process of elaboration clearly indicates that more effective units of competition are frequently created by logical combinations of a number of small units which might otherwise fail to be effective as individual concerns.

Nowhere in the report has the FTC demonstrated that these mergers have injured the consumer either through monopolistic prices or poor service. In many cases, even according to the FTC report, the mergers, particularly those of the vertical type, have resulted in more effective production and distribution. This will doubtless lead to relatively lower costs and prices.

Another example of the specious type of reasoning in the report is that the financial condition of the 78 largest manufacturing companies put them in a position as of June 30, 1947, to acquire 90 percent of the total number of manufacturing companies in the United States. For example, it is stated that the 78 largest manufacturing corporations have enough net working capital to purchase the assets of 90 percent of all manufacturing companies in the United States. If the 78 corporations were to spend all of their working capital for acquisitions, as suggested by the FTC, then they would cease to operate for lack of current funds to meet pay rolls and other requirements. It could be said that the Reconstruction Finance Corporation has enough billions to purchase the assets of approximately 90 percent of all manufacturing corporations in the United States, thus indicating there is just as much concentration of power in a single Government corporation as there is in the 78 largest manufacturing companies. This view, although unrealistic, is not as impractical as the absurd observation made by the FTC, because RFC money is easier to spend for such purposes than the working capital of industrial concerns.

In the FTC report, considerable emphasis is placed on the fact that a few large companies have a large proportion of the output of the heavy steel drum capacity of the steel industry. Nowhere does the report point out that heavy steel drums and barrels represent only a minute fraction of the steel industry. The implication of the report is that a few large steel companies have acquired a large proportion of the steel output of the country—not measured by total production but by the production of one item.

According to the figures compiled by the American Iron and Steel Institute, total fabricated-steel shipments in 1947 were 63,057,150 tons. In that year the shipments of steel barrels, drums, and shipping pails, 18-gage and heavier, were 616,788 tons. This represents less than 1 percent of all steel shipments in 1946.

There is much confusion in the analysis as to the relation of these acquisitions to small business. If the companies acquired had generally been large units, the charge of monopoly and restraint of competition might have been sustained. However, since apparently most of the companies acquired were relatively small, the report lays great stress on the effect of these mergers in driving small companies out of business. For example, it is stated that "fully 93 percent of all firms bought out since 1940 held assets less than $5,000,000 and 71 percent had less than $1,000,000 of assets. On the other hand, only 4 percent of the total number of acquired firms had assets of over $10,000,000." Because of the predominant number of small units in business, these acquisitions have had no effect in reducing the over-all number of small businesses because their slight number is offset many times over by new businesses starting.

The report makes a distinction between horizontal acquisitions, vertical integrations, and conglomerate acquisitions. The report does not give a break-down of the acquisitions by these three leading types, except as to their over-all number. Since no asset figures are given for the acquisitions, it is impossible to determine the relative importance of the various types of mergers as to the restriction of competition.

TABLE 1.—*Mergers and acquisitions, 1940–47, as percent of number of firms in existence*

Industry of acquiring company	Number of firms merged or acquired, 1940–47	Number of firms in operation Dec. 31, 1947	Merged or acquired firms as percent of total
			Percent
Food and kindred products	369	57,400	0.6
Textiles and apparel	154	40,000	.4
Paper and allied products	84	3,000	2.8
Printing and publishing	28	41,800	.1
Chemicals	212	9,000	2.4
Rubber products	25	1,500	1.7
Leather products	19	5,100	.4
Metals and metal products (not elsewhere classified)	241	24,700	1.0
Nonelectrical machinery	167	17,200	1.0
Electrical machinery	105	4,100	2.6
Transportation equipment	140	4,200	3.5
Lumber and furniture	50	64,600	.1
Stone, clay, and glass products	64	14,700	.4
Other manufacturing	220	31,600	.7
Mining and quarrying	71	29,000	.2
Nonmanufacturing	104		
Total or average	2,062	348,500	.6

TABLE 3.—*Mergers and acquisitions in manufacturing and mining, by quarters, 1919–39*

[Net number of concerns absorbed][1]

Year	Quarters				Total[2]
	I	II	III	IV	
1919	57	82	147	125	438
1920	209	186	188	166	760
1921	184	99	80	122	487
1922	86	53	82	76	309
1923	84	67	44	105	311
1924	110	71	87	85	368
1925	124	104	127	175	554
1926	286	236	171	146	856
1927	161	247	220	213	870
1928	197	315	242	274	1,058
1929	349	395	312	160	1,245
1930	204	237	156	189	799
1931	163	142	87	71	464
1932	7	102	46	40	203
1933	19	43	33	12	120
1934	19	25	34	23	101
1935	36	27	38	24	130
1936	39	25	27	32	126
1937	32	27	29	31	124
1938	32	20	22	33	110
1939	24	22	16	25	87

[1] Number of concerns merged less number of mergers plus concerns acquired.

[2] Annual totals are larger than the sum of the quarterly figures, because they include a small number of cases where exact dates were not available.

[3] Includes 1 merger of 60 concerns.

ORT—Passport to Freedom

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. JAVITS. Mr. Speaker, the work of this great organization should be recognized and understood. Its objective is threefold: To train DP's in the displaced persons camps to work with their hands; to train those DP's who have been resettled in western European and other countries in specialized skills of particular use in the countries where they have settled; and to train DP's who are emigrating to Israel and who have already emigrated there for the maximum usefulness to Israel's economy.

ORT trains white-collar workers, professional and businessmen and farmers, principally Jewish, in specialized skills. In 1948 it trained 43,000. In 1949 it expects a big increase in its training program. It is estimated that in France alone there are 100,000 resettled DP's who need training; already 20 percent of them have been trained by ORT.

The work of knowledge and education about ORT has been carried on in the Congress by the ORT congressional committee whose officers are: Senator BRIEN MCMAHON, chairman, and my distinguished colleague, Representative EMANUEL CELLER, and myself as secretaries.

There is appended as of interest an eloquent prose poem from the New York Journal-American on the occasion of the annual convention of the American ORT Federation, held in New York this past week end:

ORT—PROLOGUE TO FREEDOM

(By Harry H. Schlacht)

In New York today we greet the delegates to the ORT convention who have come from every part of the Nation. We salute them and we hail them for service to our fellowmen.

ORT (Organization for Rehabilitation Through Training) is a great Jewish institution, a symbol of devotion to long-suffering Jews, a bridge to their economic independence, a link between American abundance and European poverty, a passport to their freedom in the lands of their choice.

ORT has been an institution without trumpet, a name men have heard from continent to continent, an organization spoken of quietly in the cruel years.

ORT is a name that has survived the unholy pogroms, the death camps and crematoria, the tortures of tyrants.

ORT remained with the law and the prophets. It remained with the Talmud and Midrash. It remained with the Ark of the Covenant. It remained with the candles on Shabbos.

ORT believes—that there is dignity in labor; that it is the inalienable right of every man to work; that it is the best way to teach people to help themselves; that it is the tools and training that are a refugee's best passport to peace and security.

ORT seeks to aid Jews—through opportunity—not pity; through security—not charity; through tools and training.

Trainees today, workers tomorrow.

ORT has helped restore the Jews' shattered lives. It has helped to make them self-sustaining. It has helped to lead the war-weary out of idleness into ORT schools and onto farms and into factories.

ORT has helped the uprooted people of Europe to find their roots again and live as men. It has helped prepare them for a life of self-reliance in the new State of Israel or in any other land.

ORT has created unprecedented opportunity for bringing within reach an era of freedom, security and dignity to Jews wherever they choose to make their lives.

It believes that vocational training is the key to world security.

It is to that end that the ORT is striving. It is for that end that the ORT is working.

We in America should help them.

If we will dedicate ourselves to these objectives, if we will have the understanding of the size of the problem, we could help the current ORT membership drive.

If there is one simple truth in all history, it is that men need the comfort and aid of their fellow men.

We recall the poem For Whom the Bell Tolls. It comes from the pen of the great religious poet John Donne. It tells of the ringing of church bells on the death of a native. It tells of people seeking to ascertain for whom the bell was tolling.

The poet's answer is one of the finest passages in literature:

"No man is an island, entire of itself;
Every man is a piece of a continent, a part of the main;
Any man's death diminished me, because I am involved in mankind;
And, therefore, never send to know for whom the bell tolls;
It tolls for thee."

Whenever you hear the bell toll for the death of justice, brotherhood, religion or democracy, "never send to know for whom the bell tolls; it tolls for thee."

So here's an all-American toast from coast to coast to the American ORT Federation on their glorious celebration. Whoever we are, wherever we are, let us contribute to the United Jewish Appeal. Let us join the American ORT Federation for a happy civilization.

America in the Eyes of Russia

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 24, 1949

Mr. LANE. Mr. Speaker, under leave to extend my remarks, I wish to include the following article from the Christian Science Monitor, Tuesday, May 24, 1949:

THIS WORLD—RUSSIAN IMPRESSIONS OF NEW YORK

(By Edmund Stevens)

(How does the average Russian picture the average American? What does he think of the United States economic system, its social institutions? To answer these questions one would have to make a comprehensive and objective poll among the 200,000,000 citizens of the Soviet Union.

(Obviously, this could not be done. But there is little secret about what the Soviet Government would like the Ivans and their wives and children to think of the United States.

UNIVERSITY OF MICHIGAN LIBRARIES

(The following dispatch from our Moscow correspondent is a good example of the technique the rigidly controlled Soviet press uses for stripping American achievements.)

Moscow.—First of the returned Soviet delegates to the Communist-sponsored New York "peace" conference to publish his impressions from the trip is cinema director Sergei Gerasimov. His article appears in the weekly Literary Gazette, a publication editorially dedicated to "unmasking the reactionary culture of the bourgeois west."

Gerasimov's account describes New York City as a collection of cities each quite unlike the other. Manhattan impresses him as a gaudy advertisement for the whole country which undeniably attempts an overwhelming impression. The height of the skyscrapers and the flash of the electric signs are intended to astound the unprepared man, to upset accustomed concepts of normal scales natural to man.

He feels prompted to ask: "Can one live in such a city?" and he answers: "Evidently not, since the residents of Manhattan, as soon as their business day is over, rush to get out of it, and breaking their necks, speed to the suburbs, leaving Manhattan with its famous Broadway to glitter for habitual idlers, visiting yokels, and foreign tourists."

He further remarks that the view of New York from atop the Empire State Building is obstructed by a grating erected to keep people from jumping off.

DIRT AND POVERTY IN BRONX

Gerasimov finds Brooklyn and the Bronx totally different from Manhattan. Brooklyn and the Bronx, he explains, are where the less well-to-do and not at all well-to-do Americans live, "where the Negro and Chinese districts are located." There, states Gerasimov, "dirt and poverty reign." The inhabitants of these boroughs, he reports, never leave their own neighborhoods as they have nowhere to go; instead they mill around the streets concerned with something else: "They simply have nothing to eat."

Gerasimov declares that the American press is always on the lookout for sensations and always prepared to misconstrue, often with deliberate malice. Thus, he remarks that when he and his comrades were stepping out of the plane at LaGuardia Field, the fact that he held Shostakovitch's arm was promptly reported: "Shostakovitch steps onto American soil. An unknown Soviet guard, specially assigned to him, holds him firmly by the arm."

At the same time, Gerasimov describes America as a country of sharp contrasts. He reports attending a Madison Square Garden rally at which 20,000 Americans "unanimously demonstrated their genuine sympathy for the Soviet Union." But, he adds that at this point the State Department intervened and "with indecent haste annulled the hospitality and showed the entire world the extreme degree of fear of its own people who had warmly rallied in defense of peace."

Gerasimov reports that the intelligent, honest, and educated Americans whom he met at the Waldorf conference all shared in bitter, ironic deprecation of the vaunted American living standard and of that culture which obtrudes everywhere in a murky wave of mechanized pornography and savage superstitution. These thinking, honest people, he adds, "cannot reconcile themselves to the present course of American foreign and domestic policy."

TEEN AGERS: CAPITALIST DECADENCE

Depraved morals and manners were attributed to American gilded youth in another recent Literary Gazette article. Material for this commentary was provided by the photographic essay on American teen agers in an earlier issue of Life magazine.

The commentator, Evgeni Dolmatovsky, began by pointing out that the youngsters in question evidently are the offspring of wealthy parents, thus giving the correct Marxist approach.

Anent the boogie haircut which Life pictures as fashionable in Detroit, Dolmatovsky drew a meaningful parallel with the tonsorial fads of Nazi hoodlums.

He saw striking evidence of capitalist decadence in the various complicated teenage handshakes, described and photographed in Life.

One of the other pictures, showing a high-school boy pouring all the prepared chemicals into one retort while the chemistry teacher was out of the room, made Dolmatovsky exclaim: "Such a hooligan ought to be expelled from the class, but in America he is photographed for a magazine. He is the worthy pupil of those elder Americans who put their feet on the desk of Americanized Europe."

What renders these teen-aged shenanigans truly sinister, in the opinion of Dolmatovsky, is his added information that in Des Moines the boys put on soldiers' boots once a week. "On the seventh day (he writes) we hear military heel clicking, and through the idiotic grimace of the idol of American youth there appears the savage snarl of the young warmonger."

Proposed World Calendar

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Wednesday, May 25 (legislative day of Monday, May 23), 1949

Mr. KEFAUVER. Mr. President, I ask unanimous consent to have printed in the RECORD a compelling editorial entitled "When Is the Holiday?" published in the Washington Times-Herald of May 25, giving the importance of adopting a world calendar.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHEN IS THE HOLIDAY? (OR, WORLD CALENDAR, PLEASE)

When is Memorial Day? Go up to the first man you see in the street and ask him that question fast, and see how long it takes him to figure it out. Hmmm, he will say, it's Sunday, isn't it? No; it's Monday. No; it's the last Thursday in the month. No; that's Thanksgiving; it must be the 30th. Yes; that's it, the 30th; so that makes Memorial Day Sunday, I mean Monday.

Of course, if he is a Government worker he may have the date at his finger tips because he has a week-end holiday arranged, and thus be able to answer your question in a hurry. If he does, then ask him when is Labor Day and watch him flounder.

What a mess our calendar is.

Every month is different from every other month. Every year is different from the one before and the one after. And as if that weren't enough, every 4 years we throw in an extra day just to hash things up worse.

Every year the holidays fall on different days of the week—the immovable ones, that is, the movable ones fall on different days of the month. Holidays, like Easter, are so hard to determine in advance that it takes the aid of astronomers.

What a slapdash, haphazard, rickety mess.

When are we going to throw out the old makeshift calendar that has plagued us since 1582? When are we going to adopt a world calendar?

The proposed world calendar

FIRST QUARTER

January							February							March

FOURTH QUARTER

October							November							December (W [2])						
S	M	T	W	T	F	S	S	M	T	W	T	F	S	S	M	T	W	T	F	S
1	2	3	4	5	6	7					1	2	3	4						1	2
8	9	10	11	12	13	14	5	6	7	8	9	10	11	3	4	5	6	7	8	9
15	16	17	18	19	20	21	12	13	14	15	16	17	18	10	11	12	13	14	15	16
22	23	24	25	26	27	28	19	20	21	22	23	24	25	17	18	19	20	21	22	23
29	30	31					26	27	28	29	30			24	25	26	27	28	29	30

[1] The leap-year world holiday, W or June 31 (an extra day), follows June 30 in leap years.
[2] The year-end world holiday, W or Dec. 31 (365th day) follows Dec. 30 every year.

A calendar such as here pictured, which gives us all years alike, all quarters equal, all holidays unvarying?

Look at this picture, please, and see if you can find any fault with the system of counting our days thus set forth. If you can find such a fault, you will be alone in your glory, because no one, no businessman, scientist, priest, or housewife has ever yet objected to this new calendar.

The only objections ever raised have been the usual barriers that oppose new ideas no matter how sound and necessary—ignorance and laziness.

There is no reason, no reason at all, for this country not to adopt this calendar right now, and let the rest of the world tag along at its leisure, which would not be very prolonged once it was demonstrated practically what a tremendous advantage the new system gave.

Notice how simply the new calendar handles the odds and ends of time which no calendar can ever get rid of so long as the earth rotates around the sun once in 365.24219 days and not 365 days precisely. The world calendar does it by merely slipping in once every four years, between June 30 and July 1, an extra Saturday called June L or 30, Leap Year day. Between December 30 and January 1 every year comes another extra Saturday, December Y or 31, Year End Day.

Except for these two "bonus days," which harm no one and benefit everybody—everybody who likes a holiday, that is—the new calendar rocks along, year after year after year, with each month the same, each quarter the same, each year the same. Each holiday falling on the same day of the same week of the same month.

All holidays, by the way, would be fixed by law, and would be placed on the week end.

Businessmen particularly favor the new calendar. It takes the buckles and kinks out of accounting and interest periods, it makes possible accurate calculations of worktime arrangements, it puts an end to approximations.

Insurance companies, banks, governments, all going concerns which employ any kind of accounting system, have been plugging for the world calendar for years.

There is no real opposition.

Why don't we get it?

Only because of habit—laziness—a certain feeling that there is something sacred about our old Gregorian calendar.

But the time for the new time is coming. At present there is a bill in Congress which would authorize United States adoption of the world calendar. Senator ESTES KEFAUVER, of Tennessee, introduced it "to alleviate the calendar chaos now existing throughout the world."

Chaos is right, Senator. Illogical, unwieldy, expensive, useless chaos which has ruled our lives nearly 400 years. The old calendar must go, the new world calendar must come. Why not now?

They Served Illinois and the Republic

EXTENSION OF REMARKS
OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1949

Mr. O'HARA of Illinois. Mr. Speaker, in the 131 years since the admission of Illinois to the Union there have been 24 distinguished Members of this historic body who have preceded me as Representative in the Congress of the people of what is now the Second District of Illinois. Of the 24 but 3 are now among the living, 2 of whom, to the great good fortune of the Nation, are still in the service of the Republic, holding with outstanding distinction positions of high prestige—the Honorable Raymond S. McKeogh, Chairman of the Maritime Commission, and the Honorable William A. Rowan, collector of the port of Chicago. The third of the survivors of the 24—the Honorable Richard B. Vail—is the head of a large manufacturing company and is prominent in civic affairs and in the councils of his party.

It seems to me appropriate that on this day set aside as one of memorial for the great men of the past who contributed to the traditions of this Chamber I should mention the names and recall to memory some of the brilliant achievements of the 21 who are gone.

From 1818 to 1839, one Representative at Large for all of Illinois.

First. John McLean, born in North Carolina in 1791, moved with parents to Kentucky in 1795, went to Illinois territory in 1815; admitted to the bar; elected to Fifteenth Congress in 1818 as Democrat, unsuccessful candidate for Sixteenth, Seventeenth, and Eighteenth Congresses; member of State House of Representatives in 1820–26–28, serving as speaker; elected to United States Senate—vacancy—in 1824 and again in 1829. Died in office 1830 at the age of 39. One of the counties of Illinois is named for him.

Second. Daniel Pope Cook, born in Kentucky in 1794; started law practice at Kaskaskia, Ill., in 1815; newspaper publisher, auditor of public accounts, circuit judge, first attorney general of Illinois, and elected to the Seventeenth, Eighteenth, and Nineteenth Congresses; defeated as candidate for Twentieth Congress; died in Kentucky in 1827 at the age of 33. Cook County, in which is located the city of Chicago, was named in his honor.

Third. Joseph Duncan, born in Kentucky in 1794, served as infantry officer in War of 1812; moved to Illinois in 1818; farmer, justice of the peace, major general commanding Illinois State troops in Black Hawk War in 1831; member Illinois State Senate in 1824–26; elected to Twentieth Congress in 1826 as Jackson Democrat; reelected to Twenty-first, Twenty-second, and Twenty-third Congresses, resigning in 1834 on election as governor of Illinois. Reelected governor in 1838. Died in 1844 at age of 50.

Fourth. William L. May, born in Kentucky; moved to Illinois; lawyer, justice of the peace, captain State militia, member Illinois House of Representatives; appointed by President Jackson as receiver of public moneys for United States Land Office; elected to Twenty-third Congress to fill Duncan vacancy, reelected to Twenty-fourth and Twenty-fifth Congresses. Died at San Francisco in 1849.

From 1839 to 1873 all of Cook County, including the present Second District, was in one congressional district.

Fifth. John T. Stuart, born in Kentucky in 1807; graduate Centre College in 1826; admitted to bar in 1828, commencing practice at Springfield, Ill., and becoming law partner of Abraham Lincoln; major in Black Hawk War; member Illinois House of Representatives in 1832–36; elected as Whig to Twenty-sixth and Twenty-seventh Congresses; member Illinois State Senate in 1848–52; defeated for Governor in 1860; elected as Democrat to Thirty-eighth Congress—but not from district at that time including Cook County; died in Springfield, Ill., in 1885 at age of 78.

Sixth. John Wentworth, born in Sandwich, N. H., in 1815; moved to Dover, N. H., 1819, and attended public schools there and an academy; graduated Dartmouth 1836; moved to Chicago, engaged in newspaper work; attended Harvard University Law School; admitted to Illinois Bar in 1841; elected as a Democrat to Twenty-eighth, Twenty-ninth, Thirtieth and Thirty-first Congresses, 1843–51; elected to Thirty-third Congress, 1853–55; served as Republican mayor of Chicago 1857–63; elected as a Republican to the Thirty-ninth Congress, 1865–67; died in Chicago 1888.

Seventh. Richard Sheppard Moloney, born in New Hampshire 1811; studied medicine and was graduated from Dartmouth Medical School 1838; commenced practice of medicine in Belvidere, Boone County, Ill., 1838; delegate to the Democratic National Convention in Baltimore 1852; elected as a Democrat to the Thirty-second Congress, 1851–53; not a candidate for reelection; moved to Nebraska. Delegate to the Democratic National Convention at Chicago 1884. Died in Nebraska 1891.

Second of nine districts all of Cook County 1853–61.

Eighth. James H. Woodworth, Member of Congress, 1855–57; born in New York, 1804; taught school in Fabius, N. Y.; inspector of common schools, 1826; moved to Chicago, 1833, and went into the dry goods business. Served in State senate, 1839–42; member of State house of representatives, 1842–47. Was owner and manager of the Chicago Hydraulic Flouring Mills; member of Chicago City Council, 1845–48; mayor of Chicago, 1848–50; elected as a Republican to the Thirty-fourth Congress; appointed by Governor Yates to serve on the board of auditors on war claims. President of Merchants and Mechanics Bank of Chicago; president of the Treasury Bank; one of the founders of the University of Chicago. Died 1869.

Ninth. John F. Farnsworth, Member of Congress, 1857–61; born in Canada, 1820; settled in Ann Arbor, Mich., studied law and was admitted to the bar, 1841. Moved to Chicago and was elected to the Thirty-fifth and Thirty-sixth Congresses as a Republican; did not seek renomination. Served in the Union Army during the Civil War; commissioned Colonel of the Eighth Regiment Illinois Volunteer Cavalry, 1861; Brigadier General of Volunteers 1862; resigned March 4, 1863, to take up duties as Congressman, but due to redistricting he no longer represented the area which now comprises the Second District. He remained a Representative from March 4, 1863, to March 3, 1873. He was defeated for reelection in 1873; resumed the practice of law in Chicago, but in 1880 moved to Washington, D. C., where he continued the practice of law until his death in 1897.

Tenth. Isaac N. Arnold, Member of Congress, 1861–65; born in New York, 1815; attended district and select schools and Hartwick Seminary; taught school, 1832–35; studied law and was admitted to the bar, 1835. Moved to Chicago, 1836, and continued the practice of law. Delegate to Democratic State Convention 1842. Member of State house of representatives, 1842–43. Presidential elector on Democratic ticket of Polk and Dallas, 1844. Delegate to the Free Soil National Convention at Buffalo, 1848. Again member of State house of representatives, 1855. Elected as a Republican to the Thirty-seventh and Thirty-eighth Congress. Declined renomination, 1864. During the Civil War he served as aide to Colonel Hunter at the Battle of Bull Run. From April 1865 to September 1866 he was the sixth auditor of the United States Treasury, from which position he resigned to resume his law practice. Died, Chicago, 1884.

John Wentworth was elected to the Thirty-ninth Congress as a Republican, 1865–67.

Eleventh. Norman B. Judd, Member of Congress, 1867–71; born in New York 1815; studied law and was admitted to the bar 1836 and commenced practice in Rome, N. Y. Moved to Chicago 1836. City attorney 1837–39; member of State senate 1844–60. Delegate to the Republican National Convention and nominated Abraham Lincoln for President 1860. In 1861 Lincoln appointed him Minister Plenipotentiary to Berlin, where he served until 1865. He was elected as a Republican to the Fortieth and Forty-first Congresses. He declined renomination in 1870. President Grant appointed him collector of the Port of Chicago, in which capacity he served until his death in 1878.

UNIVERSITY OF MICHIGAN LIBRARIES

Twelfth. Charles B. Farwell, Member of Congress 1871–73, born in New York 1823; attended Elmira Academy; moved to Illinois 1838; settled in Mount Morris, where he was employed as a Government surveyor and farmer until 1844, when he went into real estate and banking in Chicago. He was clerk of Cook County 1853–61; engaged in dry goods business; member of State board of equalization 1867; chairman of the Board of Supervisors of Cook County 1868; National Bank examiner 1867. Elected as a Republican to the Forty-second and Forty-third Congresses. He presented credentials as a Member-elect to the Forty-fourth Congress and served until 1876, when he was succeeded by John V. LeMoyne who contested his election. Mr. Farwell was elected 1887 to the United States Senate to fill the vacancy caused by the death of John A. Logan and he served until 1891. He died 1903. Mr. Farwell represented the Second District for one term only. As a result of redistricting Illinois representation was increased to 22 districts and Mr. Farwell after his first term was succeeded as Representative of the Second District 1873 by:

Thirteenth. John B. Rice, Member 1873–74, born in Maryland 1809, received limited schooling, went by stage to New York and moved to Chicago 1847. Became a manager of theaters in Chicago; Bangor, Maine; Buffalo, N. Y.; and Milwaukee, Wis. He retired from the stage 1857 and from theater management 1861. He was mayor of Chicago 1865–69; elected to the Forty-third Congress but died in office at Norfolk, Va., 1874.

Fourteenth. Bernard G. Caulfield—elected to fill the vacancy occasioned by the death of Hon. John B. Rice; born in Virginia 1828, graduated Georgetown College, Washington, D. C., 1848, and from the Law School University of Pennsylvania 1850. Admitted to the bar and started practice of law in Kentucky; moved to Chicago 1853. Elected as a Democrat to the Forty-third Congress to fill vacancy; reelected to Forty-fourth Congress; was not a candidate for reelection and moved to Dakota Territory 1878. Died 1887.

Fifteenth. William Aldrich, Member of Congress 1877–83; born in New York 1820; attended common schools and local academy; taught school until 1846 when he moved to Jackson, Mich., and later to Two Rivers, Wis.; merchant and lumber manufacturer; superintendent of schools 1855–56; member of State House of Representatives 1859. Moved to Chicago, 1861, and went into wholesale grocery business. Member of Chicago City Council 1876. Elected as Republican to Forty-fifth, Forty-sixth and Forty-seventh Congresses. Unsuccessful candidate for renomination 1882. Died 1885.

Sixteenth. Ransom W. Dunham, Member of Congress 1883–89, born in Massachusetts 1838, attended common schools and high school at Springfield, Mass. Clerk for life insurance company 1855–57. Moved to Chicago 1857; became grain and provision commission merchant; president of the board of trade of Chicago 1882. Elected as a Republican to the Forty-eighth, Forty-ninth and Fiftieth Congresses. Died en route to attend the centennial of his native town 1896.

Seventeenth. Abner Taylor, Member of Congress 1889–93, born in Maine 1829; moved with his parents to Ohio, 1832; thence to Fort Dodge, Iowa, and subsequently to Chicago, 1860. Was a contractor, one of the contractors for building the Texas State capitol. Member of Illinois House of Representatives 1884–86. Delegate to the Republican National Convention at Chicago, 1884. Elected as a Republican to Fifty-first and Fifty-second Congresses; not a candidate for reelection. Died in Washington, D. C., 1903.

Eighteenth. James Franklin Aldrich, Member of Congress 1893–97 (son of William, M. C., 1877–83), born at Two Rivers, Wis., 1853; moved with parents to Chicago, 1861; attended public schools and University of Chicago; graduated Rensselaer Polytechnic Institute, 1877. Manufacturer of linseed oil; subsequently went into gas business. Member of board of county commissioners, 1886–88; president of board, 1887. Member of county board of education, 1887; commissioner of public works, Chicago, 1891–93. Elected as Republican to Fifty-third and Fifty-fourth Congresses; not a candidate for renomination in 1896. He was appointed Consul General at Habana, Cuba, 1897, but did not reach his post owing to the outbreak of war with Spain. Died, 1933.

Nineteenth. James Robert Mann, Member of Congress, 1897–1922; born near Bloomington, McLean County, Ill., October 20, 1856; educated public schools; graduated University of Illinois, 1876; graduated Union College of Law, Chicago, 1881; admitted to bar, 1881; practiced law in Chicago. Member Oakland Board of Education, 1887; attorney for Hyde Park and South Park commissioners; member of citizens association which secured the adoption of Jackson Park as a site for the 1893 world's fair; master in chancery of the superior court of Cook County; member Chicago City Council, 1892–96. Proponent of the lower level sewer system for Chicago. Chairman of Illinois State Republican Convention, 1894; chairman of Republican county conventions, 1895 and 1902. Elected to the Fifty-fifth Congress and to the 13 succeeding Congresses. Served in Congress from March 4, 1897, until his death before the close of the Sixty-seventh Congress. Minority floor leader from Sixty-second to Sixty-fifth Congress. Died in Washington, D. C., November 30, 1922, interment, Oakwood Cemetery.

Twentieth. Morton D. Hull, Member of Congress, 1923–33, born Chicago, 1867; attended public schools and Phillips Exeter Academy, 1885; graduated Harvard University, 1892; admitted to bar 1892; practiced law in Chicago. Member of State house of representatives, 1906–14; member of State senate, 1914–18. Delegate to Republican National Convention at Chicago, 1916 (convention nominated Hughes and Fairbanks); delegate to State constitution convention, 1920. Elected as Republican to Sixty-eighth Congress to fill vacancy caused by death of James R. Mann, his plurality over Barratt O'Hara, Democrat, being 8,255; reelected to Sixty-ninth Congress over Frank A. Wright, Democrat, by a plurality of 75,867; reelected to Seventieth, Seventy-first, and Seventy-second Congresses. Died 1937.

Twenty-first. P. H. Moynihan, Member of Congress, 1933–35; born Chicago; attended public schools; four terms as alderman of Chicago; Republican committeeman of tenth ward. Served 8½ years as chairman and member of Illinois State commerce commission. In printing and publishing business; vice president of Calumet Coal Co.; elected as a Republican to Seventy-third Congress. Died 1946.

Following Mr. Moynihan were, twenty-second, the Honorable Raymond D. McKeogh, Democrat, in the Seventy-fourth, Seventy-fifth, Seventy-sixth, and Seventy-seventh Congresses; twenty-third, the Honorable William G. Rowan, Democrat, in the Seventy-eighth and Seventy-ninth Congresses; and twenty-fourth, the Honorable Richard B. Vail, Republican, in the Eightieth Congress.

Mr. Speaker, I feel a pride, and with it a leveling sense of humility, to serve in this Chamber as the successor of men of such stature and of such illustrious achievement. Interesting it is, in the light it throws upon the manner in which one State has contributed its youth to other States in the merging of our people to make one American people, that the first of my distinguished predecessors as Representative in the Congress of the United States was a native son of North Carolina, the next four in unbroken line were native sons of Kentucky, and that of the others five were born in the State of New York, two in the State of New Hampshire, one in Canada, and one each in Maryland, Virginia, Massachusetts, Maine, and Wisconsin. Not until Mr. Mann's election was a native son of Illinois included in the list, and at the time of his birth the county of his nativity bore the name of the first Representative from Illinois, a son of North Carolina.

Three of the 21 who are gone and in whose memory I speak with reverence today it was my happy fortune to know. Congressman Mann was in this Chamber when war with Spain was declared, and when a few years after the war I came to live in Woodlawn on the South Side of Chicago I was his constituent and he was my Congressman. He was a man of large abilities and a national figure of importance. When shortly after his last reelection he died; the sense of loss was keen, not only in Chicago, but throughout the Nation.

The Honorable Morton D. Hull was the Republican nominee and I was the Democratic nominee in the special election in the spring of 1923 to fill the Mann vacancy. Although during the long incumbency of Mr. Mann the district had been overwhelmingly Republican the contest between Mr. Hull and the speaker was close, this attributable in part to the circumstance of a concurrent mayorality election in which the Democratic nominee, Judge Dever, was the popular choice. Nevertheless there was no bitterness of

personal nature in the campaign and Mr. Hull retained my high esteem as a man of lofty character and devotion to public duty. He was a member of the Illinois State Senate during the 4 years that I presided over that body as lieutenant governor. No member of any legislative body ever could have worked harder and expended more hours of study in familiarizing himself with pending legislation. It was said of him, and I believe with truth, that every bill and resolution introduced in the senate he read and analyzed with thoroughgoing attention to all details. His especial interest was in the protection and strengthening of the civil-service laws. Although we belonged to different political parties, and our philosophies were not the same, I had for the Honorable Morton D. Hull a deep affectionate regard and with all the people of the Second Congressional District, as well as of the city of Chicago as a whole, experienced real grief at the news of his passing.

Mr. Moynihan I knew for many years and liked so very much. He had many friends to whom his democracy of manner and generous nature endeared him. His career in the City Council of Chicago might have been continued in the Congress but for the changing tide of political sentiment coming with the depression, the advent of Franklin D. Roosevelt, and the great popularity of the brilliant Raymond D. McKeogh. As it was, Mr. Moynihan's one term ended the long reign of Republican domination of the old Second District and for the six succeeding Congresses a Democrat came to Washington as the choice of the people of that district.

Mr. Speaker, I feel strongly that a useful purpose is served by the holding of these annual memorial services in this historic Chamber. It is strengthening to pause in the activities of what we are doing in the present to contemplate upon what was done in the past and how well the public servitors who are gone did the work of their respective generations. I am glad to have had this opportunity of paying tribute to the memory of the departed Members of the Congress who represented the people in the area of Illinois which now is the Second Congressional District.

Robert Lewis Coffey, Jr.

MEMORIAL ADDRESS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1949

On the life, character, and public service of Hon. ROBERT LEWIS COFFEY, JR., late a Representative from the State of Pennsylvania

Mr. ROONEY. Mr. Speaker, we were all shocked to hear of the sudden and tragic passing of our beloved colleague, the gentleman from Pennsylvania, ROBERT L. COFFEY, JR.

It was my pleasure and privilege to meet "BOB" COFFEY just before he took his oath of office as a Member of this House of Representatives. From that time on I learned to admire him for his sterling character and unusual ability.

"BOB" died at the beginning of a great career in this body and at a time when every Member of this House felt that here was a real leader of men and one whose future looked extremely promising.

As we all know, "BOB" COFFEY was one of the most outstanding and brilliant combat officers to emerge from World War II. Despite his distinction as one of our foremost pilots, he was extremely modest and reluctant to dwell much on his war experiences. The records of the Air Force show that he had completed many missions and participated in many dangerous experiences in his unselfish devotion to the cause of his country. He attained the rank of colonel at a very youthful age, which in itself is a great tribute to his ability and leadership.

His sense of fairness and his ability to make friends was such that he would undoubtedly have gone far in the Congress of the United States. It is indeed a great tragedy that his successful legislative career was cut short by such a terrible accident.

We shall miss Representative COFFEY, and I am sure that the sorrow that is his family's is shared by every one of us. My heartfelt sympathy goes out to his parents, wife, and children. May our good Lord comfort them in their hour of sorrow and grief.

John Holmes Overton

MEMORIAL ADDRESS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1949

On the life, character, and public service of Hon. JOHN HOLMES OVERTON, late a Senator from the State of Louisiana

Mr. HÉBERT. Mr. Speaker, I rise to pay tribute to the memory of one of Louisiana's most beloved citizens and most brilliant statesmen. In the death, just a little over a year ago today, of former Senator JOHN H. OVERTON I lost one of my dearest friends, a man for whom I had the greatest admiration and respect.

I knew former Senator OVERTON from the time I was a boy. His long career of honest and faithful public service stands out as a monument on a hill, enshrined by noble deeds and noble thoughts and measured, mature judgement. I shall never forget that it was in the political arena more than a score and 10 years ago that I first came to know JOHN OVERTON. He was a candidate for the United States Senate. I was a youngster in my teens working for the summer in the headquarters of one of his opponents, Governor Luther E. Hall. In the immaturity and impetuousness of my youth—I was 16 then—I wrote my first political speech, which, incidentally, was never delivered. I remember, however, the profound respect I had for this man and how I was impressed with what I had read and heard about him. I never knew at that time that we would eventually walk down the same political path.

In my later and more mature days of newspaper reporting and political writing, I again crossed JOHN OVERTON'S path. Although the newspaper on which I labored disagreed with JOHN OVERTON'S political affiliations, neither the newspaper nor myself ever lost respect for the man or admiration for his ability. The integrity of JOHN OVERTON could never be questioned.

It was an education to have covered part of his political career as a newspaper reporter. It was a privilege to have served as a colleague in the Congress of the United States.

In his death the Nation, and the South in particular, lost a valiant champion who was always ready and able to defend, in a magnificent and courageous manner, any attack upon the South. Frequently and effectively his voice was raised in Congress in opposition to those who would destroy States' rights for which the South stands and upon which the South was founded.

Everyone who was fortunate enough to have been associated with Senator OVERTON during his lifetime had the most profound respect for his fairness and ability. Quite naturally the people of Louisiana had great confidence in his integrity and demonstrated this sincere belief by selecting him as the man among men to represent them in the Senate of the United States for three terms.

Prior to 16 years of conscientious and devoted attention to his duties in the Senate he had served in the House of Representatives from the Eighth Congressional District of Louisiana.

Mere words are inadequate to express my admiration and high regard for JOHN OVERTON. His thousands of real friends in the great State of Louisiana were proud of his distinguished career, and his unblemished record of fine accomplishments will continue to live and shine like a beacon, lighting the way for those who aspire to follow in his footsteps.

While he had many individual achievements to his credit, Senator OVERTON will probably be best known and long remembered for his outstanding work for flood control. He was a recognized leader in this field, and the results that he accomplished for Louisiana and the lower Mississippi Valley are engraved in history.

During his long tenure in the Senate he made the study of flood control, not only as it affected Louisiana and the Mississippi valley but as it affected the country as a whole, a living and vital objective. He was thoroughly familiar with and well versed in all waterway matters and became the recognized authority on this subject not only in the Senate, but throughout the Nation.

The contributions he made in this respect will be cherished through the years because of the prosperity and safety it brought to the people of Louisiana.

When JOHN H. OVERTON first became a Member of the House of Representatives and later, was elevated, through the

UNIVERSITY OF MICHIGAN LIBRARIES

good-will of the people he served so faithfully, to the Senate of the United States, the progress of Louisiana was being retarded and held back in business and commerce because of recurrent and devastating floods when the angry, muddy Mississippi River and its tributaries overflowed the unprotected banks.

In fact the whole lower Mississippi Valley was suffering and practically stalemated by this torment of nature. From the very outset of his career on the national scene, Senator OVERTON practically plunged into the great problem of flood control. And it is because of his fine work and determination of purpose that we have the magnificent Federal flood and conservation programs which today are helping the South to advance businesswise comparable to any other section of the country.

Senator OVERTON was born September 17, 1875, at Marksville, La., then a small country village in the central part of the State and only a few miles from where the Red River joins the mighty Mississippi. During his early life it was only natural that he would witness the great damage, loss of life and property caused by floods, because the district in which he was raised was in the direct path of Louisiana's worst flood areas.

As a young man he attended and was graduated from Louisiana State University with the degree of bachelor of arts. Following this he studied law and received his degree from Tulane University Law School. For many years he was recognized as one of the most brilliant lawyers in the South.

On May 12, 1931, he was elected as Representative from the Eighth Congressional District to fill the unexpired term of James B. Aswell. He was elected on November 8, 1932, to the United States Senate, reelected to this high office again in 1938 and in 1944.

As many of his friends know he was rather reluctant to run for reelection in 1944, feeling that he would like to retire from the arduous duties and responsibilities he felt he must assume during the great World War. But his inherent loyalty to his country and his State was the ruler of his decisions rather than his desires.

All through his early childhood he personally witnessed the ravages of floods in the early spring when the turbulent Mississippi and Red Rivers swept over the section in which he lived. That he would dedicate his life to a fight for flood control was just one of the characteristics that made Senator OVERTON a distinctive public servant.

It was not an easy victory. Year after year Senator OVERTON fought for greater flood control and continual improvements of river and harbors. To repeat that he was a recognized authority on these two subjects is not just an idle use of words. He had at his command the facts and figures concerning the need, the cost, and benefits to be obtained by an adequate system of flood-control work.

And as he had lived so he died. For his last thoughts and actions were directed toward the approval by the Congress of a measure to advance and improve the flood-control operation of the country. But even though he became universally regarded in this great task on which he concentrated and worked so hard, it was by no means all of the attributes and services of former Senator OVERTON.

He was broadly and liberally informed and to a great degree familiar with all public questions and problems, and especially with issues which directly affected his own State.

Throughout his entire life Senator OVERTON was noted for honor, honesty, candor, and his firm stands for rights and justice. His loyalty and devotion to the best interests of his country and the State of Louisiana was unquestionable. He stood for decency in politics and Government.

He was always forceful and forthright in his opposition to issues which he did not believe reflected the best for America and the American people. He was steadfast in his devotion to principles, loyal to his friends, and forgiving to his opponents. He possessed a warm, friendly disposition and was always cheerful and willing to help and guide the younger Members who came to Congress to represent the State of which he was justly proud.

Senator OVERTON possessed a great quality of humility, tolerance, and understanding which endeared him to his friends and caused his opponents to respect and admire him. Even when the arguments over national issues in the Senate became highly controversial and involved he remained a true gentleman of the South, always courteous, but firmly decisive.

With unusual ability and rare insight into national and international events, Senator OVERTON was one of the leaders in the Senate in the matter of preparedness. He supported and fought for legislation which would build up our national-defense program and make this country strong. Before and all during the last World War he made every sacrifice that his health and energy could contribute so that America could always be the champion for free and independent people everywhere.

He gave unstintingly of his time and ability to help others. He gave his services unselfishly and vigorously to State, National and international problems up to the very hour of his death.

My respect and admiration for Senator OVERTON cannot be wholly expressed in just a tribute to his memory. He was a real friend and his death was a great loss not only to his family, his legions of friends, and admirers, but a great loss, too, for the State of Louisiana and the Nation.

Members of Congress and people in the State and over the Nation who were fortunate in having the opportunity to know and work with Senator OVERTON will always cherish his memory and hope that by following the fine example he set during his life that we in turn may be able to improve our services to mankind and make this a better world in which to live.

Senator OVERTON'S great contribution to history and advancement of his State and the Nation will live long after many of the issues for which he fought and won have been forgotten.

In humble tribute to a great man and fine leader, I also want to extend my sympathy to his family, to whom he was devoted. I know the loss they suffered, just over a year ago, cannot be compensated for by tributes or monuments, regardless of how great or significant they may appear to be at the moment.

In His wisdom our Almighty Father saw fit to take Senator OVERTON from among us but we will always have the memory of his great character and personality to guide and help us.

Sol Bloom

MEMORIAL ADDRESS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1949

On the life, character, and public service of Hon. SOL BLOOM, late a Representative from the State of New York

Mr. ROONEY. Mr. Speaker, gone from our midst is that lovable and outstanding American, the late Congressman SOL BLOOM, whose death filled all our hearts with sadness.

Congressman BLOOM served continuously in this House from March 4, 1923, to the time of his death on March 7, 1949. As a member of the House Committee on Foreign Affairs for over 20 years and as chairman of that great committee, he was a leader in the field of foreign affairs and a potent influence in the development of the foreign policy of our country during the most critical period of our international relations.

The intensity of his convictions and the spirit with which he gave his best to every cause that he championed will long be remembered in this body. He was respected by his neighbors and colleagues and deeply loved by his many friends.

SOL BLOOM labored for the welfare of all races, and in the Twentieth New York Congressional District, which he represented, one could find inhabitants of many racial strains. He gave his services to humanity irrespective of race, and it did not make any difference to him what a man was as long as he was decent and devoted to our American institutions.

The arduous duties of his office, and the sincerity with which he discharged them, unquestionably contributed to SOL'S passing. We have lost an able and conscientious legislator, and a fine gentleman. He shall, however, remain in our loving memory as one who enriched our association and experience in this House. We mourn his memory; we must strive to emulate his example.

In the years to come I shall remember his ability, his accomplishments, his constructiveness, his noble character, and all that he stood for, and in my memory I shall always cherish his friendship.

I extend my deepest sympathy to his daughter upon her great loss. May he rest in eternal peace.

Thomas Leonard Owens

MEMORIAL ADDRESS
OF
HON. EDGAR A. JONAS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1949

On the life, character, and public service of Hon. THOMAS LEONARD OWENS, late a Representative from the State of Illinois

Mr. JONAS. Mr. Speaker, the 7th day of June 1948 recalls to our minds the untimely and sudden death of the former Congressman, THOMAS L. OWENS. This unforeseen tragedy was a great shock to his family, friends, and constituents. TOM, as he was affectionately called by those who knew him best and those intimately acquainted with him, was on the threshold of a formative and successful career as the Representative from the Twelfth District of Illinois when death overtook him.

For TOM OWENS life was real and life was earnest. As a young man he mapped out the course that he wished to pursue by hitching his wagon to a star. At the time of his death, TOM was an outstanding personality in the community where he made his home. He had been elected as the Congressman from the Seventh District of Illinois, which, prior to the reenactment of the State reapportionment act, was the most heavily populated district in the United States.

THOMAS L. OWENS was born in Chicago, Cook County, Ill., on the 21st day of December 1897. His life as a boy and as a young man was symbolic of what perseverance, courage and an abiding faith in prevailing opportunities can ultimately achieve in this great country. He was educated in the parochial and public schools of Chicago, including advanced study at Northwestern and DePaul Universities, all of which culminated in his enrollment as a law student at Loyola University from which school he graduated in 1926 and had conferred upon him the degrees of bachelor of laws and master of laws.

His intellectual and spiritual training as a boy can best be evaluated by his conduct as a man, a father and a public citizen. TOM OWENS was respected and held in high and affectionate regard by all who came in close contact with him. He was known to despise bigotry, intolerance, sham and hypocrisy. In his personal conduct and demeanor he evidenced traits of character that expressed frankness, sincerity, courage and a pleasing and congenial personality that left a lasting impression on all those who were privileged to associate with him. His inherent abilities extended beyond those appearing on the horizon of the average individual. Quite frequently his attainments and outstanding ability displayed in his profession reflected in no small measure his intellectual capacity for grasping and coping with intricate problems, both of a private and public nature.

Subsequent to entering the practice of law, he elected to specialize in the field of labor-management relations at a time when research and explorations in that particular field were comparatively new and rather limited. Nevertheless he applied himself most assiduously to the tasks before him and by the reason of the results that he obtained, and for the untiring efforts that he put forth, he was repeatedly sought out to act in an advisory capacity or any other helpful manner on committees dealing with labor laws by such outstanding institutions as the Chicago, Illinois, and American Bar Associations. Unfortunately his brilliant career in this particular field of endeavor and specialty in labor law was brought to a sudden close by his untimely death. During his first term in Congress, he was given considerable recognition because of the special knowledge and talent that he possessed and by means of which he was able to make a valuable contribution in the formulation of legislation dealing with labor relations.

In private life, TOM was always ready to make a valuable contribution to society in that he took an active part in matters pertaining to the welfare of the community where he resided with his family.

He was a man of fine and high ideals who believed in the American way of life. He became interested in local civic functions, playgrounds, schools, parks, and other constituent elements that go to make up a law-abiding community. In advocating or supporting civic problems, he never hesitated to implement in the thoughts and minds of his neighbors, friends, and associates, the ideals for which he stood and to which he fully subscribed.

He participated actively in political controversies and campaigns and was a dominate and outstanding leader in Republican politics in the ward where he made his home. Regardless of the many arduous duties that he assumed, he always had time for creating a little happiness and laughter in life. He was endowed with a rare gift—in all probability inherited from the great race from which he sprung. He had a pleasing tenor voice, and this gift together with his affable personality made him a popular figure in organizations where his talents were fully appreciated. TOM always had a song in his heart for the crowd when the program began to lag or tended to become boresome or too serious.

His untimely passing in the full bloom of manhood coupled with his useful, promising, and brilliant career, made his unexpected death all the more lamentable. He will be long mourned and not soon forgotten. His exemplary conduct as a lawyer, citizen, and public official was not only highly commendable, but inspiring as well. The close, confidential, and affectionate relationship that existed between Congressman OWENS and his brother John, with whom he was associated since his admission to practice law, presented a picture of love, confidence, and esteem between brothers that won the admiration of all those who were privileged to observe this relationship.

Words, no matter how well chosen or sincerely spoken, cannot wipe out the heartache and sorrow that is visited upon the loved ones who remain to mourn the departed. TOM left surviving him a kind, dutiful, and highly respected wife who is the mother of his three growing and attractive children. Unfortunately the death of TOM OWENS deprived his family of the love and protection which he showered upon them as a kind and thoughtful father and husband. Naturally, his demise has left a void that is irreplaceable in that family and hearts upon which will rest the heavy hand of sorrow for many years to come.

The eulogy due TOM OWENS as he sleeps and lives again in the Great Beyond is not spelled out alone by fine-spun words or phrases. The acts and deeds that he molded into living realities during his life transcend anything in importance that might be said of him now. His life is best typified in the record of constructive service, his aggressive and dynamic personality, his courage and forthrightness, and a dominant and driving force that never knew defeat. Because of these respective attributes and his spiritual and moral concepts of life he militantly, and with confidence, traveled the long and winding road that ultimately led to success and fame.

His departure from this earthly sphere was all too sudden. Where others are called to eternal rest amidst the shadows that accompany the twilight of life, he departed all too soon in the glorious light of a rising sun. Divine providence has decreed that TOM OWENS should be taken from our midst and to forever reside in that celestial home, which we know to be a house not built with hands.

It is most fitting and proper that we honor his memory today and I am proud and privileged to join this distinguished audience assembled here in paying tribute to TOM OWENS, who, I am sure will always be remembered as a man of outstanding qualities; a patriotic and loyal American; a veteran of World War I; a capable, industrious, and able lawyer; a constructive and outstanding civic-minded citizen; a courageous and talented public official; and a loving, considerate, kind, and protecting husband and father.

John Joseph Delaney, Sol Bloom, and Andrew Lawrence Somers

MEMORIAL ADDRESS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1949

On the life, character, and public service of Hon. JOHN JOSEPH DELANEY, SOL BLOOM, and ANDREW LAWRENCE SOMERS, late Representatives from the State of New York.

Mr. MULTER. Mr. Speaker, on occasions such as this words rarely express in adequate measure our full feeling of respect and esteem for those who have passed on. With the passing of JOHN J. DELANEY, SOL BLOOM, and ANDREW L.

UNIVERSITY OF MICHIGAN LIBRARIES

SOMERS the country lost three great Americans; New York City lost three of its most valued citizens; and we, who had the pleasure of serving with them in Congress, lost three very good friends.

The following quotation from Rudyard Kipling is apropos:

L'ENVOI

When earth's last picture is painted, and the tubes are twisted and dried,
When the oldest colors have faded, and the youngest critic has died,
We shall rest, and—faith we shall need it—lie down for an eon or two,
Till the Master of all good workmen shall set us to work anew.

Andrew Lawrence Somers

MEMORIAL ADDRESS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1949

On the life, character, and public service of Hon. ANDREW LAWRENCE SOMERS, late a Representative from the State of New York.

Mr. ROONEY. Mr. Speaker, the recent passing from this earthly scene of our beloved colleague, the Honorable ANDREW L. SOMERS, has given me a keen sense of personal loss. My close association with him gave me a deep insight and a grateful appreciation of his many wonderful qualities and abilities.

ANDY SOMERS had been a true friend of mine for many years. His record in the Congress is filled with great achievement. He was an able legislator and a fine statesman, serving the Tenth District of New York with honor and rare distinction for almost a quarter of a century. He was first elected to the Sixty-ninth Congress and reelected to each succeeding Congress. At the time of his passing, he was chairman of the great Public Lands Committee of the House. His long experience afforded him many opportunities to wield his influence as a legislative strategist in the consideration and passage of important national legislation.

Long before the Reorganization Act of 1946, Congressman SOMERS served as chairman of the Committee on Coinage, Weights and Measures and sponsored the Gold Reserve Act of 1934 and the $2,000,000,000 Stabilization Fund Act. He served as chairman of the Committee on Mines and Mining during his tenure here and drafted the mine safety inspection law. These are just a few of his contributions to the enactment of legislation which has meant so much to our Nation's progress and economic welfare.

Because of his great modesty and disdain of ostentation, I doubt very much whether many Members of this body ever actually realized that ANDY SOMERS was one of the foremost authorities on international monetary problems. In recognition of his talents and intellectual achievements in this field, our late President Roosevelt appointed him as a delegate to the International Monetary Conference which was held in London a short time before the outbreak of World War II.

I have never heard anyone express an unkind or derogatory word of ANDY SOMERS. He was humble, friendly, and solicitous for the welfare of all who served with him and the people of his district whom he represented so long and faithfully. He was always a gentleman and held in the highest esteem and effection by his constituents, who showed their genuine appreciation in returning him to Congress for 13 consecutive terms.

I remember well his good and distinguished father, who for many years served as president of the board of education of the city of New York. Like his father, ANDY SOMERS was a man possessed of great intellectual integrity. Throughout his successful career as a public servant he exemplified everything that a statesman should be. As an aviator in the United States Marine Corps during World War I, he served with honor and distinction. It was only fitting that two of his sons should participate in World War II in like capacity, thus adding to the brilliant lustre of a family richly imbued with unique public service and patriotism.

In these turbulent times, when men of character and proved ability are so much needed, the passing of ANDY SOMERS is a great loss not only to all of us in this body, but to the people of the State of New York and the Nation as well. I have lost a good friend. I express to his devoted wife and five children my sincerest and heartfelt sympathy. May God have mercy on his soul.

Robert Lewis Coffey, Jr.

MEMORIAL ADDRESS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 25, 1949

On the life, character, and public service of Hon. ROBERT LEWIS COFFEY, JR., late a Representative from the State of Pennsylvania

Mr. FLOOD. Mr. Speaker, I, too, wish to use these moments to say a word about BOB COFFEY, whom I think I have known perhaps, with the exception of my distinguished colleague from Pennsylvania [Mr. KELLEY] much longer than the other Members of the House. I first met Col. BOB COFFEY when he was the handsome, dashing, and distinguished Air Force attaché of the Embassy of the United States in Santiago, Chile. My colleagues in the past few moments have said gracious, and gentle, and fine things of BOB; but let me assure you that Colonel COFFEY loved life. BOB did not want to die then, or today, or tomorrow. He was handsome, "a mirror of fashion, the mold of form," yet a skilled and brilliant fighter pilot—oh, not one of the kind that in the musical plays did it "without hands"; no; he was a student of aerial dynamics, a student of the game. He had been through the mill and he knew other things had to be done for the generation of fighter pilots now in service and yet unborn.

Mr. Speaker, this is the first breach in the Pennsylvania delegation on the third floor of the Old House Office Building. We are a clannish crowd, the Pennsylvania Democratic delegation. We are very proud of each other. We work very, very closely together. BOB COFFEY's office was right next to mine and right across the hall was the distinguished dean of the Pennsylvania delegation, the Honorable FRANCIS WALTER, where he could keep his eye on the several of us in that corridor. Day after day in the past 3 or 4 months we would gather in my office or in that of Congressman WALTER and there settle great and momentous problems of state. I remember that in the first weeks of the session BOB wanted very much to be on the Committee on Armed Services; he felt that he could bring to that committee all of his experiences. He was a red-hot pilot and a red-hot Congressman. But it was pointed out to him that in accordance with the great and beloved traditions of this honorable and distinguished body, one had to be a good soldier, one had to take one's place in line, and one had to bow to seniority and abide one's time.

We said to him, "It will not be long, BOB; you will be on there next term."

Well, BOB will never serve on the Armed Services Committee of the House of Representatives. It is our loss and the loss of the Nation.

Some people say that they do not care whether they are Members of this House or not; some say, "Maybe I will not run this year, it was not my idea anyhow"; but not COFFEY. He loved every minute of the few—sadly few—weeks and months that he was with us as a Member. Let me assure you again, Mr. Speaker, every minute he loved.

It so happened, as several of my colleagues have reminisced in this eulogy, that BOB and I had dinner the night before he left on recess because I was leaving by plane the next morning at 9 o'clock for Cuba. He took the pains to bring to me a little present of greeting that he wanted me to deliver to a husband and wife who had served with him in Chile, Commander Hal Thompson and his lovely wife, Julie, a gracious Chilean lady. It was on Thursday in Habana at the American chancelry offices that the American Ambassador brought to me BOB COFFEY's friend and said, "This is the fabulous friend of your fabulous friend."

So, today, for the few of us who had the chance to enjoy the intimacy and the humor and the friendship of BOB COFFEY, I am privileged to add these few words. Progress and a jet pilot are words that in themselves are synonymous. I said to COFFEY time and time again, "BOB, you are no boy any more. Why not stop fooling around with those things? You will kill yourself someday. Jet fighters are for kids." He said, "LOOK, FLOOD, there are bugs in those things. I am going to find out where they are."

He did and he died.

"Better love hath no man."

Mr. Speaker, I have lost a good, good friend, not a gentleman by an act of

Congress or as an officer of the Air Force, but a born gentleman, a great soldier, ah, let me assure you, a wonderful father, a loving husband.

He is not dead,
As we that are left shall die,
Age shall not weary him,
Nor the years condemn,
At the going down of the sun,
And in the morning,
We shall remember him.

My heart breaks to think of his lovely and gracious wife—his children. But how proud these young ones can be—a noble heritage, a hero father, a great name—he will come to them out of the east on the wings of morning—until the day when they join him in "the wild blue yonder."

I am sad today at his passing. May God have mercy on his soul.

John Joseph Delaney

MEMORIAL ADDRESS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 25, 1949

On the life, character, and public service of Hon. JOHN JOSEPH DELANEY, late a Representative from the State of New York

Mr. ROONEY. Mr. Speaker, all our hearts were saddened upon the passing last November of our dear friend and distinguished colleague, the Honorable JOHN J. DELANEY, who represented the Seventh Congressional District of New York for many years.

Congressman DELANEY, affectionately known to virtually all of us as JACK, has left behind him a record of which any man may well be proud. Through the many years of my personal friendship and close association with JACK DELANEY, I was happy to learn on countless occasions the warmth of his heart and the gentleness of his spirit. From the very first day I became a Member of this great body he was exceedingly kind and considerate to me. He willingly offered me his good counsel and sound advice on the multitude of problems and intricate legislation procedure with which I became confronted. As a new Member, I greatly profited by his sane advice and friendly counsel and have always profoundly appreciated his kindness in extending to me the benefit of his wisdom and experience gained from many years of devoted and valued service in the Congress of the United States.

It was my great misfortune to be totally physically incapacitated and confined to the Naval Medical Center at Bethesda, Md., when my beloved friend and colleague passed away. I was quite ill at the time and overcome with a feeling of despair and frustration when I realized that it was impossible for me to pay my last respects in person to my friend whose memory will always linger with me throughout the remaining days of my journey through life.

JACK DELANEY loved life and good fellowship. Due to his ready Irish wit and congenial manner it was only natural that he had many close and loving friends. It is indeed a great personal satisfaction to me to feel that I was included in that category.

In his long and distinguished career JACK DELANEY served 10 terms of faithful service in the House and only 2 weeks prior to his death had been reelected to serve in this Eighty-first Congress. The substantial majority he received from the people of his district clearly demonstrated the confidence and respect they had for a man who had given so much of his time and unselfish efforts in furtherance of their needs and welfare. The Borough of Brooklyn, the State of New York, and the entire Nation have lost in the death of Representative DELANEY a great statesman, a loyal American, and a true Christian gentleman.

Mr. Speaker, in conclusion may I say that JACK DELANEY was a good husband, a devoted father, and a warm and loyal friend. He has left to his fine family the heritage of a good name and the achievements of a career upon which the people of the State of New York and the country can look with pride. May Almighty God in his wisdom and mercy grant him the peace and rest which he has so richly earned. May his faithful and loving wife, his fine son, and his lovely daughter, be consoled by the fact that "Pop's" life was dedicated to serving his fellow man. Because of his sincerity of purpose and greatness of character he enriched the lives of all who were fortunate enough to be touched by his fine and ennobling influence. May his soul and the souls of all the faithful departed, rest in peace.

Soil Conservation

EXTENSION OF REMARKS
OF
HON. A. WILLIS ROBERTSON
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES

Thursday, May 26 (legislative day of Monday, May 23), 1949

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an essay by Robert Marshall, of the Woodstock, High School, Woodstock, Va., which won the top award of a $50 savings bond in the soil-conservation essay program for 1949 sponsored by supervisors of the Lord Fairfax Soil Conservation District, comprising the counties of Frederick, Clarke, Warren, and Shenandoah.

There being no objection, the essay was ordered to be printed in the RECORD, as follows:

SAVE THE SOIL—THERE IS NO SUBSTITUTE FOR PRODUCTIVE SOIL

(By Robert Marshall, Woodstock High School)

"It's my land. I am going to keep it," says the farmer, as he looks across the rolling countryside which stretches forth mile after mile. "My crops are growing. They'll grow next year."

But wait a few years—perhaps 30, perhaps 15, maybe only 3 or 4. One day it will be noticeable that the stand of corn on the slopes is not so good. There'll be a patch of subsoil on the hump of the field where there used to be nothing but good topsoil. Thieves have been at work here. Silent, sinister, unnoticed; the rain and the wind have picked up many tons of the farm's most precious possession and hauled it away. He then robs the rest of the farm of manure, lime, and fertilizer in an effort to make the subsoil productive and to heal the ugly scars of erosion.

Look a little further and a small gully will be noticeable in the cornfield—and another, and another. Small gullies grow swiftly into large gullies, and all gullies are ugly searing scars on the earth; unhealed scars which proclaim that the lifeblood of the farm is washing away—polluting streams and silting reservoirs and harbors.

This isn't some vague problem one can shrug off and leave for the people of the dust bowl to worry about. It cannot be dismissed as a predicament of the hill farmer. It happens on more than 90 percent of our farms. Sheet erosion can do its work on a very slight slope as can be seen all about us.

Erosion is a poison which can easily kill the farm. But there are medicines with which to fight that poison. Grasses and legumes, trees, shrubs, contour farming, ponds—these will immunize the land against erosion's attacks, and nurse it back to health if the poison has begun to take hold. The farmer is the doctor, armed with tried and true techniques developed over the years by the Soil Conservation Service with farmers and other agricultural agencies. Six million farmers must believe this.

Soil conservation is the youngest of all agricultural sciences—applying all scientific knowledge to the land. Farmers have organized over 2,000 soil-conservation districts for the quick application of this knowledge to their farms. This is of vital importance to all.

Some 10,000 farmers reporting from all parts of the country report an average of a 36-percent increase in crop yields of better quality due to the application of soil-conservation measures to their farms—3 acres doing more than 4 acres, and best of all they are keeping the fertile topsoil on their farms.

Erosion not only affects the farmer and his crops, but it also has its effect on roads and adjacent lands. There are 3,000,000 miles of public roads in the United States. These roads necessarily cut the terrain at all angles, and divert run-off from its natural flow. When the natural course of water is intercepted and proper protection is not given to the highway ditch through applied soil-conservation measures, deep gullies are formed parallel to the highway from smaller gullies on the land above. Often the erosional debris from these gullies and highway ditches is deposited on good agricultural land. Unless special precaution is exercised in the protection of drainage ways, and the design and location of culverts, the run-off from roads will cut gullies into the land along the roadway. In recent years progress has been made in the control and disposition of run-off waters on highways, roads, farm lanes and adjoining fields and forest—observation will show we have only begun, but we do have much of the know-how.

Man has a habit of wasting nature's gifts to him. Nowhere has our waste been greater than in the misuse of our land. A survey which was taken in 1934 showed that we had let erosion badly damage or ruin about 282,000,000 acres of our crop and grazing lands. Another 775,000,000 of crop, grazing, forest, and other kinds of land had eroded to some extent. This is tragic, because so many

UNIVERSITY OF MICHIGAN LIBRARIES

farm families have lost their means of earning a living. It is tragic because productive land is the basic resource from which future generations as well as present must live. Generally the worst erosion has taken place on the farmlands of southern United States, where erosion goes on all seasons. Much of the topsoil has been removed from large areas across the Nation and the less productive subsoil is being farmed in many places.

About 500,000 acres of good land is being allowed to go down to ruin each year—10,000 50-acre farms. And we now have the soil conservation techniques to prevent it.

Soil conservation is everybody's job. A new ethical attitude is required by all, in which the proper use and conservation of natural and human resources is regarded as a moral duty—a correct and lasting economy will follow.

Today the Corn Belt is one of the larger areas being damaged. Old Man River carries some 750,000,000 tons of this fertile soil into the Gulf of Mexico year after year—to say nothing of its devastating floods. The funds to repair the damage must come from the land that is left. Throughout the country about 100,000,000 acres of cropland on farms that cover around 250,000,000 acres are now being damaged at a critically severe rate. This means that yields from about a fourth of the land now being used for crops will be considerably lower within 10 or 12 years unless soil conservation measures are adopted. But prompt action can prevent most of this potential damage. We must have the will to do it.

The United States has much high producing soil, compared with other food-producing areas. It is a shame that it has had such poor care. One hundred million acres of cropland have been lost completely by allowing water to wash it away. There are only 460,000,000 tillable acres of land left. This is less than 3½ acres per individual for our ever-increasing population of some 140,000,000. Our number of acres will not increase. These are being lost at the rate of half a million each 12 months to the same enemy—soil erosion. Nine acres out of every ten are subject to this damage.

First, we must all make our contribution to the wise use and conservation of our natural resources wherever we are. I quote from the Southern Planter of March 1947: "Pictured on this page is the soil and moisture saving program of the Lord Fairfax Soil Conservation District, embracing Frederick, Clarke, Warren, and Shenandoah Counties in Virginia. This is the most concise statement of the over-all problem of conserving and using productive soil and rainfall that has come to our attention. Every agency, civic and educational, interested in the agriculture and people of the district, has joined with the Soil Conservation Service in one big effort to have the plan put into operation on farms of that rich agricultural region.

The record of accomplishment of the Soil Conservation Service is one of the finest in American agriculture. Farms in this program are yielding more at less cost.

For larger yields of better crops for better living, erasing the handwriting of erosion, apply correct land use and vegetative land cover using simple soil conservation patterns and practices:

(1) Good crop rotations built around good sods of grasses and legumes.

(2) Crop rotations in alternate contour strips on sloping cropland.

(3) Contour tillage, all farming operations on the level, on the contour.

(4) Productive meadows and pastures of grasses and legumes, soil protection and soil building, most economic production of nutritious feed.

(5) Correct use of lime, fertilizer, manure, and crop residues.

(6) Cover crops, soil protection and enrichment.

(7) Grasses, waterways, drainage, diversions, carrying surplus rainfall safely.

(8) Farm ponds, storage of rainfall on the farm, water for livestock and wildlife, fire protection, spraying, irrigation, fish, and recreation.

(9) Woodland conservation and management for sustained yields of woodland products, protect from fire and grazing.

(10) Vegetate gails and gullies, cuts, and fills.

(11) Wildlife protection and conservation, vegetate borders for erosion control and wildlife food and cover, bicolor and sericea, also multiflora rose.

We now have the agricultural know-how. For the country generally about 10 percent of the needed work has been done and it is spreading from farm to farm because everyone benefits.

Second, we must export agricultural know-how. Other countries in the past years have come and got it and they are welcome to this scientific knowledge. We should make every effort to extend all benefits of our agricultural research to all countries. We've already made a good start with students from China, India, Brazil, and Argentina attending our leading agricultural colleges. Special missions of top-flight American agricultural specialists have responded to the call from many parts of the world.

There, work is badly needed, for don't let anyone tell you we can feed the world. We can't come anywhere near it even if it were wise to try. We must make certain our own production potential is maintained and increased.

To arms, farmers of America! In the past, when foreign nations invaded our country, we would immediately rise to the defense of our land and our way of life. We would defeat the enemy, regardless of cost. Now we must go to war against soil erosion. Save the soil, nature's indispensable gift to man—the soil on which all life depends.

To the 140,000,000 Americans—

Lives of great men all remind us
We can make our lives sublime,
And departing leave behind us
Soil conservation patterns on the sand of time.

The Challenge of the Inter-American Ideal

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Thursday, May 26 (legislative day of Monday, May 23), 1949

Mr. MUNDT. Mr. President, in these days of bitter controversy and jealous armaments, it is good at times to reflect upon the manner in which the people of the Western Hemisphere have come to live at peace with one another and to cooperate with each other for the common good. It was my pleasure recently to address an inter-American seminar of the Pan American Union, and I offer the text of that address for printing in the Appendix of today's RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Distinguished platform associates, fellow Americans, all, I appreciate sincerely the thoughtfulness of the chairman in asking you to establish a more balanced appearance out in the audience instead of having collected yourselves exclusively to the left of the room, as you had originally, because as one who feels that too many people are now going too far to the left in too many places, I am glad to see you keep close to the center of the aisle; and it also makes it easier, of course, for a person having the privilege and the opportunity of addressing this fine assemblage. I am mighty happy that I was chosen to come down from the Hill to represent the United States Congress, and the United States Senate, to think out loud with you for a while about some of the problems which are close to the hearts of everybody in the Western Hemisphere.

I think that you have started something of great importance in this Latin-American Trainee Seminar which you are just concluding. I was surprised to learn that this is the first time that you have ever been brought together, here, under the auspices of the Pan American Union, and in this building, to conclude your individual training courses with a collective organized interchange of experiences and ideas such as that in which you are now participating.

Prophecy, as you all know, is something rather dangerous for a man to engage in who earns his living in the tricky art of politics. Nevertheless, I dare prophesy that this will not be the last time that the Pan American Union invites you to use its buildings, its resources, its personnel, and its guidance to conclude such a series of training experiences by having group discussions and general plenary sessions such as you are now having here today.

In fact, I dare to hope that this movement grows and expands and becomes even more significant than it is today. I can certainly envision in my mind that next year, and perhaps in the years after that, you will add many days to the three which you are utilizing in this particular session for this seminar.

I hope that you will add additional speakers, additional discussion opportunities, additional challenges to your minds and your hearts and your souls growing out of conferences of this type, and that they will steadily expand in significance and in usefulness.

I would think that we might well add to an organization chart, such as the one I was privileged to inspect a few minutes ago here on the platform, something which should become a regular recurring experience for you, and for others who follow after you to study here in our Government offices and in the schools of the United States; something which you might call an inter-American citizenship institute or an inter-American leadership institute or conference, in which, instead of for 3 days, perhaps for 2 weeks or more you would be brought together as representatives of all the countries in this hemisphere to exchange ideas and to study techniques of self-government.

I am not sure whether Canada is included in this seminar; if not, I think Canada might well be included to make the thing completely universal for the Western Hemisphere. I can envision out of 2 weeks spent together, representing all the countries of the hemisphere, at the citizenship level, and at the level of young people most of whom expect to dedicate their lives to public service and government service, that tremendous dividends can come flowing down the corridor of time in the years ahead if we held here such an annual institute of leadership for the Western Hemisphere. We could spend at least two full weeks on the job of meeting together and discussing in round-table conferences the problems that people must meet these days, the ways to solve them, and ways to cooperate together to continue to keep the Western Hemisphere God's chosen area of opportunity. I just throw that out to you as a challenge and as a hope for the future.

We have had 3 days of it this year. I believe if you could have had 2 weeks of this experience, you would have achieved even more, and that the friendships that you formed, the associations that you make, the contacts that you develop, the understandings that evolve from meetings of this type would be certain to pay dividends to every country represented here, and to the collective enterprise that we like to call the Pan American Union or pan-Americanism, or just simply the great family of free governments that inhabit the Western Hemisphere.

If I understand the situation correctly, most of you are what we would refer to in American governmental slang as "bureaucrats," and there are more complimentary terms, I must concede, that you can attach to a citizen these days than to call him a "bureaucrat." But bureaucrats have had a great break in America—in the United States, I should say—a great break, this week because in every echelon of government, on every radio, and in every newspaper, and the magazines that followed, in the Halls of Congress, and the executive departments, good alert citizens throughout the country took time off this week to pay tribute to the man that I have frequently referred to as the world's best bureaucrat. I refer to the remarkable experience that we jointly underwent this week when J. Edgar Hoover, Director of the FBI, commemorated 25 years of consecutive leadership of the Federal Bureau of Investigation.

I think J. Edgar Hoover's record should be a challenge to young men and women like you whom I hope, whom I sincerely hope, expect to devote your lives primarily to being bureaucrats—because bureaucrats, after all, are the people who make government operate—they make it work. Fellows in jobs like mine can appropriate the money and can pass the laws and establish the guide posts—then we go home and go fishing or go out and campaign for reelection if it's an election year.

Fellows like President Truman and the members of the Cabinet can take the guide posts that we establish in Congress because ours is a representative government where the guide posts are established by Congress and not by the President, but the Executive in the White House, and those in the departments at the top levels take our guide posts and assign them and parcel them out to other people under them in order that the goals are attained. So the people who actually do the work that make governments run are the bureaucrats who get these eventual operational assignments and responsibilities. You couldn't any more have government without bureaucrats than you could go fishing without fishhooks. Thus, being a bureaucrat is an honor and a distinction because it offers a great field for constructive responsible service.

GOOD BUREAUCRATS VERSUS BAD BUREAUCRATS

You have been doing something practical and constructive in making a direct contact with the problems and people who are working in the bureaus in Washington. You have worked with some mighty fine ones and you have seen some mighty poor ones because we have both kinds. The thing you are trying to do is to discover why it is that there are bad bureaucrats in the Government of the United States and what they are doing that you should avoid doing, and why it is that there are good bureaucrats in the Government of the United States and what they are doing that you should try to imitate and that you could try to improve upon. We are happy and proud that you do us the honor to study our system of government in this manner.

I think you can carry back to your respective countries the fact that you were meeting here in Washington, at a time many of the intelligent and well-informed people of the country took time off to pay tribute not to a Senator or to a Representative or to a President or a Cabinet Member, or a diplomat, but they took time off to pay tribute to a bureaucrat—J. Edgar Hoover—who has established as successful a record of public service as anybody in the history of the country which you are now visiting. A man who is certain to be longer remembered in history books than many American Presidents have been. A man who has contributed more to the success of his country than a number of just average ordinary Presidents of the United States because Hoover has demonstrated that by skill, and energy, and fair play, and devotion to duty, and courage, he was able to establish a division of government that members of both the two great political parties of this country honor, support, and applaud with equal vigor and enthusiasm. It should be a real inspiration to you to realize that Hoover did all this while serving in the capacity of a bureaucrat. Go thou and do likewise.

FOUR GREAT FACTORS IN THE WESTERN HEMISPHERE

I suppose those of us who live in the Western Hemisphere are so fortunate in so many ways that sometimes we sort of think that if we could just protect the things we have, things would be good enough because it certainly is true that by comparison with the sorry conditions prevailing in so much of Europe and with the sad conditions prevailing in so much of Asia and Africa and other areas of the world that we, in the hemisphere known as the Western Hemisphere, are exceedingly fortunate.

We have peace which is one thing of tremendous importance as anybody connected with either of the late wars can well understand; we have more of peace than is available to people living any other place under the whole canopy of Heaven.

We have freedom in the Western Hemisphere; we have more of freedom than is available to people living anywhere else in the whole wide world. True, everybody isn't equally free. The Western Hemisphere doesn't stake out any claim as to going into competition with God's Heaven, but aside from that, we approximate that wonderful area of freedom and fair play more closely than the people of other hemispheres or other areas.

We have more of opportunity in the Western Hemisphere than is available to people in any other region of the universe; more people have more chances to have more success in the Western Hemisphere than anywhere else.

We also have more security in the Western Hemisphere than they have anywhere else in the world; fewer people have to shudder at night that somebody's going to come in and rout them out of their beds and trundle them off to jail; fewer people have to worry about that here than in any other area of the world. Fewer people have to worry about starvation; fewer people have to worry about unemployment—we have more of security of every kind in this Hemisphere just as we have more of peace and more of freedom and more of opportunity.

Now, I think, despite those facts, despite the fact that any honest umpire of the game of life would have to conclude that the Western Hemisphere has more of those four essential fundamental elements of happy living and good fortune than people anywhere else. All of us would quickly testify that even so we do not have enough of them. We wish we had more. We wish it were unnecessary to maintain armies and navies and air corps at great expense. We wish that unpleasantness never developed between any of the neighbors of our whole family of Western Hemishpere countries, but people being human, and human beings what they are, we can't hope for perfection. We just have to move in that direction, and so we establish inter-American conferences, Pan-American unions, and a seminar like this which I hope will grow to even greater proportions, as I have said, and become an institute of inter-American leadership bringing people into these conferences who are going to lead the American Republicans 10 years from now instead of always bringing in the people who have probably already had the jobs 10 years too long.

I like to look ahead. Let us bring in the young leaders of each country to plan and to propose new programs. We will—we must have armies. We must have navies—but we must also have conference rooms—inter-American agreements, and boards of arbitration, and folks who utilize peaceful methods of understanding instead of wartime methods of destruction in order to attain a common area of agreement. Freedom we have in great abundance here, but one can almost never get too much freedom and if we can make it available to certain elements on our continents, not now having it, if we can make it increasingly available to all despite any differences they may have in politics or economics or color or race or religion, the further we can expand freedom the better we build I think upon a sound and firm foundation.

THE MAGIC FORMULA—SECURITY AND OPPORTUNITY

I think those other two terms I have talked about—opportunity and security—are probably the magic formula by which the world progresses. I think one of the reasons why the people of the iron curtain countries are so unhappy is because they have neither opportunity nor security. Human beings, generally, no matter how humble their place in life, no matter how limited their education, just hate to be pushed around by someone else all the time. I suppose along with all the other difficulties of living in a land of tyranny, of living under conditions such as I saw the people living under when I visited Russia, and when I visited Czechoslovakia under the Communist regime where men are afraid to say anything, afraid to go anywhere, afraid to do anything because some politician is going to come along and push them around, is the fact that such a life makes cowards out of human beings.

I think that we, in the Western Hemisphere, must cling closely to freedom, must cling closely to opportunity, peace, and security. Pretty much, I think, civilization marches up a ladder in which the rungs are alternately marked, security and opportunity—and opportunity and security—and security and opportunity, again. Every now and then some government or some age of civilization emphasizes one too much, and deemphasizes the other too much. We must avoid that.

If we emphasize security too much we kill off opportunity. We then give security to everybody at a level nobody wants. We then give security to everybody under conditions that nobody desires. We then give the kind of security that people enjoy at Alcatraz, out in San Francisco Bay, and Atlanta, Ga., in the Federal penitentiary—the kind of security that is safe enough if you are locked up for life in a penitentiary. You are pretty safe there from being shot at by anybody else. You are pretty secure against losing your job because you can't get out if you want to when you are in jail. You have complete security from the standpoint of getting meals because the Federal law provides you must feed the prisoners. Nobody is going to steal anything from you in jail because you haven't got anything and can't get anything—so you have got security. But that kind of security, the kind of security that Hitler gave his victims and that Stalin gives his political prisoners, and that the dictators around the world give people in prison is not what we want in the Western Hemisphere as our goal. It is not what we

UNIVERSITY OF MICHIGAN LIBRARIES

provide. It is precisely what we collectively resist.

Now, you can also overemphasize opportunity. You can give people the kind of opportunity that a tiger has in the jungle to do anything that they want to anybody who crosses their path. You can make opportunity so free and so general that the strong can always attack the weak and so that the law of the tooth and the claw becomes the law of the land. You can enlarge opportunity so that those who work hardest, it is true, get the best rewards, but so that those who have the most power can also cause all other people in the community to suffer. That kind of opportunity is as bad as the kind of security which denies man freedom of expression and locks him up in a slave camp. So, I think the secret formula that we are trying to make work for everybody in the Western Hemisphere is to get the proper balance between security and opportunity—trying to bake a cake which will be a good government cake because we mix the ingredients of the recipe in exactly the proper proportions and balance. That means that we try to give people in our hemisphere every single opportunity which can be made available to a free citizen which will not in any way injure opportunity that other people also have a right to exercise.

We of this hemisphere are trying to give people the opportunity and security of law; the security of a fair chance for a free people; the security of being protected against acts beyond their own control; the security that comes from orderly government—solvent government—well managed government; the security and opportunity that comes to a civil-service employee who holds his job regardless of what political party is in power, who holds his job as long as he fulfills his duty carefully; the security and opportunity that enabled J. Edgar Hoover to move from a young student in the law schools of Washington, a poor boy, to the head of the greatest protective organization the world has ever seen, and to hold that job for a quarter of a century while we have had all kinds of changes of administration—politically—all kinds of swings and ebbs and flows of social, political, and economic thought in this country.

THE AMERICAN WAY

J. Edgar Hoover holds his job because he has the security we like to say is the American grant. A secure opportunity to make good if you have the stuff in you to make good, and the kind of security that says if you can't make good you have to move over and let someone move up on the bench. I think in meetings of this type we can get together and discuss these problems and the folks from one country can say to the folks of another country, "How do you protect security and opportunity for your people in your country?" "How do you protect freedom?" "How do you protect peace?" You can ask these questions of each other and there isn't any of us but what can learn something from the most backward country here, and I wouldn't name it if I could, and I don't know which one it is. Maybe, it's ours, I am not sure, but there isn't anybody but what can learn something from another country by discussing those things frankly and by setting certain goals we try to reach as free people in a free hemisphere—the only free hemisphere left in the world.

We have a chance to work out a program of action, I think, that is mighty important. I am mighty proud to have my name associated as the author of the UNESCO legislation, and the so-called Voice of America Cultural Exchange program. I believe in these programs wholeheartedly. I am now in the process of trying to get the Senate Appropriations Committee to appropriate $50,000,000 a year to expand these programs. That's less than a third of the cost of a modern battleship, and I think, 8 years of genuine exchanges among peoples of the world with nothing to hide—who are willing to exchange—I think 8 years of that will do more for peace than 6 or 7 battleships. I want the countries of the world to exchange people and ideas generally—around the globe—with just one single simple rule of inter-American fair play—we welcome to this country, as you do I am sure to yours, students and visitors and young authorities in government; we welcome them to come here in exchange for those from our shores they will permit to visit their countries, but if they have something so bad they must conceal it behind some kind of fictitious curtain, if they dare not let free people visit their country because of the tyrannical conditions there existing, then, I would say, the rest of us might well speed up and expand our exchange with each other and not seek visitors from those unhappy lands. Folks who are not ashamed of the fact that everything isn't perfect in any of our countries should exchange ideas. Folks who will say, "Of course, we have some slums; of course, we have some poor people; of course, we have some criminals; of course, we have some people who can't read and write, but come in, neighbor, and look us over—we have some things of which we are also proud. Just look us over as we are." You people come from countries like that. You have no barbed wire fences or iron curtains nor stone walls that keep folks from looking at you, as you are, and we are that kind of country, too.

We of the Americas have great big open windows and doorways and arches through which people can move in both directions. The legislation I have sponsored is simply to take countries which divided themselves from their neighbors by arches and windows, and build paved roads under the arches so we can move people and ideas back and forth in greater numbers and more quickly. I have no desire at all to build some kind of an overpass through an iron curtain by which people can walk only on a one-way street. I am interested in reciprocity. I never saw anybody make any friends by shaking hands with himself. Hand-shaking is a two-way proposition, and so is cultural exchange—so is the business in which you people are here engaged. That is why we always welcome so heartily the folks from Latin America because when one of us gets a chance to go down to any of your countries we feel mighty welcome there. I think that builds for peace and progress and it builds for expansion of those things that I like to sort of consider, as I have said, the lode stars of the Western Hemisphere—peace and freedom and security and opportunity.

I think that the great Mexican leader and philosopher and educator who is the present head of UNESCO was eternally correct when he said up in Cleveland, not long ago, at the UNESCO Commission meeting that "Wars can be started between the capitals of great countries, but that peace has to be built in the slums and villages and among the people of the country."

I don't imagine any of you have found any people in this group from some neighboring country that you dislike so much you would like to go to war when you get home to exterminate them. You found them to be pretty good folks—to have about the same number of ears and eyes and legs and opinions as you have, and that it is pretty easy to get together and discuss things and come out with some kind of working combination. So, I think Dr. Torres Bodet was exactly right—that great Mexican, when he said this is the way to build peace among people here.

I am afraid my time is about concluded. I might say one other thing, as a proud son of the United States who was born out in the Middle West in South Dakota—no Latin American should ever go home and say he has seen the United States unless he has visited South Dakota because there you will find the beautiful Black Hills and there you will find the shrine of democracy which means so much to us all with those great democratic figures carved in the mountainside. There, in South Dakota, you will find friendly, hospitable people and a ready welcome. There you will see farmers at work and businessmen engaged in their activities and we urge you to come to a typically midwestern community of the United States—really to see how folks live up here north of the Rio Grande. I invite you to visit South Dakota.

THE AMERICAN CHALLENGE

I will conclude by saying I have always been impressed as a son of South Dakota by the fact that everybody in this room, because he comes from one of the American countries, can take, I think, a certain amount of pride in the fact and also recognize some challenge in the fact that the last two syllables of the great family name that encompasses us all—those four letters which conclude the word "A-mer-i-can," separated by themselves spell out "I can"—A-mer-i-can. I want to say in conclusion just a word about those two syllables—I think it was a happy thought that someone had to name our great area America, and to call us North Americans, South Americans, and Latin Americans, because that "I can" somehow has come to typify what we stand for in this hemisphere. Think of the number of people in eastern Europe, and in Asia, and in Africa, who never are permitted to say "I can"—who always are compelled to say, "You can," as they point to the dictator, as they point to the generalissimo, as they point to the Kremlin—or as they pointed to Hitler. I think each of you in government should keep that in mind as you start back home. Let it be a constant challenge to each of you to do your best.

Each of you in government should keep that in mind as you start back to your respective duties and responsibilities; I think each of you can get real inspiration and gratification from the fact that you are workers in government on a continent and in a hemisphere where every citizen constantly has before him the challenge of "I can" as he participates in the political and economic life of any one of our great American Republics.

It has been a pleasure to address you this afternoon. I wish you all the greatest possible success in the important positions which you hold. I rejoice in the friendly neighborliness which exists among all the peoples of the Western Hemisphere, and I hope that the example of good will and good teamwork that we are seeing here may take hold and catch on in other areas of the world so that once again we can look forward to an era of social and economic progress made possible because we are living in an environment of permanent peace.

Hugh L. McArthur

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Thursday, May 26 (legislative day of Monday, May 23), 1949

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Know Your Department Officers," wherein high tribute is paid to Hon. Hugh L. McArthur, a veteran of our foreign wars.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

KNOW YOUR DEPARTMENT OFFICERS

Though a young man, Hugh L. McArthur, department judge advocate of the Veterans of Foreign Wars, has already assumed a place of outstanding prominence in the affairs of Hillsborough County and the city of Tampa, where he is practicing law and is an active leader in social, church, fraternal, civic, legal, and veterans' affairs.

Both the State of Georgia and the State of Florida had a hand in turning out Hugh L. McArthur, one of the finest products that ever set foot on its red or white soils.

It was in Dalton, Ga., on October 15, 1907, that Hugh Lynn McArthur first saw the red clays, blue skies, and green hedges of his native State. For, as one of his friends said, on his first day in this world his nurse carried him to the window and recited Beaumont and Fletcher's words of ambition: "Our natures are like oil; compound us with anything, yet will we strive to swim at the top."

Five years later the McArthur family moved to Sarasota. After graduating from the high school there McArthur chose the University of Florida as the place to take his college work. He graduated, with honors, from the university with an A. B. degree in 1929 and completed all requirements for his M. A. degree. In 1933 he received LL. D. and J. D. (juris doctor) degrees from the University of Florida at Gainesville. During his academic years at the university he served as student instructor in psychology for the years 1928, 1929, and 1930. He also took postgraduate work at Georgetown University in Washington, D. C. He holds membership in Kappa Phi Kappa, Pi Gamma Mu, Phi Kappa Phi, and Alhpa Phi Epsilon, honorary fraternities, and this shows his ability and versatility. The fact that he is a past president of the John Marshall Debating Society at the University of Florida sums up his early achievement in oratory. His speaking ability was testified to when the National Safety Congress, attended by some 10,000 people, in Chicago invited him to appear before it as a speaker a second time. After completing his education at the University of Florida, he taught and coached in Pinellas County schools, including the St. Petersburg Junior College where he was a favorite among students and teachers. But in 1933 McArthur decided to take a new step toward his career, so he moved to Tampa, hung out his lawyer's shingle and has since made a brilliant record in his profession. Judge Himes, a Tampa judge before whom McArthur has practiced said, "McArthur is a lawyer of unusual ability." And J. Rex Farrior, State attorney at Tampa, whom McArthur has opposed many times in the courtroom said, "I have observed Hugh McArthur under real test and he is capable, resourceful, and tireless. He quickly grasps facts as well as law. As State attorney, I have handled cases in which McArthur was the opposing counsel and he prepared his cases thoroughly. On several occasions I have employed him to assist the State. McArthur has made an excellent record. He possesses the trait of loyalty to an unusual degree, has a good education and good traits of character, is courageous, persistent, and a good speaker."

McArthur served as attorney for the Florida State department of public safety with distinction from 1940 until he entered the Navy during the recent war and as such was special assistant to the attorney general of Florida. At the request of Governor Spessard Holland, McArthur prepared and wrote the act creating the present department of public safety or chapter 20451, Laws of Florida, acts of 1941. He also prepared chapter 20378, Laws of Florida, acts of 1941, the same being the prevailing, all-inclusive traffic act regulating traffic upon the highways of the State of Florida.

J. J. Gilliam, who was then director of the State patrol, said "McArthur is an attorney of great ability and talent and absolutely truthworthy." When some of the law-enforcement officials over the State interpreted the 1941 model road-patrol law to mean that reports of highway accidents must be kept confidential, it seemed for a time as if newspaper reporters would not get much information from the records. Even lawyers preparing to defend clients from court action growing out of traffic accidents found reports closed to them, but Hugh McArthur rendered an opinion, for the State public safety department, that accident reports are public property. This cleared the haze considerably. Thanks from all sections of Florida went to the safety department's attorney for his prompt and clarifying opinion.

McArthur, probably more than anyone else, contributed to the general explanation that the traffic laws and regulations of the department of public safety is not a law-enforcement agency as much as it is an agency to prevent accidents as well as arrests through securing cooperation of the public by education, not by the use of force.

He is a member of the Hillsborough County, State, and national bar associations, a member of the Tampa Exchange Club, the Elks Lodge, president of the Tampa Propeller Club, worthy president of the Fraternal Order of Eagles, Knights of Pythias, and the chamber of commerce. When SPESSARD HOLLAND, now United States Senator, was Governor of this State, McArthur was a member of his personal staff. McArthur, who has an education far beyond that of many people, entered the Navy in June 1943, closing his law offices at Tampa and Tallahassee for the duration of the war. The Army rejected him because he had three physical defects, including being color blind, but somehow, he persuaded the Navy to waive these defects and, according to Vice Adm. E. S. Land, it was the first time in the history of the United States Navy that three physical defects were waived. He held a commission as lieutenant commander in the USNR, reporting for active duty on January 1, 1943, and remaining on active duty, with service in the Pacific, until February 1944. He was wounded and placed on an inactive status on January 13, 1946. While in the Pacific he served with the Seventh Service Fleet and Sydney, Australia, was base headquarters.

While McArthur was in Sydney a banquet was held at one of the leading hotels at which he and Gen. Douglas MacArthur were guests. Hon. Walter Sykes, of the King's Council, and Hon. Bob Menziers, ex-Prime Minister, collaborated in the preparation of the following toast:

"THE TWO M'ARTHURS

"Here is the story of one McArthur
American through and through.
'You, of course, are referring to Douglas?'
'No, you fool—to Hugh.'

"Truth 'twas by Washington's inspiration
To the Anzac zone he flew.
'Now, of course, you refer to Douglas?'
'No, you fool—to Hugh.'

"He, by singular charm of manner
Captured our hearts anew.
'Now, of course, you speak of Douglas?'
'No, you fool—of Hugh.'

"We have seen that fighting figure,
War-worn, battered, and blue.
'Now we know you speak of Douglas?'
'No, you fool—of Hugh.'

"We have watched at headquarters
Inspiring his sweating crew.
'Are you, by chance, referring to Douglas?'
'No, you fool—to Hugh.'

"Let's drink a toast to Australia's saviour;
With me, lift your jug.
'Are you still referring to Hughie?'
'No, you fool—to Doug.'"

Before reentering the practice of law at Tampa, McArthur served as assistant to Commissioner Edward Macauley of the Maritime Commission at Washington. While in the National Capital he hobnobbed with many of the big wigs on intimate terms. When he left Washington James Forrestal, Secretary of the Navy, in telling him good-by, said, "For your part in the achievements of our Navy, you deserve to be proud as long as you live." And after he returned to Tampa to resume the practice of law, the United States Attorney General, Tom Clark, wrote and said, "You have my best wishes for success in all the profession has to offer." Later on, when McArthur announced for state senator from Hillsborough County, Commissioner Edward Macauley wrote: "I do hope your campaign will turn out successfully."

Soon after McArthur returned to Tampa and reopened his offices there and at Tallahassee, he was reappointed attorney for the State department of public safety and holds that position today.

He is commander of the Veterans of Foreign Wars Post 121 at Tampa, a member of the Disabled World War Veterans, a member of Post No. 5 of the American Legion at Tampa, and is judge advocate for VFW district No. 1 and also the department. He was recently given a major assignment, as department judge advocate of the VFW, to investigate Drew Hospital at Tampa with a view of deciding whether or not it would be advisable to ask the Veterans' Administration to withdraw therefrom all veteran patients. His negative decision closed the matter with complete satisfaction to a vast majority of all concerned. He is also an active member of the First Christian Church. He married Lady Weeks Phillips, of Bartow, and they have three children: Hugh Lynn, age 8, Sarah Lynn, age 17 months, Nancy Lee, age 71 days, and a stepdaughter, Lady Margaret Phillips, age 11 years.

Many outstanding articles have recently appeared in the Florida press as to McArthur's possible candidacy for the office of attorney general for the State of Florida, but he has reached no definite decision as to this matter, although pressure from friends over the State is being brought to bear on him to get in the race.

Mrs. Jeannette M. Mitchell, President, Somerset County Women's Republican Club

---

EXTENSION OF REMARKS

OF

HON. OWEN BREWSTER

OF MAINE

IN THE SENATE OF THE UNITED STATES

Thursday, May 26 (legislative day of Monday, May 23), 1949

Mr. BREWSTER. I ask unanimous consent that an article from the Portland Sunday Telegram dealing with the interested citizenship of one woman in this country, in connection with my repeatedly pointing out the failure of both Democratic and Republican organizations to present effectively their programs, as a result of which 45 million citizens of America did not vote, or practically 49 percent, be printed in the Appendix of the RECORD. This one woman, at 78 years of age, enrolled 360 women in a political club, in 2 or 3 months' activity, and expects to extend

UNIVERSITY OF MICHIGAN LIBRARIES

it to 500. I commend that to both Republicans and Democrats alike as something that indicates the extent to which we are failing in our task.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHE IS TOPS

Attention Republicans who head any type of a political organization be it local, county, or State. If your group is dying on its feet, just don't fret and worry because Mrs. Jeannette M. Mitchell, of Skowhegan, perhaps has the cure.

I pen this without so much as consulting Mrs. Mitchell, yet I feel safe in offering her services, advisory of course to GOP groups the State over.

She's a most remarkable woman. Two years ago, despite her 76 years, Mrs. Mitchell was one of a very small group to organize the Somerset County Women's Republican Club. It immediately affiliated with State Federation which had been a going organization for many years.

Last Tuesday, the Somerset club celebrated its second anniversary and Mrs. Mitchell, the group's first and only president, reported a membership of 360, which is one-third of the entire membership of the State Federation.

Today, at 78, she's more enthused over Republicanism than any one person in Maine.

You might suspect that the enrolling of 360 members in 2 years to give her county group the No. 1 listing in Maine would suffice. You might suspect a woman of 78 would retire on her record.

You might be right were we not talking about Mrs. Mitchell. She plans, in October, to step down as president, but her work will not end there. She has set a goal of 500 members and I'll wager a pretty penny it is met before she retires.

All praise to a most remarkable woman.

Europe's Recovery

EXTENSION OF REMARKS
OF
HON. JAMES P. KEM
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Thursday, May 26 (legislative day of Monday, May 23), 1949
